The Investors' Review.

More About New Zealand Finance.

People of a lugubrious cast of mind, who like their amusements sad coloured, ought to get a deal of enjoyment out of the study of Seddonic finance. It is full of fun of a sackcloth and ashes kind, and sprinkled with funereal surprises. For instance, the ministry presided over by the unpeered Right Hon. Richard Seddon make a great parade of net debt as against gross, but when we try to discover where the difference arises in substance failure attends the attempt. The fact is, every penny of the gross debt is due by the colony, and no provision whatever has been made for the redemption of one farthing of it. The "sinking funds" have been openly appropriated, and every budget shows so much stock created for sinking fund purposes and taken into current revenue to eke out the budget. Thus in the accounts for 1902-3 we find this entry—"receipts in aid, debentures issued under the Consolidated Stock Act, 1884—for increases of sinking fund £57,500." That forms part of the magnificent revenue of £6,718,000, and the whole of it disappears in the current expenditure. This is finance worthy of that renowned genius the Hon. Sir G. J. Ward, K.C.M.G., Minister of Railways, when he was trading in fairy oats and helping the Colonial Bank of New Zealand to its grave. But the finances of the colony are full of this sort of thing, and one has only to look at the detailed account of the expenditure on public works to realise how slender the assets are that are nominally held for behoof of the state creditor against the tremendous debt. We shall deal with railways later, meantime remember that all the subjoined items represent expenditure of borrowed money.

On immigration the sublime Government of this empire in embryo has from first to last spent £2,148,000, and on the staff of the public works department, at least that is what we take a mysterious departmental entry to mean, £491,000. Roads have cost nearly £6,400,000, including £89,900 received indirectly through drafts upon the Government loans made to local bodies. No less than £1,999,000 has been spent in buying land to retail to settlers, and £726,000, all of it borrowed money, never forget, has gone in the development of goldfields. Telegraph extension has cost over £1,006,000, and the prodigious sum of £2,853,000 has disappeared in public buildings, in edifices usually much in excess of the requirements of the handful of people forming the population. Lighthouses, harbour works and defence have swallowed up £991,000, and fighting appliances, called contingent defence, £734,000. Surely the most unjustifiable employment of money borrowed abroad or anywhere it would be possible to conceive. A further £1,151,000 represents charges and expenses of raising the loans, and that cannot be called a very valuable asset, any more than the £218,000 odd spent in interest and sinking fund. There are a number of smaller items which need not be detailed, the total rising to £37,945,000, including the railway expenditure. This total is very much short of the overpowering mass of the public debt of about £56,000,000, and for the balance there are presumably no assets of any description beyond the unimproved land.

Look now at the railway accounts. In the past year, ended March 31 last, the capital expenditure upon the railways was £911,013, bringing the total outlay from borrowed money up to £19,082,000, and for this only thirty-six miles was added to the length of the roads in operation, the total at the year's end being 2,291 miles, as against 2,235 on March 31, 1902. Where did the money go? It went in various directions, all, we may say, more or less wasteful and unremunerative. Part of it assisted the revenue of the colony, in the shape of railway charges met out of Government resources; how much altogether we are not able to say, but there is an entry in the accounts of the railway department of £54,663, as being money paid out of the general revenue of the colony for railway services rendered on Government account, a most improper entry, and yet probably well short of the facts. There is, however, no apparent doubt at all about the amount of capital disbursed last year on lines open for traffic, mostly in a questionable fashion, at least no doubt so far as the accounts go. The total thus fed into the open lines capital account in the year ended March 31 was £423,167, and of this about £29,000 was paid for respacing and relaying sleepers, obviously a payment in relief of revenue. Most of the other entries are vague, such as fencing, additions and improvements to stations, buildings, sidings, dwellings, and so on, but the impression left after an examination of the detailed account is that most of this money is expended with a view to hide the non-remunerative character of the railway traffic. This view is strengthened by another statement buried amongst the voluminous and mostly quite useless accounts elaborated and appended to the minister's report, to the material increase of the printing bill and the perfect befogging of most of those who look into the figures. This table professes to set forth the position of each of the lines, and a number of these are so incomplete as to be unopened, while amongst those opened very few return any adequate profit to the state, even on the basis of the official figures. The Auckland line is said to have last year yielded £3 5s. 4d. per cent. upon the capital stock, and the Westport line as much as £16 2s. 7d. per cent., but out of the twenty-six different lines opened and unopened only nine return net revenue of more or less magnitude. On the unopened lines the dead capital expenditure totally unproductive exceeds £1,000,000, or did so last All Fool's day. No wonder that the Government is compelled to lug all sorts of helps in to make the show good. It has to feed the agricultural and mining interests with money borrowed in London, to stimulate traffic in all directions, to play tricks with the accounts, and to dip heavily into capital

account, in order to meet current expenditure so as to hide the waste going on and the real loss to the unfortunate community involved in this belauded railway enterprise. Therefore the capital cost per mile of opened line steadily increases, and rose in the past year by £277 per mile. Railways are also used, as Mr. Samuel Vaile has more than once pointed out, as a sort of out-door relief for the able-bodied, and again in the past year the working staff was increased by 562, to a total of 8,875, or nearly four men per mile of line open.

One other point on which much light is required is the treatment of the so called territorial revenue. In the past year that is said to have amounted to £252,278, and every penny of it is taken in as current revenue, yet £37,446 of the total is put down against cash land sales, and that sum ought clearly to be treated as capital, and utilised in redeeming debt. The same may be said of £6,702, the amount realised by deferred-payment land sales. That also is capital coming back, and it is treated as income. How much of the £208,129 set down against "pastoral runs, rents and miscellaneous" is capital, how much revenue there is no means of guessing, but when we recollect that the whole of this money represents the fruits of land jobbing on the part of the Government, land jobbing that has already involved the expenditure of about £2,000,000 of borrowed money, exclusive of an unknown portion of the £6,500,000 spent upon roads, it is fair to assume that a considerable portion of this amount ought also to have been regarded as capital, to be utilised as sinking fund for the debt. Nothing of the kind, however, is to be looked for from the Seddonian Government, and these are but samples of the sort of recklessness which permeates the finances of this and other colonies from top to bottom. They must seize capital in order to keep up appearances. This New Zealand colony all by itself, with its pitiful little group of people, spent last year £3,634,599 on administration alone, or at least twice as much as necessity required or prudence justified. Add to this £1,901,000 for interest and so called sinking fund on the debt £273,000 disbursed under special acts of the legislature, probably in corrupt ways for the most part, £71,000 paid as subsidies to local bodies, £209,156 given away in old-age pensions, and nearly £60,000 paid out as endowments to New Plymouth, Greymouth, and Westport Harbour Boards, and it is easy to see why every subterfuge must be adopted in order to hide from the people, and from us the moneylenders, the ravages of criminal extravagance. But the end of it all is not now so far away as the moon.

By way of wind-up at present, it may be just as well to mention that the New Zealand Premier and Finance Minister gently hints at the necessity of borrowing another £1,000,000 in the current fiscal year. We know his gentle ways, and understand quite well that this £1,000,000 is merely a fashion of speaking. To keep the business afloat and the show of paying interest out of revenue clear of breakdown the real requirements in borrowed money in the current year cannot be much less than those of last year, when about £3,000,000 was added to the debt. Think of the number of side shows and "departments" this poor little "municipal trading sort of Government has to keep going. It has to provide advances to "settlers," to furnish wages to large bodies of workmen, to look after the public health, hospitals, lunatic asylums, and charitable distributions; to maintain farms for "social outcasts"; to run a tourist department, a post office savings bank, an insurance department—fire life and marine; to provide old-age pensions, to eke out railway revenue from capital, to spend extensively, and we hope commendably, upon education, and to further farming industries by the establishment of model creameries, the provision of experimental farms, the starting of vineyards, and so on. Land for settlement has also to be bought at good prices from wearied out or over-mortgaged owners or their locked up creditors, and the estates split up and sold to people who become owners with borrowed money and begin to make their fortunes. Fruit growers have to be assisted, and Government instructors in the art of preserving, drying and tinning fruit have to be provided to go round the country and teach the people. Forests and plantations have to be looked after, gold mining has to be encouraged, and prospecting done at the expense of the taxpayer or loan provider. State coal mines are also absorbing capital, and experiments are to be made in utilising water for generating electricity. The colony's share of the deficit on the Pacific Cable has to be made good, an ocean mail service has to be subsidised, one or several; some money has to be spent on a show of furthering immigration, which the citizens take good care shall not eventuate in any increase in population. The Midland Railway bondholders have to get their £150,000, bagmen have to rush round the world in order to hunt up new markets, and finally there is the cost of the proposed New Zealand "Inter-Colonial Fair" to be looked after. Does anybody in his senses imagine that all this, and a variety of other forms of "Government" activity, can be provided for by a paltry loan of £1,000,000 this year. Avaunt, ye miser!

"We shall borrow it all in the colony," says the redoubtable Seddon. Well, that is good, too, especially as the last loan issued here is still burdening our Consol market, who cannot get a bid for it, play at buying and selling as it may. But beyond the immediate requirements New Zealand has some formidable amounts of old debts falling due that require to be provided for within the next year or two. In 1904 alone, for instance, we make the sum to be met about £3,700,000. Thus £150,000 of 3½ per cents. become payable on January 4 next, and £750,000 of 4 per cents. on April 1. Another £528,000 in 4 per cents. is repayable on May 1, and on July 19 the £2,000,000 in 4 per cent. stock guaranteed to keep the Bank of New Zealand on its legs falls to be paid off, while on December 1, 1904, another £250,000 of 4 per cent. must be redeemed. How is the Government of New ealand going to meet these demands, together with the £1,640,000 payable in 1905? This latter amount, by the way, includes the £500,000 of bonds bearing no interest which the Bank of New Zealand was compelled to take in lieu of its preference shares held by the Seddon Government. It will be remembered with what a flourish Seddon's telegraphic agencies informed the world that these shares had been paid off. At the time we pointed out the truth—the Seddon Government had borrowed the money, and the bank was compelled to take non-interest bearing debentures for the debt while the shares were cancelled. The transaction, it was doubtless told, cost it nothing, was a profit to it, seeing that it had to pay interest on these surrendered shares. All the same the debt is there, amounting to £500,000, and falls due in amounts of £100,000 each in the five months from January 15 to May 15, inclusive, 1905. From this brief summary it will be seen that within about two years from now New Zealand has to provide for the redemption of nearly £5,400,000 of expiring debts. How is it going to do this, and at the same time raise between £2,000,000 and £3,000,000 per annum of new debt with which to carry on its operations in the meantime? No wonder the wise Dick has rushed to the conclusion that unless "economy" can be practised the credit of the colony will "soon fall below zero."

Economic and Financial Notes and Correspondence

Joseph and Horatio, a Recommendation.

Into the mysteries of political party organisation and the "selection of candidates" we have no desire to penetrate, but there is no harm in looking on or in being amused at the type of man apparently coming prominently forward in troops to vindicate the cause of democracy after having made money in City finance, and we may be forgiven for thinking that a bad choice has been made in the candidate of quite another sort said to have been chosen to contest Mr. Chamberlain's seat in Birmingham. He appears to be an honest working man, who knows the circumstances and aspirations of his class, who thinks straight and says what he thinks, and does not base his statistics upon emotions. That is not the kind of man at all to make a good fight against the truly romantic and sentimental ex-Colonial Secretary, the mighty man of empire, and side shows. If we might dare to offer a

suggestion to Mr. Herbert Gladstone it is that he should shift Mr. Davies to another place, and put up the renowned Horatio Bottomley against Mr. Chamberlain. There are many points of similarity in the careers of these two men, some of which we commend to Mr. Gladstone's attention, and Mr. Bottomley's peculiar merit is that, for the present, he appears to be ending in politics where Mr. Chamberlain began. In the intervals of running horses on the race course, he edits a democratic newspaper, trounces Keir-Hardie and makes promises, conjures up delusive visions of bliss to the empty pocketed shareholders of his mining and finance companies, and then he goes and says I am the true Radical for Islington. Just so the great Joseph started forth on his fuliginous career, vowing death and destruction to all privileged classes, promising three acres and a cow to those who wanted them, and more particularly to those who did not, cursing church privileges, and generally waving the lathen sword of the demagogue over the heads of all who neither toil nor spin. Later on he lured the mob by "emotional" talk of old-age pensions, and pretty things like that—and did not the great Horatio announce a gift of £250,000 to the stripped shareholders of his Hansard Union, which £250,000 they mostly still wait for, even as Joseph's working man waits for his old-age pension. Mr. Bottomley has also, times without number, announced to his admiring followers, all in the Highbury manner, the immediate advent of fabulous profits from gold digging or share punting, and only last week he was delighting those who listened to him with an exposition of the splendid profits to be extracted from continuous losses. All this seems to mark him out as the one real rival to Joseph. His persuasive tongue would be sure to work wonders in turning voters away from that most romantic and emotional man, who says that the one and only way for an empire to flourish is that its owners or real supporters should go hungry. Mr. Herbert Gladstone will, we feel persuaded, make a great mistake, a mistake that may be fatal to the campaign he is now organising, should he neglect this hint. Horatio is the one man living capable of setting Joseph down, of outshining and outbidding him, of leading the sheep wheresoever he pleases. But, perhaps Horatio is afraid of free imports! Nay, he cannot be. It would be too dreadful to think of. Make haste and secure him, ere it is too late.

A Point for Protectionists.

Not content with shamelessly twisting arithmetic to suit their schemes, Protectionists, whether following the banner of Mr. Chamberlain or Mr. Balfour, also calmly ignore historical facts lest they wrinkle the placid surface of their sophistries. Mr. Ernest Vizetelly in last Tuesday's *Westminster* drew attention to a very striking instance of this wilful blindness to past causes and their effects. Every adherent to the new fiscal policy measures our present foreign trade with that in 1872, and from the comparison conjures up fearful visions of woe and ruin. But in taking this standard of measurement they coolly set aside two important facts, the one the enormous lift given to our trade by the end of the Franco-German war, and the other a clause in the Treaty of Frankfort. That the first should be overlooked does not surprise us, but that the second is left out of the reckoning is a piece of sharp practice which we cannot understand. For, as Mr. Vizetelly points out, Germany, in addition to grabbing Alsace and Lorraine, and exacting an indemnity of five milliards from France, also compelled her fallen foe to place German commerce on the most favoured nation basis. So bitter was French feeling against this clause in the Treaty of Frankfort that the Republic speedily dissolved all her commercial treaties in order to have her hands free to build up a tariff wall against her conqueror's goods. The then existing treaty with Great Britain was therefore ended at the close of 1872, and for the remainder of the year, after notice of the change had been given, both importers and exporters were striving to get as much merchandise as possible into France before the new duties were imposed. This alone, without the post-war demand, would have caused an increase in our trade returns for the year. And the Protectionists conveniently or insolently forget or ignore such facts. Another point to which Mr. Vizetelly draws attention is the effect this clause in the Frankfort Treaty will have should the nation be besotted enough to back Balfour's Big Revolver Policy. France's first thought in adopting protection was to injure her enemy's trade, no matter at what cost to herself, so blind and unthinking was her hatred. Rather than permit German goods to come freely into her markets the Republic placed a barrier round herself to shut out all other goods as well as German, since this was the only method by which the obnoxious clause could be evaded. That barrier and the reason for it still exists. What, then, would France's position be if Mr. Balfour or any other British Minister endeavoured to compel her to give us a preference over other nations under threat of reprisals? If she gave us the preference we asked, Germany would at once claim to receive equal treatment, which France is no more prepared to give her now than in 1872. Therefore there can be no idea of reciprocity between France and ourselves unless the former is prepared to tear up the Treaty of Frankfort and take the consequences. And the French, even with all their affection for us, will think long before they make such a serious move. But thoughts such as these never seem to enter the heads of the Prime Minister and the ex-Colonial Secretary. The former is too busy, in the intervals of golf, trying to settle his convictions, while the latter is hard at work thumping the Imperial drum and shouting "What a great nation we are! We have only to speak and the world trembles." If we start on the broad path of protection we may talk till we are hoarse without the world paying much attention to us, save to jeer at our misfortunes and our impotence.

Kaffir Dividends and Rand Gold.

In our issue of September 12 we gave a lengthy list of the principal Rand mining companies, with their issued capitals, the market values of these and the sums that would be required to give a yield of 10 per cent. on the latter. The market values aggregated the stupendous sum of £177,846,400, thus needing £17,784,640 wherewith to return a respectable yield to holders and investors. This week we supplement that list with another, comprising the less known companies. As it is impossible to get any quoted prices for the majority of these we have given their nominal capitals and calculated what profits must be earned to pay 10 per cent. Should a boom be engineered the prices of these shares, whether earning profits or making losses, will assuredly be rigged to premiums, so by taking their par values we are showing every favour to the companies and the bosses. We do not pretend that it is an exhaustive list; it is the completest we can get together, which is another fact in favour of the Rand. Moreover, all are purely mining companies, directly dependent upon gold winning. There are dozens of finance companies, land companies, syndicates, exploration companies, vendor companies, and every variety of parasitic creation which we leave out of count altogether, though they must all live indirectly by the gold that the Chinaman has hereafter to delve out of the earth. It is known, too, that scores of companies are waiting a favourable opportunity to be floated, to be quickly followed by scores of others should the public be on the feed, and that existing companies must peddle out millions of shares, to provide fresh capital, when the public are in the mood to be bled. Incomplete, therefore, as our tables are, they suffice to prove our contention that it is physically impossible, unless we can obtain the whole male population of China, to turn out sufficient gold annually to give anything approaching a decent return to this mountainous mass of paper mockingly styled "capital," to say nothing of the further heaps hereafter to be piled on the existing Babylonian rubbish heaps.

Now to prove this. It will be seen that the capitals of market valuations of this second table total £109,934,700, which will require £10,993,470 to provide 10 per cent. for holders—a minimum return if such wasting possessions are to be genuinely profitable. Combining these figures with those of the first list, the aggregate amounts are, respectively, capital £287,781,100, and requisite net revenue £28,778,110. Taking the average price of the

gold at £4 per ounce, that will require, say, 7,194,500 oz. free after meeting every current outgo. Calculating the average yield from a Rand mine at ½ oz. to the ton—and the majority yield less—this will entail the crushing of 14,389,000 tons per annum. This represents profit requirements only. To reach the real requirements we must further allow for all outgoings. Let us be strictly moderate, and take the average cost per ton at 24s.—some mines are much higher, others a shilling or so less—so 24s. is rather a low average. In addition to this we must allow for administrative outgo, reserves, depreciation, tax on profits, forward balances, and so on, so if we put on another 6s., and make it a round 30s. per ton, we shall run no risk of being accused of doing what the Birmingham false prophet is doing—manipulating figures from sordid, unscrupulous motives. And such figures mean that working charges of all sorts absorb about 75 per cent. of the annual gross yield of the quartz. It follows that the 7,200,000 oz., in round figures, required to furnish 10 per cent. upon the market and promoter valuations of the properties engineered for purposes of robbery is only one-fourth of the total output required. Put the entire weight at 28,000,000 oz., and then ask how you are going to get such a figure by help of Chinese or any other cheap labour? It means a gross output of gold to the value of over £112,000,000 per annum. In 1898, the last complete year before the war, the mines produced four million and one-quarter ounces. How are the mine bosses going to multiply that output nearly seven-fold? Is it not impossible? And even were it physically possible, say, in ten years' time, will even this staggering total keep pace with the further rush of new companies and the additional capital created, let alone the market inflation? Human labour can accomplish many wonderful things, but it cannot achieve miracles. Remember, too, that the greater the output of gold each year, the more quickly will the Rand become exhausted. Gold does not multiply itself like grass, which yields a larger crop the more it is cut. Not one ounce taken out of the ground can ever be replaced. Try and conquer your imaginations, good reader, and let common sense once more guide your conduct. "My mine is all right, and I don't care a dump about any other." So say we all, do we not, and all end by being fooled. It is such imagining that makes the depredations of the bucket shops so easy—the bucket shops and the bosses.

* Companies whose shares have no market quotation.

Robert Reid and Co., Limited.

Why are the directors of this Australian trading company so shy of letting their good deeds become known to the general public. They have issued their report for the year ending July 18 last, and held their meeting all without letting a line or a syllable reach the average investor. Perhaps they do not feel quite sure that the welcome would be enthusiastic, and one of the first things we note at the foot of the balance-sheet is a remark by the auditors, Messrs. Jackson, Taylor, Abernethy and Co., to the effect that their report "has been forwarded to the shareholders" along with their certificate. Did that report reach shareholders, and if not why not? At the meeting the chairman, Mr. Robert Reid, Junr., spoke as pleasantly as he could, and duly emphasised the bad results of the drought, the railway strike in Victoria and the higher rates for money in causing forced realisations on local markets at a loss of profit. The company, it may be explained, has warehouses or shops in Melbourne, Sydney, Adelaide and Brisbane, so that the drought doubtless touched it everywhere. Hope, however, revives, and recent cables indicate fine spring weather, an improving appearance in the country, and the prospect of what is called a "record" harvest. Mr. Reid had also good news to give the shareholders, in the shape of the verdict by which £169,916 is declared to be the value of the wharf property taken over from the company by the Government in New South Wales. Up to the date of his speech, the 8th inst., this money had not been received, but doubtless it will be all right when New South Wales gets its next loan out, or vends its next batch of "Treasury" bills at 4½ per cent. In the meantime the asset is a fine comfortable one to stick in the balance-sheet. Profits, though, were not particularly brilliant. They amounted to £30,198, before deducting directors' and trustees' fees and income tax. These paid, the sum left was £26,328, and out of this all fixed charges were met, together with an interim dividend at the rate of 10 per cent. per annum previously declared on the ordinary shares. This last took £7,500, ill spared, and left only £264, so that the ordinary shareholders do not get another distribution at this or any rate per pound. Poor simple ones. However, the directors place £863 to a "special" reserve fund, as being 10 per cent. of the net profits after providing for debenture interest and preference dividend. This is not much in the way of accumulation for a company whose goodwill stands at £71,480, but then stocks are heavy, and the company not only owes £150,000 on 4½ per cent. first mortgage debenture stock but £420,244 to sundry creditors, while sundry debtors owe it only £130,708. To be sure its stock-in-trade, etc., "taken at or under cost," amounts to £368,750, and there are £112,085 worth of new season's goods afloat or landed not yet taken into stock to be set against these heavy debts, but the position is not exactly comfortable even then. However, the company had £37,258 in cash at its bankers, and £20,860 was due to it on bills receivable, so that its position is not overcharged with elements of trouble. On the other hand, neither is it as soothing as a fortune in "Khakis."

No War Cost Contribution from the African Magnates.

It has been daintily announced this week by sundry press sbirri of the bosses that although no official announcement had been made it was "pretty generally understood" that the second Transvaal loan had been "indefinitely postponed." We have understood that it would never become an accomplished fact since ever the promise of such a loan was given, and have never missed an opportunity of jeering at the empty pretence that accompanied the announcement. Those South African bosses must have had their tongues in their cheeks while they talked to Mr. Joseph Chamberlain, their humble servitor, about "guaranteeing" £30,000,000 in amounts of £10,000,000 at a time towards our expenditure upon their war, and we very much doubt whether the ex-Colonial Secretary was not as well aware of the imposture as every cool-headed observer could easily have been. They are not going to pay a farthing out of their own pockets, these African bosses, either now or at any other time. Having got our money in hundreds of millions, and persuaded us to shed our blood to serve their ends, they can afford to laugh at us, and doubtless do laugh at us. This is one more of Mr. Chamberlain's emotional illusions, burst and done with, and the country does not seem to care a farthing, is eager, rather, to tax itself still further for behoof of the same despicable gang. £30,000,000 we were to get, originally people talked of £100,000,000, and now it is nothing, and never will be anything. So far from giving us anything the £35,000,000 which we have graciously consented, through the ever stunning Government, to advance to the Transvaal in order to buy out Continental holders of the railways there—people who were perfectly content with their investment as long as we left the country to itself—and to enable the "sons of Balliol," who, under the pretence of "governing" it are now playing ducks and drakes with all its enduring interests, plus its white inhabitants, to build railways and indulge in other fantastic efforts of genius, will ultimately become a charge on the British taxpayer. We have nothing to say as long as the public is satisfied with this kind of imperialism. By all means let us have as much of it as possible, till it bursts us and teaches us a little sense. And the bosses? Oh, they are getting poor, some of them, and if you lay by a penny now and then out of what the tax dragon leaves you, who knows but what it may come in handy in buying a broom for some poor ex-millionaire when he succeeds to a vacant crossing. But the competition on such will be keen soon.

Espirito Santo and Caravellas Railway.

Although armed with a satisfactory account of the past year's operations, as referred to elsewhere, the directors of this undertaking come before the shareholders in some distress. As is well known, the Brazilian Government has in hand the much needed improvement of the Port of Rio—it recently issued a loan for the purpose—and it appears that the plans include the acquisition, amongst other properties, of the Trapiche Reis, or warehouse, belonging to this company. In England that would have been an excellent thing, because a good fat price could have been

squeezed out of the Government, but different ideas prevail in Brazil, and anything in the way of sharp practice will be performed by the authorities. A Bill has recently been introduced into the Brazilian Parliament under which the expropriation value of properties to be acquired for the improvements, including the Trapiche, would be adversely affected, the value on compulsory sale being arbitrarily reduced by 25 per cent. to 40 per cent., namely, from twenty years' purchase to 15 to 12 years. This seems unfair, and if the facts are actually as stated a very great injustice is about to be committed. No wonder the board has solicited the assistance of the British Foreign Office and His Majesty's Minister in Brazil to protest against the proposed alteration of the law, although not much can be expected from either. Cannot the Brazilian Government realise that incidents of this sort must inevitably injure its credit, never standing very high, and tend to keep foreign capital out of the country just when it is so badly needed?

Some Humours of the Chinese Labour Intrigue.

An interesting light is thrown upon the efforts of the bosses to prove that there is not sufficient black labour in South Africa for their purposes, in a letter written by Mr. Russell Harding to the *Diamond Fields Advertiser* under date September 14. He declares that during the past twelve months he has supplied natives to the Vereeniging Estates, Koffyfontein Mines, Johannesburg Municipality and Witwatersrand Labour Association, and that all to whom the men were sent were satisfied except the Rand Labour Association. "It," he says, "is like a sick child, it does not like this, it does not want that." It bars Hottentots, Griquas, Korannas, Bushmen, Bastards and Cape boys, of which fairly large numbers are available for the Rand mines and railways. "These tribes," he adds, "are employed with success by the Kimberley and Barkly West Divisional Councils for road making, and also on the Prieska railway extension." Large numbers, furthermore, are working in the local and Koffyfontein Diamond Mines. The Labour Association also objects to the physique, weight, looks and bearing of many boys as supplied by Mr. Harding. It further bars convicts, although it is a well known fact that the De Beers Company employs a very large number of convicts on its floors. All this leads up to the inference that the controllers of the Rand industry do not want native labour because it is too dear. What they are after is labour at twopence a day, as defined by the late Cecil Rhodes in a most curious and suggestive speech of his which the *South African News* has unearthed and reprinted. It was delivered by him at a Jameson banquet in 1894, when Rhodes and his friend were plotting that Raid, out of which so many horrors have sprung. Their object then even was labour at twopence a day, and it is most instructive to listen to the voice of the master out of that too much forgotten past. Like all his utterances the language is involved and often vague, charged also with ignorance of the laws governing the price of labour, but perfect in its Phœnician morality. When this speech is read in connection with the statements of Mr. Russell Harding some people in this country may realise what the purpose is which keeps the mine bosses from giving free scope to the recruitment of black labour. It is not cheap enough, and as for white, do you imagine those fellows got us to wipe out the Republics for the benefit of the British working man? Not much! Gabble about "freedom," "no taxation without representation," and rot of that sort was all very well as platform squibs and crackers when Joseph was engineering the war, but now, well business is business you know, and frauds in capitalisation have to be hidden or justified. Therefore the end is now Chinese, and when the pig-tail proves a failure—by that time the bosses hope to be all out and enjoying their fortunes.

> For two solitary months I have been continuously travelling, and, do you know, the one point that has come home to me is the question of native labour. It is a very interesting question. I feel I am detaining you, but I must mention it because I want you to think over it. I start from here, where native labour is £3 to £4 a month and food, I get up to Bulawayo and I find it is 10s. a month and food, and the telegraph is going to Blantyre, where it is 4s. a month, without the food. Then I come to Parliament, and I find that hon. members in Parliament want irrigation schemes, and fruit cultivation schemes, and then I think it out. I find labour in England at 12s. a week, that is £2 10s. a month, producing an export. I happened to go to Egypt the other day, and I found labour 2d. a day, that is 4s. a month, producing an export, and I find in India labour at 4s. a month and food producing an export. Then you talk to me about producing corn and sending it home, and you talk about fruit cultivation, and you say the farmers are very lazy and they won't do anything, but you don't think over the question. It is the labour question that is at the root of it. You are paying these natives £3 or £4 a month, and here are the people of Blantyre, with whom we are just going to be connected by telegraph, paying 4s. a month, and you are going to ruin them.
>
> You are going to introduce £4 a month. Now I am constantly meeting the gentleman who advises the Transvaal and he proposed, or made a proposition, that those natives who don't work should pay a certain tax. Then, totally apart from that proposition, a gentleman, who represented Her Majesty proposed that those who did not labour should pay a tax. Then I thought it out myself, and last session we passed a Bill, and why I refer to it is—don't think I am going into party politics, for the whole House nearly approved of it, there were only three against it on the second reading—why I can so fairly put you this case for consideration is the following:—The whole House was nearly unanimous. I will tell you a story.
>
> I remember an excellent Dutch member came to me. He said: "I am going to vote for your Bill, but I really think I am wrong." I said "Why?" Well, this member represented Victoria West, his name is Mr. Le Roux, and he replied, "Why, I hear that the member for Fort Beaufort is going to vote for it." He added, "I am sure something is wrong; I must vote against it." You know if I could put a simile—I hope I am not saying anything which will subject me to a subsequent criticism, but I think you will understand the feeling and the reason why I put it—really if you want a simile, it is just as if those ethereal beings above voted with the ethereal beings below on a substantive proposition. (Laughter.) Now you ask me why I put this proposition. I can put it as being above party politics, and what you have got to think over is this—that we have got a great country, that we cannot expect the neighbouring States to part with their independence, just in the same way, as we will not part with our flag, but on general questions like our railway tariff there is no need to go into a cut-throat competition detrimental to all of us. It is just in the same way with regard to the labour question. We have all got to think out the proposition why the English labourer works at the rate of 12s. a week, why the Indian works at 2d. a day, why the Egyptian works at 2d. a day, and why we pay, including food, £4 a month? I represent three millions of natives and they are lying idle. I know the best thing for them, would be to understand the dignity of labour, and if you ask me for a big foreign policy it is the question whether he can bring these natives to understand the dignity of labour and whether we can make arrangements with the neighbouring States to co-operate in bringing that about. (Applause.)

Australian Mortgage Land and Finance.

More important, perhaps, than the actual results of working for the half-year ended June 30 last, just submitted to proprietors, is a series of resolutions which they are asked to pass, specifically charging their uncalled capital in favour of debenture holders present and future. When the matter was first brought forward at the annual meeting held in April, certain shareholders took objection to the proposal on the ground that the debenture holders would be getting an advantage for nothing, and that the company would be preventing itself, in case of emergency, from raising funds by making a call on its shareholders, eminently reasonable arguments. So in again bringing the matter forward the directors think it well to clearly state their reasons for the proposed action, although whether they will induce proprietors to voluntarily mortgage from £20 to £22 per share remains to be seen. First it is pointed out that the main object of the company has been to borrow money upon debentures and debenture stock in England, and lend it on more favourable terms in Australia, and from the first the debenture and debenture stockholders have been invited to regard their investment as satisfactory, because in addition to the charge upon the properties of the company there was also the uncalled capital. It was always understood, so says the board, that the debenture stockholders would have the uncalled capital as part of their security, but subsequent legal decisions have shown that this capital was in no way charged in their favour, and the directors now want effect given to the original intention that all the debenture stock, including the amount still unissued, should be secured by a formal charge upon the uncalled capital. They disclaim any intention of asking for any of this money, merely desiring to correct a misunderstanding that has been brought to light by legel decisions subsequent to the formation of the

company, and to increase the value of the unissued debenture stock, thus rendering it more available when it may be found desirable to sell it. No doubt these are very excellent reasons, and quite probably until recently the shareholders always considered their uncalled capital specifically mortgaged to the debenture holders, but having found themselves relieved of this liability, it seems hardly probable that they will readily acquiesce in accepting the board's proposals. True, the undertaking is the best managed of all the Australian mortgage companies, and with its reserve fund of £250,000, all invested in good class securities, and the improved pastoral prospects, there seems no immediate probability of the shareholders having to meet the heavy share liability, but no one knows what may happen in the future, and we shall be surprised if the proposition does not again encounter opposition. Amongst the proposed alterations or additions to the articles of association we notice a rather important amendment to article 10, to which it is proposed to add the words, "In the case of shares not fully paid up the directors may decline to register any transfer to a transferee of whom they do not approve." This seems to give rather autocratic powers to the board, and although doubtless they will not be misused, it is not exactly pleasant to think that a sale of shares can be vetoed should the purchaser not be, in the opinion of the directors, a person of sufficient substance. In the annual report issued in April last it was pointed out that the practice hitherto adopted of estimating certain items relating to the working of the properties had proved unsatisfactory, and that the directors proposed in future to make up the balance-sheet to June 30, thus enabling them to include the actual results of the working of these properties for the reason ended about December 31. The accounts now submitted, however, do not include these results, because in the last balance-sheet £80,000 was set aside to an internal reserve to provide for the losses which it was known had occurred. We now learn that the actual debit was £42,228, so that the company has almost a similar sum hidden away to meet further misfortunes should they ever occur. Profits for the half-year to June 30, after providing debenture and other interest, are returned at £14,006, to which is added £5,537 brought forward, making £19,543. From this current expenses, including directors' remuneration and all charges at head office and branches draw away £13,419, and £6,125 remains to be carried forward. The expenditure on the properties relating to the current season is not included in this statement, being carried forward as previously intimated. Comparing the balance-sheet figures with those of December 31 last we note that debentures outstanding have been reduced by nearly £21,000, while liabilities on bills payable are up £41,359 to £115,179. Sundry creditors, customers' balances, and interest accrued, etc., show a decline of £23,949 to £158,952. On the other side loans on land, stations, stock and properties have increased £118,061 to £2,404,032, but advances on wool and other produce are £164,014 lower at £125,195. Sundry debtors are about the same at £53,626, and cash has risen £48,500 to £88,452. Investments, in the balance-sheet at £337,265, were of a market value of £322,469 when the accounts were made up. Speaking of prospects the directors observe that the rains which have fallen all over the country during the past nine months have produced abundance of feed to carry the reduced numbers of sheep, and the recovery already reported in the condition of the land after the protracted drought is very satisfactory. Now is the time then to proceed with the greatest caution, and by fortifying the company's position be prepared for another spell of adversity which sooner or later is certain to visit the Australian colonies.

The Exodus from Australia.

The following remarks by our Australian correspondent throw an unpleasant light on the prosperity of the Commonwealth for men do not leave a country if there is any prospect of making a living:—Australia is losing its population at a rate which is rather alarming. Every steamer that leaves these shores for South Africa has to refuse passages to numbers of men for want of accommodation; and last week, in addition to those who got away, sixty stalwart Australians had to postpone their departure for a fortnight. They are going off from all parts of the Commonwealth, but principally from the States of Victoria and new South Wales, because it is from Sydney and Melbourne only that these steamers trade to South Africa. It will convey some idea of the exodus when I state that for the first six months of the present year 11,357 persons sailed away from the State of Victoria alone, nine-tenths of whom were adults. For the current half-year, these figures give every promise of being considerably exceeded, but if the same rate of exodus is maintained Victoria will have lost nearly 23,000 of its population by the end of next December. Why are people leaving Australia, will naturally suggest itself to English readers? Because the colonies are in such straits for want of money that they cannot proceed with public works. It is a case not only of stagnation, but of actual drift. No employment, but plenty of distress, and apparently no hope of any immediate improvement. The only silver lining to the cloud is the assurance that there will be no drought during the coming season. There have been very copious rainfalls all over the pastoral regions, and at a period of the year, too, which leaves no doubt as to their effects in preventing a recurrence of last year's drought. Those men who during the drought season acquired squatter properties for a mere song will make fortunes during the coming season. But outside the pastoral industry everything else is unpromising, and it is not a good sign when so many of the farmer class are seeking fresh fields and pastures green. These men, with various amounts of capital, have left us in the hope of bettering their conditions elsewhere, principally in South Africa. As for the artisan class, the whole labour market is supplied out of all proportion to the demand, and people used to lighter occupation are workless by the thousands, as well as labouring men. And they are obliged to loaf about workless from week to week and month to month, simply because they have not the means to take them away. Only that these people are compelled to remain in Australia in their impoverished condition, the exodus would be enormous.

A South African Bank Chairman on the Country's Prospects.

Twelve months ago we published in these columns an extract from the speech of Sir David Barbour, delivered at the half-yearly meeting of the Standard Bank of South Africa. It was full of optimistic and cheering utterances, and doubtless Sir Spencer Walpole, when addressing the shareholders of the same institution on Tuesday last, would have been gratified had circumstances allowed him to tell his hearers that the predicted era of mighty prosperity had commenced. But although confident that eventually matters would turn out well he was obliged to sound a note of warning regarding the proximate future of the war ravaged colonies gained at such terrible cost. Comparing the words of the two men, one is forced to the melancholy conclusion that the past has been a year of marching backward for South Africa, and those acquainted with recent history know only too well that a long period, full of anxiety, must elapse before these devastated and ill-governed possessions can flourish as they did before the war spread ruin and disaster throughout the land. The close of the war, said Sir Spencer, led to an anticipation of an immediate and rapid revival of trade, and merchants forgot that the restriction of military expenditure and the waste which had resulted from war incapacitated the country from receiving and rapidly digesting the huge masses of goods which were poured into South African ports. The same confidence in the immediate future—how misplaced we all know—led to a rapid appreciation in land values in the chief centres of industry and trade, and to the demand for more and more capital for the development of industrial enterprise. Some signs of reaction had since appeared, and the inflation in prices of fixed property, which was particularly marked at the commencement of the year, had been checked. Because, Sir Spencer might have added, that so great is the impoverishment of the country, and so stagnant its internal trade and industries, that the inhabitants are physically incapable of paying the exorbitant prices hitherto obtaining for fixed property of all kinds. People were beginning to learn, he further observed, that time was an

essential element in the reconstruction of national prosperity, and that the progress which the war had arrested could not be restored in a moment by the conclusion of peace. These remarks were specially applicable to the gold mining industry, on which the fortunes of our new colony in the Transvaal were so largely dependent. The industry had not reached the point which it attained before the war; and notwithstanding discoveries in various out-of-the-way parts of the country we fear it never will reach a point to justify the extravagant capitalisation placed upon it. Some figures which we publish on the subject should be closely studied by those who think that the recent severe fall in the prices of South African mining shares has reduced them to their intrinsic worth, and that now is the time to buy. Skimming the surface only of the controversial labour question, Sir Spencer was content to say that the matter seemed to be approaching some sort of sclution, a very diplomatic and non-committal statement. Agricultural pursuits which suffered during the war had unfortunately been adversely affected by the drought which had afflicted many portions of the country. In Fraserburg and the adjoining districts it was estimated that over 100,000 sheep and goats had perished, and many of the farmers were quite denuded of stock. On the other hand large numbers of sheep had been sent from the Cape to restock farms in the new colonies—at exorbitant cost to the farmers, we may be sure. But Sir Spencer could not refrain from indulging in a cheerful peroration, and remarked that the governments of the various colonies were making considerable efforts for the development of the country by the construction of irrigation works, railways and harbours. Revenues had been singularly elastic, he said, and the Colonies' financial condition confirmed the impression that with good government and prudent administration—where are they?—South Africa might have before it a period of great and increasing prosperity. We devoutly wish it may be so, but cannot feel sanguine while the high and mighty governing powers, subservient ever to the mining bosses and totally ignorant of the real needs of the country, remain as at present.

The Rating of Scotch Railways.

For some time past we have noticed that the item of rates and taxes in the balance-sheets of some of the Scottish railway companies showed a decrease, and we have often wondered why. On this side of the border the steadily increasing assessments have become a stock grumble in the half-yearly speeches at the meetings of railway shareholders. Yet in Scotland they are credited with a far greater keenness in money matters than in England. How then is it that the local authorities have let slip such an opportunity to increase their rates at the expense of the railways? Considerable light is thrown on the mystery by an article in the October number of the *Railway Magazine*, on the "Valuation of Scottish Railways for Rating Purposes," from which we have extracted the following facts. In Scotland the whole system of land valuation for rating purposes, including that of railways, is governed by an Act passed in 1854, which established one uniform method of arriving at the annual yearly value of lands and heritages. The principal of this uniform valuation is that the real rent upon which assessments are to be made shall be the rent at which, one year with another, such lands and heritages might in their actual state be reasonably expected to let from year to year. Should the lands be actually let that naturally is the real rent. With regard to railways, there are, however, certain further rules laid down as to the methods to be adopted in arriving at the real value of the lands and heritages held or leased by them, which rules are contained in the following sections of the Act:—

> 21. The assessor of railways and canals under this Act shall . . . inquire into and fix *in cumulo* the yearly rent or value, in terms of this Act, of all lands and heritages in Scotland belonging to or leased by each railway, and forming part of its undertaking; and shall also inquire into and fix the amount which, one year with another, would be required in order to the acquisition, formation, and erection of the several stations, wharves, docks, depots, counting-houses, and shall also inquire into and fix all other matters necessary to enable him to make up a valuation roll of railways.
>
> 22. The yearly rent or value shall be ascertained as follows—that is to say, there shall be deducted, in the first place, from the *cumulo* yearly rent or value of the whole lands and heritages in Scotand or each such railway a sum equal to three pounds per centum of the whole cost as aforesaid of the stations, wharves, docks, depots, counting-houses, connected with the undertaking of such railway, and the proportion of such diminished *cumulo* rent or value corresponding to the lineal measurement of the portion of the line, with the addition of a sum equal to three pounds per centum of the cost, as aforesaid, of any station, etc., shall be deemed and taken to be the yearly rent or value, in terms of this Act, of the lands and heritages belonging to or leased by such railway, and forming part of its undertaking.

A subsequent Act, passed in 1867 increased the percentage to be deducted for stations, wharves, docks, etc., from 3 to 5 per cent. of their cost. The same Act also contains the only statutory direction for the valuation of a railway, which is that—

> In ascertaining the yearly rent or value in terms of the Act of 1854, of the lands belonging to or leased by any railway company and forming part of the undertaking of such company, one-half of the expenses incurred in maintaining or repairing the permanent way of railways and charged to revenue in the published accounts of such railway company for the year preceding that for which the valuation is made, shall be allowed by the assessor of railways as a deduction before the *cumulo* yearly rent or value of each railway is fixed.

Such is the law, now let us see what may and has happened in practice. The valuations are made upon the gross earnings for each preceding year, less working expenses and certain allowances for tenants' profits, interest depreciation, etc. Five per cent. on the cost of all stations, buildings, wharves, and so on, is then deducted from the valuation to be given to the parish, county or borough in which the stations lie, and this deduction is a preferential charge upon the assessment. But it may so happen, as it did in 1901 with the valuation of the Highland Railway, that the deductions for the stations exceeds the whole amount of the assessment. If this takes place, then those unfortunate local authorities which have no railway buildings within their boundaries, but only mileage, get nothing. In 1901-2 the valuation of the Highland Railway worked out at £22,491, while the deduction on account of the stations was £23,700, leaving a deficiency of £1,209, so all that the county of Perth got was 4.75 per cent. on the cost of the stations within its borders. The explanation given by the Assessor of Railways was that the increase in the expenditure on coal, wages, repairs from various causes had materially reduced the real value on which the assessments was made. No other case has been quite so flagrant as this, though nearly all the companies have reduced their assessments, and now the local authorities are beginning to be seriously alarmed lest they see this source of income entirely vanish. Memorials have been addressed to the Secretary of State for Scotland, and he cannot see his way to bring in a Bill to remedy matters, the authorities mean to try on their own account.

Robert Stephenson and Co.

Of the many unfortunate ventures with which the names of Pease and Furness have been associated, none has proved such a lamentable failure as Robert Stephenson and Co., engineers and shipbuilders, of Newcastle and Hepburn-on-Tyne. We had a lot to say about the position of affairs when the annual report was issued in April last, and were quite prepared for the announcement made at the yearly meeting that more money was required to complete the graving dock. No definite scheme was promulgated—that was to come later on—and in the meantime the company was to resort to temporary borrowing. We now learn that in September last £60,000 was raised on a second debenture stock, making a total debt outstanding of £310,000, besides the share capital of £500,000. This is a tidy amount for a concern which finished 1902 with a debit balance of £34,773—notwithstanding that not a penny was provided for depreciation of the rapidly wasting assets. Most will remember that the preference dividend was guaranteed up to December 31, 1902, and that guarantee being now at an end the business must rely upon its own resources. No wonder then that a further heavy fall has occurred in the company's securities, until the quotations for the £10 preference and ordinary shares and the £100 debenture stock are £1, £3 and £74 10s., respectively, with business almost impossible in any of them. Subjoined is a list of the principal shareholdings, and it will be noticed that Armstrong, Whitworth and Co. are largely interested.

This firm was not only one of the dividend guarantors, but it also arranged in 1899 to use the graving dock for all its war vessels for a period of fifteen years—the dock which is not yet complete. At what price was the Robert Stephenson holding valued in the recently issued Armstrong balance-sheet?

Bank Failures in America.

Had we only seen our New York *Commercial Chronicle*, as that man of keen wits and pen who conducts the City columns of the *Pall Mall Gazette* reminds us, we should have had nothing but sympathy to extend to Messrs. John L. Williams and Sons, of Richmond, and Messrs. J. William Middendorf and Co., of Baltimore, two Southern banking firms that have come to grief in the recent "contraction of market values" over yonder, firms "which must be considered the victims of an abnormal situation," the estimable *Chronicle* tells us. It is indeed abnormal for, as the New York correspondent of the *Pall Mall* informs us, the two banks together had a capital of probably not more than £200,000, but that did not restrain them from entering into commitments in connection with various enterprises to the tune of something like £40,000,000. One of the partners in Williams and Sons of Richmond was president of the Seaboard Air Line system of railroads, and the two firms together have been very active in promoting railroad and industrial "deals," especially in the South. In pursuance of this high industry they worked up the capital commitments of the Air Line to more than £20,000,000 in shares and bonds, and the banker president seemed to aim at being the Pierpont Morgan of the South. It is to be hoped that the real Pierpont is not going to share his fate. Not content with the Seaboard and its £20,000,000 odd, they turned their attention to street railways in order to form one of the biggest combinations of such in the South. In pursuance of this grandiose design they wrapped up in their scheme the principal street railways in Norfolk, Portsmouth and Berkley, and in addition constructed three plants for manufacturing gas, six ferry lines and three ice-making plants. Their company also carried on three pleasure resorts in the suburbs, and altogether ran up a capital in shares and bonds of about £4,500,000. Both firms, this correspondent says, had also to do with the Virginia-Carolina Chemical Company, the recent slump in whose securities is conjectured to have affected them, and Mr. Middendorf is one of the committee appointed by Baltimore investors to "brace up" the Cotton Duck trust if possible, and through his firm a very large quantity of its securities was placed upon the market. Altogether their commitments foot up, as already mentioned, to no less than £40,000,000, which is not a bad figure to erect on the top of £200,000, but the entire narrative is beautifully illustrative of latter-day Yankee finance. It appears to be a combination of vanity drunk imagination and typewriter.

The Post Office Savings Bank.

Mr. Alfred Marks writes to us as follows with reference to our note of last week upon his examination of the Post Office Savings Bank accounts. We are in agreement with all he says, for he speaks as a shrewd practical banker, and amongst other things gives expression to the mischief done to ordinary bankers by the average high rate of interest offered to depositors in the Post Office Savings Bank. That high rate of interest has much to do with the hopeless mess into which this sample of bureaucratic business capacity has now tumbled. The Post Office Savings Bank is insolvent, and were this fact to be grasped by the multitude of the depositors they could force it to close its doors in forty-eight hours. Not only so, but they would also force the Government of the country to its knees and shatter it, ricketty structure that it is. But partly because this danger is real, and one not likely to be removed in our time by any more wise or commonsense methods of administration, we have not insisted too emphatically on the actual bankrupt position of the Bank. What we prefer to dwell upon is the liability of the nation as a whole. It will have to make good to the depositors of the Savings Bank the loss caused by Chamberlain's South African war, and by the gross mismanagement of the institution from the beginning, be that loss £10,000,000 or £20,000,000. The Government dare not allow the Post Office to default, and yet to-day it could not repay £5,000,000 of the deposits in hard cash without bringing the whole credit fabric of the country into imminent danger of collapse.

"In commenting on my article in the *New Age* on the subject of the deficiency of the Post Office Savings Bank, you suggest a reduction of the rate of interest to 1¾ or 1½ per cent. In my opinion the rate should certainly be reduced to not more than 1½ per cent., which, having regard to the State guarantee, would be a full rate, probably quite equal, over a series of years, to the rate earned by depositors in a joint stock bank. Granting the philanthropic basis of the Post Office Savings Bank, its aim should be limited to giving to thrifty persons of the working class security for their savings, with a moderate

rate of interest. As it is at present conducted the Post Office Savings Bank attracts depositors of the well-to-do classes who are quite able to take care of themselves. I greatly doubt, however, whether the Post Office Savings Bank is in a position to make the reduction. Is it at the present time prepared to face the possible withdrawal of deposits lodged with it for the very reason that it gives a higher rate of interest than can ordinarily be obtained from a trading bank?

"You suggest that a cash reserve should be formed by the appropriation of the profits resulting from a reduction of interest. But it must be remembered that before this could be done the existing law must be altered. The Act 40 and 41 Vict. (1877), c. 13, requires that any profit shall be handed over to the Exchequer. In accordance with this law the sum of £1,598,767 was paid into the Exchequer in the twenty years, 1876-1895. We find, therefore, this remarkable state of affairs. When the Post Office Savings Bank makes a profit, that profit is seized by the Exchequer. When a grave deficiency is revealed in the value of the securities, the Commissioners for the reduction in the National Debt and the Treasury neglect to act on the power given to them to make good the deficiency out of the Consolidated Fund.

"In writing to a financial journal, one may use greater freedom than in a newspaper for general readers. I may, therefore, remark freely in your columns on the extreme danger of publishing a balance-sheet containing the startling announcement that the liabilities exceed the assets by six millions. We are nearing the close of the year: what is likely to be the result of disclosing a deficiency of perhaps ten or twelve millions? What is likely to happen if the depositors lose confidence? I cannot but regard the position of the Post Office Savings Bank with grave anxiety. There is yet time for the authorities to act on the powers conferred on them expressly in view of the contingency which arose four years ago."

A Loan for Johannesburg.

Baulked by circumstances over which they have no control, and unable, therefore, to earn a handsome commission on a £30,000,000 loan, to be subscribed by us in aid of our own war costs, which have already run, taxes and loans included, to over £250,000,000, the mine bosses have still a chance to pick up a few pounds. Johannesburg is in awful straits for the ready. It tried to get out a £4,000,000 loan in London some months ago, but the underwriters' agony had begun, and the attempt failed. So Milner, the universal prosperity provider under De Beers, has advanced £600,000 on behalf of what is called the "British Government" of the Transvaal—out of other borrowings, doubtless—but only till the end of the current year. As the local banks either want too much or have too little faith in the security offerable by 75 square miles of ground, plus 100,000 white and 82,000 black or towny "natives," the "municipality"—all free and elected on the Chamberlain model suffrage, you know, the suffrage we poured out our blood and our treasure to secure—is coming to London. It will be satisfied with £3,000,000, we gather, so now is your opportunity, oh, bosses. Down with the dust, and show your "patriotism." No? You want 5 per cent. commission for underwriting the issue? Really, really, now; why not 10 per cent. Your chances of "making a bit" out of us poor investors are getting so rare. But the progress is sublime.

Baldwins, Limited.

Not many companies are happy in the possession of so self-sacrificing a board as this one is, and its philanthropic acts and deeds, as set forth in the annual report to June 30 last, deserve the fullest light of day. We may commence by expressing pleasure that the manufacturing and trading profit of £108,354 exceed the best year set forth in the prospectus, and are many thousands of pounds above the poorest results therein disclosed. Adding to this revenue small sums received for back interest and transfer fees, and a total of £110,447 is arrived at. First of all are deducted directors' fees and managing director's remuneration, trustees' fees, etc., £12,455, depreciation £10,000, and sinking fund premiums £5,651, leaving a balance of £82,341. From this debenture interest absorbs £11,078, balance of interest on purchase money £3,611, and preference dividend £14,447, so that £53,204 remains. But although the whole of the ordinary shares are held by the vendors and directors, not a penny of this money is divided amongst them. Instead the directors charge against the year's revenue the sum of £30,259, being special expenditure for alterations and improvements at works, write off the whole of the preliminary expenses £6,799, place £5,000 to reserve for contingencies, and carry forward £11,146. The directors are entitled to congratulation for these efforts to put the business on a sure foundation, and doubtless one day they will be duly rewarded. Including £19,528 added during the year, and after deducting depreciation and reserve for contingencies, the properties are valued at £569,167, against which there is a capital reserve of £19,323, and sinking funds of £6,931. The item, however, does not take into account goodwill, trade marks, etc., which are separately entered at £165,186. Trading accounts are largely in favour of the company, cash and bills amount to £40,323, and stocks to £249,176. Next year, no doubt, the directors will commence an ordinary reserve, and they may perhaps allow depreciation on a rather fuller scale, so as to be on safe ground when the first triennial valuation of the land, buildings, plant, machinery, etc., is made in 1905.

Underground Electric Railways Company of London.

The interest in this important undertaking is not confined to those directly involved as investors, because when the many underground railway schemes which it has in hand are completed, the London City and Suburban inhabitant will find his means of transit so vastly improved that only with a shudder will he reflect upon the days when there was no choice between pedestrianism and one of Pound and Co.'s lumbering buses. It was this company, too, which, through its control of the London United Tramways, "dished" Pierpont Morgan and his crowd out of that little tube scheme from Hyde Park Corner to Palmer's Green, a feat for which we shall always hold it in high esteem. A report just issued for the period to June 30 last gives details of the work accomplished to that date, and it will be seen that this is of an eminently satisfactory character. The power house at Chelsea will provide the current for the Metropolitan District Railway, the Great Northern, Piccadilly and Brompton Railway, the Baker Street and Waterloo Railway and the Charing Cross, Euston and Hampstead Railway, and every effort has been made to push the work with all possible rapidity, for until its completion none of the railways can commence operating. It is difficult to calculate when it will be completed, but the directors hope to see it in working order by January 1, 1905. The work of converting the District Railway is rapidly progressing, and it is believed that by the time the power house is finished the whole of the District lines will be ready for electrical operations, intelligence which travellers on them will receive with thankfulness.

As regards the Baker Street and Waterloo Railway the line between Baker Street and Waterloo is completed with the exception of a short space of tunnel under Portland Place, and that is expected to be finished at the end of the current month. This line will be ready for working at about the same time as the District, and at the meeting of the Underground Electric Company held on Thursday Mr. Yerkes announced that a connection between the two railways would probably be made at the Charing Cross station of the District. Further, the Baker Street and Waterloo Railway had decided to extend its system from Waterloo to the Elephant and Castle, while the extension from Baker Street to Edgware Road is about to be commenced. When it is finished the line will be still further carried on to Paddington. Next referred to is the Great Northern, Piccadilly and Brompton Railway, on which good progress is also reported. The connection with the District Railway at Earl's Court station has been arranged, and the work commenced. Ten of the station sites for the Charing Cross, Euston and Hampstead Railway have been acquired, at which work is being actively prosecuted, the running tunnels being driven rapidly. As is well known, about a

year ago a controlling interest was acquired in the London United Tramways Company, and since then the extension to Hampton Court has been opened, with very satisfactory results. The acquisition of this system will render the problem of transportation much less difficult, for the reason that with the connections at Hammersmith between the District Railway, the Great Northern, Piccadilly and Brompton Railway and the London United Tramways, the transfer of passengers will be greatly simplified. Everything possible is being done to ensure immunity from fire, so as to give the public perfect confidence in using underground railways.

As was to be expected, the balance-sheet is an imposing looking production, and reaches a total of over £6,500,000. Half the ordinary share capital of £5,000,000 has been paid up, and on the profit sharing notes for £6,999,931 issued in June last the amount received to date is £3,115,300, less £24,399 interest allowed on instalments paid in advance, and £3,884,632 is still to come in. The amount received in respect of construction contracts is £450,351, liabilities for Parliamentary deposits come to £209,593, and sundry creditors, etc., £268,827, complete the debit side. On the other the most important items are investments in stocks and shares £2,334,321, and cost of railway construction and expenditure £2,250,841. It is pleasant to hear that the outlays have been considerably within the estimates made at the time the company was organised. Freehold land and buildings, including generating station and transmission line are valued at £384,763, Parliamentary deposits come to £269,593, sundry debtors, etc., owe £80,706, and cash comes to £919,450. Discount on issue of profit sharing notes £279,997, is carried as an asset. A long time must elapse before we shall know whether all these enterprises are to prove financially successful, but the names of those in control are sufficient guarantee that everything will be conducted for the best, and we see no reason why the reward in due course should not be good enough.

Critical Index to New Investments.

*** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Tasmania Gold Mining Co., Limited.

This company has been formed to take over the property of a Tasmanian company known as the Tasmania Gold Mining and Quartz Crushing Company, Registered, which is said to have produced since 1888 gold valued at over £2,000,000, and to have paid away in dividends £769,072, but is now apparently drowned out. Its pumping plant, at any rate, has proved insufficient to cope with the large quantity of water in the mine, and as further equipment is wanted the property has been transferred to this company through the inevitable intermediary syndicate, which, of course, seeks to make its own profit. The Colonial Mines Syndicate paid £20,000 in cash and £210,000 in shares, and having formed this company with a capital of £500,000 in £1 shares, transfers its interest for £19,500 in cash and £247,000 in shares. Another 210,000 shares, of which 180,000 are to provide working capital, are offered for subscription, and the Syndicate turns a further honest penny by guaranteeing these for a consideration of £10,500 in cash and £43,000 in shares, out of which it pays underwriting commissions to others of 25 per cent.—one-fifth in cash and the balance in shares. All the directors are interested in both the Syndicate and the subunderwriting commissions, and some of them stand to make a fair sum out of their deal should it come off. Messrs. John Taylor and Sons, who have two representatives on the board, have reported that, assuming the reef maintains its size and value, they estimate that with the proposed additional stamps the mine should be capable of producing a profit of £95,000 to £100,000 per annum, and if this proves a correct forecast, the company will have been made to pay dearly for its new capital. It is, however, a very big if, and under the circumstances the shares are only for the gambler.

Victorian Loan.

The London and Westminster Bank announces that it is instructed by the Government of the State of Victoria to offer holders of the £5,000,000 4½ per cent. debentures maturing on January 1, 1904, a choice of converting them on the undernoted terms. For each £100 of the expiring debentures they may take either £108 Victorian 3½ per cent. consolidated stock, redeemable 1929-1949, or £100 Victorian 4 per cent. Treasury bonds, repayable July 1, 1906, plus 25s. in cash, with the option of converting into 3½ per cent. stock at 104 at any time up to December 31, 1905. In both cases the holder retains the coupon due an January 1 next. In the former alternative a full six months' interest is payable on April 1, or in other words a bonus of 17s. 6d. or three months' interest will be given, and in the latter the interest is not payable until July, but this is compensated by the cash payment of 25s., equivalent to a repayment of ½ per cent. per annum for the entire currency of the bonds. A sinking fund of 1 per cent. of the amount issued is to be provided annually towards the redemption of the 3½ per cent. stock offered, and due prominence is given in the prospectus to the fact that it is a trustee security. Debentures will be received by the London and Westminster Bank up to November 4, and all debentures not lodged by that date will be paid off at par on January 1. The issue, however, has been guaranteed so that the conversion is probably assured.

Passing Events.

Two great free-trade speeches were made this week, one by Lord Rosebery at Sheffield and the other by Sir Henry Campbell-Bannerman at Bolton. Of the two Sir Henry's was the best, for not only did he demolish Mr. Chamberlain's fantastic economics, but he also laid down the outlines of a programme for his party. Still it is cheering to see that the "plougher of the lonely furrow" is sound on the fiscal question, in spite of his notions of Liberal Imperialism. "A mass of glittering soap bubbles" is the description he applied to the Brummagem statesman's schemes, bubbles which when the hand tries to grasp them vanish into nothing. Joseph's career, Lord Rosebery pointed out, has been one long unbroken tale of promises made but never fulfilled, old age pensions, that precious cow, and now the pig, which is the least likely of all to come to fruition. How, then, can a man with such a record expect the nation to accept a policy based on mere hypothesis and assertion unsupported by facts or figures, save only those cooked for the purpose. Throughout the speech his Lordship riddled again and again preferences and retaliation alike, but, as we said before, Sir Henry Campbell-Bannerman went beyond this, and spoke more like a far-seeing statesman. In addition to pulverising the "moulted ministry," with its idea of a big revolver and Joseph with his catapult, he described to the nation the lines on which it must proceed to protect itself against similar attacks in the future. In other words he sketched the true "protection" policy. The one speech was that of an able man, the other that of an able leader. Sir Henry was especially severe on Mr. Chamberlain's methods of working his agitation. Raising bogeys out of mere nothingness is not the way to gain the suffrages of the nation, yet this is the method he has chosen to adopt. But Sir Henry's speech exposed the turnip lantern and the broom stick in all their shameless nakedness.

Mr. Leonard Courtney summed up the character of the hollow and uncalled for agitation started by Mr. Chamberlain—apparently in revenge for his defeat over the corn tax by Mr. Ritchie—in true and forcible language. Mr. Chamberlain's ideal of a self-contained empire, Mr. Courtney said at Glasgow, is a delusion, and must lead to discord. "Britain has lived on free trade, and free imports are her life blood." Mr. Chamberlain's policy is impossible of realisation in its political form, and only calculated to introduce the most odious manœuvring and

bargaining of interests between different parts of the empire, so that it tends to make for disunion rather than union. Yes, and it also tends to a dishonesty in the conduct of business probably without a parallel in our history, but the agitation itself being root and branch dishonest there is nothing else to expect.

So the latest form of the "Consistent, Birmingham," kill or cure trade pill is "every man to make his own tariff." A "commission" would be appointed to go round the country—all in the screw vending manner—and ask each particular manufacturer what he would like. Having found this out, arrange your tariff "accordionly," as the hedge evangelist said. Could anything be more simple? But is not the trader to pay for his tariff?

In a speech to his constituents, last Wednesday, Mr. Asquith drew attention to the fact that had it not been for our intervention at the close of the Russo-Turkish war of 1878 Macedonia would have been freed from the Turk at that time. For by the Treaty of San Stefano the Macedonian Christians were liberated from the direct rule of the Turk, only to be thrown back into his clutches by the Treaty of Berlin, the treaty which gave us "peace with honour." Having perpetrated this cruelty, for it was nothing else, we should at least have seen to the welfare of the poor wretches, the living sacrifice to our ambition. But we have not, and our attempts to check the Sultan's misrule have been feeble and half-hearted. If the nation's affairs at the present moment were directed by ministers worthy of the name, instead of the inept crowd who waste time in weighing the balance of criminality, what moral influence we have left would be thrown on the side of Russia. France and Italy would at once join in, and the combination could neutralise any attempt at interference Austria and Germany might make from jealous motives. Whatever proposals the four Powers made to the Sultan he would be forced to accept, and the possibility of war would rapidly vanish. Yet until we get something better than the present "moulted ministry"—happy phrase that, Sir Henry—matters will drift on in the Balkans until Turkey forces Bulgaria into a fight, the consequences of which may be disastrous to the peace of the whole continent.

All rumours of strained relations between Japan and Russia are emphatically denied by both Powers who seem most anxious to assure the world that "All's well" in the Far East. Yet the bear still keeps one paw on Manchuria, and scrapes away with the other at Korea, in spite of Japan's diplomatic protests against the infringements of her rights. Moreover, while talking and scraping are going on troops and munitions of war are being poured over the Trans-Siberian railway as quickly as possible, for Russia, wiser than the Stock Exchange, recognises that Japan in the end must fight or lose its position in the Far East. We are in this case decidedly pro-Japanese, though we wish they could possess their souls in patience for a few years, since there are many changes pending in the Slav empire.

The Right Hon. Richard Seddon is in a desperate hurry. Hardly is a new loan hinted at in budgets than a Bill empowering his Government to raise another £1,000,000 is brought into the legislature. And along with this satisfaction of a felt want, a Provision is inserted to allow the Government to borrow on short-dated debentures "bearing a maximum interest of 5 per cent," so as to be in a position to "redeem," as it is humourously called, the immense mass of old obligations falling due next year and the year after. How do the inhabitants like the provisions of the new Land and Income Tax Assessments Bill, also introduced, which is to graduate the land tax and impose a heavier burden upon absentee landowners? It also makes foreign mining companies carrying on business in New Zealand liable to income tax. We shall see wonders.

Queensland's Finance Minister bears the name of Kidston, it may be advisable to state, and he is not up to the mark established by some of his neighbours, for he talks of a deficit of nearly £200,000 for the year ended June 30, 1904, the revenue being expected to fall short of the late Treasurer's estimate by £185,000. This will never do, Mr. Kidston must buck up and bring out a surplus, else how is the next Queensland loan going to be floated? He also talks of a country opposed to fresh taxation, and of economies to be effected by reforms in administration, recommending this self-denial as a course to be pursued with courage and cheerfulness, as the shortest and safest method of promoting the effectual and permanent well-being of the state. To be sure, and how much is the colony going to borrow within the next twelve months or less?

Mr. Fielding, the Finance Minister of the Canadian Dominion, denies that he pledged the Ministry of which he is a member to support Mr. Chamberlain's policy on condition that no contribution was asked for from Canada by the mother country for imperial defence. "I have not used the words attributed to me in conversation with anybody at all," Mr. Fielding said, and that is satisfactory as far as it goes.

Was it Sir Trout Bartley who announced to an admiring United States the other day that when he gets back to the old country the London bus is to die the death? It is good news, we hail Sir Trout as an ally. The City corruption, in the shape of livery companies enjoying immense revenues, which really represent property in trust for the whole Metropolis, will disappear, and the released revenues—say about £1,500,000 per annum—will be applied to such excellent purposes as the widening of bridges and thoroughfares so that the tramways may be brought across the river at every focus of traffic, and north and south joined. This must be what the good Sir Trout means, for short of such a reform the 'bus will hold the highway, because city clerks and the public at large will ride.

A copy of a pretty sharp correspondence between the boards of the Buenos Ayres Western and Bahia Blanca Railways has been sent to us, and we must say that after reading it our sympathy is with the Bahia Blanca Company. After an *ad referendum* agreement had been reached, and the fact made public, to the incitement of considerable speculation on the Stock Exchange, the Western's Company's board writes to the Bahia Blanca board to notify that it declines to recommend the agreement to the shareholders for ratification. Pressed to give reasons for this unlooked for decision, its secretary replies "the bad state of your line." An examination of the Bahia Blanca road, made after the agreement had been concluded, led to this decision. "But you examined the road before," the Bahia Blanca Company's secretary answers, "not once but often, and knew its condition perfectly." If that be true, and we see no reason to doubt it, the Buenos Ayres Western Board comes badly out of the dispute. But there may be something behind.

Over 200 shareholders have assented to the action proposed to be taken against the vendors of the Yorkshire Wool Combers' Association, and this support being sufficient to enable proceedings to be taken and carried through to a conclusion they will be commenced as soon as practicable. A circular is to be sent to all the share and debenture holders who have not joined in the proceedings requesting them to do so before the 31st inst., up to which time those joining in the movement will participate in any sums regained.

Anybody who wants to speak intelligently on the artificially started question of the hour, or who desires to get reliable facts about our foreign trade into his head, cannot do better than buy the threepenny pamphlet just issued by the Free Trade Union, 8, Victoria Street, Westminster. Its title is "Handbook for speakers on the Tariff Question," and it is packed with excellent material.

An interesting pamphlet has been issued by the Cobden Club, entitled, "The Balance of Trade: An Explanation of the Growing Difference between Values of Imports and Exports." It is from the pen of Mr. Shaw Lefevre, and, like all he writes, is carefully put together and interesting to read. One of the points made by him is that this country has gained immensely during the last thirty years by the great fall in prices. Most of its foreign investments carry interest payable in gold, and the price of all the articles required by us for food and manufacture has fallen during the past thirty years from 30 to 50 per cent., measured in gold. For this reason

alone the imports tend to swell out, and Mr. Lefevre might have added that the fantastic agitation now being carried on to mislead the country implies the deadliest blow to our foreign investments it would be possible to conceive. Income tax payers may think that they will get some relief should foreign corn and manufacture be subjected to a more or less heavy tariff at British ports—although that is probably a delusive hope as long as the present helpless and extravagant Government remains in power to obey the behests of the ruthless spending departments—but even were they to get this relief under direct taxation the damage done to their investments abroad would certainly be immeasurably greater, as we have been continually insisting. Customs' duties on foreign imports mean levies upon the proceeds of British money invested abroad, as well as trade disorganisation of a most far-reaching description. The pamphlet is full of other valuable facts and thoughts, and as it only costs threepence it should have a great circulation.

We congratulate the Clerical, Medical and General Life Assurance Society upon their handsome new quarters in the city, at King William Street. In order to give the policy holders an opportunity to inspect the new building, the chairman and directors held a reception there this week, and we doubt not all who attended it went away well satisfied with the investment. At present the society only requires the ground floor of the building, and the upper floors are therefore to be let as offices, the rent of which should bring in a good revenue. But the Clerical and Medical always has made shrewd investments.

What is this we see in the *Monte Video Times*? The New York Life Insurance Company charged with "bankruptcy" in Uruguay, and talk heard of a receiver, or judge, or something, being appointed to look after the interests of Uruguayan policyholders. That cannot be true. There may, though, be some row on between the Uruguay policyholders, of whom the same newspaper says there are between 300 and 400, and the company. Is it connected with unstamped policies, or what? Policyholders here might wake up sufficiently to look whether their policies are regular according to the English law, and duly impressed with the English stamp. We are in the dark, however, as to this dispute until further information reaches us.

"As soon as the labour commission issues its report, a draft ordinance regulating the importation of Asiatic labour will be published." Thus cables Reuter's Agent from Johannesburg. The whole enquiry was a pre-arranged farce then, just like Joseph's tariff hoax. Well, we knew that before, but hardly expected the bosses and their children of Balliol to admit it so openly.

We continue to receive cheering news regarding the bounding prosperity of the United States all fostered by protection. The latest is that 4,200 men have been discharged from the New York Central, other railways of the Vanderbilt system, and from the Southern Pacific Railway, orders having been issued for cutting down the working staffs both on the lines and in the railway shops. The order is attributed to a decrease of freights and "general losses all round." And the worst of it is that there is said to be a concerted action among the chief railways in the country for a similar reduction, on account of the necessity for economy. Blessed protection, the rejected have "old age pensions," no doubt.

Particulars of the Council of Foreign Bondholders' arrangements for the unification of various issues of cedulas made by the Federal and Provincial Governments of Argentina have been made public. We are not concerned with them, and have no space to set them out in detail. What cedula holders there may be in this country are recommended to send to the Council of Foreign Bondholders' office and get the particulars for themselves. But there are one or two questions we should like to ask. Did the Council of Foreign Bondholders consult the committee of cedula holders or act on its own responsibility in getting up the consolidation? What commission does it get for entering into this transaction, and how is it to be paid? Is it the case that the final resolutions were passed by members of the Council and not by members of the cedulas committee, and is it true that cedulas whose original security is poor are lifted into precisely the same position as those whose security was comparatively good? The whole thing is a hole and corner affair, quite characteristic of Lord Avebury's Council, but it might be worth the while of those who hold cedulas to act on these hints and find out a fact or two. We know too little to give judgment; only enough to be inquisitive. Meantime do not cut off the January coupons.

Might we humbly suggest to the Tariff Reform League that it should adopt for its motto, "Curiosus nemo est quin idem sit malevolus." For the benefit of the leaguers the motto means, freely translated, "No one seeks an enquiry without evil intention."

RHODESIAN MINING RETURNS.

They are again very, very poor, poor enough to curse over. They are growing worse and worse month by month, and indirectly bring us the message that Rhodesia is at present in a bad way, with little prospect of getting into a better until the Chartered Company and the mine bosses think it to their interests to stir things up, if they can any more, which we doubt. The output for September of 18,741 oz. is, as our table shows, the lowest since February, in spite of the fact that the labour supply must have increased. At any rate, it could not have fallen off so suddenly and mysteriously as to account for this rapid drop. But the Rand Labour Commission has been sitting and the public must be shown what can be done if certain aspirations are not gratified.

PREMIER CYCLE COMPANY.

When reconstruction becomes necessary it is as well to carry out the work thoroughly, and this view was evidently taken by those responsible for the reorganisation of this concern. Its share capital is now only £175,000, against the previous amount of £600,000, the vendors surrendering £100,000, and the preference and ordinary shareholders submitting toreductions of 50 per cent., and 80 per cent. respectively. As a result land, buildings, plant, etc., and goodwill are entered in the latest balance-sheet at £163,549, against the previous amount of £644,195, and the items are segregated instead of all appearing under one head as formerly. After deducting fair amounts for depreciation, freehold land and works stand for £38,757, and plant, machinery, etc., at £20,760, while goodwill still looks important at £104,031. Most of the reserve has disappeared in the re-organisation process, but against trifling floating liabilities of £5,698, debtors owe £43,426, and cash and bills in hand amount to £47,269. Moreover, a new reserve of £25,000 must be built up before a dividend greater than 5 per cent. can be paid on the ordinary shares. As to results they are very satisfactory, speaking by comparison, the gross profits being returned at £77,126. Deducting general expenses, £45,696, repair and depreciation allowance, £6,187, and debenture interest, etc., the net balance is £19,275, against a loss of £7,001 in the preceding year. Deducting this debit, £12,275 is left, from which preference dividend at 7½ per cent. takes £9,375, and £2,899 is carried forward.

The Investors' Review.

The Week's Money Market.

Bank Rate 4 per cent. (Advanced from 3 per cent. on September 3.)

Norfolk House, Friday Evening.

There is nothing very interesting in the Money Market this week. Credits have been shockingly cheap because they are, one may say, the product of mortgages upon future wealth, not on wealth already realised. The Government has raised £5,000,000 from the Bank in order to tide it over the end of the quarter, and this £5,000,000 has enabled credit jobbers, banking and other, to find the instalment on the Transvaal guaranteed loan, nominally £4,500,000, and perhaps actually some £3,000,000, and to meet other payments so that seven day money has never risen above 2½ per cent., and has often been 2¼ per cent., while call loans have seldom risen above 2 per cent., and have often been merely 1 per cent. Banks charged the Stock Exchange 4 to 4¼ per cent. for loans to the end of the month and got better rates than the condition of the market warranted. The slushiness has been as great to-day as earlier in the week, and seven day money could occasionally be had for 2 per cent., although bankers seldom admitted accepting less than 2¼ per cent. The India Council, however, got 3 per cent. for a fair sum renewed for a month.

Because of this ease discount rates have shown a tendency to recede. In vain do the bill brokers struggle to get 3⅝ per cent. on three months' bank bills, they often had to take 3½ per cent., and bills of this class due within the year have frequently been discounted at 3¼ per cent. This is so perilous a position that the Bank has interfered and tried to stem the downward movement by renewing some of its previous borrowings from the market up to the end of the month. It has gone on borrowing on Consols, in short, and that clumsy expedient has been forced upon it by the inertia of the Treasury. Perhaps it is afraid to issue more Treasury bills, having already such a mass of that form of Government "kite" on the market. None the less is it bound to issue some security that the outside market will buy so as to relieve the Bank and restore to it some power over the credit market. In view of a probable export of gold to Egypt to-morrow bill brokers again struggled to put rates up this morning, and some houses quoted 3⅝ per cent. as their minimum for three months' bank bills. The finest working rate was certainly 3 9-16 per cent., which is rather better. Comparatively few bills were on the market.

How great the danger is may be understood by the position of the gold market and of gold demands upon us. It is estimated that between now and the end of the year Egypt alone will take away nearly £2,500,000 at an average speed of about £300,000 a week. The Continent is also in the market, both France and Holland being, till this afternoon, feared as competitors for the £400,000 to £500,000 in gold bullion arriving in the beginning of next week, and it must never be forgotten that our payment for the Netherlands South African Railway puts it in the power of Dutchmen, South Africans and Germans to draw millions of our metal away if they like. Against these probabilities of export we can only see a certain or probable £2,000,000 in gold sent in by India to prop up the empire, half of which is due here in ten days, and whatever sums the Bank can secure by competing in the open market. The price of bars there has risen to 77s. 10⅜d. per oz., a price above what the Bank is generally inclined to pay. The bullion brokers, however, anticipate that it will give 77s. 10¼d. for Monday's supply, and as the French and Dutch exchanges are to-night both slightly harder, it is hoped that the Bank will get the whole of it.

SILVER.

After a slight hesitation at the end of last week the market for bars experienced a burst of activity, during which the buying increased to such an extent as to produce a substantial advance in prices, more particularly for cash. The rise had its origin in the anxiety of bears to cover October deliveries, and in the extreme scarcity of the metal, and just at first it checked the inquiry on Indian bazaar account completely, but as the demand became fairly general while supplies were let out in a very sparing fashion by holders, buying from that quarter was once more resumed, and helped to lift quotations still further. Most of the support was given for prompt delivery, and the price for this consequently finished ½d. better at 28⅜d. per oz., while forward metal, after touching 27⅝d., went back a little on a rumour that the Straits intended shipping Mexican dollars to this country for remelting, and closed ⅜d. up on the week at 27 9-16d. per oz. The report would appear to be quite without foundation, as such a transaction at present values would involve a loss of 1½ per cent., which no bank or institution would voluntarily incur. Tenders for the Rs.50,00,000 of India Council drafts this week amounted to Rs.3,15,35,000, all in bills, and applications at 1s. 4d. per rupee received about 26 per cent. The amount to be offered next Wednesday is again Rs.50,00,000.

Exclusive of £80,000 last week paid over in aid of local expenditure making the total of such payments to date £3,933,504.

TREASURY BILLS OUTSTANDING.

The Government's necessities call for the issue of yet more Treasury bills, and notice is given that on Thursday next tenders will be received for £2,000,000 in three months' currencies, the bills to be paid for on October 27. With this addition the total outstanding will be increased to over £27,000,000, an amount which will probably grow larger still before the end of the year is reached.

Stock Market Notes and Comments.

PAPERING OVER THE CHASMS.

It is interesting, though not edifying, to watch the tragi-comedy continually played in and around the Stock Exchange. When the Consol settlement was surmounted at the beginning of this month all the financial press broke out in a chorus of congratulations in the usual strain. "Wonderful strength of markets," "marvellous resisting power," and suchlike, the refrain of the chant being always "now is the time to buy." A tip, said to be given by Lord Rothschild, through the *Daily Chronicle* was seized upon by the "bulls" of Consols, and by some few investors, with such effect that the price was rushed up a couple of pounds from the lowest published—by no means the same as the lowest actual—quotations in a few days, and then we were assured that "now all the mischief is at an end." It is curious, by the way, to note, with what eagerness the speculative, and even the investing, classes of people catch hold of tips coming from vendors whose interest it is that they should buy. The story was put afloat some days ago that £10,000,000 of Consols had been absorbed by the public, and would be transferred to private investors at this mid-monthly settlement, the fact being that the Consol account is only settled once a month. If £1,000,000 proves to have been bought by investors we shall be surprised, and if £10,000,000 has been picked up nine-tenths of that amount, you may be sure, will have to be contangoed at the end of the month. But what were the real facts? One firm in the Consol market had to be helped over to the tune of several millions, and in City gossip Lord Rothschild himself is credited with having come to its assistance by taking over £2,500,000 of its Consols at 85. The firm has still some assets left, it is said, although they may be unrealisable just now, but here is one example of the foundation for the stability markets exhibit. They are in such a mess that the big credit institutions and finance houses of the City dare not let the truth appear.

And now what has happened at this mid-monthly settlement, again got over, we are told by the financial press in unison, without a failure? "Marvellous," "Stupendous," "buy for all you are worth," "markets are so strong they must have touched bottom." Such is the kind of rubbish daily put before the eyes of the simple public. But what are the facts? Well, one of the largest firms in the Stock Exchange has been practically wiped out. We are very sorry for it. Its senior partner all through the days of his wealth has been one of the most generous, open-handed men in the City, and he has also been one of the straightest of dealers. Some of his partners have little or no experience, are men bred in the lap of luxury, to whom business is unfamiliar, and whose training has predisposed them to take empty sounds and symbols for facts. Because of the senior partner's over sanguineness he has lost his fortune, which, not so long ago, was £500,000, and because of the inexperience of his partners they are said to have lost £350,000 amongst them, and even then the gap has not been filled up. What the total losses amount to we do not know, the figure has not been disclosed, but we guess it to exceed £1,000,000, and again the banks and finance houses interested have had to step in and prevent an open insolvency. No wonder, for the firm believed in the United States Steel Corporation, and its senior used to talk about Steel preferred as "being quite as good as Consols." That might not be saying much, but faith of the kind has spelt ruin to many of those who held it besides this unfortunate firm. Had they followed the Investors' Review they would not have been ruined. From the first we have treated this monster Yankee promotion as—to use the apposite and just language of Mr. Frederic Harrison, applied to the Birmingham tariff imposture—"a palpable swindle." Such it was in its inception, such it is proving to be in its decline and fall. But the firm was also deeply engaged in Kaffir shares—Gold Fields, Rand Mines, Coronation Syndicate, goodness knows what—and likewise has several hundred thousand Stratton's Independence shares. Is it any wonder then that it is now cleaned out.

We repeat, we are genuinely sorry for the men struck by such appalling misfortune, but regret does not warrant one in hiding the truth. There was a rise in prices on pay day, Kaffir shares rebounding, and markets all round professing to be happier, and once more the Press, obedient to the finance masters, are telling the public that all is over, and that the time has come to buy. Oh no, the time has come to sell. The market sold "bears" of Kaffir shares and other things because it has had an inkling of what was about to happen for some time back. It is three months since we first became aware of the struggles of this huge firm to keep its feet, and many inside the Stock Exchange and out sold bears upon the chance of its being obliged to stop, when all the fat would have been in the fire. Those who had sold for the fall dashed in to buy back when the danger of open failure was averted, and up jumped quotations. Buying came from Paris, some of it perhaps through the Rand boss finance houses that have branches there. A general scramble arose to "get in," but the public was not buying and should not buy. What every holder of Kaffir shares, no matter what their alleged character may be, should do on every flutter of prices upward, such as yesterday witnessed and to-day sustained, is to sell out and take the money. If the bosses are so confident of the future, so perfectly sure that an army of Chinese is going to dig out gold at the rate of £50,000,000 or £100,000,000 per annum so as to make every shareholder happy, let them for the present keep the shares. Give what you have long held and grilled over back to them, so that they, and not you, may stand the racket until the harvest of gold and precious stones is near, so that they may have to find the tens of millions further of actual hard cash required before the swarm of projected or embryo mines can be fully developed. Why should you go on paying bankers' interest and contangos so as to relieve these mighty men of the load? Sell on every advance, and never touch the things again until the end of the present welter of insolvency has been seen.

For we are only at the beginning of catastrophes such as we have described, and patchings up or paperings over like those already perpetrated in the Consol and other markets merely signify an increase of pressure upon credit institutions. The banks and large Rand bucket shops or finance houses, option gambling institutions and such like, have had to step in and take up the carcase lest its complete disintegration should overwhelm them. These banks and finance houses are accordingly weaker now than they were while the strugging and overloaded firms were being drained of their own last shilling. The abandoned masses

of paper are being carried in amounts of millions by these fresh props until their turn comes to succumb. Step by step this will go on until some banks and finance houses have to face the music; then the liquidation will be something to astonish mankind.

Do you begin to understand now why the Investors' Review is always against buying securities at the present time? Does it do any good to put aside its perfectly disinterested arguments and revelations with the parrot cry of "pessimist, pessimist"? Has it not told you the truth throughout these years? Have not the events it has so persistently foreshadowed taken place? You can answer these questions at your leisure. Look back over past years and see. To us it matters not, but to you it may mean much.

The Week's Stock Markets.

To the intense relief of the Stock Exchange the mid-monthly account was adjusted without open failure of any kind, large or small, and members gave vent to their satisfaction by indulging in a Kaffir boomlet. So a week which at its commencement gave every indication of being a repetition of its immediate predecessors ends with happiness abounding, and everyone ready to once more shout "the worst is now over." They had better pause to reflect, however, that although no actual defaults have come to the surface, only covering up and manipulation of a peculiarly skilful kind has again allowed the Stock Exchange to present a bold front to a somewhat indifferent public, and that at least one big firm's affairs have been liquidated and taken over by certain important finance houses who dare not let it openly default. Rumour has it that the business will be wound up and disappear. It was a fear that even this melancholy way out of the difficulties would not be possible, and that actual failure must take place, together with the Far Eastern war scare that made markets so wretchedly weak at the outset, and the temporary smoothing over of the troubles, both internal and political, which caused them to pull together towards the end. But this little ebullition means nothing, and it need hardly be said that markets are now more inherently unsound than they would have been had a few open defaults been permitted.

Consols commenced in their usual style, and before the first day of the week was many hours old touched 88⅛ for cash on free selling, said to be due to the reported imminence of a conflict between Russia and Japan. Transvaal scrip fell heavily as well, going as low as 2⅛ discount, but from these points there was a gradual recovery, as Far Eastern affairs seemed less threatening, and a report was about that the £30,000,000 to be contributed by the mine magnates to the war expenses had been abandoned, or at least postponed. So Consols close unaltered for money, at 88 9-16 to 88 11-16, and for the account at 88 11-16 to 88 13-16, and the Transvaal scrip recovered to 1½ discount, leaving it unmoved. Khaki stock held its ground, and India 3 per cent. finish ½ better. Home County and Corporation stocks attracted very scant attention, and only Liverpool 3 per cent. moved as much as 1. They were weaker to that extent. In the Colonial list a few improvements were to be noted, including Victoria issues down to that of 1885, Cape 4 per cent. of 1881, Natal 1919, New South Wales 3½ per cent. and 4 per cent., South Australia 1916-36, and Queensland 4 per cent. New South Wales 3½ per cent. closed 1 lower.

Japanese bonds came in for chief attention in the Foreign bond market, and were roughly handled when the troubles with Russia seemed at an acute stage. At one time on Monday the new 5 per cent. bonds were driven down to 90¾, and the sterling loan to 79½, and finished 3½ and 2 lower respectively on that day. Business was pretty brisk, and the latest 5 per cent. issue went back still further before it commenced to recover, but as soon as the outlook appeared more reassuring the advance was almost as rapid as the fall, the "bears" rushing in with some precipitancy. Chinese securities not being within the immediate zone of disturbance never gave way much, and where losses did occur they were partly recovered before the close. Russians likewise wiped out early declines, and the market closes quite firm looking with little apprehension apparent anywhere. With so much attention concentrated on "political" securities, things nearer home were rather neglected, and it was not until near the end that some good Paris support for Portuguese new 3 per cent. sent them forward rather rapidly. They leave off ¾ up. Spanish and Egyptian Unified also met with favour from the Continent, and close ¼ and ½ higher. Argentine and Brazilian securities moved within narrow limits, and show very small movements, while Venezuela Consolidated and Costa

Rica "A" lost 3 and 1, Colombian bonds 1½, and Costo Rica "B" ½. Rates were light at the carry over on Tuesday, and never went above 5 per cent. on even the worst class of rubbish stocks. Spanish were continued at 3 per cent., Portuguese and Greeks at 4½ per cent., Turks at 4 per cent., and Russians and Italians at even to 2 per cent. On leading South Americans the charge was about 4½ per cent., except Uruguays, which were done at even to 2 per cent. for the 3½ per cent., and 3 to 5 per cent. for the 5 per cent. Japs cost 3 to 5 per cent. to carry over. Making up prices mostly favoured the bulls, principal exceptions being Venezuelans, Costa Rica "A" and "B," and Japanese, the last named being 4 lower for the fives and 2¼ down for the fours. Egyptian Unified advanced 1¾, Portuguese and Hungarians 1¼, and leading Argentines ¼ to 2. Servians improved 2½.

Home Railway ordinary stocks were influenced by the political fears in the early part of the week, and some very heavy declines were recorded throughout the list, but when the account came to be arranged it was found that money was not nearly so much wanted, and with the lighter charges exacted for carrying over, the general feeling became more optimistic. A small but steady recovery in prices has gone on since, without much real business to justify the upward movement, but only here and there was the advance sufficient to wipe out the earlier losses, and by far the greater portion of the list still shows heavy declines. Brighton ordinary and deferred, for instance, were 2 and 3 down, South Eastern deferred fell 1¼ and the ordinary 1, Great Eastern and Great Northern deferred declined 1, and Chatham ordinary, Great Central deferred, Caledonian deferred, and North British preferred all finished ⅜ to ½ lower. Underground stocks were very depressed, City and South London receding as much as

2, and District dropping 1. On the other hand, Midland deferred rose 1½, Great Western 1, and North-Western ½. The account open in these stocks is considerably smaller than it was, but whether the reduction is due to investment buying or to the closing of speculative accounts it is impossible to say. Contango rates on Tuesday were substantially easier in the case of the "heavy" lines, where "takers in" of stock were unable to get more than 4 to 4½ per cent. for their money, instead of the 6 to 7 per cent. ruling for months past, but in such things as Brighton "A," Dover "A," District and Great Northern deferred, which are of a more speculative class accommodation still cost from 6 to 8 per cent. Movements for the account were not so uniformly adverse as on the previous occasion. South-Western ordinary and preferred showed recoveries of 2 and 1, Chatham preference was 1½ up, and Great Central preferred, Great Northern preferred, Great Western, Midland issues, and South-Eastern preferred all gained 1. Brighton deferred, however, lost 4, and that figure was also shed by Caledonian ordinary, while the preferred and deferred were each 1½ down. North British deferred fell 2¾. Central London and Metropolitan receded 2½, City and South London, Furness and District 2, South-Eastern deferred 1¾, North-Western 1¼, and Great Eastern, Great Northern Deferred, and North British ordinary declined 1.

Yankee railroad shares have had to struggle against the uneasiness and dread created by the weakness displayed in Industrial securities on the New York market, the reported cancellation of iron and steel orders, the discharge of men by the railways, the closing down of two important mills by the Steel Trust, and last but not least the disclosures regarding the manipulation with regard to the United States Shipbuilding Trust. Under these circumstances it is rather surprising to find that in many instances the changes on the account are favourable, while even those which were adverse were mostly fractional. Southern preferred and Denver preferred suffered most, with losses of 9½ and 6 respectively. Denver common fell 2¼, Reading second preference 2, and Pennsylvania 1¼, but nothing else declined more than 1, and against these there were advances of 2½ in Erie ordinary, 2 and 1½ in the preference, 2 in Illinois Central, 1¼ in Atchison ordinary, and 1½ in Baltimore preference. Continuation rates in this section were also lighter than last time, at 3 to 5 per cent. The steady liquidation of Steel Trust issues has been the principal influence in Wall Street again this week, and railroad securities were largely neglected. On this side the usual routine has been followed, and prices each morning, after being adjusted to parity, were left alone until New York gave an indication of its mood. That market usually began by lending sufficient support to lift quotations a little, and then turned round to try and snatch a profit, yet on balance the list shows a majority of gains for the week. Atchison ordinary rose 2, but the preferred fell ½. Baltimore ordinary were 1 up. Louisville advanced 1½, Erie ordinary and first preference ¾ and 1, Milwaukee and Illinois Central 1, and a few

others were ½ or so higher. Southern preferred, however, declined 4 on sales for the Continent, presumably in connection with the failure in Amsterdam, and the ordinary fell ½, Denver preferred and Wabash preference lost 1, and Chesapeake and Missouri and Texas dropped ½.

Rumours of financial trouble in Montreal were freely bandied about this week, and although they were strenuously contradicted there was sufficient justification for believing them in the admissions made that the market there was passing through the most critical stage of its history, owing to a renewal of the heavy liquidations of speculative accounts. Wall Street evidently thought there was some truth in the stories, as operators there threw out Canadian Pacific shares to an extent which forced the price down to 120¼, but they pulled up again, and finished only ¼ lower, at 122¼. Grand Trunk stocks were also heavy, partly because the traffic return showed an increase of only £10,300, while double that amount had been expected, and the depression was further accentuated by sales from Glasgow, where the difficulties still appear acute. At the close the ordinary stock was 1 down and the third preference 2¼ lower. The guaranteed and other two preference stocks are less fancied by the speculator, and were practically unaltered. Making up prices show losses for the fortnight of 2⅜ in the ordinary and 4 in the third preference, but a gain of 3 in the guaranteed, while Canadian Pacific shares were only 1 down. Indian Railway securities have hardly moved this week, and the solitary change of importance on the account was a loss of 9 in Bombay and Baroda stock.

Trading has been poor in the Argentine group of railways, and movements for the most part were unimportant. Bahia Blanca and North-Western preferred stock, however, fell as much as 3½, and Cordoba Central first preference was marked down 5, but the Central Northern section debenture stock of the latter improved 1. Buenos Ayres and Pacific ordinary rose 2 on the dividend announcement, and Buenos Ayres and Rosario deferred and preferred stocks lost 1. Guayaquil and Quito first mortgage bonds were put down 2, but other South American issues were hardly mentioned all week. Mexican Railway stocks have all fallen away, notwithstanding the rapid advance in the price of silver, and the declaration of a dividend of 1⅞ per cent. on the first preference, against an expected dis-

tribution of 2 per cent., sent them sharply back. At the end the ordinary was ¾ down, the first preference 2 and the second 1½ lower. Mexican Southern also receded 1. During the fortnight the trend of the market has been mostly downwards, and losses predominated in the making up list. Most of the changes were merely fractional, but Bahia Blanca and North-Western preferred declined as much as 5, and Buenos Ayres and Rosario ordinary and preferred stocks fell 3 and 5. Antofagasta ordinary stock lost 4½, San Paulo ordinary 5, and Mexican ordinary and first preference were 2 and 4½ lower.

Miscellaneous markets were idle and uninteresting with prices dull and still inclined to give way. Lyon's shares were particularly depressed on rumours of dissensions amongst the directors and the retirement of the chairman, but the stories were categorically denied, and a recovery ensued. Aerateds were heavy again, but Nelsons recovered on some "bear" closing and finish 1-16 up. Sweetmeats had to face the smaller traffic decrease of £475, but nevertheless receded half-a-crown, while Liptons kept steady after last week's fall. Gas Lights and South Metropolitans continue in favour and put on 2 and 1. Textile things eased off a little while home Iron and Steel securities kept fairly steady. United States Steel issues, however, were badly knocked about, and close 1½ down for the common and 4⅝ lower for the preferred. National Telephone deferred fell back 2, and Waterworks showed renewed weakness. East London declining 6½ and Grand Junction "D" 5. P. and O. deferred lost 2.

Except that Consols flinched a little this afternoon on the fear that a big lump of gold will leave the Bank tomorrow for Egypt, all markets are leaving off firm in spite of an apathetic public. The Kaffir Circus is particularly strong, and the merry men of London Wall are putting it about that they are not sellers, not by any manner of means, but buyers to any extent; so now is your chance. Let them have all the shares you are tired of carrying. They probably think that the news of arrangements having been perfected for the importation of Chinese will cause a rush of buying on the part of the public. We hope not, and believe they are mistaken, but by all means let them buy till they grow blue in the face with the exertion. Part of their campaign for the rise appears to be worked from Paris, but the French public does not seem to be doing any more to help it than we are.

MINING NOTES AND NEWS.

This has been another week of suspense and anxiety. For a deplorably distressing account has been in course of settlement, and no man could foresee its developments. When prices dropped so alarming and unintermittently during one of the worst fortnights the market has experienced for goodness knows how long, sad faces were to be seen everywhere, for it needed no exceptional skill in arithmetical calculation to estimate the heavy differences speculators would have to face. At the previous settlement, it was no secret that many had to be helped, and the uncertainty to be faced this week was, would it be possible to shield them once again from the effects of the merciless avalanche? Hence there has been much whispering as to this, that, or the other probable failure; as to the likelihood of this big firm, and the other little firm going under, and no wonder the observer has gazed upon disconsolate visages, when not on those of bears. Monday was contango day in the mining market, and the making-up list was not a cheerful thing to look upon. Not only did practically every share in the Kaffir list show a loss unrelieved by gains, but the majority of the falls were heavy. In the van was the decline of 1 3-16 in that highly speculative paper, H. E. Proprietary, happily not much in the hands of outsiders. Other big losses were 15-16 in Modderfontein, ⅞ in Welgedacht, ¾ in Bonanza and Wemmer, ⅝ in Consolidated Gold Fields, Crown Reef, Geduld, and Rand Mines, 13-16 in City and Suburban, 9-16 in Anglo-French Exploration, ½ in Angelo, Henry Nourse, and Rose Deep, with several relapses ranging from ⅜ to ⅛.

With little speculation open for the rise, and a lot open by the "House" for the fall, rates were again light, the majority of shares being continued at a charge of 6 to 7 per cent., whilst on other specialities, such as De Beers, Chartered, East Rand, Rand Mines, etc., the figure was lower. Rhodesians were generally contangoed at 6 to 8 per cent.

For the new account there has been just a tinge more brightness in the market, and prices have in several instances shown a sharp recovery. It is declared that the mine magnates have been giving support, and this is highly probable, for no buying has come from the outside public. Paris has likewise been buying, so it is reported. A rumour has been in circulation to the effect that the second Transvaal Loan has been postponed indefinitely, thus releasing the magnates temporarily (?) from their heavy underwriting engagements, engagements they never treated but as a good joke at John Bull's expense. Naturally, the market has tried to make the most of this as a bull point, arguing it would give the bosses greater freedom and resources wherewith to support the market, so prices improved, the bears bought back on the news that banks and big wigs interested had had to unite to hide the smash of one of the biggest firms of brokers in the exchange. Paris bought, too, hoping for a boomlet to let it out again, and all may be happy as crows at a donkey's funeral in the space of three days.

Both the Rand and Rhodesian outputs have been published this week, and each is disappointing. The total of the former for September was 276,197 oz., an increase of only 4,279 oz. over August. The value of the gold was £1,173,211, against £1,155,039 in the previous month. Figures of the native labour supply are published simultaneously showing the paltry net gain of 238 boys, the total number employed at the end of September being 68,466. The Rhodesian production has been gradually falling away since last February, and was only 18,741 oz. in September, in comparison with 19,187 oz. in August, and 23,571 oz. in July. Should this rate of retrogression continue there will come a month when Rhodesia will have to report "no output."

With respect to native labour no news of any outstanding importance has come forward. Since our last issue another week has brought us nearer to the impatiently-awaited report of the Labour Commission, which is, so some say, to terminate the woes of the Kaffir market. A telegram has been received from Lisbon intimating that the board of the Nyassa Company has approved the contract with the Witwatersrand Native Labour Association for the engagement of natives within the limits of its territories for the purpose of temporary immigration to the Transvaal mines. The arrangements provide for the recruiting of natives for a period of two years, and for their repatriation after the expiry of the contract. A cable on Thursday stated that immediately the commission issues its report a draft ordinance regulating the importation of unskilled labour will be published.

The West Australian making-up list offered a striking contrast to the South African, for here rises predominated, the principal being ¾ in Great Fingall Consolidated, ¼ in Associated and Ivanhoe, 7-32 in Sons of Gwalia, and 3-16 in Golden Horseshoe and Kalgurli. For some days past it has been rumoured that concerted efforts are to be made by the leading spirits to put some life—or an appearance of life—into this department by a display of support, and a lift to prices. Whether the movement has actually commenced, or is about to commence, we do not know, but the market certainly wears a more cheerful aspect than it has worn for some time. We doubt whether any such tactics will succeed in bringing in the public, who have been utterly disgusted by recent scandals, scandals that are not yet buried out of sight. The public have freely talked about the "dirty era," but instead of being able to feel that this is ended, lo, they are dragged forth to witness another exhibition of unwholesome linen washing, the scrubbing of which is still going on. This does not help to purify the atmosphere, and though prices may be raised to tempt the public and to take their eyes off disgusting sights, the great probability is it will have no such effect. Only this week, the directors of the West Australian Goldfields have issued a circular to their shareholders again postponing the publication of the long-overdue accounts, an event that is not likely to strengthen confidence and re-assurance in Westralianism.

West African shares, like Kaffirs, relapsed heavily during the past account, Gold Coast, and Ashantis making up ½ lower, whilst losses of ⅜ were shown by Adansis and Wassaus, ¼ by Ashanti Goldfields, Akrokerris, and West African Syndicates, 7-32 by Abbontiakoons, and 3-16 by Gold Coast Amalgamated, British Gold Coasts, and Taquahs. Prices further declined at the commencement of the new account, but they have recovered later. Dealers have been encouraged to put them higher on the publication of a circular from the Wassau Company, stating that crushing has commenced at last, with ten stamps. These are not likely to earn large profits, but it is explained:—"This is in accordance with the program settled with Mr. Feldtmann, by which the mill will be gradually got into full work, and the plates set, with ore extracted during deveopment before regular crushing with clean ore from the stopes is commenced." It is added that "good progress is being made with the cyanide plant, and it is now probable that it will be in working order by the time the regular crushing with the full mill commences. In his letter, dated September 22, Mr. Feldtmann reports that the reef which had been lost in the No. 5 level north, had been picked up in the cross-cut east, and that it assays over 3 oz. for a width of 28 in."

The miscellaneous market has again fluctuated in an irregular, irresponsible fashion, without any distinct tendency. Little or no business has been done. Rio Tintos made up ⅜ higher, and they have continued on their upward progress during the week.

United South Africa Association.—The directors of this concern publish their report and accounts for the sixteen months from its formation to June 30 last. There are three credit items in the profit and loss account, viz.:—By net profits realised, £34,822; interest received, £1,744; and transfer fees £91. The auditors explain that "the profit realised is generally arrived at by deducting from the proceeds of shares sold their average cost price and no increase in value over such cost is credited to the profit and loss account." After deducting outgo and allowing ten per cent. for depreciation, a profit of £25,655 is shown, out of which the directors recommend the payment of a dividend of 1s. 5d. per share, "being equivalent," it is explained, "to ten per cent. per annum on the amount from time to time called up on the shares of the company," and this will absorb £17,928. They

further recommend that the cost of formation of the company, amounting to £7,389, be entirely written off, which will leave £338 to be carried forward. A very good balance-sheet is issued. The company assisted during the year in the formation of the Premier (Transvaal) Diamond Mining Co., Limited, the Fede a ion Syndicate, Limited, and the Orangic Main Reef, Limited. Boring operations undertaken on another property, on the Farm Doornkop, have been disappointing, the gold values of a reef that was struck having been too poor "to justify the assumption that the average value of the reef in this region would be payable."

"The Jumpers" Gold Mining Company.—This company was able to re-start crushing operations last March, and up to the end of the company's financial year, July 31, 9,570 tons were milled, and 2,491 oz.of gold extracted, including the results of the cyanide treatment. This realised £10,446. Notwithstanding that and revenue from dividends, rents, etc., there is a loss on the year's working of £15,265, although no provision has been made for depreciation. With respect to the latter, the directors offer the explanation that:—"The general manager has reported that the machinery and plant, with the repairs and alterations made during the year, are now in a better condition than at the end of last year. In view of this, and also on the recommendation of your general manager, the board have decided not to write any depreciation off machinery and plant." Deducting the above loss from the amount brought forward, the balance-sheet shows a diminished credit of £10,797. At the end of July the company had liabilities aggregating nearly £23,000, being some £7,000 in excess of cash and other available assets.

Ferreira Gold Mining Company.—In terms of the resolutions passed at the special general meeting of this company held on the 10th inst., the directors now offer 5,000 new shares at £20 each. The whole issue has been guaranteed at £19 per share, for a commission of 5 per cent. We may remind readers that the increase of capital is to purchase the mining property, buildings, plant, machinery, and other of the Johannesburg assets of the Worcester Exploration and Gold Mining Company. The scheme was dealt with fully in our issue of August 15.

Main Reef Deep.—This subsidiary of the Consolidated Main Reef Mines and Estate, Limited, has issued its report and accounts to the end of June, the former stating that "no work has been possible during the past year owing to the want of native labour." Ordinary expenditure totalled £4,645, against which were received the sum of £190 refunded by the Government on account of claim licenses paid during the war, and £1,787 from interests, etc. On capital account £3,786 was spent, less £511 received, making a net outgo of £3,274. No profit and loss account is yet issued by this company. It displays as much as £31,500 cash in hand, with debtors down for £416, against liabilities aggregating £2,286. Although this company is only in the development stage, and ultimate profits and dividends are most uncertain, nevertheless it has issued thousands of shares at a premium, bringing in a total sum of £33,867, less £2,000 paid in commission and guarantors.

Main Reef East.—This is another subsidiary of the Consolidated Main Reef Mines, and it likewise issues its report and accounts for the twelve months to June 30, the expenditure still being capitalised. For a reason similar to that given in the preceeding note, no work has been done on the property during the past year. Ordinary outgoings totalled £5,260, and incomings from interest and claim licenses refunded, £2,035, leaving a balance on the wrong side of £3,225. On capital account a net amount of £220 was spent. Cash totals 38,158; liabilities are trifling.

Chimes West.—"Owing to the financial position of your company no work has been done on the property, and your directors regret that, under the existing labour conditions and the consequent depression, they have not been able to formulate a scheme for placing the company on a working basis," is the sorrowful admission made in the report of this company for the year ending May 31. However, 21,770 claims have been sold to the Kleinfontein Deep, Limited, for 1,125 shares per claim. To enable the company to exist in these depressing times, it has borrowed from the Anglo-French Exploration Company, the loan having been increased this past year by £1,750 to £39,696, of which £7,946 represents accrued interest. The only revenue received was £877 from licenses recovered for the war period, and there is now an accumulated debit of £72,140. Cash is only £599, and sundry debtors appear for £151, against £1,161, against sundry creditors. The directors express the opinion that should a favourable opportunity arise for the sale of the Kleinfontein Deep shares it would be in the interests of the company to dispose of them in order to liquidate the liabilities. Quite so, but when is that opportunity likely to come?

Rand Klipfontein Company.—For some time past this company has been engaged in boreholing to find gold, and after a prolonged suspension of this kind of work, operations were resumed in August of last year, and it is said, the Main Reef series has really been intersected. Unfortunately, however, the results "have proved the main body to be pinched, and of low grade," and we offer our condolences. However, one bore has brought out an average of 6.35 dwts.—which would not strike anyone as being other than also low grade—nevertheless the directors joyfully say:—"This latter strike leads your board to the conclusion that, at last, taken in conjunction with the strikes on Geduld and Cloverfield, a well defined and payable section has been located." Interest, water revenue, and sundry receipts gave a total of £2,028, and by charging depreciation to premiums, the debit is kept down at £14,164. Cash totals £47,348, liabilities being trifling.

West Australian Gold Fields, Limited.—The accounts of this company were due months ago, and the annual meeting ought to have been held last April. At that time, however, both were postponed until the autumn. Autumn has duly arrived, but instead of the accounts being published, as promised, the shareholders have received another circular apprising them of still another postponement. Similar reasons are given, namely, the carrying through of certain negotiations. "That we were right in not holding the meeting in the spring," the circular runs, "has been very clearly proved, inasmuch as we have been able to successfully carry out certain negotiations which, if the meeting had been held, and a public discussion taken place, would have been seriously jeopardised, if not rendered impossible. We are now engaged in carrying on other negotiations of equal importance, and public discussion of which could not fail to be most detrimental to the shareholders' interests." The meeting is now postponed until the commencement of 1904, when a balance-sheet to December 31 next will be issued. It will be seen there is an air of tip-toe mystery about these negotiations, which cannot but excite keen curiosity, and which we shall expect to see result in some wonderful piece of good fortune for the shareholders. On the other hand, it may not; expectations may be aroused which will not be realised, that seems the greater probability. For the meeting could easily be held without running the risk of making these wonderful negotiations public. The directors could not be forced to say what they did not wish to say, so the excuse is a very lame one. Figures are given showing that dividends received during 1902 totalled £11,914, whilst for the nine months to the end of September, they aggregated £8,419, "so that," argue the directors, with swift logic, "if it had not been for outstanding commitments the dividend on the preference shares, which amounts to £9,660 per annum, need not have been passed." Then they conclude with a magniloquent peroration, as vague and as indefinite as though it were written by the sacred Joseph himself:—"We have passed through a period of intense anxiety, demanding constant attention and great personal responsibility and sacrifice, but, happily, the position has improved, and is improving. We believe that with patience and by the pursuance of the policy adopted during the past twelve months the company can be brought back to something like its former condition of prosperity." Such is the "belief" of the directors. But don't you buy the shares.

Akriporisu (Ashanti) Syndicate.—The accounts of this Jungle Company for the year ending December 31 last—it will be noted the directors have been in no haste to issue them—show that £11,768 has been spent on the Akriporisu property and £405 in London. It is stated that since the closing of the accounts and up to September 30 last, further expenses have amounted to £9,068, of which about £7,586 has been spent upon the Eduam property. Unfortunately—and we record the fact with visible grief—the operations on the Akriporisu have disclosed no payable reefs, accordingly it has been resolved to suspend all work here and to "concentrate the whole energies of the staff on the development of Eduam." Not that the Akriporisu has been definitely abandoned. Oh, no. The directors have still got their eyes upon it. The Eduam property, it is said, is developing "satisfactorily." At the point of discovery at a depth of 23 ft. the lode was found to be 5 ft. wide, and in driving upon it south-west and north-east ore bodies 20 ft. and 8 ft. in length gave values on assay from 22 dwts. to 31 dwts. per ton, so it is concluded, not exactly by the rules of strict logical deduction, that "the results fully warrant the hope that, with deeper sinking, more stable conditions will prevail, and a payable lode be opened up." We shall see what we shall see and nothing more definite can be said. The company is burdened with slight liabilities, against which it has a goodly amount of cash.

West African (Gold Coast) Mining Corporation.—By the sales of logs and timber, which brought in £13,337, this small company managed to keep down its loss on the past year's working to £372. This is deducted from a credit of £3,043 brought in, thus leaving a balance of £2,671 to be carried forward. The financial position is not a particularly strong one, as the company had only £588 in cash at the end of March last—the date to which the accounts are made up. Debtors, however, owe the sum of £7,040, against an indebtedness to creditors of £3,971. What are called "investments" are valued at cost at £6,324, but shareholders are not enlightened as to what this asset consists of. They are probably shares in other Jungle companies, the market prices of which may be lower than their original cost.

Road Block Gold Mines of India.—The directors of this company have issued an abstract of receipts and payments on capital account to October 2 for presentation at the forthcoming statutory meeting. Out of a capital of 180,000 shares 119,685 shares have been allotted, upon which 1s. has been called up. Altogether £5,757 has been received and £1,561 spent, leaving a sum of £4,196 at the bank. The new shaft proposed by Mr. Thomas Richards was commenced on August 18, and the superintendent reports that good progress is being made.

TRADE AND PRODUCE.

Wheat.—The chief feature of this market continues to be the absence of buyers, either of cargoes or of futures. Holders valiantly put prices up on several occasions whenever the news from America was especially good, or things looked blacker than usual in the East and Far East, though even this manœuvre did not induce buyers to come in, and on the whole the week has been dull. Much of the English wheat this season is very poor in quality, and prices in consequence nearly everywhere show a tendency to decline. The weather is solely responsible for this inferiority, and the wheat that was still unharvested last week has now been absolutely ruined by the recent storms. In America values have varied far more than they have here, and though small receipts tended to strengthen the position, it was not strong enough to

withstand the effect of disappointing cables from Europe, or selling orders from the West. Bradstreet's estimate of the wheat in sight east of the Rockies this week is 33,056,000 bushels, compared with 33,043,000 bushels last week, and 47,961,000 bushels a year ago, while the probable yield as based upon the Government crop reports is now only reckoned at 659,028,000 bushels, compared with the estimate of 669,841,000 bushels made last month.

Wool.—As the weather gets colder so business improves, and nearly every centre reports a better demand this week. For cross-breds prices continue firm, since the stocks are limited, and there is no prospect of an increase for some months to come. Merinos also are well held, and as there has been a slight increase in the demand for them, prices for the raw material are not only decidedly firmer, but likely to remain at their present high level in order to restrict consumption. Trade both the Continent and Colonial is fairly good, the demand from Australia and Canada being steady, while considerable quantities of ready-made goods are going to the Cape.

Linen.—Though the general tone of the market continues healthy, the demand is not expanding at the rate usually expected at this time of the year. This, however, was not unexpected, and for this reason the disappointment is not so keen, nor is any change for the better looked for until the close of the year. Manufacturers are only taking any business offered them at full rates, since even the present demand is sufficient to keep their looms fully engaged. For brown bleaching power looms there has been no appreciable change in quotations, in spite of the demand absorbing the output. Hand-loom linens, both light and heavy, are in moderate request at firm prices, while in unions business keeps well up to the level of previous weeks, and there is every prospect of an improvement taking place shortly in spite of the unsettled condition of the cotton market. In other branches. though the volume of business is fair, there is still room for a change which, judging by the reports from various quarters, ought not to be long in coming. As yet, however, no developments have taken place either in the home or the United States markets, but it is thought that if makers would consent to a fractional concession in price, a considerable increase would at once take place. On the other hand Continental and South American trade continues good, while the Australasian Colonies are also on the whole buying satisfactorily.

Cotton.—From Sir Jacob Behrens and Sons' circular we learn that so far as the immediate future is concerned, the reports from the States do not favour lower prices. Receipts are only moderate and for this reason spot prices keep firm, though they may be considered fairly safe until more definite information is obtained concerning the new crop. The demand at Liverpool, however, is increasing both for spot and future deliveries, and twist cotton is scarce and long staple almost non-existent for the time being. For this reason several spinners have been compelled to entirely change the character of their outputs, and the scarcity of good raw material is apparent from the lower quality of yarns which have been produced of late. For the higher grades of American the basis has, however, become more reasonable, quotations for "good middling" and above being slightly lower than last week, while on the other hand middling is dearer. For yarns the demand has improved, and a fair business has been done since, spinners, in view of full time coming into operation again next week, are showing more inclination to meet the wishes of buyers. In both home and export trade there are signs of improvement, though buyers in the former still continue their hand to mouth policy, and an order for extended delivery is a rarity. There has also been more enquiry for cloth, though but little of it was suitable. India continues to be the most discouraging market, and only makes offers which even the most anxious of sellers refuse.

At the end of last week and the beginning of this the warlike news from the Far East sent prices down in the States. But once the fear of immediate hostilities was removed both spot and future went steadily up, for it is now almost certain that the crop will be far from good. Occasionally sales to realise had the effect of forcing quotations down a few points, but on the whole the tendency was for them to move up. The Southern bull clique bought fairly freely during the week, and there was also a fair demand to cover contracts, all of which helped to keep prices moving upwards.

There was a moderate demand for spot American at Liverpool yesterday, and the price of middling was raised to 5.94d., while M. F. was quoted at 6.26d. Egyptian was also in good request, 6 13-16d. being asked for brown fair. Futures were steady, with but little variation in the price of any of the positions, after October, for which 5.47d. was asked. For later months the quotations ranged from 5.28d. Oct.-Nov. to 5.19d. Jan.-March, and 5.20d. April-June.

Coal.—The unpleasant weather of the past few days has given a filip to the South Yorkshire collieries by increasing the demand for household coal. This has enabled the masters to maintain the advance of 1s. per ton, made a short time back, and with the demand steadily increasing, a further rise would not cause surprise. Steam coal is also in good demand, and the exports from Hull, considering the time of year, are highly satisfactory. In South Wales, however, the stormy weather has been the cause of much delay in getting shipments cleared, though prices still continue firm for all descriptions of steam and household fuel. Neither Lancashire or the north of England are busy, though the former is far worse than the latter, the collieries there still only working four days a week, and even on this short time many of them find it difficult to clear away their restricted output.

Copper.—In the early part of the week the price of this metal slipped down a little every day under the influence of considerable selling orders, and the news that New York was dealing at easier prices. The fall was also accentuated by the American producers granting concessions, especially for near dates, and at one time any position could be bought for £53 12s. 6d. After this the market turned, and though there was but little business done, values gradually hardened until at the close on Friday £54 15s. was asked for cash, and £54 10s. for three months.

Tin.—Eastern advices on the whole were firm this week, yet notwithstanding, the London market in the early days was inclined to lower prices rather than lift to the level of the Straits quotations. This feeling was perhaps partly caused by the rumour that the American demand would in the near future show a considerable decrease. Buyers' orders, however, were fairly numerous, and every now and again forced prices up, though sales to realise never allowed them to keep long on the higher range. Still the result of the week's movements was an advance of 25s. on cash and 27. 6d. on three months, the quotations at the close on Friday being £115 15s. for the former and £116 7s. 6d. for the latter.

Iron and Steel.—Glasgow has been quiet this week in spite of the cheering news that the recent stories of the threatened American dumping are unfounded. Prices, however, remained steady, Scotch warrants being quoted at 50s., Cumberland at 55s. to 55s. 9d., and Cleveland at 43s. 6d. cash, and 43s. 7d. one month. In the manufactured iron and steel trades there is a fair quantity of work on hand, while prices show but little variation. In steel especially there is a large output, the deficiency in shipbuilding material being more than compensated by the large demand for bridge and general structural work. The market in the north of England has been upset by the political situation, both at home and abroad, which has had the effect of discouraging both consumers and merchants. Yet though sales were slow, the quantities delivered this week were large, and on export account are by far the best that have been recorded this year. Makers of finished iron and steel are busier, especially those engaged in turning out rails, and shipbuilders, it is expected, will soon be in the market to buy material to carry out the work they have secured. While the condition of the Scotch and North of England pig-iron markets is decidedly favourable that of Barrow is very much the reverse. Consumption has fallen off considerably, and stocks are accumulating at the works which do not find their way into the public stores. For this reason several furnaces have been blown out, in order to reduce the output. Of the steel makers those engaged on rails and plates are busy, although the future is not nearly so rosy as it looked a few weeks back.

Tea.—The auction of Indian teas was rather heavier this week than last, yet the effect was to some extent counteracted by the reduced quantity of Ceylon offered. This enabled the steady tone of last week to be well maintained, and prices in many instances advanced. Buying also appeared more general, especially for good liquoring teas, and the commoner kinds as well became slightly firmer. From Messrs. Gow, Wilson and Stanton we learn that 38,358 packages at an average price of 7.89d. were sold this week, an improvement both in volume and value compared with last year. The arrivals of Ceylon teas are showing an improvement in quality, which has acted upon the tone of the market, and also reduced the supply of the commoner grades. All kinds, however, were in strong demand, and under the influence of considerable competition prices advanced, the average for the week being 7.98d. Java also improved, most of the teas brought to auction being sold, the average price realised since June 1 being 6.58d. on a total of 33,855 packages. In countries outside the United Kingdom the use of Indian and Ceylon is steadily extending, though the larger portion of the increase has been in Ceylon green tea sent to North America. This fact emphasises the importance of encouraging the manufacture of both green and coloured teas, which, it is satisfactory to note, has been at last appreciated by Indian planters.

Sugar.—Now that the factories have started work the sanguine expectations of the crop are being toned down. The results so far are not bad, but yet they are not exceptional, and the best that can be said is that the yield is one of a fair average. Germany, which, in August, was expected to give a considerable increase, is now only likely to show a moderate increase in weight, while the quality has been damaged by the recent rains. Neither will the Austrian crop show any startling advance over last year, while France, Belgium, and Holland are all complaining of too much moisture. Therefore it does not appear that Europe has an exceptional crop, in fact all the trade estimates put it below six million tons. In addition the figures of the Louisana crop have been lowered, and if the present estimates of 240,000 to 200,000 tons prove correct, American buyers may be forced to come here for raw sugar, which at present they show no inclination to do. All these unfavourable features caused prices to advance this week both for actual sugar as well as speculative values, though the latter on Thursday lost most of the gain they made earlier in the week. Mr. Czarnikow, in his circular, gives the following as the movements of the various positions: Oct. from 8s. 9d. to 8s. 11¾d. to 8s. 9¾d.; Nov.-Dec. from 8s. 8¾d. to 8s. 10d. to 8s. 8¾d., and Jan.-March from 8s. 10d. to 8s. 11⅛d. back to 8s. 10d. Business in cane sugar is only on a very moderate scale, and with the market languid, prices are either barely steady or held above buyers' heads. In America, though the market is slack, refiners are quite ready to pick up any bargains that may be going. Several private sales have accordingly taken place this week at prices slightly under recent rates. The special session of Congress called to consider the question of the Cuban Reciprocity Bill, has no doubt had the effect of keeping buyers away from the market, though why it should is hard to see. For whatever the result of the session, it can hardly be effective until the new Cuban crop begins to come in. Landings at the three ports were again small this week, being only 16,000 tons, while meltings were 35,000 tons, which brings stocks down to 152,000 tons.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Reading Company.

Notwithstanding that this company was, perhaps, the most heavily hit by the strike of anthracite miners which lasted until October, 1902, the gross receipts of the three companies forming this corporation for the year ended June 30 last showed a substantial increase of $1,136,249, at $62,140,743, while at the same time there was a reduction of $1,977,388 in expenses to $42,815,462. The surplus was consequently $3,113,637 higher, at $19,325,281, and as the gross fixed charges and taxes came to $14,127,498, or only $294,681 more, the net earnings before payment of the Reading company's dividends and general mortgage sinking fund amounted to $5,197,783, compared with $2,378,826. The increase in fixed charges resulted from the sale of $1,711,000 general mortgage bonds made to reimburse the treasury for expenditure on new equipment, etc., and from heavier taxes. Of these figures the Reading company itself got $6,340,761 as net earnings against $5,230,000 a year ago, and disbursed $4,230,739 in fixed charges and taxes, leaving a surplus, including $153,137 brought in, of $2,263,159, out of which a dividend of 2 per cent. on the first preferred stock has been paid since the close of the fiscal year.

The Philadelphia and Reading Railway showed an increase of $3,088,153 in gross receipts, of which $1,071,279 came from coal traffic, a decrease of 1,533,062 tons in the anthracite coal carried, to 7,932,891 tons, being more than compensated for by an increase of 2,350,237 tons in the tonnage of bituminous coal, to 8,437,325 tons. General merchandise also yielded $1,531,883 more from a gain of 1,814,261 tons in the quantity carried, and passenger traffic showed advances of 868,855 in numbers, and $355,192 in receipts. Working expenses came to $19,092,084, or $2,548.308 more, but this includes outlay on equipment renewals, which have heretofore been charged as a separate item, and as other expenses were cut down by $382,344, the net revenue, including $168 803 more received from other sources, showed an improvement, after meeting fixed charges, which were practically the same in both years, of $1,091,103, at $2,317,515. Contrary to what might have been expected, considering the strike, the Philadelphia and Reading Coal and Iron Company contrived to make for it a very fair exhibit. Anthracite coal produced was 615,295 tons less than for the previous year at 7,582,979 tons, the falling off of course being due to the strike, and coal purchased amounted to 1,008,252 tons, or a reduction of 26,037 tons, and sales came to 6,842,537 tons, or a decrease of 1,447,291 tons, while the cost per ton mined and purchased rose by 16 cents to $2,188, owing to the increase in wages awarded by the strike commission in March, and taking effect from the previous November. Gross receipts declined $3,240,289 to $23,279,241, but expenses were $4,815,755 lower at $19,341,138, owing mainly to smaller costs of transportation and deductions for coal, added to stock, so that net earnings were actually $1,575,466 better, and after providing for new work at collieries, interest at 2 per cent., on the debt to the Reading Company, against 1⅜ per cent. a year ago, and depreciation of lands fund, there was a balance of $1,147 993, of which fixed charges absorbed $377,748, leaving a surplus of $770,245, compared with a deficit of $183,532. Adding this result to those of the other two undertakings and including the amount brought in, the total surplus for the year was $8,797,623. During the year $4,327,850 was added to the bonded debt of the Reading Company bringing the total up to $103,304,040. Of this $1,381,000 was represented by general mortgage bonds, $1,765.000 by car trust certificate series "D" issued, less small amounts of the "B" and "C" series cancelled, and $1,200,000 by bonds on new locomotive and machine shops at Reading. Further, the Philadelphia and Reading Railway increases its indebtedness by $400,000 on account of the same works.

Illinois Central Railroad Company.

The business of this huge company continues to expand in a wonderful way, and with an increase of only 16.75 miles, to 4,293 miles, in the average number operated the gross receipts from traffic during the year ended June 30 were $4,365,047 higher, at $45,186,077. Freight traffic yielded $2,881,312 of this, a reduction of 0.05 cents to $1.40 per ton in the average receipts having been offset by an increase of 2,785,429 in the number of tons of revenue freight carried, and as 2,225,403 more passengers were carried, at an advance in the average fare from 42.20 cents to 42.28 cents, this branch yielded $956,579 more. Expenses of operation and taxes absorbed $31,697,955, or $3,683,615 more, the ratio to earnings being 70.15 per cent., compared with 68.62 per cent., mainly because of the heavier cost of conducting traffic, which was $2,234,065 up, while maintenance of way and structures took $259,552, and maintenance of equipment $964,800 more. Net revenue was consequently only $681,431 higher, at $13,488,122, and with smaller sums of $15,830 from sale of lands and $3,445,317 from income on investments, etc., the total income came to $16,949,269, compared with $16,358,496. Interest on funded debt and repayment of bonds drawn under sinking fund required $3,049,740 of this, and rent of subsidiary roads took $3,170,136, leaving a net increase of $10,729,393, to which was added $1,132,447 brought forward, making an available total of $11,861,840, and although the customary dividends of 6 per cent. for the year on the common stock required $5,702,400, or $950,400 more, owing to the additional issue made in 1902, the company was able to set aside $4,881,253 for betterments, compared with $4,340,172, and to provide $100,000 for the difference between $3,100,000 (£620,000) sterling sinking fund 5 per cent. bonds due April 1, 1903, and the $3,000,000 3½ per cent. gold bonds due 1951, which were issued in extension of a part of them, and still leave a balance of $1,178,187 to be carried forward. During the year $15,301,579 was spent on permanent improvements, and of this $119,680 was charged to betterments fund, $4,881,253 was met out of revenue and $10,300,645 charged to capital. Expenditure on construction, including $2,769,742 on second track, accounted for $5,945,205 of the last amount, and the balance of $9,356,637 represented outlay on new equipment purchased, 56 locomotives, 27 passenger cars, and 9,666 freight cars having been bought, in addition to those bought or built to replace old ones and charged to expenses. The new issue of capital, however, made in 1902 proved ample to meet all these requirements, and no further additions were made.

Central Uruguay Railway of Monte Video.

This undertaking did very well during the year ended June 30, gross earnings being £20,414 better at £371,177, and expenses £10,365 lower at £165,059, so that the net revenue improved £30,779, to £206,118. These figures are those of the main line only, but the working of the combined system, that is including the northern, eastern, and western extensions shows that the gross receipts advanced £44,044, against a drop in outlay of £14,333, leaving the net balance £58,376 better. Ratio of expenditure to income was 5.54 down, at 44.47 per cent., on the main line, and 6.81 per cent. lower, at 45.32 per cent., on the combined system. With a view to securing greater accuracy in the statistical returns relating to the main line, as distinguished from the combined system, the expenditure of the latter has been credited with the cost of working the extension companies in lieu of the amounts retainable under their respective working agreements, while the profits on working these extensions is now included in the net revenue account. So to the balance of £206,118 resulting from operations is added year's interest on Government bonds, interest on western extension debenture stock, profit on extensions, sum brought forward, and other smaller items, making a total revenue of £274,247. On the other hand, there must be deducted debenture interest, North-Eastern Railway rent, western extension advance under guarantee, and income tax altogether absorbing £189,313, and leaving £84,934. An interim dividend of 1 per cent. has been already paid on the ordinary stock, and the directors now propose a further payment of 2 per cent., making 3 per cent. in all, or 1 per cent. more, with £15,000 to general reserve and £9,934 carried forward. These results can be pronounced very encouraging, particularly when it is considered that business was seriously disturbed by the political outbreak of March last, and that the maize and wheat crops partially failed. The working would have turned out better still had the steady development noticeable in other directions also occurred on the western extension, but so far this line has not come up to expectations. Its failure to do so is attributed to several causes, the principal being the very unsatisfactory wheat crops in the districts served, the antipathy on the part of cattle breeders to adopt railway transport in place of the old custom of driving in cattle to market, and the absence of suitable access roads to the camp stations. Improvement, however, is gradually coming about, and the local committee is hopeful that their efforts to foster traffic will bring about more encouraging, if not altogether satisfactory results. As regards details of the past year's operations passenger traffic increased £9,272, excess luggage and parcels rose £2,564, and telegraphs £365. Total animals carried went up 59,248, giving an increased revenue of £5,387, but although goods receipts increased £8,219, the number of tons carried fell 17,024. This was due to rather big decreases in the company's and extension materials, the total public goods traffic being 2,472 higher. The items in which decreases are shown are those paying low freights, while those in which important increases are visible, viz., wool and general merchandise, are charged comparatively high rates. The general manager thinks the prospects encouraging, and with steady progress being made in the industries of the country the company can reasonably expect the current year's results to be even more favourable than those of the twelve months under review.

Central Uruguay Eastern Extension Railway.

This company's gross revenue rose £9,116, to £92,873, during the year ended June 30, and the expenditure £3,968, to £46,496, so that the net receipts are higher by £5,148, at £46,377. Nevertheless, the amount available for distribution is less, owing to the system adopted by the Government for calculating the working expenses for guarantee purposes being on a different basis from that laid down in the working agreement with the Central Company. Thus, while for the six months ended December 31 the company was entitled to and received the sum of £3,853 less £678 deducted in respect of customs dues, for the second half of the year the position was reversed, the company having to refund to the authorities £6,214 on account of the amount received for guarantee in past years. The matter is receiving the serious attention of the board, and the prejudice which the company is at present sustaining is being brought to the notice of the Government with a view to obtaining their approval of the adoption of the sliding scale basis as laid down in the working agreement for the purpose of ascertaining the actual net profit of the company in place of the system now in force. For the period under review the system adopted by the Government meant that the company had to pay a net sum of £3,039, whereas a year ago £7,253 was received, and the result is seen in a decrease of ¾ per cent. in the dividend to 2¾ per cent., and a drop in the amount carried forward from £1,954 to £1,214. Quantity of goods carried declined

953 tons, but the receipts were £5,130 more, while animal traffic advanced £1,995, and coaching revenue £1,991. As on other sections of the line, the outlook for the current year is considered encouraging.

Central Uruguay Northern Extension Railway.

This company as well as the Eastern Extension issues a separate report, and its accounts show that the gross receipts for the twelve months ended June 30 were £39,108, or £5,286 more than in the previous year. Working expenses rose £3.172, to £23,465, and the net receipts are £2,114 better, at £15,643. Adding Government guarantee, £51,332, and balance brought forward, the total sum available is £70,979, from which debenture interest takes £31,357, income-tax and interest £2,245, and interim dividend £15,000. Amount still left is £22,377, so a final dividend of 3s. 6d. per share is declared, making 3¼ per cent. in all, or ¼ per cent. more, with an advance in the sum carried out, to £4,877. Coaching receipts improved £910, goods traffic £2,453, and revenue for carriage of animals £1,923. As provided in the working agreement, the system is operated by the Central Uruguay Railway for 60 per cent. of the gross receipts. A "saladero" for the preparation of "jerked" beef is being established on the Brazilian frontier at Santa Anna, adjoining the northern terminus of the railway, and the traffic from this source should tend to favourably affect the future earnings of the railway, while the colonisation movement in the northern d'stricts if successfully carried out ought also to benefit the company. The outlook, therefore, seems hopeful.

Cuban Central Railways.

This company's annual report to June 30 last tells us that the traffic of the first half of the financial year was severely affected by depression in the sugar industry, augmented by a poor tobacco crop, but the sugar harvest fortunately proved an excellent one, and considerably reduced the deficiency of the first half-year. It was still pretty severe at £17,825, the total revenue being £253,878, particularly as the working expenses rose £660 to £153,919. Net income therefore shows a decline of £18,485 to £99,959, and with £6,935 brought forward, £56 registration fees, and £1,650 for interest, discount, etc., the available balance is £108,599. Rent charges absorb £13,748, debenture interest £36,000, interim preference dividend of 2s. 6d. per share £12,250, and taxes, exchange, etc., £3,034. Directors now propose a final dividend of 8s. 6d. per preference share, bringing the payment to the full 5½ per cent., or the same as in the preceding year, but then £8,996 was set aside for extraordinary expenditure on roads and rolling stock. Falling off in coaching revenue was the heavy amount of £11,766, while goods returned £5,259 less, notwithstanding that 250,926 extra tons were carried. Sugar cane alone advanced 221,132 tons, sugar rose 36,651 tons, and molasses 18,055 tons. Tobacco, however, which is a good paying source of traffic, fell 4,963 tons, building materials 7,694 tons, and general goods 13,721 tons. Since the close of the financial year the receipts of the line have shown steady increases upon those of the previous year, and the directors are hopeful that the improvement will continue. Prospects of the sugar industry, which is the staple of the districts served by the lines, are much improved; the cultivation of cane is being steadily extended, and if the present favourable conditions continue, the coming harvest shoulc be still heavier than the last. Surveys and plans are now completed for the extension of the line from Placetas to Placetas del Sur, to connect with the Cuba Company's lines to Santiago de Cuba. This extension, together with the erection of the new workshops at Sagna la Grande, will be taken in hand as soon as the dry season sets in. Provided certain important freight contracts, which are now being negotiated, are consummated, the directors contemplate applying for a concession to construct an extension of about 30 kilometres from Rodas, which will tap a very important sugar producing district. Studies are also being made for the construction of a deep-water wharf at Cienfuegos, which, if made, the board feels convinced will prove a very valuable adjunct to the company's properties.

Western Railway of Havana.

Although not recovering all the previous year's loss, this undertaking did much better during the twelve months ended June 30 last. Gross receipts rose £17,529, to £154,144, against an increase in working expenses of £8,266, to £88,138, so that the net balance is larger by £9,263, at £66,006. Adding £1,098 brought forward, and small sums received for interest and transfer fees, the net amount available is £67,537, from which debenture interest takes £18,000, taxes, interest, and other charges £3,613, and loss on exchange, etc., £513. Then £3,399 is allowed for special renewals, shareholders again receive a dividend of 6 per cent., and £1,212 is carried forward. In addition to the ordinary maintenance outlay, £22,573 has been expended on the property, of which £11,768 was allocated to capital, £7,406 was charged to the renewal and casualty fund, and the balance borne by revenue. But as this renewal and casualty fund was credited with £6,076 contributed by revenue under the head of permanent way and works, locomotive power, and carriage wagon repairs and renewals, the credit to the account is very little lower, and now stands at £20,030. Total capital expenditure was £53,018, and includes £38,323 for cost to June 30 last of the extension from pinar del Rio, which is being actively pushed forward. Details of traffic show that while the past year has not been marked by any abnormal movement, there has been a steady growth in the company's business. Passenger traffic increased £4,979, and goods advanced £12,534, best results being given by sugar and sugar cane, building materials, manure and tobacco seedlings. The quantity of tobacco transported was 10,360 tons, an amount only once exceeded. Rather a heavy decrease took place in stone, as the Government has established its own plants in Havana. Regarding the future, the general manager speaks very hopefully indeed. In the district served by the company's line over 40,000 acres of land have been purchased by Americans for agricultural purposes, which must sooner or later bring a considerable amount of new traffic. The sugar industry does not give grounds for much enthusiasm, but the last tobacco crop, though generally reported somewhat short of the preceding one, is of much higher quality, and is selling freely at favourable rates. The good prices realised should have a favourable effect on the planters, and tend to increase the area sown for the next crop, part of which the railway will transport during the current year. Manure and building materials likewise promise well.

Espirito Santo and Caravellas Railway.

The year to April 30 last was rather good for this concern, as things go, and although the dividend is still very modest, it is a great improvement on the prceeeding twelve months. Traffic receipts of the railway and fluvial services amounted to Rs.221,747, or Rs.26,031 more than in 1901-2, while expenses were reduced Rs.14,828, to Rs. 164,239. The revenue at the Trapiche Reis, however, declined Rs.6,557, but here also the outgo was less, being Rs.7,989 lower, at Rs.94,743, so that all branches gave improved net income. As is well known, the railway is largely dependent for its carrying trade upon coffee, and the past year's increased receipts are entirely due to this traffic. In sterling the railway earnings are £11,087, and the warehouse income is returned at £7,672, or £18,759 in all. Combined working expenses accounted for £12,949, general charges in London and Rio took £1,164, and £4,647 was left. The directors are able to announce that the Government of the State of Espirito Santo have paid the guaranteed interest to December 31, amounting to £2,871, and with this, interest and commission of £473, and transfer fees £3, the available balance is brought up to £7,993. Debenture interest absorbs £423, exchange £21, and sums of £227 and £1,000 are written off materials and stores, and preliminary expenses respectively. It is now proposed to pay a dividend of 5s. per share, or 4s. per share more, with a large increase in the carry forward from £636 to £2,174.

Paterson, Laing, and Bruce (1901).

Our worst fears regarding the course this business might take have been all too quickly borne out, and he must be an optimist indeed who can find much for consolation in the report and balance-sheet just issued. The directors seem to think them all right—at least they make no apology for the miserable results set forth—and blame the drought for all the troubles, notwithstanding that for about 10 months of the company's financial year to July 31 it was not in existence. Do they forget that in the previous twelve months this drought was at its height, and that the company then earned over £20,000 more than in the period under review? Clearly the collapse is not traceable to this cause alone, and is more probably due to the flimsy unstable character of the company's business. What can be thought of a concern that has floating debts of £233,009, a share and debenture capital of £752,125, goodwill of £161,192, and a reserve of £5,000? Stock-in-trade, including the new season's goods not yet paid for, or only partially so, are valued at over £500,000, and the profits earned in turning them over can only be described as paltry. Freehold land and buildings are valued at £186,788, and warehouse, fixtures, fittings, etc., at £27,398, and in neither case can we trace a penny allowed for depreciation. Cash, as usual, is imposing, and stood at £8,962 at the date of the balance-sheet. Profits for the twelve months are returned at £28,769, or a drop of £21,328, and after meeting various charges, including £1,800 for directors' fees, together with debenture interest, the sum remaining is only £17,458. Nevertheless the directors pay the preference dividend, absorbing £21,000, so that of £3,750 brought forward, only £208 is carried out. The directors tell shareholders that it would be imprudent to expect that the revival in the general trade of the Commonwealth will be other than gradual, so evidently the current year is not expected to turn out very grandly.

Richardsons, Westgarth and Co.

Profits of this Christopher Furness undertaking fell away sharply during the twelve months ended August 25, but in view of the depression in the engineering and shipbuilding trades, the directors think the results very satisfactory, and they are. After allowing £19,043 for maintenance, the net profit is returned at £79 595, compared with £93.961, and with £10,615 brought forward, the net balance is £90,210. Directors' fees, interim dividends, and debenture interest, altogether absorb £43,097, leaving £47,113, from which balance of preference dividend takes £6.731. A further ordinary dividend of 3 per cent., is then paid, making 6 per cent. for the year, but nothing is placed to reserve against £10,000, and the allowance for depreciation is £2,500 less, at £12,500. Balance carried forward, however, is £17,382, or nearly £6,800 more, which creates an impression that the board thinks the current year's revenue, will need some fortifying. Reserve only amounts to £20,000, and on properties valued at £687,982, including £20,487, added during the year, the depreciation allowance is insufficient. The company, though, is well supplied with liquid resources, creditors being only £48,903, against debtors £88,784, cash £55,246, and bills £88,791. Stock-in-trade, loose plant, and tools are down for £104,375, and work in progress comes to £133,206.

Bank of Tarapaca and Argentina.

Business was good for this South American bank during the twelve months ended June 30, the gross profits being returned at £207,867. To earn this sum cost £92,874, income-tax took

£4,744, and rebate on bills not due £20,565, so that including £9,684 brought forward, the net balance is £99,367. For the preceding year it was £86,684, with an almost similar amount from previous account, and the progress made, therefore, is substantial. No increase is proposed in the dividend, which will again be 6 per cent., paid in two equal instalments, but £5,000 is added to bank premises account, and the balance forward is raised to £16,558. In addition to these appropriations a further £25,000 is placed to reserve, staff pension and guarantee fund receives £500 more, at £2,500, and the balance of the expenses incident to the amalgamation with the Anglo-Argentine Bank, £5,309, is written off against £5,000 applied a year ago. Reserve now reaches £200,000 against the paid-up capital of £750,000. A further moderate increase to £2,207,518 is noticeable in the current and deposit accounts, but bills payable are £327,303 lower, at £1,508,903. Bills receivable, £1,595,999, and advances, etc., £2,042,303, show considerable reductions, being £94,198 and £217,448 smaller respectively. Cash in hand, at bankers, and at call has risen from £548,283, to £585,626, and money at short notice has again advanced to £284,225. Investments have gone up £32,164, to £137,145, but are still rather small, and premises, furniture, etc., are valued at £88,246.

Robinson and Cleaver.

This business of wholesale and retail linen manufacturers did well in the twelve months ended July 31 last. Trading profits were £51,669, transfer fees gave £52, and £1,834 was brought forward, making £53,555 in all. Preliminary deductions from this comprising income tax, managing directors' salaries and commission on profits, depreciation, sinking fund, etc., drew off £16,163, and debenture stock interest £7,544, leaving £29,847 for appropriation. Preference dividend absorbs £9,426, the ordinary shares receive 6 per cent., and after placing £5,000 to reserve, the balance carried forward is reduced to £420. Depreciation allowance was £3,797, and the report describes it as full, but as all the property assets are given under one head, the outsider is not in a position to judge. The entered value of shops and warehouses, machinery, plant, fixtures, fittings, and goodwill is £523,701, and up to date —the concern has been in existence since December 1900—£14,051 has been provided for leasehold redemption, and £10,490 for depreciation, which does not seem lavish. The reserve of £20,000 is invested in the business. Trading accounts are largely favourable, cash and bills reach £21,583, and stock is valued at £139,451, a big figure.

Swift Cycle.

In their report for the twelve months ended August 31 the directors tell us that the prosperity of the company has been well maintained, and notwithstanding very adverse conditions, the results shown are somewhat better than those of the previous season. Net revenue is returned at £34,452, against £33,077, but the latter sum was earned during a period of only eight and a-half months, so that evidently there are certain times of the year when cycle companies make no profits. Adding £1,627 brought forward, the amount for disposal is £36,079, and the capital is now so attenuated that the directors can make a big dividend display, besides adding materially to the company's resources. After providing various charges, including £6,657 for maintenance and depreciation, £888 as a reserve for bad and doubtful debts, and £3,750 for debenture interest, the sum remaining is £22,652. From this preference dividend takes £6,500, a dividend of 10 per cent. on the ordinary shares absorbs £4,000, £10,000 is placed to reserve, and £2,152 carried forward. We should like to see a little of this reserve money invested outside the business, but the directors have decided to extend the operations of the company in connection with the manufacture of automobiles, and tell us that the large addition to the savings is to provide for this development, which is quite right. Reserve now amounts to £22,000, not at all a bad accumulation in less than two years, and there is a fair quantity of liquid resources.

Paine and Co.

During the twelve months ended May 31 this company increased its gross profit by £2,566 to £19,415, but including the rather larger sum of £1,805 for repairs and renewals, the outgo went up nearly as much, so that the net balance is only £409 better at £4,474. Nevertheless, the directors promptly add 1 per cent. to the ordinary dividend, making it 10 per cent., and still quietly ignore the question of reserves. The only savings possessed are an amount of £1,000 accumulated against book debts, rents, and loans, entered on the other side at £16,897. Freehold and leasehold properties and goodwill are valued at £51,810, and manufacturing plants and rolling stock at £11,879, and there is apparently no allowance for wastage beyond the sum spent on repairs and renewals. Sundry liabilities come to £5,166, and the startling cash balance of £899 is far below the amount required for dividends.

Maynards, Limited.

Business for this company during the twelve months ended June 30 was much the same as in the preceding year. Gross profit on trading was £13,409, or £139 less, while transfer fees gave £19 and interest £45, making a total of £13,473. Total charges, which are very fully detailed, and include £3,056 allowed for depreciation, altogether absorb £8,234, leaving £5,239 as net profit. This pays the preference dividend and 6 per cent. on the ordinary shares, the same as in the preceding year, with an increase in the balance forward from £1,462 to £2,388. Fair sums are allowed for wastage, but in most cases the additions for the year were larger, so that such items as plant, machinery, utensils, fixtures, fittings, horses, carts, etc., are all higher than at the end of the June 30. Sundry creditors exceed debtors by over £2,000, and as cash comes to £8,023 only, the position here is rather poor. The directors must not forget the question of reserves.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1903, and October 10, 1903:—

Revenue and Other Receipts.

—	Estimate for the year 1903-1904.	Total Receipts into the Exchequer from April 1, 1903, to Oct. 10, 1903.	Total Receipts into the Exchequer from April 1, 1902, to Oct. 11, 1902.
Balances, April 1:	£	£	£
Bank of England	—	5,887,524	8,080,383

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended Sept. 11, $8,978; decrease, $2,119. Aggregate from January 1, $435,702; increase, $7,246.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended Sept. 12, Rs. 40,435; increase, Rs. 14,625. Aggregate from July 1, Rs. 3,25,112; increase, Rs. 29,664.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended Sept. 12, Rs. 8,805; increase, Rs. 3,807. Aggregate from July 1 Rs. 83,895; increase, Rs. 22,283.

Bengal Central Railway.—Traffic receipts for week ending Sept. 19, Rs. 51,532; increase, Rs. 15,960. Aggregate from July 1, Rs. 365,674; increase, Rs. 75,775.

Canadian Northern Railway.—Traffic receipts for week ended October 7, $72,200; increase, $23,800. Total, from July 1, $848,300; increase, $354,700.

Lucknow Bareilly Railway.—Traffic receipts for week ended Sept. 5, Rs. 20,813; increase, Rs. 1,344. Aggregate from July 1, Rs. 2,05,372; decrease, Rs. 1,760.

Quebec Central Railway.—Traffic receipts for the 1st week of October, $11,879; decrease, $838. Aggregate from January 1 $541,880; increase, $18,548.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended Sept. 5, Rs. 17,896; decrease, Rs. 362. Aggregate from July 1, Rs. 82,990; decrease, Rs. 3,321.

Salvador Railway.—Traffic receipts for week ended Oct. 10 $11,250; increase, $170.

White Pass and Yukon Railway.—Traffic receipts for the week ended Sept. 30 amounted to $127,846.

English.

Cleator and Workington.—Gross receipts for the week ending Oct. 10, £1,176; increase, £1. Total receipts from July 1, £16,201; decrease, £168.

Cockermouth and Keswick Railway.—Receipts for week ending Oct. 10, £918; decrease, £49. Aggregate from July 1, £16,175; decrease, £926.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending Oct. 10, £410; decrease £9. Aggregate from July 1, £5,692; increase, £430.

Liverpool Overhead Railway.—Traffic receipts for week ending Oct. 11, £1,562; increase, £92. Aggregate from July 1, £25,539; increase, £1,759.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending Oct. 10 £566, increase £29; aggregate from July 1, £8,419, increase £260.

Belfast Street.—Traffic receipts for week ending Oct. 10, £2,690, increase £182; aggregate from July 1, £42,017, increase £1,727.

Birmingham and Midland.—Traffic receipts for week ending Oct. 9, £798, decrease £57; aggregate from July 1, £12,647, increase £222.

Birmingham City.—Traffic receipts for week ending Oct. 10, £5,314, increase £161; aggregate from July 1, £78,479, increase £3,178.

Blessington and Poulaphouca.—Traffic receipts for the week ending Oct. 11, £10, decrease £3; aggregate from July 1, £426, decrease £39.

Bristol Tramways and Carriage.—Traffic receipts for week ending Oct. 9, £5,013, increase £472; aggregate from July 1, £78,619, increase £2,740.

Burnley Corporation.—Traffic receipts for week ending Oct. 10, £826, increase for week £144; aggregate from July 1, £13,208, increase £2,292.

Dublin and Blessington.—Traffic receipts for week ending Oct. 11, £124; decrease, £2; aggregate from July 1, £2,499, decrease £131.

Dublin and Lucan.—Traffic receipts for week ending Oct. 11. £123, increase £9; aggregate from July 1, £2,165, increase £160.

Dublin United.—Traffic receipts for three days ending Oct. 10, £4,978, increase £453; aggregate from July 1, £81,686, increase £7,367.

Edinburgh and District.—Traffic receipts for week ending Oct. 10, £4,349, increase £359; aggregate from January 1, £174,921, increase £18,232.

Edinburgh Street.—Traffic receipts for week ending Oct. 10, £475.

Harrow Road and Paddington.—Traffic receipts for week ending Oct. 9, £282, increase £25.

Isle of Thanet.—Traffic receipts for week ending Oct. 10, £474, decrease, £25; aggregate from July 1, £19,358, decrease £923.

London General Omnibus.—Traffic receipts for week ending Oct. 10, £24,258, increase £1,485; aggregate from July 1, £373,296, increase £8,549.

London Road Car.—Traffic receipts for week ending Oct. 10, £8,977, increase £1,309; aggregate from July 1, £116,676, decrease £1,440.

Rossendale Valley.—Traffic receipts for week ending Oct. 9, £186, increase £5; aggregate from July 1, £2,762, decrease £11.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending Sept. 14, £6,870, increase £2,564; aggregate from January 1, £216,762, increase £51,944.

Barcelona.—Traffic receipts for week ending Oct. 10, £2,482; aggregate from January 1, £94,823, decrease £3,284.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending Oct. 10, £346, increase £137; aggregate from January 1, £11,944, increase £6,573.

Brazilian Street.—Traffic receipts for the month of July Rs. 35,553; increase Rs. 63. Total receipts from August 1, 1902, Rs. 473,933, decrease Rs. 7,662.

Brisbane.—Traffic receipts for the week ending August 26, £2,277, increase £74.

British Columbia Electric.—Traffic receipts for the month of August, $61,893, increase $8,597. Net earnings from July 1 to August 31 $45,695, increase $12,797.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending Sept. 13, £3,531, increase £634.

Buenos Ayres Grand National.—Traffic receipts for week ending Sept. 12, $45,996, increase $5,087; aggregate increase from April, 1903, $24,868.

Calais.—Traffic receipts for week ending Oct. 10, £162; increase £16; aggregate from July 1, £3,227, increase £17.

Calcutta.—Traffic receipts for week ending Oct. 10, Rs. 29,012 decrease Rs. 6,421; aggregate from July 1, Rs. 497,174, increase Rs. 94,992.

Carthagena and Herrerias.—Traffic receipts for the month of September, £3,252, increase £341; aggregate to Sept. 30, £33,421; increase £3,014.

MINING RETURNS.

Abbott's Proprietary.—Crushed 440 tons; cyanided 288 tons; total yield 350 oz.

Antenior (Matabele) Gold.—Crushed 701 tons; yield 530 oz. 8 dwts.; cyanide treated 637 tons, producing 127 oz. 17 dwts.

Alaska United.—Crushed 16,030 tons ore, value of bullion $18,049; saved 360 tons sulphurets, value of bullion $8,800.

Associated.—Ore milled 4,678 tons; tailings treated 2,400 tons; slimes treated 2,624 tons; total 6,760 oz.

Associated Tamworth.—32 oz. from plates.

Chinese Engineering.—15,000 tons; sales 18,000 tons; consumption 1,300 tons.

City and Suburban.—Ounces 8,513; tons crushed 16,500.

Consolidated Gold Fields of New Zealand.—Progress Mines—Crushed 4,800 tons of ore, value of bullion £9,345. Golden Fleece—Crushed 1,190 tons of ore, value £2,170. Wealth of Nations—Crushed 1,061 tons of ore, value £1,781.

Craiggiemore Proprietary.—Crushed 1,100 tons; cyanided 790 tons; yield 564 oz.

Crown Reef.—From mill 8,061 oz.; from cyanide 3,943 oz.; from slimes 263 oz.; total 12,267 oz.; 20,252 tons milled.

Driefontein Consolidated.—Tons crushed 14,062; ounces 3,911; tons treated by cyanide 11,594; ounces 3,260.

East Murchison United.—Tons of ore 4,771; ounces recovered 1,234; tons of tailings treated by cyanide 1,915; ounces recovered 299; total ounces 1,533.

El Oro Mining and Railway.—Crushed 9,080 tons; production $126,012; profit from mine, $62,602; profit from railway, $11,000; total $73,602.

French Rand.—Tons crushed 6,365, yielding 1,482 oz.; tons tailings treated, 5,070, yielding 1,020 oz.; total 2,502 oz.

Ferreira.—Crushed 15,151 tons, yielding 6,543 oz.; concentrates and sand treated 8,960 tons, yielding 2,046 oz.; slime treated 4,399 tons, yielding 604 oz.; total 9,193 oz.

Geldenhuis Main Reef.—666 oz.; cyanide works 523 oz.; ore milled 2,800 tons; tailings treated 2,230 tons.

Golden Blocks (Taitapu).—Crushed 227 tons, obtained 208 oz.

Golden Horseshoe.—Crushed 11,878 tons, yielding 3,751 oz.; tailings treated 2,072 tons, yielding 1,022 oz.; slimes treated 8,032 tons, yielding 3,973 oz. Shipped to smelters: Sulphide ores 1,201 tons, yielding 6,997 oz.; concentrates 497 tons, yielding 1,860 oz.; total output 13,079 tons, yielding 17,063 oz.

Great Boulder Perseverance.—18,206 oz.

Hainault.—Crushed 2,020 tons for 830 oz.

Henry Nourse.—Mill crushed 9,612 tons, yielded 3,290 oz.; treated by cyanide 6,512 tons; yielded 1,882 oz.; slimes, tons treated, 3,005; yielded 321 oz.; total 5,493 oz.

Inverness Coal.—17,700 tons; increase 11,591 tons.

Jubilee.—Mill, 1,058 oz. from 4,660 tons crushed; cyanide 508 oz. from 3,220 tons treated.

Knight's Deep.—Crushed 10,460 tons, yielding 3,120 oz., inclusive of 1,159 oz. from cyanide.

Lake View Consols.—7,851 tons treated, yielded 3,988 oz.; 1,376 tons of sand re-treated, yield 258 oz.; total 4,246 oz. fine gold.

Lancaster West.—Crushed 6,465 tons, yielding 1,955 oz.; cyanide works 4,231 tons, yielding 653 oz.; total 2,608 oz.

Lancelot Freehold Tin and Copper.—dressed 65 per cent. tin-bismuth ore; on hand four tons seconds ore, assaying 45 per cent. metallic tin and bismuth. Shipped 43 tons dressed Lancelot ore.

Langlaagte Estate.—Ore crushed 21,340 tons; produced 5,253 oz.; concentrates, cyanide process, tons treated 580; produced 1,119 oz.; tailings, cyanide process, tons treated 14,400; produced 2,178 oz.; total 8,550 oz.

Lloyd Copper.—Production of copper, 124 tons.

Malacca Diamond.—88 loads washed, producing 112 carats diamonds and 2,275 lb. of tin.

May Consolidated.—Crushed 9,479 tons, yielding 2,856 oz.; cyanide works 6,710 tons, yielding 1,496 oz.; slimes works 2,488 tons, yielding 350 oz.; total, 4,702 oz.

Matabele Sheba.—Mill crushed 1,032 tons, yielding 643 oz.

Montana.—Drumlummon Mine—Tailings plant treated 13,148 tons of tailings and slimes, producing cyanide precipitates represented by 860 oz. of gold, and 12,590 oz. silver. Lucky Gold—Crushed 1,400 tons, producing bullion bars and cyanide precipitates represented by 490 oz. gold and 344 oz. silver.

Mount Zeehan.—Output 425 tons of silver-lead ore, containing about 284 tons of lead and 38,250 oz. of silver.

Mungana (Chillagoe).—1,716 tons of ore containing 70¾ tons of copper, 11,488 oz. of silver, and 248 tons of lead, shipped to Chillagoe Company's smelting works.

New Heriot.—Ounces 3,563; tons crushed 7,910.

New Ravenswood.—Crushed 1,190 tons of ore, value £4,000; 300 tons of concentrates and smelting ore produced, value £3,000.

New Zealand Crown Mines.—Mill crushed 2,828 tons of ore.

Nigels Gold.—Ounces 2,536; tons crushed 3,150.

No. 2 South Great Eastern Gold.—Crushed 3,350 tons, 4,412 oz.

Palmarejo (and Mexican.—Zapote mill—crushed 2,600 tons; treated 2,000 tons, producing $13,000 gold, $31,500 silver.

Pena Copper.—Output of ore from mine, 16,172 tons; shipments 6,884 tons; precipitate containing about 84 tons of fine copper produced.

Penhalonga Proprietary.—5,000 tons of ore milled, yielded over plates 1,400 oz. and 65 tons of concentrates.

Queensland Copper.—250 tons matte from 900 tons ore; shipment 350 tons.

Raub Gold, Malay Peninsula.—710 oz. from 2,850 tons ore crushed.

Robinson.—Crushed 18,474 tons; yield 9,064 oz.; by cyanide 2,001 oz.; from own concentrates (by chlorination), 1,103 oz.; from slimes 418 oz.; total 13,829 oz.

Robinson Deep.—Crushed 23,456 tons, obtained 8,750 oz.; 3,956 oz. from tailings by cyanide and 536 oz. from slimes.

Rogers' Golden Gate.—Crushed 716 tons, yielding 716 oz.

Salisbury.—Output 1,835 oz.

Sao Bento Gold Estates.—4,072 tons of ore treated, producing 1,103 oz.

Selukwe.—Crushed 5,200 tons, produced 2,665 oz.; treated by cyanide 6,200 tons, yielding 1,482 oz.

Simmer and Jack Proprietary.—Crushed 24,360 tons, obtained 5,997 oz.; 3,188 oz. from tailings by cyanide, and 451 oz. from slimes.

South Randfontein Gold.—Ore crushed 12,100 tons, produced 3,841 oz.; concentrates, cyanide process, tons treated, 760; produced 364 oz.; tailings, cyanide process, tons treated 7,559; produced 1,519 oz.; slimes, tons treated, 3,476; produced 408 oz.;

Standard Copper Mines, Clifton, Arizona.—275 tons, averaging 30 per cent. copper, net proceeds $10,250.

Stratton's Independence.—October 1, 110 tons gold, value £550; October 3, 80 tons gold, value £450; October 6, 115 tons, value £750.

Tronoh Mines.—117 tons of tin.

Tyne Valley Colliery.—Output 7,022 tons, profit £667.

Van Ryn.—Ore crushed 8,590 tons for 2,816 oz.; cyanide 963 oz.; tons treated 5,600.

Village Main Reef.—Total from all sources, 7,626 oz.

Vivien Gold.—786 tons of ore milled for 409 oz.

Wanderer (Selukwe) Gold.—Crushing 10,569 tons, yielding 1,878 oz.

Wemmer.—Crushed 6,920 tons, yielding 3,354 oz.; 4,500 tons tailings treated cyanide, yielding 819 oz.; 191 tons concentrates caught; total 5,335 oz.

West Rand Central.—Ore milled and tailings treated, 3,845 tons, yielding 394 oz.

Westralia Mount Morgans.—Crushed 7,200 tons, yielding 2,451 oz.; cyanide works treated 4,608 tons, yielding 1,967 oz.; slimes treated 3,260 tons, yielding 907 oz.

Windsor Diamond.—Loads washed 3,023; yield 163 carats.

Witbank Colliery.—Output 30,580 tons.

Witwatersrand Deep.—Tons crushed 7,696; yield 2,039 oz.; tons of sands and concentrates treated by cyanide 5,595; yield 1,071 oz.; total 3,110 oz.

Zeehan-Montana.—255 tons of silver-lead ore, containing about 180 tons of lead and 21,675 oz. of silver.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Buenos Ayres and Pacific.—Dividend of 5 per cent. for the year on ordinary stock, placing £33,836 to reserve.

Cuban Central.—Balance of the dividend for year ended June 30, on preference shares, viz., 8s. 6d. per share, payable 31st instant.

Mexican.—Dividend at the rate of 1⅞ per cent. per annum on first preference stock for past half-year.

Mexican Southern.—Dividend of 2 per cent. for year ended March 31, 1903, carrying forward £10,466.

Midland Uruguay.—¾ per cent. additional interest on the debenture stock for year to June 30.

Nitrate.—Interim dividend on the ordinary and preferred converted ordinary shares, at the rate of 2½ per cent., payable Nov. 2.

MINES.

Anaconda Copper.—Dividend, No. 16, of 50 cents per share, payable on and after November 16.

Burma Ruby.—Interim dividend at the rate of 1s. per share.

Mount Boppy Gold.—Interim dividend of 2s. per share, payable October 30.

Mysore Gold.—Interim dividend of 4s. per share, payable Nov. 10.

No. 2 South Great Eastern Gold.—Dividend of 1s. and bonus of 6d. per share, payable October 23.

Progress of New Zealand.—Dividend of 1s. 6d. per share, payable 31st inst.

Twentieth Century.—Dividend at the rate of 8 per cent.

Westralia Mount Morgans Gold.—Interim dividend for three months ended March 31, 1903, of 7½d. per share, being at the rate of 50 per cent. per annum.

MISCELLANEOUS.

Bank of Adelaide.—Interim dividend at the rate of 8 per cent. per annum.

Blackpool Tower.—Dividend of 6 per cent. on ordinary shares.

Cardiff Channel Dry Docks.—Interim dividend at the rate of 6 per cent. per annum for half-year ended September 30.

Ceylon Tea Plantations.—Interim dividend of 7 per cent. on ordinary shares, payable October 29.

City of Santos Improvements.—Interim dividend on preferred

ordinary shares at the rate of 5 per cent. per annum for six months ended June 30, payable Nov. 2.

Coventry Pure Ice.—Dividend of 3 per cent.

D. and W. Murray.—Dividend of 6 per cent. per annum on ordinary shares for year ended July 19, carrying forward £3,508.

Eastern Produce and Estates.—Interim dividend of 1½ per cent. on the ordinary shares, payable on Nov. 4.

Geo. H. Hurst.—Dividend of 10 per cent. on the ordinary shares.

Friday, October 23.

Anglo-Sicilian Sulphur Company.—Winchester House, 2.15 p.m.
Cuban Central Railways.—River Plate House, 1 p.m.
Central Bahia Railway.—Cannon Street Hotel, noon.
Demerara Railway.—Cannon Street Hotel, noon.
Espirito Santo and Caravellas Railway.—Cannon Street Hotel, noon.

Although the British public is not now interested in the lower ranks of Turkish bonds, it may be as well to record the terms of conversion of Series "B," "C," and "D" into the new unified debt. For each £100 nominal in Series "B," £70 nominal in new stock is given, and Series "C" receives £42 in new, while Series "D" gets £37½ new for the £100 old, nominal amounts in both cases. The exchange of old bonds into new will be made in Constantinople, Paris, London, Vienna, Berlin, Frankfort, Rome, Brussels, Antwerp and Amsterdam, and new bonds will have to be stamped with the stamp of the country where they are delivered. Other particulars can be obtained of Messrs. Samuel Montague and Co., or from any foreign banking house interested.

Prices of Mine and Mining Finance Companies' Shares.

Investment Inquiries.

Questions about public securities, and on all points in company law, as well as on the position of life insurance offices and their promises, will be answered week by week in the REVIEW on the following terms and conditions:—

A fee of FIVE shillings must be remitted for each question put, provided they are questions about separate securities. Should a private letter be required, then an extra fee of FIVE shillings must be sent to cover the cost of such letter, the fee then being TEN shillings for one query only, and FIVE shillings for every subsequent one in the same letter.

Correspondents should *number* the questions, keeping a copy for reference.

Inquiries should reach the office of the INVESTORS' REVIEW, Norfolk House, Norfolk Street, W.C., not later than Thursday morning if reply is required in same week's issue.

LOAN.

COLONY OF VICTORIA.

VICTORIAN GOVERNMENT 4½% DEBENTURES,

Maturing 1st Jauuary, 1904.

THE LONDON AND WESTMINSTER BANK LIMITED are instructed by the Government of the State of Victoria to offer the holders of the above-named Debentures exchange on the following terms:—

For each £100 of the expiring Debentures
(the holder retaining the Coupon due 1st January, 1904):

either

£108—of Victorian 3½% Consolidated Stock, 1929–1949.
Interest payable 1st April and 1st October.
Six months' Interest payable 1st April, 1904.

or

£100—Victorian 4% Treasury Bond, and £1 5s. Cash Payment.
Interest on Treasury Bonds payable 1st January and 1st July.
Six Months' Interest payable 1st July, 1904.
Principal payable 1st July, 1906.

The holders of the Treasury Bonds to have the option, on surrendar of the Bonds, with all undue Coupons attached, to convert the same at any time up to 31st December, 1905, into £104 of Victorian 3½% Consolidated Stock, 1929–1949.

The above-mentioned Victorian 4½ per cent. Debentures (ex January, 1904, Coupons) will be received at the London and Westminster Bank, Limited, Lothbury, London, E.C., up to the 4th day of November, 1903, when the lists will be closed, and all Debentures not lodged by that date will be paid off at par on the 1st January, 1904.

The "Victorian Government 3½ per cent. Consolidated Inscribed Stock, 1929-1949," will be inscribed in accordance with the provisions of "The Colonial Stock Act, 1877," 40 and 41 Vict., cap. 59, in the books kept by the London and Westminster Bank, Limited,—and will be transferable without charge and free of stamp duty at that Bank, either by the Stockholders personally, or by their attorneys. The interest, at the rate of 3½ per cent. per annum, will be payable on behalf of the Victorian Government at the London and Westminster Bank, Limited, Lothbury, on the 1st April and 1st October in each year, by Dividend Warrants, which, if desired, can be sent by post at the Stockholder's risk. The principal will be payable at the same Bank on the 1st October, 1949, but the Government of Victoria have the option of redemption at par, in London, on or after the 1st October, 1929, on giving twelve calendar months' notice by advertisement in the "London Gazette" and in the "Times" Newspaper.

In accordance with the provisions of the Redemption Fund Act of the Victorian Legislature, 61 Victoria, No. 1,561, the sum of one pound per cent. of the amount of Stock issued will be provided annually towards the redemption of such Stock.

Stock Certificates to Bearer, of the denominations of £100, £500, and £1,000, with Coupons for the Half-yearly Dividends attached, will be obtainable in exchange for Inscribed Stock at the London and Westminster Bank, Limited, Lothbury, on payment of the prescribed fees, and such Certificates can be re-inscribed as Stock at the will of the holder.

The revenues of the Colony of Victoria alone are liable in respect of this Stock and the Dividends thereon, and the Consolidated Fund of the United Kingdom and the Commissioners of His Majesty's Treasury are not directly or indirectly liable or responsible for the payment of the Stock or of the Dividends thereon, or for any matter relating thereto.—40 and 41 Vict., cap. 59, sec. 19.

The Government of Victoria having complied with the requirements of the Colonial Stock Act, 1900, as announced in the "London Gazette" of the 12th March, 1901, Trustees are authorised to invest in this Stock subject to the restrictions set forth in the Trustee Act, 1893.

Scrip Certificates will be issued in respect of the Victorian 4 per cent. Treasury Bonds, which will be exchangeable for the Bonds so soon as they are received from the Colony. Due notice will be given by the London and Westminster Bank, Limited, by advertisement in the London Daily Newspapers.

Forms for listing the Debentures can be obtained at the London and Westminster Bank, Limited, Lothbury; at the Office of the Agent-General for Victoria, 142, Queen Victoria Street, E.C., and of Messrs. R. Nivison and Co., 8, Finch Lane, E.C. The lists pertaining to Debentures to be exchanged for Stock must be signed by the persons in whose names the Consolidated Stock is to be inscribed.

London and Westminster Bank, Limited,
Lothbury, London, E.C.,
14th October, 1903.

LOAN—*continued.*

THE STATE OF VICTORIA.

		£
The Funded Debt on the 30th June, 1903, was ...		51,471,900
The Unfunded Debt on 30th June, 1903, was:—		
Loans from Savings Banks, etc. ...	£1,962,117	
Land Sales by Auction Fund	330,194	
Deficiency on Revenue Account 1901-2 ...	£294,002	
Less surplus on Revenue Account 1902-3 ...	194,000	
	100,002	
		2,392,313
		53,864,213
Deduct liability taken over by Melbourne and Metropolitan Board of Works on account of Yan Yean Water Works		2,082,336
Total Funded and Unfunded Debt on 30th June, 1903		51,781,877
Against this indebtedness allowance should be made for the following:—		
Various Sinking Funds in the hands of the Trust Fund Trustees	£309,268	
In Trust for Country Tramways ...	137,872	
Loan Moneys in hand on 30th June, 1903	125,091	
		572,231
Net Funded and Unfunded Debt on 30th June, 1903...		51,209,646
The Purposes for which this debt of £51,781,877 was set apart are as follows:—		
Reproductive Works:—		
Railways	£38,794,238	
Waterworks	6,027,949	
Docks, Telegraph and Telephone Lines, Tramways, etc., etc., ...	1,215,054	
		46,037,241
Works and Purposes not directly interest earning ...		5,744,636
		51,781,877
The Total Amount of Interest and Expenses on Loans charged on account of the financial year 1902-3 was		1,915,887
The net Interest earned for the year by the foregoing works and purposes was	£1,323,648	
Leaving to be provided out of Revenue from other sources	592,239	
		1,915,887
The Total Gross Annual Revenue of the State of Victoria is approximately		7,000,000

Total Indebtedness:—

On 30th June, 1893	£49,184,519
,, 1894	49,644,955
,, 1895	49,926,779
,, 1896	50,037,942
,, 1897	50,133,350
,, 1898	50,211,969
,, 1899	51,262,162
,, 1900	51,555,752
,, 1901	52,306,268
,, 1902	53,547,334
,, 1903	53,864,213

Of this indebtedness of £53,864,213 over £8,000,000 is domiciled in the Colony.

Of the sum of £4,679,694, being the increase in indebtedness for the last ten years, only £1,100,000 was raised in London.

A. DOBSON,
Acting Agent-General for Victoria.

142, Queen Victoria Street, E.C.,
14th October, 1903.

NOTICE.

NOTICE IS HEREBY GIVEN that the Thirteenth Ordinary General Meeting of the Shareholders in Henry Bucknall & Sons, Limited, will be held on November 3, at the Cannon Street Hotel, at 12 noon, to receive the Report of the Directors with Statement of Accounts and Balance Sheet for the year ended August 31, 1903. To declare Dividends on the Preference and Ordinary Shares, to elect Auditors and to fix their remuneration, and to transact the ordinary business of the Company.

The Transfer Books of the Company will be closed from October 15 to November 5, both days inclusive.

By Order of the Board,
J. S. BUCKNALL, Secretary.

The Investors' Review.

Playing Joseph's Game.

One day an American citizen of our acquaintance, a most amiable and estimable fellow, to whom the world and his employers had not been over kind, was entertaining us with an estimate or inventory of his talents. "I never boast," said he, "that I ken do what I kyant do. I 'aint an inventor, not worth a cent. I kyant preach, and never wrote a book or an article for a newspaper, never in my life. Mathematics beant my line, and I'm no show as a politician, but I tell you what I ken do, my friend, I ken sell. If this pocket book," pulling a neat one out of his breast pocket, "is worth half-a-dollar, I'll undertake to get a dollar for it, soon's any man livin', you bet. Yes, I can sell, just you give me the article." Most days Mr. Chamberlain brings this intelligent and go-ahead Yankee to mind, for the ex-Colonial Secretary is beyond question one of the finest salesmen alive. But it is just because he is this, and nothing more, that he must not be taken too seriously, not, for instance, so seriously as Sir Henry Campbell-Bannerman took him at Stirling. Self contradictory he is, and must be, because he is not always engaged in vending the same article. His speech is always strictly and admirably suited to the business on hand, and at present this business is to beguile the thoughts of the nation away from its afflictions, and from thoughts of the crimes and mistakes of the Party in power. "Dismiss all the past from your minds," this most expert "commercial" says, "and pay no heed to the bad bargains I have often let you in for, or that you have made in your ministers, or to the ravages of the departments they cannot control, but just take hold of my latest cure all." "Protection, protection." "Preference, preference." "Empire, empire." "Unity of the Anglo-Saxon race against a wicked world," these are my latest political wares, and I mean to sell 'em to the best advantage for self and employers. Who'll buy, who'll buy?" This is the attitude, and because the wares are old, second, or third-hand cast off garments, the language of the traveller who has to pass of these remainders or cere cloths of a dead past as new must be peculiar, full of dazzling variety, of contradiction, and of liberties with the truth.

Granting all this, is it not a pity that rival leaders, of higher capacity, greater culture, and more statesmanlike aims should waste energy in refutations, treating the poor hack as a serious foe, with whom grave argument is possible. Mr. Chamberlain's business is not with truth, with enlightened views, with patriotism, or any noble or manly thing whatever—he means to sell his nostrums and the nation—nothing better, nothing more. Take him, then at his bagman level, and consider how best to cross and defeat his object. Do rival "commercials" make their employers' fortunes by crying down each other's wares? No, but by each doing his best to sell all he can of the "line" or "lines" he is engaged to push. So should it be with the opponents of the new prophet of Phœnicianism, of exclusiveness and hatred between man and man, nation and nation, and race and race. Instead of demonstrating that truth is anywhere absent from the statements of "Consistent, Birmingham"—the easiest thing in the world to do—or of demolishing over and over again the threadbare "ole clo" arguments, also no great undertaking, try, gentlemen, to sell your own wares, speak to the people about the ghastly revelations of the War Commission, tell them of the mess at the War Office, about the horrible waste at Woolwich, in the dockyards, at Dover, at Gibraltar, everywhere; point the moral of the constantly augmenting national expenditure, and ask all day and every day why the African mine controllers are not contributing to the cost of the war. Nor must you stop there, but go on to set forth the programme of the future. The old watchwords "peace, retrenchment, reform," must be revived to counter the unclean gospel of thriftlessness, perpetuation of abuses and of privileges, class rivalries, international dispeace and hate. A vision of peace and international goodwill must be continually evoked in the minds of the people, the humble doctrine of "live and let live" must be rejuvenated and expanded into the brotherhood of nations. Whatever else fails, let unwearied efforts be made to lift politics out of the dreary morass of rival schemes of selfishness, and appeals to "the gospel of number one." By following Joseph in his twistings, doublings, and Catherine wheel-like simulations of progress, we are playing his game, not our own. In the hubbabboo he has so adroitly stirred up, all that he and his associates in impotence and infamy have done or permitted to be done in the nation's despite is put out of sight. We have been defending too long, it is time to attack. What wares have ye to vend, Opposition leaders?

American Insurance Offices and Their Investments.

It is with a certain reluctance that we recur from time to time to this subject. For all the warnings published in our columns for many years back against the delusive, one may say the dishonest, methods of business pursued by three prominent life insurance offices of the United States in this country they appear still to flourish and secure numerous victims. As long as the evil day can be staved off—and insurance offices with large revenues can stave off that day better than any other description of credit handling institution—the public will go on being victimised by its own ignorance and hope of excessive gain. That will not prevent the end from being utterly disastrous, and the longer the imposture continues the more widespread is the suffering destined to be. The three so-called life offices or companies doing business here—for we may leave out that utterly shameless and disreputable wreck the Mutual Reserve Company of the United States—are, let us recall,

the Equitable Life Assurance Society of the United States, the Mutual Life Insurance Company, and the New York Life Insurance Company. These three claim to have possessed assets at the end of last year amounting to about £215,000,000, and they are always parading their tremendous resources, stunning surpluses and what not, in the eyes of the foolish public and making promises which time, with its usual infallibility, proves to be delusive. Their vaunted "bonuses" do not materialise, and the longer they go on trading the more are they driven to subterfuge, deception, dodgery of all mean kinds, in order to hide their failure. The moral atmosphere in which they live and seem to thrive excites nausea.

It always interests us much to look into the investments representing these stupendous "asset" totals, and the recent development of financial trusts in the United States, especially in New York, with their malign influence over stock market speculation and their intimate association with the dishonest company promoter in the creation of monster combinations, have peculiar interest to Yankee life office policyholders here. These simple folk never suspect that the money they pay away year by year, dreaming that they are guaranteeing not merely a safe provision for their old age or for their heirs, but making a more or less magnificent "profit," may be utilised to back up all kinds of gambling on the New York Exchange, in railroads, in land "grabs" or "steals," in fancy articles of every description. Yet this is the sort of thing that goes on. Two of the offices are pretty deeply involved in the capitals of financial trusts, but the third, the New York Life Company, does not appear to have adopted this method of stowing away part of its policyholders' contributions. It, however, is pretty deeply engaged in railroad adventures of all kinds, and according to the latest return of its investments holds $3,200,000 of the "International Mercantile Marine Bond Syndicate's" bonds, is to that extent therefore involved in the abortive Morgan shipping combine. It holds nearly $12,000,000 in bonds of various descriptions emitted by the Southern Railway, $12,000,000 of the Northern Pacific Great Northern combination bonds, issued over the Chicago, Burlington and Quincy Road, and is committed to the extent of about $6,000,000 in bonds to the fortunes of the Louisville and Nashville. Many of its investments of this category may be and are good enough, though to a large extent unrealisable. Others are the fruit of financial hardihood, and its involvement in the Atchison, Topeka and Santa Fe amounts to nearly $10,500,000. It holds, by the bye, £350,000 worth nominal of British Consols, on which it admits a small loss, but that was nine months ago. The New York Life Company is altogether distinguished above its two rivals by the amounts of money sunk in Foreign Government securities, Foreign Municipal bonds, and such like. Along with these, some good, many highly speculative, there is an enormous variety of obscure corporation issues, about most of which we know nothing, in which the policyholders' money is buried, and the general impression left by a study of the list is that fully half the $208,423,000 put away in permanent investments is of a description which could not be readily marketed. Some portion of it clearly could not be marketed at all, yet the total of the assets amounting to nearly $323,000,000 is swelled out by $6,616,000, called "market value of bonds over book," or cost, "value."

When we turn to the Equitable and Mutual offices the scene changes, and the air becomes if possible still more rarified, for there we get evidence of direct involvement in the risks of banks and financial trusts. Take the Equitable to begin with. It has invested its policyholders' money more or less heavily in the share capital of seven different financial trusts, and holds the controlling interest in the Mercantile Trust, obviously the Equitable's own creature. That is to say out of $2,000,000 nominal which this trust's, or New York bucket shop's capital amounts to, the Equitable holds $1,276,000 which cost it $4,421,000, and which it values for the purpose of swelling out its assets at $11,484,000. Obviously the market value here has been created mainly if not wholly by the insurance office itself. Its holdings in other trusts are individually comparatively insignificant, but in the aggregate it paid $7,398,000 for shares of the par value of $2,326,000, and these possessions are brought into its accounts at a market price of $17,339,000. This is very pretty inflation to behold, especially when the character of these financial trusts is borne in mind. They are simply tools of the market gamblers.

But the Equitable is not content with investments of this gossamer and fairy description. It has staked a considerable amount of its trust funds in five banks, having bought shares therein of the par value of $1,728,000 at a cost of $2,677,000, which investments figure in its last year's show as worth $7,144,000. Its policyholders' largest stake in any one bank is in the Western National, of whose par capital of $10,000,000 it holds $1,079,000 or more than one-tenth. This investment cost $2,091,000 and is valued in the books for the benefit of those who run the real risk at $5,395,000. Our P. O. Savings Bank cannot beat that. The office also holds a few shares in other insurance companies and safe deposit companies, but the only interesting point about that portion of the assets is the fact that $1,903,000 was paid for shares of the par value of $739,000, and that the prices were such full ones as to leave very little room for inflation in the books. Other investments are of the usual description and include £250,000 worth of what is called British Government "bonds," some $4,000,000 worth of Atchison, Topeka and Santa Fe bonds, over $3,000,000 of Baltimore and Ohio bonds, upwards of $5,500,000 in North-Western sinking fund and debenture bonds, nearly $3,500,000 in Erie bonds, including $1,500,000 of Erie-Pennsylvania collateral bonds on which there is an admitted loss. The investments in the Pennsylvania Railroad are very heavy, and many of these cannot be objected to, but along with such we have tolerably heavy amounts in Wabash bonds, Union Pacific bonds, Oregon Short Line bonds, Missouri Pacific bonds, Metropolitan Street Railway bonds, Norfolk and Western bonds, Hudson Coal Company bonds and so forth. There is thus a large mass of what may be described as safe, if often unmarketable, securities mixed with second and third rate issues on which the probability of loss is considerable. Nevertheless, the gross assets of $358,417,000 are swollen out by a "market value of bonds and stocks over book value," amounting to $15,798,000. This, partly, is how "surpluses" are manufactured and paraded in the eyes of the easily deluded British public. For other tricks of the trade apply to an actuary if you can find one courageous enough to speak out.

It is, however, when we come to the Mutual Life Insurance Company that the greatest magnificence appears. This New York enterprise was much given to boasting of its underwriting feats when our war debts were being created, and it now holds in Consols just the sum required for Board of Trade deposit, viz., £20,000. It is great, however, in trusts of the pure, or impure, finance order, and two among the fourteen in which it is a shareholder are mainly creatures of its own. These two are the Guaranty Trust Company of New York, whose issued capital is $2,000,000, of which the Mutual Life of New York holds $856,400 bought for $1,092,000, and ranking in the books for $5,138,000. The other is the United States Mortgage and Trust, out of whose issued capital of $2,000,000 the Mutual Life holds $1,077,000, bought for $1,564,000, and now valued for show purposes at $4,306,000. Amongst other trusts in which it is a considerable shareholder is the Title Guaranty and Trust, of whose issued capital of $4,375,000 it holds $516,000, bought for $1,157,000, and valued at $2,065,000. The Central Trust in which it holds only $133,000 out of $1,000,000 issued, seems to be the most inflated of the lot, for this investment cost the Mutual $1,529,000, and it values the possession at $2,394,000, or a market appreciation of 1,700 per cent. In the Morton Trust again, where it figures as one-tenth owner of a capital of $2,000,000, it paid $500,000 for what it now values at $1,600,000. Altogether the investment of the Mutual in this dangerous class of security foots up to $3,879,000 at par, and cost it $9,275,000, all of it policyholders' money, valued on December 31 last at $20,168,000. This is the finest example of book-keeping inflation that we know, and when it is remembered that these mushroom

trusts are all engaged in the business of assisting financiers to manufacture monster corporations, combines, railroad fusions and so on, and that they nearly all trade without any cash reserve, that the Guaranty Trust, moreover, has opened an office in London as a vehicle through which it can pass bills of exchange on to the London market, of whose origin and quality the London banks and discount houses can often have no knowledge, it will be seen what a brilliant display of fireworks may ultimately take place when some of these airy structures catch alight.

But the Mutual office is also a great banker, and the New York National Bank of Commerce appears to be its chief favourite. That bank has a capital of $10,000,000, of which the Mutual Life holds $2,032,000, bought for $3,329,000 of policyholders' funds, and valued at $6,096,000. Altogether it is a shareholder in eight banks, in which its total investments represent a par of $2,516,000, for which it paid $5,400,000, and which it values at $8,625,000. Here also there is ample scope for the escape of gas. Like the Equitable, too, the Mutual holds a few shares in safe deposit companies, and in an insurance concern called the Continental, but the total par of its investments in these directions is only $566,000. For these it paid $1,525,000, and it is only able to inflate the market value to $1,782,000, so there is little in that class of asset one way or another. Beyond all these, however, the company holds about $5,600,000 in bonds of the United States Mortgage and Trust Company, which may or may not be a security of any particular value, and all three offices have large sums deposited with trusts and banks. Thus the amount so dealt with by the Mutual Company—how much lent to trusts, how much to banks is not indicated—was $15,406,000, while the Equitable Company had $25,843,000 in this manner put aside, and the New York Life Company $21,074,000. They are like the trusts in having no cash in hand for the balances in the office tills were in the case of the Equitable $9,822, of the Mutual $17,880, and of the New York Life $29,632. Besides this they had all modest balances on current account in their banks, but how much of this kind of "money" may be available when the storm enters on its final phase we should not like to guess, and were it all forthcoming it would be but a drop in the ocean. What is of vital importance is the fact that assets to the aggregate amount, "book values" alone taken, of $125,000,000, or more than £25,000,000, including deposits at interest in banks and financial trusts, trust bank, and safe deposit shares held, trust bonds held, etc., represents money of policyholders, risked to a large extent in dangerous channels, and inflated to serve as the flimsy stuff out of which "surpluses" are manufactured.

The Mutual Life has naturally an enormous exhibit of other separate investments more or less substantial, but their speculative description is in places just as conspicuous as in the displays of the other companies. For example, $11,355,000 is sunk in Atchison debenture and general bonds, $5,445,000 in Central Pacific first bonds guaranteed by the Southern Pacific, $3,500,000 in Metropolitan Street Railway bonds, about $5,000,000 in Southern Railway certificates, $2,000,000 in Wabash first bonds, and about $8,500,000 in Northern Pacific prior lien and Burlington collateral bonds. There is $1,000,000, too, in "Share and Estate" first bonds, and nearly $2,500,000 in New York Dock first bonds. The company also owns heavy amounts of mere share capital, including $5,000,000 in Pennsylvania stock, $1,633,400 in Worcester, Nashua and Rochester Railroad stock, and $1,247,000 in Brooklyn City Railway stock, with quite a number of others. These figures represent the par value not the cost price, that being in nearly every instance an inflation. For instance the Pennsylvania Railroad stock was valued at $7,725,000 on December 31 last, and $2,050,000 of Chicago and Milwaukee preference stock figures in the books at $3,920,000, having cost about $3,076,000. Another example is $800,000 par stock in the Rensselaer and Saratoga Railroad, which was bought for $1,422,222 and stands in the valuation at $1,600,000. We have thus a false system of making up the assets visible throughout, and the display is consequently a sinister and ominous one wherever we look at it. Can you draw an inference, reader?

Economic and Financial Notes and Correspondence

The Alaska Boundary Dispute.

To profess an intimate acquaintance with the dispute over the Alaska boundary would be to say what is not true. We have never taken any profound interest in the question, and the documents were too meagre to enable the mere workaday journalist to get up the case. The only thing we have studied occasionally has been the map, and it has all along seemed to us a suggestive example of the ignorance of those who guide our imperial affairs that the boundary of Alaska, as settled with Russia, should have granted to that empire a long stretch of coast line going far to the south of the mainland that was undoubtedly Alaskan territory. If any reader takes a map, no matter how old, and looks at the coast line, he will find that instead of ending in the sea at Mount Elias, as it naturally ought to have done, the Alaskan boundary comes away down the coast for a long distance to a line called the Portland Canal, and that in doing so it shuts out all Northern British Columbia, not only from the ocean but from the inlets, or Scotch sea locks, by which the coast is everywhere indented. Probably our rulers did not care a brass farthing one way or the other when the original treaty of 1825 was entered into, and never imagined that the frozen north would be of any value to anybody. Gold discoveries in the Yukon region changed all that indifference into keen interest some few years ago, and a hot dispute has gone on between the Dominion Government and that of the United States as to where the boundary line was actually to be drawn. The two parties could not come to an agreement, and ultimately a commission was appointed, whose award has now stirred up the Jingoes of Canada to a rare outburst of genuinely filial love and patriotic feeling. There were many elements of doubt in the dispute, but mainly it consisted in a difference of opinion as to where the United States territory should end inland. Canada wanted free access to the ocean, and the States said, "No, no, Sonny, you cyant get that 'cept on dollar terms, because all the water's ours." The Yankee had bought Alaska from Russia, and fell heir to the coast line we had surrendered to that Power in 1825. The Canadian Government contended that the boundary should be drawn quite near the coast, and that certain privileges should be granted to the people of the interior as to access to the ocean, and such like, which, if granted, would practically have opened the whole coast line up to British Columbia and the Yukon territory. In the result the boundary line has been drawn neither as Canada wished it nor as it was laid down by the United States, and Canada has won upon the point of access to the ocean by the boundary line being drawn along the Portland Canal, but north of the observatory inlet, so that the harbourage is opened to the Dominion. Two islands out of four there, however, the two lying furthest out in the ocean, have been handed over to the United States, and this concession appears to be the main cause of the wrath exhibited in Canada, and of the refusal of her commissioners to sign the award. It is signed by the three American commissioners and by Lord Alverstone. Doubtless it will be given effect to, and after a little time Canada may settle down to recognise that on the whole she has gained as much as could be expected from the nature of the original treaty, and the careless indifference with which our political amateurs have been in the habit of surrendering property they were not interested in. There is not a great deal in the matter, one way or another, to those whose minds are not heated by Jingoism, and by and by, when the gold is worked out, it is probable that Alaska will sink back into its original obscurity, interesting to nobody. But it would not surprise us if Canadian Jingoes ceased to worship at the shrine of Joseph.

The Filial Affection of New South Wales.

It amused us very much to read in the *Morning Leader* last Monday that Sir John See has been doing his best to woo the Labour vote, as against the free traders, by promising that for the future the locomotives required for

New South Wales railways shall be made within the colony. He found, he said, that within the next five years from sixty to a hundred locomotives would be required by the State railways. Hitherto the locomotives required had been supplied by Messrs. Beyer, Peacock and Co., of Gorton, near Manchester, and, as might be supposed, the engines coming from that firm gave every satisfaction, but now home labour must be provided for, and accordingly Sir John See says he is quite ready to give higher prices for an inferior article—it certainly would be inferior—made in New South Wales, rather than continue to give the orders to England. In this policy he is backed up by Mr. Wise, the Attorney-General of the settlement, a gentleman who used to be a staunch free trader, and who even wrote a book in support of free trade. This shows the rapidity with which men may degenerate in bad company; and the only consoling thought we have is that, all very fine though it be for Sir John See and his colleagues to make these specious promises, if we do not lend any more money to New South Wales the engines to be ordered by him from coddled and bountied colonial makers cannot be paid for. That thought should be very consoling to Beyer, Peacock and Co., Limited, and the shareholders therein. Were the orders for these sixty to a hundred locomotives to come along, it would be prudent on the firm's part not to execute it unless the loan weavers in the City would guarantee payment of the bill. According to the report of the railway commissioners of New South Wales for the year ended June 30 last, the colony spent more than £1,000,000 of new capital upon its railways within that twelve months, and the whole of that money was supplied by loan agents here. If the loan agents cannot continue to meet demands of this magnitude, then New South Wales cannot pay for any locomotives, that is the sum of the matter. Naturally, our free trade press is rubbing in the lesson furnished by this attitude of the New South Wales Ministry, and taunting the Chamberlainite anarchist agitators with the practical illustration of love for the mother country furnished by Sir John See and his band. We are not very greatly concerned in that aspect of the matter; it is comical enough in other respects, and not least so in the valiancy with which Sir John See distributes his favours. "He would be prepared to give a substantial preference to the locally made article, for the reason that money spent here was circulated among the industrial class." All right, only let it be colonial money henceforth, not British, then we shall see where we are. Will Sir John charge 3 per cent.

Kent Coal.

Those who now direct the fortunes of the Consolidated Kent Collieries Corporation are striving hard to live down the evil name acquired by the company in the past, and for this reason invited certain members of the press to go down to Dover to see what they are doing at the shaft head. Although no coal was shown, the visit was none the less interesting, as it afforded an opportunity of seeing a system of shaft-sinking at work which is little known in this country. Partly because the works are close to the sea-shore, and partly because of the large water-bearing strata through which the shaft is being driven, the pit is a wet one. To have sunk it by the usual methods employed in mining here would have been almost impracticable, on account of the enormous cost involved and the danger to the men down the hole. Recourse was therefore had to what is known as the "trépan," or Kind-Chaudron, method of shaft-sinking, commonly used throughout the north of France and Belgium, where much the same geological conditions prevail as in Kent. By this system the sinking is done entirely with machinery, and it is immaterial whether the pit is wet or dry. The trépan consists of an enormous cutter lowered into the shaft, and weighing about twenty-five tons. When working it rises and falls about a foot, its direction being changed from the pit head. When the trépan has pounded and crushed a certain depth of rock it is withdrawn, and a grab or bucket lowered in its place. These remove the débris of water and powdered rock, and clear the bottom for further crushing by the trépan. When the shaft is down to the big coal seam, what is practically an iron caisson is lowered, and on this is built up the iron lining of the shaft, consisting of eighteen-foot rings bolted together. Not till this is finished is the shaft pumped dry, the peculiarity of the system being that so long as the actual sinking of the shaft is in progress no attempt is made to deal with the inrush of water. The initial cost of erecting the trépan and its machinery is heavy, but where the ground is so wet the subsequent saving effected in labour and material more than offsets this. By adopting the system Franco-Belgium, the directors have therefore signalised their desire to work the property in an honest and businesslike way. They and the mine manager, Captain N. M. Griffith, are confident that they can overcome all the natural forces pitted against them, serious as they are, but this, however, time alone can show, and also whether the mine can be made a paying concern. For though the samples of coal taken out of the bore-holes compare favourably by analysis with Welsh and Northumbrian, still what it will cost by the time it is brought to the surface, and the price it can be sold at, are for the present only matters of estimation. We may, however, say that we have always believed in coal seams at depth in Kent, and there is no reason why mines there should not pay, if honestly opened and worked, as well as in the Pas de Calais. Hitherto the honesty has been conspicuous by its absence, but now the effort is genuine, and the men controlling it capable and trustworthy. Therefore, we are delighted to see the progress they are making, and heartily wish them all the success their enterprise deserves. We cannot have too much coal.

The Mine Bosses and White Labour.

At the tenth week's sitting of the Rand Labour Commission the principal witness was Mr. F. H. P. Cresswell, the manager of the Village Main Reef. This expert, we need hardly remind readers, has been making experiments with white labour on his mine, and has demonstrated it can be employed to profitable advantage. The correspondent of the *Daily Mail* cabled this fact two or three weeks ago, and gave the figures of profits earned during July and August, which we have already reproduced. This week the mail brings us a full report of Mr. Cresswell's evidence, and as it is of the greatest importance, being, probably, the most candid opinion yet given to the Commission, we propose to give lengthy extracts from it. His statement was written, and he submitted tables showing the results of employing white labour in various capacities. The following are his conclusions:—

From tables No. 3 and 4 (machine drilling, milling and cyaniding), which gives the result in the only portion of the work in which the records supplied the necessary data for the calculations to be made, it is seen: That the cost of driving so far has been greater, and the cost in stoping less than for similar work in 1899. That taking the contract work, driving and stoping on the south reef together, the actual contract cost was 7s. 0.6d. per ton mined in 1899. That on the basis of theoretical calculations as to the cost of white labour made by the consulting engineers in statement prepared for Mr. Chamberlain (exhibit 20 of that statement), and stated to be based on assumptions unduly favourable to white labour in 1903, should be 1s. 4.7d. more per ton mined than in 1899. That, in actual practice, it is found to be 3.2d. per ton less than in 1899. That, in the mill, the labour costs were, in 1899, 4.83d. per ton. That, on the same theoretical reasoning, it should, with white labour, be costing 0.77d. per ton more than in 1899. That, in actual practice, it costs, with white labour, 0.58d. less per ton than in 1899. That, in the cyanide works, it should, with white labour, by the same theory, be costing 2.2d. per ton milled more than in 1899. That, in practice, it is found to cost 0.38d. per ton less than in 1899. These figures show that the conclusions arrived at theoretically by the consulting engineers are not borne out in practice, and the Commission may judge for themselves as to the value to be attached to such theoretical statements. A comparison of the gross results of work in this mine in the two periods of 1902 has been laid before you and deductions wholly misleading were drawn therefrom as to the cost of white labour, in the latter period. As a contra picture bearing on the question of the economy of white labour, I beg to set before you the following—

	March and April, 1902.	July and Aug., 1903.
Tons crushed	18,980	35,600
Value per ton	40s. 3.07d.	35s. 2.5d.
Total cost	£24,435	£41,821
White labour costs	£8,234	£13,134
Native labour costs	£3,516	£7,422
Total cost per ton	25s. 9d.	23s. 6d.

If I wished to imitate a previous witness I might say, "Or in other words by the use of white labour on the milling of 35,600 tons, the Village Main Reef Company has effected a saving of £4,000.

The above figures and deductions are conclusive enough, and explain themselves clearly without help from us. Equally important were other portions of Mr. Cresswell's evidence, when he, for instance, fearlessly gave his reasons why the mine bosses will not employ white labour, reasons supported by documentary evidence. He was asked by the members of the Commission, many of whom are mine monopolists themselves, how he accounted for his experience being so different from that given by other engineers. His reply was: "I am of opinion that the concensus of expert opinion laid before you against white labour is largely due to the following causes:—That the financial authorities at home viewed it at the outset with disfavour, being afraid that the employment of a large number of white men as labourers would make the labour element too strong a factor in economic questions, and, when representative government was given, in political questions; that the leading experts, besides being naturally influenced by these ideas on the part of their employees, had made the success of their careers here on the old, cheap, inferior race system, and would be reluctant to admit that a new departure must be made if any way of perpetuating it was possible; and that, in these circumstances, all arrangements and results adverse to white labour would be welcomed, while those on the other side would be combated and sifted with a view to proving them fallacious. It does not, therefore, seem to me surprising that, approached in this way, an experiment requiring careful handling and resolution to overcome difficulties as they arose, should, in many cases, have been pronounced a failure." In reply to other questions—it appears he was cross-examined at considerable length without so much as turning a hair or revising an opinion—he declared the experiment on his mine was not carried out under the most favourable conditions; that once they could get away from the bugbear of dependency on a mass of cheap labour the mines could be worked on a much larger scale than at present, and the working costs reduced materially. At first, he said, he met with some sympathy from Sir Percy Fitzpatrick and Mr. Schumacher, "then things veered round and the change was followed by violent attacks and endeavours to judge the experiment in its course, instead of letting it go on." His directors had been most loyal to him, but at a certain stage it was represented that the experiment was uneconomical. His justification for holding the opinion that the mine bosses are against white labour was contained, he said, in a letter he received from his chairman, Mr. Percy Tarbutt, dated July 3, 1902. The letter was the following:—

Dear Mr. Cresswell:—With reference to your trial of white labour for surface work on the mines, I was not present at the board meeting when the matter was read, stating that the board did not approve of the suggestion, but on receipt of the last mail I called another board meeting to consider the matter in view of the fact that the local board had already commenced to adopt your suggestion. I have consulted the Consolidated Gold Fields people and one of the members of the board of the Village Main Reef has consulted Messrs. Wernher, Beit and Co., and the feeling seems to be of fear that, having a large number of white men employed on the Rand in the position of labourers, the same troubles will arise as are now prevalent in the Australian Colonies—namely, that the combination of the labouring classes will become so strong as to be able to more or less dictate, not only on the question of wages, but also on political questions by the power of their votes, when a representative Government is established. I cannot, of course, set up my own personal view against that of the authorities I have mentioned, but, at the same time, I think, if the European population of the Transvaal is going to increase to anything like the extent that Lord Milner and other best authorities anticipate, that the extra number of working men which your scheme would provide, would be merely a drop in the ocean, and the board finally agreed to the trial being made, and a cable was sent to that effect. I hope that you will meet with success.—Yours sincerely, Percy Tarbutt.

In reply to a protest as to putting in this letter as evidence Mr. Cresswell admitted that the facts, as far as his relations with the members of Messrs. Wernher, Beit and Co.'s house went, did not confirm Mr. Tarbutt's letter, but his relations with the consulting engineers did. He believed when he received the letter they expressed the views of Messrs. Wernher, Beit and Co., nevertheless he had hopes they might be sufficiently large-minded to try white labour. We have ourselves said no more than has Mr. Cresswell. This gentleman is evidently one of the few independents on the Rand, so cares not a rap for mine bosses or others who have had to hide the truth from many motives—the potentates for the reasons given above and the employees from abject fear. But truth will out in some way or other, conspire to smother it as the short-sighted grab-alls may.

San Paulo (Brazilian) Railway.

For the first time since 1900 this company's revenue in the opening half of the year shows a falling off. There is a decrease in every class of traffic, general depression in trade being brought about by the decline in the value of coffee. Tonnage carried was 43,589 tons less, chiefly in coffee and general merchandise, meaning a loss in income of £54,496. Coaching traffic was down about £1,000, and smaller recessions occurred in other branches of traffic. Expenditure, however, was only £1,371 lower, entirely owing to a big advance under maintenance of way and works, because traction power, traffic expenses, taxes and miscellaneous charges were all substantially smaller. Law charges were up over £3,200. Thus the net revenue is reduced to £179,362, and the balance available for ordinary dividend to £107,487, but there was an important advance in the sum brought forward to £114,380. Total net revenue, therefore, is only £11,382 less, and the directors maintain the dividend bonus at 6 per cent., carrying £41,867, against £53,249, to next account. Since the last general meeting the Bragantina Railway which is of metre gauge and about thirty-two miles in length, and with branches from the company's station at Campo Limpo, was offered for sale to this undertaking on advantageous terms. The directors did not think it desirable that this line should fall into other hands, and decided to acquire it at a cost of £115,000. By the purchase the length of the line is increased to 118¾ miles. No mention is made of the method of payment, and we note that already the capital account is overdrawn £14,168. The undertaking, however, is rich in reserves and liquid assets, and the provision of the money should not cause the slightest inconvenience.

The Australian Commonwealth Imposture.

Whenever Mr. Chamberlain's administrative deeds of derring diddle come before us the question forces itself upon the mind whether in the not distant years to come the mischief wrought by his zeal in obtaining the inclusion of Colonial loans amongst trustee securities, or his fatuous assiduity in hurrying forward federations between the debt swamped and decaying settlements of Australasia will most redound to his discredit. We cannot decide, but that he will be execrated by all investors for betraying them by the trustee security dodge is unquestionable. Within a very brief space of time now, unless miracles happen of a kind quite unknown in the history of the world, the Australian colonies will default, wholly or partially, and those guided by the Trustee Act in their investments will have plenty of opportunity to reflect upon the peculiar wisdom of Mr. Chamberlain as an administrator of colonial affairs. It may take a litle longer to bring the humbug with which Australian federation was brought about into prominent view, but there can be no doubt whatever that before long this great feat of imperial consolidation will be found to be a disastrous mistake. Already grumblings are plentiful, and cleavages of interests are becoming increasingly visible, but the great

fact which damns this hastily conceived and ignorantly pushed forward measure is its wholly useless and uncalled for expense. Here were a group of colonies, all of them overloaded with debt, all struggling to keep up appearances, and often at their wits end to make a budget which would sufficiently deceive the investing classes here to admit of the successful issue of another loan. Upon these struggling communities, jealous of each other, with differing tariffs, with industries fostered in mutual hostility, and general antagonistic aims in many directions, federation was imposed, and the liberties of each settlement to ruin itself in its own way was thereupon not replaced, but supplemented by a new instrument of extravagance, a controlling power that could not contest, but whose influence must tend to destroy individuality within the various colonies. Partially free trade New South Wales became protectionist, perforce, because the tariff was "unified," others of the colonies drifted towards violent Protectionism, like Victoria, had to see their exclusive spirit modified. The result is already considerable affliction and no small confusion, but present results are nothing to what we must expect The special expenditure originating in the Federation Parliament alone, in the creation of a Federal Government, has risen in the budget estimate for 1903-4 to £435,000. This includes the cost of the general election now about to take place, which is put at £75,000, and this included, in two years, that is to say since the thing started, the increase in this specially federal expenditure has been £173,470. We thus have a costly piece of new machinery superimposed upon separate colonial legislative machines of the most expensive description, and the tendency will be for federal charges to increase at still greater speed, while merely state charges cannot be effectively reduced. Federation will thus hasten default, and any attempt to unify the debts of the various settlements under a project for making them all federal is certain to break down in present circumstances, cannot indeed be relied upon to help matters for many a year to come. Yet the Federal Government has the power to impose fresh taxes, and will be driven to do so. It has also the power to borrow money on its own account, and we may be certain that it will borrow if the London market gives it the least encouragement. So by and by the true value of this feat of our one and only imperial administrator is likely to become plainly visible.

Hotel Cecil.

With the greatest regret do we find this undertaking following the course we last year said it would. The falsification of our prediction would have afforded us the sincerest pleasure, because as is well known, nearly all the ordinary shares are held by that resurrection of the Jabez Balfour ruin, the United Realisation Company, which must bear the brunt of the poor display. The directors of the Hotel Cecil seem to be possessed of a minimum of perspicacity, and twelve months' ago increased the dividend on the ordinary shares by ½ per cent. to 3 per cent., when the slightest reflection must have proved to them that the maintenance of such a rate was virtually impossible. In vain was it pointed out that the period under review would bring with it increased charges for debenture interest and preference dividend of £7,250, and that the policy of continually neglecting the question of depreciation would presently lead to serious trouble. We now find the ordinary dividend down to 1 per cent., with again not a penny allowed for wastage, and there can be no doubt that if the future interests of the concern were studied even the preference distribution would not be forthcoming. It seems to be a failing of the directors of hotel companies that their last thought is the fact that properties can deteriorate, and one of these days there must come about a severe reckoning. Although the subjoined statement shows a fair increase in revenue, the actual hotel business was poorer, because against a rise in income of £1,329 to £226,372, the cost of wines, provisions, etc., increased £5,438. Then working expenses rose £3,658, and the maintenance of profits is traceable to an advance in rents receivable of £4,894, and a reduction in the amount spent on repairs and renewals of £3,606. Debenture interest absorbs an additional amount of £4,000, and the net profit, including a smaller sum of £752 received for interest, is nearly £4,000 lower at £32,319. To add to the distress the preference dividend takes £27,500 against £24,250, so the ordinary dividend must be reduced from 3 to 1 per cent., with an advance of £819 to £15,772 in the amount carried forward. We have already mentioned the sum spent on repairs and renewals, but it is necessary to emphasise the fact that nothing further is provided against properties valued at almost £1,500,000. Reserve, of course, receives no addition, and remains at its old imposing figure of £26,111. Trading accounts are still largely adverse, and cash has been reduced £17,370 owing to capital outlays during the year, and the reduction in net profits. To make matters worse the company has got into a dispute over the new buildings of the Savoy Hotel. The directors say they have carefully considered the plans of these and are of opinion that if they are erected in accordance therewith, they will seriously interfere with the light hitherto enjoyed by this company. Reluctantly, therefore, proceedings have been commenced to restrain the erection by the Savoy Hotel Company of any building which would infringe the right of light of the windows in the east block of the hotel. Let us trust that the litigation will not involve the Hotel Cecil in heavy expenses, which it can ill afford.

Yankee Railroad Capital Consumption.

We have not devoted such an amount of our space this year to Yankee Railroad reports as has been our custom for a good many years back, because the elusiveness of their statistics has disappointed us. It is impossible to be sure that we are getting the whole truth, and as the months have slipped by it is becoming more and more obvious that no small part of their dazzling prosperity has all along been the outcome of increased financial commitments. Traffic has been swelled out by the operation of trusts and syndicates, more than by the natural and profitable growth of production and of genuine demand. How far such peculiar creations as the United States Steel Corporation may be responsible for the diseased increase in freight business upon the railroads we have no means of determining, but it is plain to anybody who cares to look that the fomentation of a consumers' demand by this corporation and its dependents must have swollen out railroad receipts to a quite deceptive extent. And the railroads themselves have been at the same occupation—the furnishing of plenty of freight for each other—as an interesting article in the New York *Evening Post*, one of the oldest and still one of the most honest, able, and independent newspapers in the United States, serves to reveal. From this article we learn, in a summary fashion which is very instructive, that the outpouring of new securities by the railroad companies has been systematic and excessive during the past three years of overwhelming prosperity. They have all added their capital account to a more or less startling extent, and the prospects of further expenditure out of the same kind of resources are quite formidable enough to cause doubts as to the genuineness of the recent prosperity, and to raise apprehension that another period of railway defaults, receiverships, and assessments may not be very far off. In the article we get a short table contrasting the total capitalisation of sundry prominent roads in each of the past three years. Comparing the figures of June 30, 1903, with those of the same date in 1901, we discover that the Atchison road has added $31,000,000 to its capital in that interval, that the Chicago and North-Western has increased its capital by $9,000,000, the Chicago, Milwaukee, and St. Paul by about $8,000,000, the Denver and Rio Grande by the same figure, the Illinois Central by some $29,000,000, the Southern by $28,000,000, and the Nor-

them Pacific by no less than $118,000,000. The whole of these increases must represent payments for new work done, much of which is the product of amalgamations and absorptions resulting from capitalist schemes of aggrandisement, but, on the other hand, the roads all claim to have utilised large amounts of current revenue in order to execute betterments, so that, were the English system to be followed, and everything new or additional to be paid for out of capital, the figures would unquestionably be very much more striking than they are.

As it is, the railroads, although well in funds according to their latest reports, are all finding difficulty in obtaining the capital they require. The Erie board, for instance, got power last April, to issue $50,000,000 in 4 per cent. bonds, and a banking syndicate contracted to sell $10,000,000 of this issue. In the subsequent six months, however, it was only able to sell $1,000,000. The Pennsylvania Railroad, again, has been adding to its capital at a tremendous pace, as everybody knows, no less than $150,000,000 having been added to its authorised stock issue, as against the Rock Island's $250,000,000, and they are all finding it so hard to get money that many of them have come into the market and borrowed temporarily at exorbitant rates of interest, some of them into the London market. Notwithstanding this difficulty they are all busy carrying out improvements and extensions. In addition to the immensely expensive tunnel and terminal undertakings in New York, the Pennsylvania has spent at least $10,000,000 on new facilities at Pittsburg to avoid such another freight blockade as that of January last. The New York Central has in contemplation, or in hand, track and terminal reforms of an estimated cost of $20,000,000, and in its past fiscal year the Illinois Central disbursed no less than $15,300,000 on new stations, lines, and equipment. The Canadian Pacific, too, has been authorised to obtain $9,500,000 of new capital, to be spent wholly on fresh rolling stock and improved terminal facilities. The accounts, in other respects, show with what remarkable speed and steadiness the cost of the undertakings has risen. This is incidentally illustrated with figures from the Reading Company, whose annual report—a most confusing document—we dealt with last week. Compared with 1896, the average cost of the company's locomotives in its books has risen from $4,906 to $6,463, and the average cost of the freight cars from $383 to $558. And the roads are all spending heavily on new rolling stock, and a good deal of the expenditure goes to capital account, is provided for ultimately by the money-lender or share investor. Out of this kind of thing, more than anything else, the tremendous prosperity of the past few years has arisen. How long will it continue? Who can say? We do not even know how much of the "betterment" outlay recently met from current income is destined to be one day thrown upon capital. But when the recoil in the kind of prosperity here indicated does come, it is from its nature swift and far reaching.

A Cosmopolitan Protectionist.

Friends of Sir Thomas Wrightson, Bart., M.P., apostle of Joseph and defender of the protectionist faith against all comers, will be quite shocked to learn that his real solicitude is for the hated foreign capitalist and not at all for the grand old British nation fast going to the dogs. At least that is what we gather from the names of the little band he has gathered around him as fellow shareholders in the engineering and general contracting business of Head, Wrightson, of which concern Sir Thomas may be described as the controlling spirit. This estimable M.P. wants to tax imported manufactures, and don't you know why? Because if we can get rid of that hated foreign competition and put up prices of say, manufactured machinery against the luckless British consumer, cannot we vastly increase our dividends and earn the lasting gratitude of our French shareholders? In the protectionist days of the future we can imagine one of the annual gatherings of Head, Wrightson and Co. Sir Thomas will probably be promoted to the chairmanship by then, and in a magnificent peroration will say: "Monsieurs, the report and accounts which I have just had the pleasure of analysing fill us all with joy. Thanks to the change in the fiscal policy of the United Kingdom, brought about by that wonderful statesman the Marquis of Highbury, we have been able to charge our English customers three or four times as much for our wares as we could in the old free trade competitive days, and you, our French allies, receive all the benefit." The report will be adopted amid unbounded enthusiasm and the meeting close with the singing of "For He's a Jolly Good Fellow," by Monsieurs Audresset, Eghelby, Folch, Hecht, Kerston, Sohne, Marti-Codolar, Ran, Subiran, and Trias. Of course any protest by an English shareholder who may complain that although he was receiving a higher dividend he had been almost ruined by the high prices ruling, will be received with shouts of laughter.

Chinese Customs.

During the June quarter of this year the total revenue collected by the Imperial Maritime Customs of China at the thirty so-called "Chinese Ports" shows a decline of about 3 per cent., compared with 1902. This fall is mainly due to the sharp drop in the imports duties at Shanghai owing to the financial troubles in the north and to the reaction which naturally followed a bumper year like last. For as the *North China Herald* points out, the duties collected in 1902 were 50 per cent. greater than in any year of the previous decade. Leaving these exceptional figures out of consideration, the revenue of 7,770,083 Haikuan taels collected this year shows a considerable increase over that of the average for the past ten, and continues the steady advance which has been so noticeable a feature since 1900. Of the thirty ports at which the duties are collected, sixteen increased their returns compared with 1902, the percentage being large at Yochou Hankow, Wuhu and Chinkiang, while the other twelve showed the usual increase to be expected from them until better communication with the interior is opened up. The remaining fourteen ports from various causes did worse, the cause with some being a fall in the opium duty or in the exports, and with others the fact that no return is made of the duties collected under the native flag. From a table drawn up by the *North China Herald*, in which the quarters' receipts are arranged under the different heads, and compared with those in the corresponding periods of 1902 and 1901, the decrease mentioned above in the total is found to arise chiefly from a fall in the import duties. These this year amounted to Hk. tls. 2,593,711, while last year they were Hk. tls. 3,043,372. Yet in spite of this decline of about 15 per cent. the total is nearly a million taels more than in

1901, when the receipts under the old tariff were Hk. tls. 1,596,104. The export duties also showed a slight decrease, but it was little more than nominal. That also in the opium duty was comparatively small, and was caused by the diminished revenue of tls. 54,062 derived from native opium. Apart from these three, the coast trade duty, tonnage dues, transit dues, and opium likin all showed a steady advance, even on the high figures of 1902.

Carlton Hotel.

In the report issued twelve months ago the shareholders of this company were told that a substantial interest would be taken in an undertaking to be formed for the purchase of the lease of the Walsingham House Hotel, and the freehold of the Bath Hotel, in Piccadilly. In due course, subscriptions were invited for an issue of £300,000 debenture stock, the prospectus setting forth that the money would be advanced to a building company, whose purpose it was to pull down the Walsingham House and Bath Hotels and erect a new large building, to be called the Ritz Hotel, the finest in London, you may be sure. This happened in December last, since when all concerned have been patiently awaiting the demolition of the old structures, so that the erection of the new palace might commence. But month after month went by, and Walsingham House was still untouched by the housebreakers. Meanwhile the great Lyons' restaurant was springing up close by, and proprietors in their anxiety commenced to write letters to the press seeking an explanation of the cause of the delay. So far as we are aware, no information was vouchsafed, but from the report of the Carlton Hotel for the year to August 31 last, just issued, we learn that the demolition of the existing buildings, which has now been commenced, was to some extent delayed by negotiations with the London County Council and other parties interested, to provide for the widening of Piccadilly opposite the new hotel, to which the management attach great importance. These negotiations have been satisfactorily concluded, agreements having been signed under which the street will be widened by the breadth of the present footway, a very necessary improvement. This brings us to the position of the Carlton Hotel Company in connection with this new affair. It seems that a concern called the Building and Vendor Co., Limited, has been formed, with a share capital of £300,000, for the purpose of completing the purchase of the old properties and putting up the new, the Carlton Hotel Company subscribing for half the capital, and four of its directors being the managers of the Building Company. Further the proceeds of the above mentioned debenture stock have been advanced to the Building Company, the concern repaying to the Carlton all the expenses incident to the issue, and undertaking to pay the interest, fees to trustees, and provide the annual contribution to the sinking fund. The Carlton has also joined in a guarantee of £150,000 borrowed by the Building Company for the purpose of rebuilding, etc. It comes to this, then, that the Carlton Hotel Company is the controlling influence in the whole business, and has taken upon itself responsibilities of a very serious character. We suppose the board has a mandate from the shareholders to proceed as it is doing, but the actual position of affairs is by no means clear, and we hope a lot more light will be thrown on the subject at the meeting on Wednesday next. First, let us know the approximate cost of this new hotel, because we greatly fear that the business is being overdone, and seem to detect the raising of much more money than at first indicated. In the prospectus offering the debenture stock for subscription, it was stated that the cost of the new building would be not less than £550,000, but the sums so far mentioned aggregate £750,000, as follows:—Capital of the Building Company £300,000, debenture stock raised by Carlton Hotel £300,000, amount jointly guaranteed by Carlton Hotel £150,000, total £750,000. Maybe the latter debt will be redeemed out of the capital of the Building Company, and colour is given to this assumption by the fact that of the Carlton Hotel's moiety only £54,422 has been paid up, leaving £95,578 still to be found. How the sum will be got together, we do not pretend to know, but imagine that it is the inability of the concern to find it that has necessitated the raising of the above named £150,000. No mention has yet been made of the holder or holders of the balance of the Building Company's capital, and some information on the point appears desirable.

Now we come to the very important questions of the length of time required to complete the new hotel, and the provision of interest during the period of construction on the large amounts of money raised. We shall probably not be far wide of the mark in assuming that about two years will be required before the new hotel is ready for the public. Now there is 4½ per cent. per annum to be provided on the new debenture stock, and say a similar rate on the borrowed £150,000, meaning £40,500 in two years, to say nothing of the sinking fund on the former. All this money must be found by the Building Company. Where is it to come from—out of capital? Doubtless, and added to the cost of the hotel. And suppose after all the lavish expenditure the Ritz Hotel does not pay. It is situated in a fiercely competitive spot, and will have its work cut out to obtain sufficient patronage—that sounds better than custom—to provide a decent return on its heavy capital. We cannot help thinking that the directors of the Carlton Hotel have been ill-advised in embarking on this venture, and should have been content to let well alone. Without doubt the Carlton Hotel continues to do excellently. After meeting outgo of every description, and making provision for maintenance and renewals, the net profits were £63,762, or a few hundreds more than in the preceding year. Adding £205, being interest on sinking fund investments, and £11,482 brought forward, the total for disposal is £75,509, an advance of rather more than £1,000. So debenture and preference interest having been met, the ordinary shares again receive 10 per cent., a sum of £2,265 is transferred to amortization of leases reserve, £20,000 is placed to general reserve, and £13,675 is carried forward. The last named fund now reaches £55,000, all invested in shares of the Building Company, but it is to be noted that the lease, buildings, furniture, etc., remain at the old figure of £647,311. Trading accounts are a little favourable, and cash comes to £28,158, apart from the large sum received from the latest debenture stock issue.

Salviati, Jesurum and Co.

Few company fiascos have given us more to say than the deplorable record of this concern, but the day for hard words is now happily over, and we have only to express the hope that the new career on which the undertaking has been launched will prove a prosperous one, and do something to retrieve the disasters of the past. In order to preserve the continuity of the company's history, it is only necessary to say that the scheme of reconstruction outlined in these columns in December last was duly accepted by the shareholders and received the sanction of the Court on August 4. Under this the capital was reduced from £330,000 to £60,908, the preference shareholders sacrificing 14s. and the ordinary shareholders 19s. per share. Thus the capital now consists of 179,293 preference shares of 6s. each, and 142,400 ordinary shares of 1s. each, and to illustrate the drastic nature of the reorganisation we cannot do better than place side by side some of the principal figures of the last three balance-sheets, that for the year 1902 just issued, showing the effects of the reconstruction:—

	Years ended December 31. 1900. £	1901. £	1902. £
Liabilities:—			
Capital	321,668	321,693	60,908
Bills payable	23,821	25,985	33,824

Cash	6,503	2,325	958
Debit balance	796	40,139	—

* 20 per cent. written off for depreciation.
† 25 " " "

The present directors took office on January 1, 1903, and tell us that since that date they have succeeded in

effecting very considerable reductions in the working expenses of the company. Reforms have also been introduced in the general organisation, and as benefits are already being derived from the changes the board anticipates that the next report will show a great improvement in the position. Let us hope so. The chairman has visited Venice three times in order to initiate the necessary reforms and conclude the sale of the business, all of which have been carried out with satisfactory results.

Critical Index to New Investments.

**** To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Borough of Durban Municipal Loan, 1903.

Applications will be received by the Standard Bank of South Africa for £300,000 4 per cent. inscribed stock, redeemable in 1953. The objects of the loan are to provide for the extension of electric tramways, electric lighting and water supply, sewerage, drainage, and equipment and future extensions of a telephone system, etc. Including this issue the debt of the municipality upon the security of the town lands, and the rents, rates and general revenue of the borough amounts to £1,794,000, of which £544,000 has been raised locally, and £1,250,000 in London. Durban, it is said, has a population of 60,446, but what proportion of this number are natives is not stated. The rateable valuation, however, exclusive of Government railway, harbour, and other exempted properties was £8,655,530 last year, and is estimated at approximately £9,000,000 for the current year, while the assets consisting of unalienated lands and the various undertakings owned, together with £178,072 for sinking fund investments, are valued at £3,420,488. For the past three years the actual revenue from rates, rents, tramways, etc., was £217,486 in 1900-1, £262,865 in 1901-2, and £346,716 in 1902-3, the increase being due to the growth of the borough and not to higher taxation. The price of £97 is payable in instalments of 5 per cent. on application, 42 per cent. on allotment, and 50 per cent. on December 31, but may be paid up in full under discount at the rate of 3 per cent. per annum, and a full quarter's interest will be paid on December 31.

Passing Events.

There is very little to be said this week about the tariff speeches, pro and con, but we rather gather that Mr. Chamberlain is not having it all quite his own way, poor man. He himself is the source of our information, his politeness being of that peculiar kind which always falls back upon abuse of the enemy when arguments fail, and temper in consequence gets heated. We hope he will go on thusly. But why is so little being said anywhere about the necessity for retrenchment and economy? Why are so few of the speakers following up the noble ideal placed before Scotland by Mr. Courtney, the ideal of the favourite Scotch poet, Robert Burns, "that man to man the warl o'er shall brothers be and a' that"? Disarmament, the cultivation of friendly intercourse in trade, the abandonment of senseless rivalries, and the gradual breaking down of impoverishing tariffs—these are the ideas to press home to the minds of the democracy, and their immediate application is stoppage of waste at home on our fighting forces. Look at Germany where a committee of experts, to use the American phase, has been gathered together to try and devise some means of bridging the deficit, a chronic and widening deficit, in the empire's finances. They cannot do it, no matter though they be archangels in finance, because the naval and military expenditure of the German Empire is now crushing, and will be destructive if continued. No, the nations must disarm, and the prize-fighter's ideal put before the British electorate by the ex-Colonial Secretary is a base and debasing one. It is not enough, therefore, to show that his statistics are misleading or downright dishonest, to prove that his arguments are self-contradictory, to exhibit him as a false prophet. He must be met by efforts to stir the nobler passions of mankind, to create enthusiasm for liberty, for goodwill among men. You thirst for "safe" investments. Try that recipe. The ex-war maker has not hitherto done much for the investor, has he?

Mr. Thomas Gibson Bowles is a very naughty man. He has the cruelty to attempt to reduce the rhetoric of the protectionist Balaam from Birmingham to level of facts. This is quite "tolerable and not to be endured." Extra taxation of £10,280,900 net imposed under the sketchy hop-o'-my-thumb of Joseph! What of it? Are we not all prepared to sacrifice one meal a day, and go barefoot in winter if necessary, provided only we can stop the foreigner from trading with us? What business has anybody not an African mine floater or a Yankee pork dealer to dare to buy or sell with England when we can make so much by waving the British flag, our one and only asset, according to the prophet? Facts are anathema, let us have famine and braggart language. You must try again Mr. Bowles.

"'Tis the voice of the sluggard," quoted the touring brave, whose cap has feathers; and we are pleased to note that he still knows a nursery rhyme or two. And he has indeed been a sluggard in turning out the landlords, in banishing sects from positions when they can devour the taxes, in delivering us from Beer, let alone de Beers, in handing us all old age pensions and those three acres and a cow—we shouldn't mind taking three cows and an acre if Joseph would please give 'em to us—Tut, he has not got these bosses to bestow that £30,000,000 yet on an exhausted nation. Other sluggards may take to complaining soon.

Lord George Hamilton's speech to his constituents on Thursday will ensure for him the respect of every straightforward man in the country, no matter what the complexion of his politics may be. It was the speech of a gentleman, a man of honour, and let us say it frankly, a man betraying deeper convictions than we had hitherto credited Lord George with. His account of the trickery, the mean deceit employed in order to hustle himself and Mr. Ritchie out of the Cabinet contained no offensive word or undignified phrase, and was all the more effective for that. We again say that men capable of treating colleagues in a fashion so far removed from ordinary rectitude as the free-trade Cabinet Ministers were treated, are not fit to be trusted in public affairs.

At the conference of the miners' representatives held this week a resolution was passed condemning any change in the fiscal policy of the country, as it would be detrimental to its general interest. And yet Mr. Chamberlain boasts that under this cure-all policy miners would get better wages and more work. But as Mr. Pickard pointed out, what the men want is not more work but more leisure, so Mr. Joseph ought to amend this portion of his speech and promise better wages and less work. If he did he would get a grand following of corner-boys and loafers who, though they haven't got votes, could make a deal of noise by shouting "crystals," and offering to maul the foreigner.

That wise French banker whose judgments are often quoted here says that there are at least £120,000,000 of foreign money in the London market, money belonging to or in control of Continental bankers. He is in a position to know, and his estimate is consequently worth quoting as being the highest we have ever seen. The whole of this money may not be floating balances upon the market, but what is not is invested here in British securities, and the rest in the hands of Continental bankers doing business in London. It is a very formidable total. Our mentor thinks it will conduce presently to cheap short credits; "perhaps

some months hence the quantity of floating money in the hands of the credit jobbers will be so great that we shall be back to the old days of 1 per cent. for the loan of it." Perhaps, but we shall have our crisis and much dearer money first. Indeed, the possibility of such a large quantity of foreign capital being habitually used on our market is far from reassuring in present circumstances. Supposing something occurs here to frighten the foreign owners of this capital and make them begin to withdraw it, how should we be able to meet their demands? This question sends a shiver down the spine like that experienced by Mr. Chamberlain twenty odd years ago when somebody whispered "retaliation."

In spite of the vehement protests of the Russian and Japanese statesmen, the general impression out in the Far East is that the countries are on the verge of war. Every little incident is scrutinised and read into a sign of the direction in which the tide is setting. Yokohama is disturbed at the appointment of Vice-Admiral Togo to command Japan's standing squadron because in the past the Admiral has earned the reputation of a fighter.

The passion swept Joseph is evidently assured in his own mind that the result of his skilful playing upon the ignorance and cupidity of the masses and their unreasoning detestation of the foreigner will be to give him the post of Prime Minister in the next Government, but he is really too mock modest when boasting of his own attainments. Speaking at Tynemouth he promised that if he carried the country expert advice would be sought for drawing up the tariff because it would be perfectly absurd for him with his small knowledge to pretend to say whether thimbles should be taxed more than anchors. If he deems himself incapable of carrying out the task, where will he find experts to satisfy him? Will they be "Made in Germany," or imported from the United States, and if so what duty will be placed upon them? Milner came to us "duty free," but that must not occur again.

Russia and Austria have presented to the Sultan their notes demanding reforms in the administration of Macedonia. Among other points the notes are believed to contain the British suggestion for the appointment of European Assessors to the Mussulman Inspector-General. But while the Powers are protesting the Turk still continues his career of pillage and murder in the unhappy province.

Would it not be possible for some of our more enterprising newspapers to reach the facts about German textile and other industries at the present time? We hear on excellent authority that the position, in the textile trades at any rate, is far worse in Germany than here, and in some branches so bad that producers are in despair, ready to sacrifice their stocks at knock-out or bankrupt prices in order to obtain a little money. Facts of this description would be most valuable in order to still further emphasise the dishonest pretence underlying the present outcry for a return to protectionism.

They seem still to want Mr. Charles Schwab very badly in the United States and Mr. Untermyer, the counsel for the people who are investigating the affairs of the Shipbuilding Trust, declares that he is "the very head of the whole outfit," but adds, "I can't find hide nor hair of him." This seems a pity for it is one of the most piquant stories of finance we have come across for some time this of the United States Shipbuilding Company. One of these days, perhaps, we shall be able to give an outline of it from beginning to end. The only prominent charge brought out hitherto illustrates the care that Messrs. Schwab and Morgan took of themselves when the marketing of the "capital" began, but we have already dealt with that, and it is only necessary to add now that Mr. Pierpont Morgan's denial of participation has been proved to be a poor sort of subterfuge. That his firm did not sign the "ironclad" agreement, as it is called, is quite true, but that the agreement provided for the preferential sale of Schwab and Morgan's shares is also true.

The trial of Whitaker Wright has been postponed until the next Old Bailey sessions to give the defence more time to get up their case.

Answers to Correspondents.

[A Fee of Five Shillings per query is charged for replies under his heading. Letters, Five Shillings extra per letter.]

W.C.W.G.—(1) Although this stock has fallen heavily in value, there can be no doubt that its interest will be duly met. You should not think of selling it.

(2) These bonds are good, but you must not forget they are redeemable in a few years' time, and that allowance should be made out of the interest for the loss on redemption. You are paid off at par.

(3) I am afraid these are not likely to recover for some time, yet I should not suggest your selling; as when better times come they may rise again in value, and in the meantime you are getting a fair return.

(4) There is, I think, sufficient security for this issue, and I do not think you should sell at present.

(5) This stock has fallen on the approaching absorption of the property by the Government. It should not now be sold as, unless holders persist in attempting to sell, the price at which it will be taken over should give a fair yield in the future.

(6) This is good, and one of the few things on your list which have not shrunk in value.

(7) The debenture stocks are, I believe, safe, but I am inclined to think you ought to take advantage of the present price to get rid of your preferred ordinary. I cannot quite make out from the figures how you stand in this security.

(8) This debenture stock is a fair one, although you got it at a somewhat high price. I am inclined to think you could find another in place of it which would give you the same income with a stronger position.

(9) This need, I think, cause you no anxiety, as it is a well managed concern.

(10) The chief objection to this stock is that it is not very marketable, and not likely to become so. The interest should, however, be fairly secure. So let it be.

(11) It is not quite clear from your description which security you have. If it is the irredeemable debenture stock you have paid rather a high price for it. Still, I do not think you should endeavour to sell now, although I do not like the company much.

(12) I am inclined to think you ought to get rid of this investment. It is not worth more than its quoted price, and, although the company is doing very much better, it is not very strong financially.

(13) Although you have rather a big loss on this stock I think you should sell. I doubt very much if there is sufficient security to generally cover the issue.

(14) I do not like this security either, and think you ought to get rid of it. I cannot say what the present price is owing to the metamorphosis that is going on now in the situation of the concern.

(15) Here again you have paid too high a price, but I do not think you should sell. The business ought to be a good one, and its debenture interest fairly safe.

(16) There should be no question as to the dividends on this security. The principal risk is that more money may be wanted by the town, and this, at the present time, might cause a further reduction in price. You could, I think, obtain quite as much, if not a little more, interest, out of one of the big railway guaranteed stocks.

I hope these replies are what you wish for, but if you should desire further information about any one of them kindly write.

G.E.R.—If the guarantee you refer to is an absolute one it naturally adds to the value of the security, as the guarantor has a considerable amount of uncalled capital. I think, however, you will find that the guarantee depends on some regular annual payment, and if that is so the actual security of the debentures will depend on the nature of the property. As a rule such issues are very unmarketable and difficult to realise.

Don.—The property is a good one, and likely to last for a very long time, but you must remember the nature of its business. It is probable that the price will not improve much, but the shares should give you a steady return.

TRADE AND PRODUCE.

Wheat.—Business in cargoes on the London market this week was practically non-existent, as buyers maintained the attitude of indifference they have adopted for some time past. Holders, however, continued to keep prices up under the influence of stronger advices from America, so rates remain much the same as last week. In futures there was a slight movement at the beginning of the week, but the staleness of the position generally was an effectual bar to its developing any strength. For a little while it was supported by favourable news from the States, but when this changed its tone, the market here promptly fell, and relapsed into its chronic state of apathy. From all parts of the country the harvests reports are bad, no district appearing to have escaped the recent deluges. This, however, has not sent prices up to any extent, nor can they move far since the wheat on offer is of a very poor quality. The New York and Chicago markets have, on the whole, been firmer than ours, partly on account of better crop reports and partly because of the unsettled state of affairs in the Far East. There is also a large buying clique at work, whose operations naturally help to lift quotations. Bradstreet, this week, estimates the quantity of wheat in sight east of the Rockies to be 38,216,000 bushels, against 35,636,000 bushels last week, and 54,628,000 a year ago.

Wool.—The weather is by no means favourable to the winter demand, and in the north sales of heavy fabrics are reported to be few and far between, though a brisk business has been done in light rain-proof cloths. Round Leicester the deep grown descriptions of home-grown wool are steadily growing in favour with consumers, and the quantities used show a steady increase every week, which has naturally strengthened prices. Such a demand for English wool has not been known for at least ten years, and, as usual, has attracted the attention of speculators, so it is possible there may be some excitement in this market towards the close of the year. At the London Wool Exchange on Thursday about 4,200 bales of woolled sheep skins were offered, and with a fair selection and a good attendance of buyers, both home and Continental, competition was brisk, and prices, with the exception of merinos, in advance of those given at the September sales.

Linen.—If any change has taken place during the week in this market it was for the better, though, so far as can be seen whatever it was could not be expressed in figures. Orders, though individually unimportant, aggregated a fair total, but prices were practically unchanged since producers have sold well forward, and can therefore hold off for fuller rates. In brown power loom bleaching cloths there was a fair movement, though not in excess of the production, while hand-looms were quiet, at unchanged prices. Unions still command considerable attention, but values were not up to high water mark, since the disturbed political atmosphere in the Far East has had the effect of unsettling the cotton trade. In other branches there was not much doing, unless perhaps in the housekeeping, which has come to life again, a better demand for damasks having sprung up. Both the home and export trade showed signs of more activity, though buyers continue to exercise the greatest caution. The States are displaying more inclination to deal freely, and while there is still plenty of room for improvement, there seems much more likelihood of expansion rather than contraction taking place. Canada also shows more signs of increasing business in the near future, while Australia and New Zealand keep up the firm position they took up a little time back.

Cotton.—There was more activity in Liverpool this week, and the demand for American keeps well abreast of supplies. Prices, however, were advanced on reports of killing frosts in many parts of Texas, and in addition the news that the top crop is far from good also affected quotations, since it induces the shorts to cover their engagements. The outlook therefore is by no means rosy from the consumers' point of view, since the temporary improvement in the financial position of the States has only rendered the two camps in the cotton market there more active—until the big smash comes along. All this, however, makes Liverpool nervous. In view of the increased supply of twist and weft, which will soon come on the market now that the mills are working longer hours, spinners of yarn were more anxious to secure orders, and this anxiety resulted in very fair business. But prices have not displayed so great a tendency to advance as might have been expected, and any attempt to force them up met with but little response. For cloth, Sir Jacob Behrens and Sons inform us, there has again been an improved enquiry, with but little business resulting from it, since the limits in most cases are still unworkable. Bombay and Calcutta are both offering, and of the two the former is nearer to business, having in fact booked fair lines, chiefly in specialities. China is also busy with enquiries, though as yet very little has resulted from them.

The unsettled condition of the financial markets in the States weakened the quotations for both spot and futures in New York, the movement being also helped by bull sales. With unfavourable weather reports, and generally discouraging news concerning the quality of the crop, prices, however, soon recovered, and continued on the whole to rise, in spite of occasional fluctuations caused by market operators.

Liverpool was quiet on Friday evening, but nevertheless spot quotations were up two points in all grades, except good ordinary, which had risen six. Egyptian and Brazilian fair, however, remained untouched at 6 13-16d. and 6.12d. respectively. Futures were barely steady, though prices were above those of last week, October American being quoted at 5.51d., Oct.-Nov. at 5.35d., Nov.-Dec. at 5.30d., and later positions from 5.28d., Dec.-Jan. to 5.26d. May-June.

Coal.—With the winter season rapidly drawing near, trade throughout the north of England is becoming quieter. Quotations both on the east and west coasts show a further decline this week, though on the whole colliery owners have not much cause to complain since during most of the year they obtained good prices for their output. In South Wales the market for steam coal has naturally been affected by the rumours of friction between Japan and Russia, both countries being good customers of the Welsh collieries. Prices are, therefore, inclined to harden and will possibly advance unless more reassuring news comes from the East.

Copper.—Though the actual amount of business done in this market during the week has been small, prices nearly every day went up steadily. It was the favourable position disclosed by the fortnightly statistics that first started the movement, but later on the firmness in Rio Tinto shares and an improved tone at New York were the chief causes of the firm tone. Last night the market was very strong, the quotation for cash being £56 2s. 6d. and for three months £56, or a total gain of 27s. 6d. and 30s. respectively on the week.

Tin.—In the early part of the week values weakened in spite of higher nominal quotations being sent over from Singapore. The weakness, however, was only temporary, and with holders not pressing, prices rallied and continued to move up, while the market became steadier, closing last night with cash at £118 and three months at £118 10s.

Iron and Steel.—Business at Glasgow in Scotch and Cumberland warrants is for the moment dead, practically no transactions being recorded during this week, though prices are still nominally 50s. for the former, and 55s. for the latter. Yet on the whole the warrant market is steadied, and a moderate number of transactions were done in Cleveland at 43s. 9½d. each, and from 43s. 7d. to 44s. 3d. one month. The production of pig-iron is well maintained, though more ordinary iron than hematite is at present being turned out. In the finished iron trade things generally are dull, though the demand for bars on home account, it is expected, will increase from now onwards until the end of the year. Steel makers, though most of them appear to have plenty of work, can hardly be described as busy, and were it not for several good contracts for structural iron, they might safely be said to be quiet. In the north of England the depression in the steel trade is seriously affecting the output of hematite pig-iron, and though it has been reduced to a figure smaller than that known for years, it is still more than sufficient to meet the demand. On the other hand, the deliveries of Cleveland pigs are exceptionally large, and would be larger had the makers enough iron to meet the enquiries they are receiving both on home and foreign account. Stocks in the public stores are down to the low figure of 116,127 tons, while those in the makers' hands are practically cleared out. Manufacturers of iron and steel are, however, not so busy except in a few departments, though they hope to have better times soon, at least all of them save those turning out shipbuilding material. At Barrow the trade in hematite pigs is weaker than it has been for some months past, and two more furnaces were shut down this week, reducing the number at work to thirty. Prices also have dropped, mixed Bessemer numbers being quoted at 57s. f.o.b., and warrant iron at 54s. 6d. cash sellers. Neither is the steel trade in a flourishing condition, the whole of the mills having been closed this week, and what business they have on hand is mostly for future deliveries.

Tea.—The autumn demand which this year set in late continues very much in evidence, and the market for Indian teas of all descriptions has still further developed the firmness of the past few weeks. Prices have advanced all round, for the commoner kinds ¼d. per lb., and for the medium ½d., while the better grades continue to attract strong competition, notwithstanding the fact that the quality of many of the Assam marks show a distinct falling off. Messrs. Gow, Wilson and Stanton give the week's sales as 39,178 packages at an average price of 7.94d. compared with 38,358 packages averaging 7.89d. last week. In Ceylon another moderate auction strengthened the market and increased all grades below 9d. per lb., from ¼d. to ½d., making the average price 7.96d. against 7.31d. last year. For Java rather better quotations were offered, and the whole of a good selection brought to auction was disposed of at an average of about 6.75d.

Sugar.—The market this week was undoubtedly influenced by offers of new crop, as consumers must have considerable supplies of old sugar on hand which will satisfy their requirements for some time to come. In addition refiners also experienced a very languid demand which compelled them to lower the price both of cubes and granulated. Raws, therefore, though at one time they showed an advance of 1d. were unable to keep it up, and closed at 8s. 9½d. October, 8s. 8¾d. November-December, 8s. 10d. January-March, and 9s. April-June. The poorness of the demand for refined is largely due to the bad condition of trade, particularly in the distressed cotton districts of the north, while the poor fruit crop must also have affected consumption. In cane dealings have been limited to a few thousand bags of grocery crystallised West India which sold at full prices, though medium grades were slightly easier. The reports from cane growing countries present no special feature, save that the estimates for the Louisiana crop are still very conflicting, while the accounts of the Brazilian are far from good. In America there has been no change in quotations, the market there being dull and disinclined to deal in anything but sugar which has actually arrived until something definite is known about the Cuban Reciprocity Bill and the possible crop in Europe. Meltings for the week are smaller and stocks therefore are up to 137,000 tons. Mr. Czarnikow in his weekly circular gives the various estimates of this year's crop in Europe, which vary from 5,700,000 tons to 6,325,000 tons, none of them in the market's opinion being justified, the latter being too big and the former too small.

MINING NOTES AND NEWS.

The many wonderful things that were to happen this week, as sequel particularly of the support to be given the Kaffir market by the philanthropic mine bosses, have not come off. Instead of prices soaring skywards, as a sign and symptom to all that the boom was on the way, lo, they fell at the opening of the week like birds shot by the cruel sportsman. Of course, circumstances were against the magnates, that was the explanation offered. The situation in the Far East, for instance, again looked ominous, and nerves were once more upset. Then there were the Trust failures in the United States, which created a state of gloom in the American section, with which Kaffirs, so keenly sensitive are they to any signs of distress around them, had to sympathise. This sympathy was expressed by further liquidation, and would-be friends and charitable helpers had to look upon this state of misery helplessly. The £2,000,000 which the bosses have so generously subscribed wherewith to assist the needy was impotent to give the necessary relief, so events had perforce to take their natural course. Many of the distressful ones even went so far as to declare the raising of this money a myth, but on second thoughts they are now inclined to believe it has been collected somewhere or other, and will be doled out as necessity requires. In fact, the syndicate that has been formed has, it is said, been christened "The African Joint Venture," the leading spirits being those magnanimous Englishmen, Messrs. Wernher, Beit, and Co. These generous-hearted men have subscribed, it is said, one quarter of the capital, that is, £500,000, the remainder having been put up by financiers in Paris and Berlin. The managers of the Syndicate are also Messrs. Wernher, Beit, and Co., who are to be rewarded for their self-sacrificing risks and efforts to the extent of 15 per cent. of the profits. And the losses? "Eh? shut up, you worker!"

The report of the labour commission has been expected every day, and its non-appearance has seemed to engender, not only disappointment, but something like exasperation. "Why don't they publish it?" cry the punters, "and end our woes and suspense?" The Commission, however, seems quite unconcerned over their longings and yearnings and cannot hear their beseeching, despairing cries for mercy. A goodly stream of buying from Paris rallied prices towards the later part of Tuesday, so they managed to leave off better than they started. Wednesday, however, again saw a change for the worse, prices falling down once more with a flop. Rumours and reports of all kinds were circulated. Again the situation in the Far East was blamed for the nervousness exhibited, and even the Venture Syndicate was said to have collapsed, so gloomy and unreasonable did the share pushers become when they found hopes once again ruthlessly shattered. And the question is, who is going to throw up the sponge this time?

A message from the Johannesburg correspondent of the *Times* has helped to depress the spirits of the optimists, for this gentleman has declared the settlement of the labour question to be not so near at hand as many people believe. There is, he says, no reason to suppose that the Legislative Council will be summoned earlier than the last day of November, and, in dealing with the report of Mr. Skinner, he adds that exaggerated notions, based on the assumption that Chinese labour is both cheap and plentiful, will have to be modified. At the most, he continues, a limited increase of labour in the mines can be hoped for during the first year, Kaffirs meantime, being not only retained, but recruited as vigorously as ever. All of which this poor journal told the market months ago. On the top of this message comes a cable from Dalziel to the effect that, "recognising the importance to the mining industry of an early solution of the labour problem, it has been decided as soon as the report of the labour commission is ready, to call a special meeting of the Legislative Council to deal with it." Heads have also been shaken over the evidence tendered at the tenth sitting of the Labour Commission by the manager of the Village Main Reef Company, a gentleman who had courage enough to express his own convictions. We give a summary of his evidence elsewhere, and we may say here that his revelations have created not a little dismay amongst the bosses and others, who have been trying to keep their motives dark, whilst many have not hesitated to anathematise Mr. Cresswell for thus giving the game away. The word "fool" is the mildest of epithets applied to him, and the advocates of Chinese labour, friends of the magnates and others, are imputing to him anything but the most laudable motives. All the more should the public rejoice that there is one man who will dare to speak the truth, and show them what the bosses really are—not their good, kind friends, but their worst enemies. Is it not now clear enough to you that these men are determined to be sole masters of the Transvaal and all that is therein? But even the Chinamen, when they come, will not be exactly dumb, tame beasts, and when their savage passions break out we may very well behold scenes of riot and bloodshed.

Every effort has been made to excite enthusiasm over the striking of the Van Ryn Reef on Grootvlei, a property belonging to the East Rand Mining Estates. No doubt it is pleasing to know there is a reef at a depth of 3,412 ft. in this property, and that it is 21 in. wide, but it doesn't follow it will make the fortunes of the shareholders. Reefs innumerable have been struck in many other parts of the Rand, but instead of yielding profit, they have been worked at a loss by several companies. The value of this Van Ryn Reef has yet to be proved, and it cannot be proved until time and money have been spent in sinking shafts and developing. If profits are to come, there is no knowing whether they will be high or low, and they will certainly not be earned for years.

Miscellaneous sections of the market have again suffered from the neglect of the public and speculators alike. West Australians have succeeded in keeping fairly firm, but West Africans have been weak. Indians have been affected by the proposal of the Ooregum Company to raise fresh capital, Etruscans have hardened on the letter of the chairman—with which we deal separately—and elsewhere things have looked distressing. At the beginning of the week Rio Tintos fell sharply, but have since recovered some of the loss.

Vereeniging Estates.—The directors of this company have issued their report and accounts for the twelve months to the end of April last. As far as profits go, the company has materially improved its position, for they amount to £37,000 against £19,343, an advance of nearly 100 per cent. Gross revenue totalled £83,984, consisting of £71,362 from profits on coal winning, firebrick sales, and farming, £5,723 from sales of erven, £2,421 refund on dynamite, £1,046 from rents, £2,734 sundry revenue, and £697 from produce. In their report the directors say the net profit has been arrived at notwithstanding the substantial writings off which have under the circumstances been necessary. "These writings off have been carefully and even liberally made and it may be noted that the actual values as per valuation schedule, apart, of course, from land, show a substantial balance in favour of the company." We find the sums written off to be £12,844 for depreciation, £90 for native small pox lazarette, £682 off boreholes, and £76 off diamond prospecting, which does not strike us as being exactly over liberal. A goodly balance-sheet is issued, and the directors certainly deserve credit for their restraint in not dividing any of the profit at the present time, looking to the undeveloped condition of some of the properties. It is stated that work at the New Cornelia and Central mines is proceeding satisfactorily. Estimates made by the general manager show that in the two coal mines now being worked the following quantities of coal are available:—In the Central mine, 5,184,000 tons, equal to an annual output of 300,000 tons for the next seventeen years, this being a rate of production higher than the output in the past. At the New Cornelia mine there is known to be available 6,900,000 tons of coal, which, at an output of 1,200 tons per working day, would give a life of some 19 years. "In regard to the calculation at the New Cornelia mine," it is explained, "it is to be noted that this has not been pushed beyond a certain point. This mine is situated in the midst of an extensive coal basin containing many times the above tonnage." In order to test the possible existence of other minerals and metals on the estate, the board commissioned Dr. F. H. Hatch to make a geological survey, and this expert's lengthy report accompanies the directorial documents. The doctor says the Witwatersrand beds do not outcrop on the Vereeniging Estates, but there is a strong presumptive evidence that they underlie the Karoo formation on some of the more southern farms. This question can, however, only be satisfactorily settled by boring, and in his opinion some money might well be expended in a preliminary investigation by diamond drilling. The directors intimate this recommendation will receive their careful attention at the proper time.

Klipfontein Estate and Gold Mining Company.—This company, which issues its report and accounts to May 31, has been engaged in carrying on joint boring operations with the Rand Klipfontein Company, and in one borehole what is moderately described as "a well-defined body of banket" has been encountered. Unfortunately, however, the financial position of the company has had to be "strengthened." Accordingly, the directors "decided in February, 1903, to take advantage of the then market conditions, and disposed of the 24,032 shares, which were in reserve, at the price of 45s. per share," so the company has £56,529 in cash and a debit balance of £17,609.

Kleinfontein Estates and Township.—In spite of the fact that this company during the twelve months to May 30 received £5,048 from rents and sundry revenue, £150 from interest, and £583 from licenses, it made a loss of £2,756. Farming operations are reported to have commenced; 464 acres of virgin land "have been ploughed, and will be placed under cultivation, and, with anything like a favourable season, should produce a satisfactory financial return. The consumption of produce by the mines in the immediate neighbourhood is considerable, and will gradually increase as new mining propositions get to work, consequently a ready market is thus assured for the company's produce." Such are prospects; could they be higher? Finances do not look over healthy, with £1,857 in cash, and £3,150 owing by sundry debtors against liabilities for £5,000.

Benoni Gold Mines.—We thought so. "During the past year," runs the report to May 31, "the capital of your company has been increased from the sum of £250,000 to the sum of £350,000 by the creation of 100,000 shares. . . Of this issue 30,000 shares were allotted to liquidate the loan of £45,000, which your company had incurred to consolidate its liabilities at that date." Were they issued at a premium? Of course—10s. Guaranteed? Decidedly, by the Anglo-French Exploration Company, at 6 per cent., who, we see, had to take up the greater portion, the shareholders saddling themselves with only 10,116 shares. "Owing to the dearth of native labour, your directors have not so far considered it advisable to unwater the workings with the view of carrying on further development." Are not the shares of such a company dirt cheap at 30s.? It has as much as 63,161 sovereigns in its coffers, and last year's loss was merely a trifle of £43,846. What it will be a year hence time may show.

Ooregum Gold Mining Company.—On Tuesday next the shareholders in this company will be asked to give their sanction to a scheme for increasing the capital to £341,500 by the creation of 100,000 ordinary shares of 10s. each, to be issued at a premium of 10s. per share. Several years ago the Ooregum was the premier mine on the Colar field, but it has been so unreliable and disappointing in recent years as to have been relegated permanently to a third or fourth place. Accompanying their scheme

the directors issue a circular in which they briefly review the work done during the past three years, that is, since fresh capital was raised at the end of 1900 by the issue of 26,500 £1 shares at £3 each. It is admitted that the developments for many months past "have not been so satisfactory as could be wished, inasmuch as the ore in certain parts of the mine has fallen off in quality, and although discoveries have been made of considerable importance and richness, they have not yet been opened up extensively enough to contribute a sufficient quantity of high grade ore to prevent the decline in the general average of quartz which is shown by the mill return." However, an important ore shoot has been proved to exist between Taylor's shaft and the boundary of the Champion Reef mine, and is said to promise exceedingly well for the future of the mine. At other points there are lodes of good width and value, but the places yielding low grade ores predominate. "There is a strong probability," the directors add, "judging from previous experience, that a generally improved condition of things may be looked for as developments proceed. Meantime, there is no doubt that well-selected exploratory work for the present, as well as work necessary for the proper continuance of the mine in years to come, must be vigorously pushed forward." It has been found necessary to sink a new vertical shaft, designed to reach the lode at a depth of 2,500 ft., which will entail a large expenditure of capital. Further, arrangements have been made for extending the Cauvery electric power, and an additional 205 h.p. has been allotted to the Ooregum mine, the machinery for which, including motor, and all accessories, has to be provided by the company. The latter has also taken 6,660 shares in the Kolar Mines Power Station, Limited, recently formed, whose object is to supply electric power to such machinery on the field as is only used intermittently, and it is these outlays that necessitate this additional creation of capital. With respect to issuing the shares at a round £1, which is much below the market price, the directors offer the explanation, that "the price is an advantageous one in comparison with the current market quotation, but as there seems to be no immediate prospect of the returns increasing, and even a possibility of their being temporarily reduced," they have fixed the price at a figure they consider fair and attractive.

Etruscan Copper Estates.—The correspondence columns of the financial press are now used as the medium whereby the directors—or, rather, the chairman—of this company seek to give information to their shareholders. Is it because it is the cheapest way, and saves expenditure on circulars and reports, the directors promised to issue regularly? A shareholder, who hides his personality under the virtuous-looking cognomen of "Faithful," has written to the directors, so he says, for information, and the chairman has kindly replied to him at considerable length. So pleased was "Faithful" with this communication that he promptly wrote Mr. Vavasour Earle asking him:—"Should I be justified in showing the letter to other persons or to publish it?" and the chairman at once gave him permission to do with it as he pleased, adding that he is well content to be held responsible for its contents. Accordingly, the man of faith and trust has sent copies of the reply to the press. Mr. Earle says his attention has been called to certain letters written by Mr. Scantlebury, but the directors "have not considered it necessary to reply to the irresponsible statements made by him. Mr. Scantlebury implied that he had spent a considerable time at our mines, and personally examined the underground workings. As a matter of fact, he could not have done so without the consent of the management, and the latter have expressly informed us there is no foundation whatever for such a suggestion." Mr. Earle goes on to say it is a fact that at the 300 ft. level cross-cuts from the main drive over a distance of 300 ft., were all found to enter payable copper ore; these cross-cuts, with the winzes and stopes in them, disclose ore channels, or veins, or bodies of ore, varying from 5 ft. to 15 ft. or 20 ft. in width, and running lengthwise and downwards through the lode; ore exceeding 4 per cent. is being sent direct to the furnace, whilst the lower grades concentrate up to 6 per cent.; and the directors have no doubt as to the ability of the mine manager to continue the supply of ore to the reduction works at the rate of 1,000 tons per week. "There is every probability that as stoping proceeds, he will continue to steadily increase this quantity." It appears that this faithful correspondent alluded to the delicate subject of dividends and past promises. "You are right," says the open-hearted chairman, "in assuming that we were oversanguine as to the actual date of dividends, in regard to which there must doubtless be some delay; but this is the worst that the enemies of the company can allege with any semblance of truth. You may, however, rest assured that by work actually accomplished the mine is now definitely proved to contain, in continuous lodes, great bodies of payable copper ore. Our technical advisers, who, within the last few weeks have visited the property on our behalf, are more than ever convinced that in due time it must inevitably prove a great paying mine." The words "due time" are delightfully ingenuous and vague. Will shareholders rest satisfied, after all the definite promises made, with the remote prospects here foreshadowed? "The rumours as to preference share issues," this pleasing epistle continues, "and reconstruction schemes are as untrue as they are ridiculous. In conclusion let me say that the directors can do no more than they have hitherto done to keep shareholders reasonably posted as to the actual state of affairs, and must adhere to the resolution not to enter into newspaper discussion. Those who allow themselves to be frightened out of their holdings, either by unauthorised statements or rumours circulated with a view to conveying false impressions, must do so at their own risk. I am, of course, well aware that you, individually, have never wavered in your support of the directors, or in your faith in the undertaking." Have the shareholders been "reasonably posted" as regards progress of the mine and what is actually doing there? What about the promised monthly reports? Where are they? And who is this "faithful" creature? Will he reveal his identity? Some definite figures of output and practical results would be more reassuring than these generalities.

The Northern Blocks Meeting.—This was held on Thursday, and there was a repetition of the disgraceful scenes witnessed on the last occasion, for long before the end came a perfect pandemonium prevailed. The meeting was, readers will recall, an adjourned one in order to take the results of the polling on the resolutions passed six weeks ago. In the meantime, however, the committee of investigation and Mr. Landau's committee had arrived at an agreement as to the course of procedure to be taken, in order, if possible, to avoid any friction and wrangling, viz.: to appoint a fresh committee of investigation, consisting of five members, two to be appointed by Mr. Landau, two by the present directors, with a president, nominated by the President of the London Chamber of Commerce. Mr. Landau's committee nominated as their two members Mr. F. Hurst, and Mr. D. Stewart-Smith, K.C., but the directors objected to the latter gentleman on the grounds that he had been briefed by Mr. Landau. After a bitter and angry discussion, which developed into boisterous clamours for the resignation of the directors, the latter gave way, and the committee was thereupon appointed. So the meeting was adjourned until the committee present their report, to be reconvened within 21 days of the receipt of this report. So the washing of the dirty linen is to continue indefinitely.

Mungana (Chillagoe) Mining Company.—During the twelve months ending June 30 this company treated 8,345 tons of copper ore, and 3,073 tons of lead ore, producing 630 tons of copper, 62,769 oz. of silver, and 703 tons of lead, realising £18,577, leaving a profit on working account of £8,586, which does not include anything written off in the way of depreciation. After adding £25 from interest, and £20 from transfer fees, and deducting Queensland, Melbourne, and London expenses, together with the debit of £3,784 brought forward, a small credit of £2,928 is carried to the balance-sheet. Little is owing by the company, the latter's indebtedness being exceeded several times over by its fingerable assets. Compared with this time last year there is an appreciable improvement in the position.

Sneyd Collieries.—A falling off in the profits of this return is recorded for the twelve months to the end of June, the trading profit, with interest received, being £2,000 less, at £33,274. This is arrived at, according to the accounts, "after providing for depreciation of plant and machinery," but the sums written off have been greatly exceeded by the additional capital expenditure. With the balance of £12,194 brought in, and after charging the profit and loss account with £6,000 for debenture interest, £2,000 for debenture sinking fund, £4,015 for income-tax, and £700 for directors' fees, there remains a credit of £33,712. The preference share dividend requires £4,500, and an interim dividend of 5 per cent. has already been paid on the ordinary shares. A final distribution of 10 per cent. is now recommended, making 7½ per cent. for the year; £7,500 is put to general reserve, and £10,462 is carried forward. The company can boast of being in a very strong financial position.

West Africa in 1902.—In the Government report on the Gold Coast for 1902 a couple of lengthy paragraphs are devoted to a short history of mining in West Africa, a history that is too familiar to many and probably too distressing to the majority of those who have ventured their capital into it. It appears the export of gold increased from a value of £32,865 in 1880 to £89,981 in 1885. From the latter year until 1897 it fluctuated between values of about £77,000 and £103,000, the lowest return being that of 1894, the highest that of 1889. The year 1901, the report reminds us, "witnessed a remarkable development in the mining industry of the Gold Coast." A "boom" broke out in the West African market; the colony was over-run with prospectors, and during the year no less than 2,825 concessions were taken up and filed in the colony. Many of these, however, were abandoned on the collapse of the boom, while the bulk of the mines engaged in serious mining operations confined themselves to development work, pending the building of the Sekondi-Kumasi Railway. During last year "the whole of the export of gold was due to the Ashanti Goldfields Corporation and its offshoot, the Ashanti Sansu mine, with the exception of a shipment of £2,000 in value, made in the last month of the year, being the first of the Bibiani Goldfields, and £36 worth of gold dust received in trade with natives." The value of the total shipments was £96 810, a figure higher than in any year since 1850, with the exception of the years 1889 and 1892. Such is the story in brief, a miserable one of reckless promotion, followed by disastrous losses. Even the Ashanti Sansu, the principal gold producer at present, is not maintaining its output, as we showed a week or two ago. Last week the Wassau commenced crushing with ten stamps, but the results from so small a battery are likely to do no more than make up for the falling away in the Sansu output. The prospects of gold production from the Jungle are most dismal. "Large sums of money have already been invested in the mining industry of the colony, and with the completion of the Sekondi Kumasi railway and the building of the branch lines to some of the outlying mining properties, there will," thinks Captain Armitage, "be justification for further investments in both mining and forestry enterprises that have been properly prospected by thoroughly competent men." The only justification will be that based upon profits and dividends. Whence will these come?

The London and County Bank will open a branch in High Street, Whitstable, as soon as the necessary alterations to the premises have been carried out.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Advanced from 3 per cent. on September 3.)

Norfolk House, Friday Evening.

On the surface all is quiet in the Money Market, and the old difficulty was again prominent this week, the difficulty of maintaining discount rates in the face of cheap short credits. Seven day loans have been as low as 2 per cent., and never till to-day more than 2¼ per cent., while call money has ranged from 1 to 2 per cent. As the week drew near an end there were faint indications that the supply of credit was becoming less abundant and that was all. The Bank return even gave little encouragement to those who predicted dearer money, for its changes were all insignificant, and the most important among them an increase of £673,000 in the reserve. This took place, notwithstanding a net withdrawal of £323,000 in gold exported, because altogether about £995,000 in notes and gold came back from the active circulation. Other deposits, however, are down £227,000, and to that slight extent the market seems to have less means, Government balances having increased £741,000, and market bills held by the Bank having run off to the extent of £145,000, the amount of the decrease in other securities. The immediate principal influence affecting rates, however, seems to be borrowing by the Bank of England, a temporarily effective but far from satisfactory mode of hardening money rates. It is to take up the money on Monday, gossip says. Also more gold is said to be leaving for Egypt to-morrow, and consequently those who held out could get 2½ per cent. for seven day advances. Call money also was generally 2 per cent.

Discount rates have been kept up mainly because of the Treasury bill sale on Thursday. As intimated last week the Government has raised another £2,000,000 on this form of accommodation paper, which £2,000,000 may or may not be used to redeem some of the Exchequer indebtedness to the Bank of England, and credit jobbers naturally sought to make the price to be paid by the Treasury for these bills as high as possible. So rates for remitted paper were kept up and never fell much below 3⅝ per cent. Business was even done at 3 11-16 per cent., and occasionally 3¾ per cent. was quoted, but on Thursday sellers claimed to have placed parcels at 3½ per cent., and the Treasury was able to get its money at an average of £3 11s. 1d. per cent., or 2d. under 2 11-16 per cent. Tenders at £3 12s. per cent. however received about 49 per cent. of the amount applied for. At first discounts weakened on this announcement until the bill brokers found that the principal buyers of the Treasury bills were the banks, found also that short credits were not quite so plentiful. Then the rate hardened until 3⅝ per cent. became the minimum for three months' remitted paper, and should gold go away in any amount in the end of this week, or should the Bank of England borrow to an effective extent the probability is that the minimum working rate will be 3¾ per cent. on Monday next. Bills due within the year are still taken at 3⅜ per cent. Continental competition is keen though, and may keep the market flabby.

Gold is in strong demand from the Continent, and the price for bars 77s. 10¼d. per oz. At the moment, therefore, it looks as if the Bank would get none of this week's arrival, which amounts to about £300,000. A New York correspondent has informed an eminent firm in the City that he thinks no gold will be taken by the States from Europe this year, because short credits are cheap on Wall Street. In the beginning of next year, he adds, gold may be shipped from New York to Europe. We shall see. Meantime the Bank is said to have appropriated the credit created by the 1,000,000 sovereigns just arrived from India, and to be sent into the Bank to-morrow. Should it also hold, as alleged, the Transvaal loan money, and should it get the Treasury bill payments to be made on Tuesday, the Stock Exchange as well as the discount market is going to find rates decidedly harder before the end of next week.

Calls on new issues of capital continue on a small scale, the most important in the coming week being the £550,000 due on Brazilian 5 per cent. bonds on Thursday. On the same day £100,000 must be found for Metropolitan Electric new preference shares, and on Friday £140,000 for Burmah Oil 5 per cent. debenture stock. Tuesday brings with it a call of £120,000 on Consolidated Tea and Lands ordinary shares, and also payment for the new issue of £2,000,000 Treasury bills allotted on Thursday. Dividends to be disbursed aggregate £1,017,000 including those of the Buenos Ayres and Rosario Railway and Phœnix Assurance.

SILVER.

The slight hesitation shown in this market at the close of last week soon disappeared, and under the influence of considerable purchases on Indian bazaar account, coupled with extremely small offerings, prices advanced rapidly to 28½d. per oz. for cash and 28d. per oz. for future delivery. The principal support, however, was then withdrawn owing to the closing of the Indian markets, and quotations sank back to 28 5-16d. and 27 7-16d. A slight resumption of the Indian demand, together with some home enquiries restored them to 28⅜d. and 27⅞d., but the advance in forward metal was a little too rapid, and on the report of the temporary suspension of the Philippine purchases it fell to 27⅝, dragging the spot price down to 28 5-16d. For the Rs.50,00,000 Council drafts on India offered on Wednesday, the total applications came to Rs.61,25,000, entirely in bills. The whole amount was allotted, and applications at 1s. 3 31-32d. per rupee received about 13 per cent., and above in full. Next week the amount is reduced to Rs.40,00,000.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict., cap. 32, for the Week ending on Wednesday, October 21, 1903.

Stock Market Notes and Comments.

A pleasant legend has been put round the market to the effect that the noble band of South African capitalists has clubbed and raised a fund of £2,000,000 with which to support the market for Kaffir shares. They are not going to hoist prices in any sensational fashion, but just to keep things simmering and prevent any alarming slump. This is delightful news, and we trust it is true, indeed, it would be a great joy to us if these high and mighty potentates of finance would have the great generosity to increase the fund to say just that lost £30,000,000. It is quite true that £2,000,000 won't carry markets far up, and we doubt whether the sum is sufficient to keep prices from sinking, but if these magnificent personages would only put the figure up to £30,000,000 we might get our African war contribution after all. The money would not come into the Treasury to be spent on phantom army corps and on battleships warranted to destroy each other on every favourable opportunity, but it might find its way by degrees into the pockets of the tens of thousands of people throughout the Kingdom who have contributed out of their more or less limited means to build up the stunning fortunes of the De Beers syndicate and other charming products of modern finance and modern credulity. All that would be necessary to secure the dispersal of the fund would be steady selling on the part of those victimised shareholders in pursuance of the advice so frequently tendered to them by the Investors' Review. Sell the shares anyway on the steady market to be provided, and take the money. It would be better to put it in Consols than to trust it any more in Deep, awfully "deep," Levels or in mines that have no ore or none that pays, or to Chinese labour and boss chicane in any form. It is to be feared that this dream is too good to indicate the truth in any measure, and we even doubt the £2,000,000, though that is neither here nor there. From all we can gather one or more of the South African houses which have sprung up like Jonah's gourds and made immense fortunes on paper by creating enormous aggregates of shares called "capital," would like to receive, instead of being in a capacity to contribute, some portion of the legendary £2,000,000. So hard up are some of these firms, or joint-stock foci of agiotage that the announcement of their open bankruptcy would not cause us the least surprise, but the tale as it stands is a nice one, and quite suitable, it is hoped, for the consumption of the still easily gulled multitude. If it contributes to the delusion of the foolish and through that to the maintenance of prices, all the more reason why wise folk should sell; so we reiterate our old advice, stick to it, in fact, as indicating the one practical and sensible course to be followed. Sell your Kaffir shares on every opportunity, on every rising market, and take the money home.

As we write markets are all sickly, the pretext being rumours of war having been declared between Russia and Japan. Most people think that war is coming in that quarter, but the unauthenticated tale of this morning was seized upon as a mere excuse. Markets are inherently weak, and every rally that takes place in prices, no matter what security it may be in, comes mainly from the repurchases of those who sold for the fall in order to secure profits. Such transitory improvements, therefore, mean that the market is weaker after the rise than before, and always the tired out gambler is parting with his shares. South African finance houses have steadily made a bold attempt to persuade operators that the French are absorbing the shares English speculators throw out, but these houses are probably themselves almost the exclusive buyers. They buy in Paris to keep up courage here, and when Paris turns round and sells they buy here to keep up appearances there. It is an exhausting business, and, as we have said above, some of the great players seem pretty near exhaustion.

We cannot yet say where to turn to buy. It is a long, dreary business this liquidation, and not yet nearly at an end. Probably we shall have bad traffics on the railways this winter, what with the wretched harvest and the cheap-jack tariff agitation, which is undoubtedly disturbing traders' minds, so that there is no motive available with which to stimulate even speculative buying in Home Rail-

way stocks, and there is nothing at all to be done yet with the Yankee market, which has to crumble much further before any one can be sure that purchases there would give a chance of a profit. All round it is the same, and only in out of the way places, in obscure corners, do any securities exist that might be worth picking up. The public must wait, and above all keep away from touting bucket shops, benevolent agencies offering to deal on a 1 per cent. cover and to take no commission. Avoid, in fact, speculative lures of every description. The air will clear by and by, but months of waiting may still have to be endured. To-night things are steadyish, with a brisk rally in Tintos, and no further liquidation in the Circus.

The Week's Stock Markets.

The Stock Exchange clearly over-reached itself at the close of last week, and the public has been compelled to teach it not to take liberties. It did so by declining to be bluffed into buying by the imposing demonstration got up in the hope of trapping the unwary, and shows every sign of remaining completely indifferent to the blandishments of the professional "bull." Why should the public speculate. Far Eastern affairs continue to give us ever-recurring frights, bank and trust failures in the United States are now of daily occurrence, the cotton spinning crisis is playing havoc with Home Railway traffics, Kaffirs are only prevented from collapsing by the aid of some kind of supporting syndicate which has been got together, and we fancy trouble can be detected in the malarious Jungle. A nice record on which to open speculative accounts for the rise. True, there is a passing spasm of comparatively cheap money, but that is merely one favourable circumstance amongst many that are distressing, and even it cannot last much longer. We hope, therefore, that no amount of lung exercise, such as was indulged in last week, will induce the public to depart from the cautious attitude so long and profitably adopted, and that is of leaving markets severely alone until the inherent rottenness responsible for the existing demoralisation has been cleared away.

Consols have no charm for investors now, and under the influence of war scares from the Far East succeeded in getting rid of a fraction from their price on most days. No great selling pressure was exerted, but the stock was dealt in at one time as low as 88⅛, and closes limp at 88 5-16 to 88 7-16 for cash and the November account, or losses of ¼ and ⅜ on the week. Transvaal scrip kept round about 1½ discount throughout the week, and War Loan stock continued steady at 97½. Childers 2½ per cent. went back ½, while of other British funds Bank Stock advanced 2. Not much was done in India Sterling loans, and they remained as before. Amongst Home County and Corporation stocks, Bristol 3½ per cent. fell 2, probably due to the fact that the Corporation is endeavouring to raise loans privately, and London County 3 per cent. receded ½. Colonial Inscribed recovered here and there. Queensland 4 per cent. 1915 and Western Australia 1915-35 putting on 1, and Natal 3 per cent. ½.

In the Foreign Government market, Paris showed some disposition to absorb a few favourite specialities, particularly the Lower Turkish groups, which finish ⅛ to ¼ higher. German, Portuguese, and Italians kept steady, but Spanish closed dull and fractionally lower. Bulgarians followed Turks, and leave off 1 better. South American issues have been singularly inactive, and the absence of dealings caused leading Argentine and Brazilian issues to weaken a little before the close, and a few losses of ½ to 1 are noticeable. Japanese bonds fell away sharply on rumours of increasing tension with Russia, but pulled together just as rapidly when no confirmation of the alarming stories was forthcoming, only to go off again just at the last. Chinese loans were unaltered.

An undercurrent of support by small investors proved insufficient to prevent Home Railway ordinary stocks from sagging under the various adverse influences which have pressed upon the market. For one thing stale "bulls" have been steadily liquidating their holdings, and as at the same time the forced sales so noticeable elsewhere have extended to this market, stocks have come out in greater volume than could be absorbed. Jobbers showed great reluctance to assume the load and prices fell all round. The traffic returns, too, although fairly satisfactory considering the miserable weather, could not be regarded as encouraging, and in one or two instances there have been special causes contributing to the pronounced weakness. In the case of South-Eastern issues, for instance, rumours of a fresh issue of capital were an added reason for realisa-

tions, and the decline in the deferred consequently reached as much as 3¼, while the ordinary fell 1. Little Chathams were ⅝ lower. Forced sales were responsible for a loss of 4 in Brighton deferred, and the ordinary dropped as much in sympathy. Great Eastern receded 3½, Midland deferred and Great Northern deferred 1¾, Great Western 1½, Lancashire and Yorkshire 2, the drop being helped by the accident, and North-Eastern 1. Scotch stocks suffered with the rest, Caledonian ordinary losing 1 and the deferred with North British issues relapsing 1 to 1¼. City and South London were exceptionally depressed and closed 3 down, and of other underground stocks Metropolitan receded 1.

Wall Street closed last Friday's business with a burst of activity on the part of the professional "bulls," and our market naturally responded by marking quotations still higher. Further improvements followed on Continental support, and the week ended with operators in a cheerful mood, which, however, was quite dissipated by Monday. The manipulation in New York was too transparently due to a concerted attempt by the big financiers to put a better face on matters, so as to enable them to get out for it to have a lasting effect, especially as a series of disquieting events followed each other in rapid succession. First amongst these came the news that the big companies were endeavouring to curtail expenditure, and that the Pennsylvania Company especially had cancelled projected improvements to the value of $10,000,000. Then came the failure of the Maryland Trust of Baltimore, with liabilities said to amount to about $10,000,000, and before the market had recovered from this shock it was followed by the suspension of the Union Trust Company of the same city. Money having been sent to Baltimore, and offers of assistance made to Pittsburg, where there were also signs of trouble, Wall Street became loud in its assurances that no further trouble was likely to occur in either centre, and proceeded to back this opinion by further lifting quotations, but hardly had the boast been made than it was given the lie by the Federal National Bank of Pittsburg closing its doors. At once came the soothing reassurance that this event was of no consequence, as it had been fully anticipated, and for a time the leaders of the "bull" cliques were able to keep up an appearance of unconcern, but it did not concern anyone for long, and immediately they ceased bidding prices stagnated. Yet another failure was reported on Thursday, the First National Bank of Allegheny having suspended payment, but, although this makes the fourth in one week, Wall Street magnates persevered with their efforts to produce some show of strength. The market, however, responds very sluggishly, and is in a very nervous condition, dreading a further spread of the financial trouble. And this is undoubtedly bound to come. The institutions which have suffered up to the present for their over indulgence in fairy finance are mere pigmies compared with their New York brethren, but the latter have been guilty of the same game, of creating and using make-believe money to a hazardous extent, and, as we show in our leading article this week, are in a thoroughly unhealthy condition. New York, however, seems blind to the dangers of the situation, and is wilfully so, as the speculators see their only chance of personal salvation lies in creating a semblance of activity and rising prices to induce the public to come in and relieve them of the load which is daily growing more unbearable. Accordingly we find that in spite of the daily failures of a bank or trust company, the curtailment of expenditure by railways, and the closing down of mines to reduce output, prices are nearly all substantially higher on the week. Louisville put on as much as 3, Milwaukee gained 2, Southern preferred 2, Union Pacific ordinary 1½, and Southern Pacific 1¼, while Atchison and Baltimore issues, Denver preferred, New York Central, Norfolk common and preferred, Southern ordinary, Pennsylvania and Chesapeake were from ½ to 1½ up. The only adverse change was a decline of 1 in Union Pacific preferred.

Canadian Pacific shares began with a very substantial

improvement on support from Montreal, and have since shared the varying fortunes of the Yankee market, with the result that in the end they show a net advance of no more than ¼. The Grand Trunk market was heartened up by a much larger increase in the traffic figures than it had expected, but the rise this produced was more than wiped out on forced selling, and, although a fresh recovery was recorded later, quotations went out lower on balance, the ordinary stock losing 1, the second preference ½, and the third preference 1¾. Amongst Indian Railway issues the principal movement was a gain of 2 in Delhi-Umballa stock.

Liquidation has gone on pretty steadily all week in several of the leading Argentine Railway issues, especially Buenos Ayres and Rosario ordinary, and prices have

accordingly suffered substantial losses. That stock fell 2½, carrying the deferred down 3, and the preferred stock and 3½ per cent. Central debenture stock 1 each. Buenos Ayres and Pacific ordinary relapsed 4, and the second debenture stock 1, and Bahia Blanca and North-Western Preferred, Buenos Ayres Great Southern ordinary, and Cordoba Central income debenture stock (Central Northern section) all closed 1 down. Southern Brazilian Rio Grande do Sul debenture stock declined 2, San Paulo ordinary 1 and Costa Rica second debentures 1. Mexican Railway issues continue heavy, notwithstanding the recent improvement in the price of silver, and the ordinary finished 1 lower, while the preference receded 1 to 2. Central Uruguay of Montevideo 6 per cent. debenture issues were about the only exception to the general depression, and improved 1 each.

The Miscellaneous market was rather put out by the Coats' dividend announcement. For some time past the hope has been cherished that a 5 per cent. bonus would be added to the 20 per cent. dividend for the past year, and during recent months the ordinary shares touched 5⅝. They were not able to maintain that level, owing to the demoralisation elsewhere, but the quotation has always been well over 5, and before the dividend was made known on Thursday the shares were dealt in at 103s. 6d. The directors, however, did not see their way to adding to the regular distribution, and the shares promptly receded to 4⅞. From that there was a recovery to the round figure, because an examination of the profits shows the great concern to have enjoyed an exceedingly prosperous year. After providing the dividends, the directors place £700,000 to ordinary reserve, against £290,000 placed to that fund, and £450,00 set aside to a dividend reserve a year ago, allocate £100,000 towards depreciation of investments, against nothing, give the employees pension fund half as much, at £50,000, and increase the carry forward from £370,500 to £420,700. A wonderful display. No other incident of importance happened, asd prices continued to recede on small realisations. Nelsons at first were run up to 24s., owing to a demonstration against the "bears," but they soon fell away again, and close at 1 1/16. Other Meat shares kept steady, but Catering and kindred companies were rather irregular, Lyons Aerated, and Sweetmeats hardening a little, while Spiers and Ponds and Harrods' Stores slipped back. Gramo-

phones went up to 33s. on the 10 per cent. bonus announced, making a total distribution of 16 per cent. for the year, with a huge balance carried forward. So much for the latest public craze. Apart from Coats, Textile securities held steady, but Drapery companies' shares showed a tendency to ease off. Home Iron and Steel shares picked up here and there, while United States Steels, after being shouted up to 15 for the common and 62½ for the preferred, collapsed again, and close at 14 and 60¾, respectively. Gas Lights rose 1, and then lost 4, and South Metropolitans remained at 118½. Hudson's Bays dropped 1½, and Southwark and Vauxhall, Chelsea and New River new stocks continue to recede. Breweries were weak.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Buenos Ayres and Pacific Railway.

A year of quite remarkable prosperity was enjoyed by this company, and not only does the ordinary stock return to the dividend list, but it does so in a substantial fashion, and shows every sign of keeping there. The increase in gross receipts for the twelve months to June 30 was £133,734 to £718,001 compared with the preceding year, and working expenses were up only £42,940 to £347,407, so there is an advance in net revenue of £90,794 to £370,594. Ratio of working expenses to total income was 48.39 per cent., compared with 52.11 per cent., a very satisfactory reduction. Number of passengers carried rose 125,537, and the income advanced £12,994, while the increase in goods traffic was 159,874 tons to 814,439 tons. Total weight hauled by goods trains, including animals, was 1,018,992 tons, against 818,594 tons, the additional revenue being £114,877 at £552,090. The report sets out figures of the live stock traffic for the past six years, and this branch of the company's business shows extraordinary development. So much so that the details are worth repeating:—

	Horses.	Sheep.	Cattle.	Pigs.	Tota.
1897-8 ...	5,823	181,317	65,164	9,646	261,950
1898-9 ...	5,661	217,444	80,507	8 760	312,372
1899-0 ...	7,305	250,191	88,757	7,856	354,109
1900-1 ...	7,277	1,308,561	126,356	9,604	1,451.798
1901-2 ...	12,917	1,969,477	119,080	7.370	2,108,844
1902-3 ...	19,501	2,107,373	181,180	6,964	2,315,018

Principal increase for the past year is in cattle, and it is stated that the tendency to transport both cattle and sheep for longer distances has an even more favourable influence on the receipts than the mere numbers show. Regarding other sources of traffic wool shows a small decline, and there can be no doubt that with the advance of agriculture in the districts served by the line, sheep rearing is on the decline. Still the decrease of wool is far outbalanced by the quantity of grain carried, and we note that with the exception of barley and oats all items under this head showed great improvement, the total being 276,074 tons, against 147,440 tons. A very much larger area of land was under cultivation than in the previous year, and throughout the system there was an exceptionally good yield of both wheat and maize. For the forthcoming season the area sown is again greatly increased, and tracts of land on the outside sections which have not hitherto produced much traffic are being brought under cultivation. Vine products have fallen off a little, and the wine business does not seem on a very satisfactory footing. A project for the abolition of the inland revenue tax of two cents per litre upon wine is now before Congress, and there is every prospect that it will become law, and take effect from January 1 next. Should it, the measure will be a relief to the trade and tend to improve business in the Cuyo provinces. Hay has again largely increased, an advance of 75 per cent. coming on top of last year's 55 per cent., but for the current year the company may have to face a decrease, as owing to the stoppage of live stock export, less hay is now being brought to Buenos Ayres. The details of expenditure show increases under most maintenance charges, and naturally the additional traffic handled meant advances under locomotive power traffic expenses and general charges. To the net revenue of £370,595 is added £10,204 for interest, and £820 gain on remittances, making a total of £381,628. Fixed charges, including £203,975 for debenture interest, absorbs £224,361, and £157,267 remains, from which the two preference dividends are met, a distribution of 5 per cent. is proposed on the ordinary stock, and the balance of £33,837 is carried to reserve. The reserve was debited with £33,066, being a proportion of the expenditure in connection with the relaying with heavier rails of 82 kilometres of line, and some sidings; and also with £18,585 spent for a similar purpose and appearing in the accounts a year ago. The fund now stands at £18,003. The general manager speaks of the urgent necessity of constructing the company's access into the city and docks of Buenos Ayres, and observes that unless remedied promptly the lack of such accommodation will seriously handicap the company's future. Terminals and charges now paid to other companies, will be saved as soon as the Buenos Ayres station is available. Such payments for the three years ended June 30 were above £40,000 per annum, and for the period under review will be £50,000. Present estimate for the whole scheme is £800,000, including full passenger and goods accommodation, but in the opinion of the manager it would be advisable to allow a margin of up to £200,000 for possible additions and increased facilities. A resolution authorising the construction will be proposed at the forthcoming meeting, and it will doubtless be readily passed.

Argentine Great Western Railway.

Although not reporting quite such substantial progress as some of its neighbours, this company found the year to June 30 a good one, the increase in gross receipts being £45,9.6 to £522,805. Expenses, however, advanced £33,791, to £315,020, so that the gain to net income was no more than £12,125, at £207,785. Ratio of expenditure to gross income rose sharply from 58.97 per cent. to 60.26 per cent. To the free income is added £14,087, being interest on investments and gain on exchange, making £221,872, from which debenture interest absorbs £130,908, interim dividends £37,500, and other outgo £1,253, leaving £52,821. The directors now propose a balance dividend of 3½ per cent. on the preferred and ordinary stocks, making the usual 6 per cent. for the year, with an increase in the balance forward from £13,962 to £14,283. Passenger traffic fell off a little owing to the previous year's depression in the Cuyo provinces, but goods advanced 46,004 tons, bringing an additional revenue of £34,865. Chief improvements were in wine, fresh fruit and vegetables, grain, seeds, and hay, firewood, and "miscellaneous" while decreases were reported under poplar timber and hardwood posts. These figures refer to the products of Cuyo only, imported articles showing declines under building, fencing, and railway material, railway construction materials, and provisions, wines, spirits, etc., and a rise in casks, staves, hoops, baskets, boxes, etc. Number of animals carried rose 3,301 to 52,297. Work upon the new branch has been energetically proceeded with during the twelve months, and the line has recently been provisionally opened to traffic. The loop round the outskirts of Mendoza was also nearly finished, and is expected to be opened for traffic on November 1. Arrangements have been made for working the Buenos Ayres and Valparaiso Transandine Railway as soon as the necessary formalities can be completed, upon terms which the directors believe will be beneficial to all interests.

Midland Uruguay Railway Company.

This company's traffic continues to expand in a very satisfactory manner, and during the twelve months ended June 30, the gross receipts went up by £9,436 to £54,004, compared with the preceding year. Every branch of business improved, passenger revenue advancing £1,680, goods £3,491, and animals £2,719. Quantity of goods carried rose 7,572 tons to 59,944 tons, and the number of animals moved 44,883 to 114,858, a revival in the saladero industry having favourably affected the live stock traffic. The improvement in receipts was accompanied by a big increase in expenses, but this is hardly a cause for regret because we find considerably heavier charges under such heads as maintenance of way and works, and carriage and wagon repairs and renewals, money doubtless well spent. The additional traffic handled naturally meant extra train mileage, so that locomotive power and traffic expenses both cost a good deal more. Total outgo was £52,254 against £41,474, so that notwithstanding the gain in earnings, the net income is only £1,750, a drop of £1,344. The company possesses a special reserve for maintenance, and as a good deal of re-sleepering was carried out during the year, £1,418 is credited from that account to revenue. There is also the guaranteed interest of £55,481, so that the total net balance amounts to £58,649. Debenture interest at 4 per cent. per annum absorbs £47,178, and various small items of expenditure £412, leaving £11,059, from which additional interest of ¾ per cent. is paid to the debenture stockholders in accordance with the arrangement set forth in the last report. A sum of £2,213 is then carried forward. The directors speak of the steady development of land along the company's line, three small townships having been founded and a new saladero constructed, which it is hoped will bring traffic to the railway. At the same time the question of the general improvement of the roads is receiving public attention.

Great Northern Railway Company (U.S.).

It was hardly to be expected that the wonderful results achieved by this company a year ago would be repeated, but it has nevertheless done exceedingly well during the twelve months ended June 30. Gross earnings rose by $4,753,391 to $40,785,647, and operating expenses were $2,287,665 higher at $20,076,829, or 49.23 per cent. of the receipts, compared with 49.37 per cent. in 1902. Including taxes, which were $234,432 up at $1,474,126, the ratio was only 52.84 per cent. against 52.81 per cent., a figure which must certainly be considered moderate and satisfactory, if it does not mean neglect of upkeep. Although the earnings per ton per mile were a shade lower at .857 cents, the earnings per freight train mile were 25 cents larger, at $3.89, and with an increase of 2,911,310 to 16,148,673 tons, in revenue freight carried, the earnings from this branch show an advance of $2,560.186 at $31,373,216. Wheat hauled to Eastern terminals decreased 1,830.892 bushels, or 54,927 tons, with a corresponding reduction of $341.965 in earnings and iron ore traffic produced $819,589 more, but most of the increase came from traffic in general business over the entire system, except on the Willmar and Sioux Falls Railway, where there was a decrease of $99,824 owing to a poor corn crop. Passenger train mileage increased 1,185,454 miles, and the receipts from this branch were $1,181,115 higher, pasenger fares yielding $913,456, transportation of mails $146,199, and the balance coming from miscellaneous sources. The average revenue per passenger per

mile was 0.015 cents up at 2.342 cents, and this increase was entirely due to a greater local traffic, as no advance was made in rates. According to the report, the movement of settlers has continued, and the vacant arable lands adjacent to the railway are being rapidly occupied, while the Government has begun the work of reclamation of semi-arid lands, and it is expected that the canals and reservoirs necessary to irrigate a vast area of land in Montana will speedily be completed. When this land is taken up, an event which seems likely to happen within a very few years, the company should benefit greatly in all its branches, and it is largely in preparation for the anticipated increase in business that it is now spending large sums out of revenue in improving the conditions of its line. The traffic charges in the past year rose from $8,910,425 to $10,161,885, maintenance of equipment cost $383,187 more, and maintenance of road and structures $570,620 more. In addition a further sum of $3,702,901 was charged to equipment account for new rolling stock bought, and additions and improvements account has been debited with $1,861,653, over and above $1,443,169, included in expenses of maintenance of road and structures. Adding in the net income from other companies owned and operated by the Great Northern Company and other sources, and deducting rentals, etc., paid, less dividends received, and transferring $3,000,000 to the fund for permanent improvements and renewals, the net income came to $12,808,608, out of which four dividends of 1¾ per cent. each have been paid, leaving a balance of $4,134,635 to be added to the undivided profits brought forward. A moderate increase of $143,750 was made in the issued capital of the Great Northern Company during the year, raising it to a total of $123,996,750, and no addition was made to the capital stock of any of the proprietary companies as the necessary funds for the construction of the lines now being built by the Dakota and Great Northern, Montana and Great Northern and Washington and Great Northern companies were advanced by this company. On behalf of some of the other subsidiaries $3,762,880 was spent on capital account, and it is claimed that altogether $15,014,071 has been added to the capital assets, with an increase of no mere than $5,789,176 in the liabilities.

New York Central and Hudson River Railroad Company.

For the year ended June 30 the earnings from operation amounted to $77,605,778, or an increase of $6,701,901, and expenses were $6,595,825 more at $53,459,314, or 68.89 per cent. of the receipts, against 66.09 per cent. Of the increased earnings $6,198,934 came from freight, the total tonnage carried being 38,081,380 tons, compared with 33,587,608. Agricultural products provided 850,357 tons more, grain, flour and other mill products accounting for 535,973 tons of this total, and the only decrease being a comparatively slight one of 38,771 tons in cotton. Products of animals and lumber were both substantially reduced, the former by 194,919 tons and the latter by 25,871 tons, but a decrease of 603,976 tons in anthracite coal hauled was considerably more than counterbalanced by an increase of 2,838,495 tons, but a minous coal, and ores were 214,576 tons higher. Express revenue was $520,704 higher, and rentals produced $170,272 more, but passenger traffic yielded $225,909 less. The number of passengers carried was down by 446,893, notwithstanding an increase of 653,443 in commutation passengers or season ticket holders, and this falling off is ascribed to the number carried in 1901-2 having been exceptionally large owing to the Pan-American Exposition in Buffalo in that year. Compared with the previous twelve months, which it is claimed is a fairer test, the figures show an advance of $2,715,219. Several causes combined to increase the working expenses, but the principal ones were the greater volume of traffic handled, the continued general rise in wages and cost of materials and supplies, and the heavy charges for improvements and renewals. Maintenance of way and structures cost $1,869,538, maintenance of equipment $1,611,412, and transportation charges $311,130 more. Net earnings from operation were $106,085 higher, at $24,146,464, and including dividends on Lake Shore and Michigan Southern stock and other securities held, the gross income was $502,906 higher, at $29,419,208. These figures, however, take no account of taxes paid, which came to $3,634,627, compared with $3,644,474, and if these are included the increase would be $512,653. Interest on the funded debt and rentals of leased lines and other charges having been met, $300,000 was set aside for redemption of 4 per cent. gold debentures of 1890, and four dividends aggregating 5 per cent. have been paid, leaving a surplus of $2,120,146, out of which $1,750,000 is carried to a special improvement fund toward defraying cost of extensive betterments, etc., and after adding $370,146 for premiums on additional capital stock sold, there was a balance of $574,182. Out of this $288,357 went in payments incident to refunding bonded debt, $202,912 was written off for sundry uncollectible charges and reduction in value of assets, and $55,913 was added to the balance brought in, making a total of $15,890,580. The special improvement funds were drawn upon for the renewal and strengthening of bridges and improvement of the roadway to the extent of $1,516,953, leaving $1,967,920 still in hand, and, in addition to this, $3,256,712 was spent out of revenue, $6,723,104 out of capital, and $1,771,159 for construction and improvements of leased lines to be charged against the funds provided by the lessor companies, making a total outlay of $13,267,928. Besides all this, and the expenditure included in expenses, $2,900,000 was spent out of capital on new locomotives, cars and floating equipment to meet the requirements of traffic, to cover which $337,100 capital stock and $1,000,989 3½ per cent. gold mortgage bonds were issued during the year, making the totals issued to date $132,250,000 in common stock and $194,780,546 in funded debt. On January 1, however, the outstanding first mortgage 7 per cent. bonds for $18,327,000 and first mortgage 6 per cent. sterling bonds for $5,724,095 matured, and a like amount of 3½ per cent. bonds was issued in exchange, effecting an annual saving in interest of $784,000, and the net reduction in interest on the funded debt was $388,365, notwithstanding the additions made.

Mexican Southern Railway.

This company suffered severely during the year to March 31 last from the further heavy fall in the gold value of silver. Traffic grew steadily in all directions, and the gross rec ipts increased $105,937 to $988,525, but working expenses were up $111,730 to $646,632, owing mainly to the app.ication of an excep ionally high rate of exchange to that portion of the expenditure payable in gold. Net receipts therefore were $5,792 lower at $341,893, but when the various amounts are converted into sterling all the gain in gross income disappears and the revenue is ac ually £2,212 lower at £81,024. At the same time the expenditure comes out £2,220 higher at £53,652, so that the loss to net revenue is £4,432 at £27,372. The fall in silver has also p ejudicially affected the value of the coupons of the $8,000,000 si.ver subvention bonds, which realised only £38,890, or £4,531 less than in the previous year. Net balance therefore, after crediting dividends, interest, etc., is £9,462 lower at £67,634. Interest, etc., absorbs £51,918 and £14,750 was brought forward, so that the disposable balance is £30,466 against £39,750. Ordinary dividend, therefore, is reduced ½ per cent. to 2 per cent., and the amount carried out to £10,466. The report says that the Mexican Government is fully alive to the injury that is being caused to the business of the country generally by the fluctuations of exchange, and has appointed a commission to deal with the subject. A sub-committee has already reported in favour of the adop'ion of a stable exchange, and has suggested the limits within which the rate should be fixed, while a further sub-committee has been appointed for the purpose of formulating a plan. In the meantime, in order to give immediate relief to the railway companies, the Government has authorised an increase of 15 per cent. from September 1 last to December 31 next, in all maximum rates, except rates on corn, cotton, wheat, fuel, and export traffic. This advance is subject to suspension before the latter date in the event of the exchange value of the dollar being firmly established at not less than 1s. 10 8-11d.

Demerara Railway Company.

The receipts of the main line declined £390 to £15,291 during the six months ended June 30, compared with the first half of 1902, and as expenses rose £186 to £8,258, the net balance is less by £576, at £7,033. Unfortunately the Berbice extension also did very badly, receipts being £61 lower, at £3,221, and expenditure £1,484 up, at £7,759, so that the loss on operating was the serious one of £4,538, against last year's debit of £2.993. The West Coast Railway, on the other hand, was able to offset a decline in receipts of £92 to £2,526 by a saving in expenditure of £522, at £3,201, so that the loss was reduced from £1,104 to £674. To these losses must be added proportion of debenture interest chargeable to the extensions, so that the total deductions from the main line revenue is no less than £5,628, leaving the slender balance of £1,404. To this is added balance brought forward, £4,729, and Government subsidy, £6,250, and after providing debenture interest payable by main line the sum left is £11,399. From this the directors propose the full dividend on the 4 per cent. extension shares, and keep £5,149 in hand to meet the expenditure on renewals already referred to. The report states that a circular has recently been issued to some of the shareholders by Mr. William Fogarty, in which several inaccurate statements appear. The matter was fully dealt with at the meeting held yesterday.

Cox and Co.

The balance-sheet of this private bank made up to October 8 last reveals a considerable decline in resources compared with the same date in 1902, current and deposit accounts being down no less than £927,189, to £3,550,437. On the other side, investments are smaller by £439,325 at £1,158,200, and cash at call and short notice is down half a million, to £340,000, so that cash at bankers and on hand, £527,261, and advances to customers, £1,780,925, are almost unaltered.

English, Scottish, and Australian Bank.

The profits of this bank fell off a little during the twelve months ended June 30, and naturally the drought is held responsible, in that exports of Australian produce have necessarily been on a restricted scale, and the volume of trade was thereby much cur ailed. Gross profits were exactly £13,000 lower, at £240,174, but balance of £13,186 brought forward was a good deal larger, so that the entire revenue is £253,360, against £260,801. Expenses of management, etc., required a little more at £91,689, debenture stock interest took £39,341, preferred and deferred inscribed deposit stock interest £51,250, and terminable deposit receipts interest £3,699, against £7,839. Then another £15,000 was placed to reserve, and £52,380 was left, a decline of £3,161. Out of this holders of deferred inscribed deposit stock receive additional interest of 1¼ per cent., dividend to shareholders will again be 4 per cent., £7,192 is applied to the purchase of deferred deposit stock, £1,000 is placed to officers' guarantee and pension fund, and the reduced balance of £10,221 goes to next account. On July 1, 1902, a good proportion of the outstanding terminable deposit receipts was paid off, and the amount still owing is £92,017, such sum being due in 1904. Perpetual stocks are also lower, at £2,698,907, while deposits at interest, including Government balances, have risen from £950.246, to £1,093,043, and current accounts are £71,007 up at £1,226,986. Notes in circulation amount to £18,961, and bills payable and other liabilities are

smaller at £271,021. An important advance of over £200,000 to £953,073 is noticeable in cash and bullion, cash at bankers and at short notice being down over £50,000 to £35,761. Bills receivable and remittances in transit amount to £593 060, against £606,311, advances and other assets are reduced £186,103 to £3,977,820, and investments in British Government securities continue small at £100,000. Bank premises and furniture are valued at £454,898.

Anglo-American Land Mortgage and Agency Company.

This undertakng comes forth with another wretched d'sp'ay, and against total liab'lities of £235,954 can p oduce assets of £132,382 only. Even this amount does not represent their actual value, because the auditors tell us that the true worth of the real estate entered in the balance-sheet at £97,665 can only be proved by realisation. During the year to June 30, the loss on sales of real estate and realisation of old mortgages was £4,362, but general income of £3,792, slightly exceeded the outgo, so that the net debit on the twelve months' operations was £4,176, and increases the total adverse balance to the trifling sum of £103,572. A year ago the item of real estate stood at £106,219, and the directors tell us that they only sell portions of it at prices which they consider fairly represent the value, and as in previous years, it has been found advantageous to leave part of the purchase price on mortgage of properties sold, all of which sounds we'l, but apparently is not very profitable. After adding fresh mortgages and allowing for those paid off during the year the mortgage account has been reduced from £12,155 to £10,321. Other assets consist of investments £7,527, cash £14,817, and balance in hands of American agent £1,317, and there are practically no floating debts, which is fortunate. The company has won its action against the Nashua Savings Bank, and as a result recove's £11,379 from this and other Ame.ican shareholders in respect of calls, interest, and costs. The indebtedness of some shareholders has been compromised on proof of inability to pay the whole debt, and on forfeiture of their shares, but several American sha eholders on various pretexts delay making a settlement of their l'ability for ca ls. Actions are pending against them, and the directors are of opinion that the company will ultimately prove successful. They had hoped on the present occasion to be able to bring forward their views as to the best means of dealing with the remaining assets, but consider it inadvisable to do so until all the actions for recovery of calls are disposed of. We hope, however, there will be no unnecessary delay as the continued existence of the concern is of no use to anyone.

Stuttaford and Co., Limited.

The year ended July 31 proved a highly profitable one for this concern, thanks largely to the abnormal state of affairs caused by the spending of war profits, borrowed money, and o'he· exceptional conditions. Net profits on trading were consequently £11,551 higher, at £73,518, and as the balance b·ought in was also larger at £11,705, the amount available for distribution amounted to £85,223, compared with £72,227 a year ago. After meeting managing directors' salaries and other directors' and trustees' fees, debenture interest, and preference dividend, and transfer ing £700 to leases reserve, against £350, the ordinary shares get an additional 1 per cent. at 15 per cent., and £10,000, or £3,000 more, is added to general reserve. This increased dividend on the ordinary shares gives the management shares £10,756, or over 1,000 per cent., and still leaves £16,217 to be carried forward. The balance of the cost of alterations made to the Cape Town building has been written off, but other allowances for depreciation seem to be very inadequate, and goodwill is still carried at cost. Stocks have further risen to £176,096, trading balances are decidedly adverse, and cash in hand is small, at £14,470. A year ago the directors obtained authority to create 60,000 new shares, but found themselves able to postpone the issue. Now, however, 40,000 of these are offered pro rata to the ordinary shareholders in the proportion of two for every seven held.

Bengal Iron and Steel Company.

This undertaking issues an interim report to which no accounts are attached. It tells shareholders that the out-turn of pig-iron during the past year was 28,236 tons, 4,913 tons less than in the preceding twelve months, due to one of the furnaces having been laid off for re-lining during the greater part of the period under review. It was blown in again at the end of July, and a third furnace will be started as soon as the steel works are ready to commence operations. Other works are being put down, and yet a fourth furnace will be built as soon as the present extensions are completed. The production of castings during the year was 13,022 tons, or 1,548 tons more, and the quantity of coal raised moved up from 43,560 tons to 48,981 tons. Unfortunately business in the latter for some time past has been unsatisfactory, with very low prices ruling. Good progress has been made with the construction of the steel furnaces, melting and rolling mill shops, etc., and it is expected that the manufacture of steel will be commenced in March next. A contract for the supply of 12,000 tons per annum of pig iron during a period of years has been arranged with one of the principal Indian Railways, and deliveries were commenced on July 1 last. All things considered the directors think the working results satisfactory, and declare interim dividends at 6 per cent. per annum on the preference and 10 per cent. per annum on the ordinary shares. Balance of the preference shares recently offered to the proprietors were over applied for.

Anglo-Sicilian Sulphur Co., Limited.

A gratifying recovery took place in the affairs of this company for the year ended July 31, and gross profits, including interest on investments, etc., showed an advance of £27,585 to £154,649. Current expenses in London and Sicily at the same time were slightly reduced, and after writing off £4,617 for loss by depreciation of investments against £7,466 last year, and £2,500 for grant to representatives of the late directing engineer, the net profit was £120,513, or £31,235 more. Out of this the preference dividend was met, then £15,704, being 20 per cent. of the balance, was added to capital guarantee fund, raising it to £82,362, the allowance for income tax was increased to £4,000, and £39,371 was carried to reserve against depreciation in stocks of sulphur. Of the remainder one-tenth belongs to the preference shareholders, and is sufficient to provide an additional dividend of ⅜d. per share, leaving the balance of £45 brought in untouched. The division of the profits just outlined resulted in the usual sum of £17,500 being left for the ordinary shares, and these receive the usual distribution of 6d. per share, or 50 per cent. Stocks of sulphur stand in the books at £724,217, after deducting the presnt addition to reserve against depreciation. Cash is £44,325 lower at £37,750, but against this temporary investments have risen by £62,709 to £73,840, and provided these are of a nature readily realisable, there is no reason to find fault with the change. Sundry creditors are £13,549 up at £71,951, and on the other hand sundry debtors have i een reduced by £8,249 only to £125,395, although advances to producers, which are included in this item, are £29,147 down at £94,417.

Lamson Paragon Supply Company (1902).

This company's business is the manufacture of stationary specialities, and the report just issued is the first annual production of a new undertaking formed twelve months back to take over and extend a similar concern bearing the same name. The year's trading seems to have been very satisfactory, and prospectus estimates of profits are considerably exceeded. Including receipts from dividends, interest and profits on sale of investments, and transfer fees, the trading revenue is returned at £27,178, from which directors' fees take £1,000, a sum of £2,700 is put to reserve for depreciation and leasehold redemption, and £3,067 is absorbed in writing off one-third of the preliminary expenses. Balance remaining is £20,411, but £1,170 must go to reserve, being proportion of profits prior to incorporation, and £2,653 is due to vendors as interest on purchase money pending completion. Nevertheless, after providing the preference dividend, the directors are able to pay 7½ per cent. per annum on the ordinary shares, with £5,000 to reserve, and £1,026 carried forward. This is a very good start, and gives hope that the affairs of the concern will be prudently conducted. As to the balance-sheet that is a very fair production, and we note trading accounts well in favour, and cash £26,594. Shares on various trading are entered at cost, £26,029, and a little information concerning these is perhaps desirable. Goodwill, patents, trade marks, etc., are valued at £59,293, and leasehold properties, buildings, plant, machinery and fittings at £83,102, and the depreciation allowed on the last named is not too generous. A resolution will be proposed at the forthcoming meeting for the purpose of leaving "1902" out of the title.

Associated Tea Estates of Ceylon, Limited.

Notwithstanding the brave words of the directors a year ago, the directors of this company were apparently unable to make up their minds to abandon the Horagoda esta'e altoge her, but the results for the year ended June 30 will surely enab e them to come to a definite decision as the production from that garden fe'l from 33,504 lb. to 10,885 lb. Excluding these figures, the crop was 35,006 lb. lower than that of a year ago, and 65,642 lb. below the superintendents' estimates, but with these added in the total outturn was 57,625 lb. smaller, at 740,243 lb. The average yield per acre, however, was 419 lb., or 15 lb. more over the fie'ds in full bearing, and while the average cost was 5.31d. per lb., exclusive of manuring, against 5.21d., the price obtained was 0.52d. higher at 6.79d., and the gross profits were therefore £4,558, compared with £3,629. From this a sum of £381 is written off buildings and machinery and immature cultivation, and another £2,265 being the whole balance of cost of manuring in the previous season is deducted, leaving, with £2 from transfer fees, a sum of £1,910 to be dealt with. Sundry expenses absorbed £807 of this, and £406 was written off coast advances, and after deducting the debit balance of £176 brought in, there was a sum of £431 to be carried forward. In spite of this slight improvement, the position of the company remains very far from satisfactory. Loans have been reduced by £2,911 to £5,000, but bi'ls payable have increased by £1,080 to £9,530, and sundry creditors stand at £1.167, while on the other hand stocks of tea are down £478 to £5,520, sundry debtors owe £493 more, at £949, and cash in hand is only slightly larger at £460, while £1,559 spent in manuring during the twelve months is carried as an asset.

Metropolitan Industrial Dwellings Co., Limited.

For the year ended September 25 the gross revenue came to £32,682, or £967 more than a year ago, but expenditure was £1,649 higher, at £22,706, owing largely to the whole cost of reconstructing the drainage at Ponsonby Buildings, amounting to to £618, having been included, together with £237 fo· expenses in connection with the purchase and resale of a house which the directors had to buy in order to enable them to e ect Elm Park Mansions. A much larger balance of £7,437, however, was brought forward, so that the total available was larger by £1,520, at £17,413, and after transferring the usual £1,000 to leasehold redemption fund, and meeting preference dividend, the ordinary shares again receive 5 per cent. for the yea·, leaving £8 900 to be carried forward. The financial position of the company as shown by the balance-sheet is not particularly good. Lea ehold and freehold properties taken at cost stand at £276.271, against which there is a share capital of £200,000, and mortgages and loans re-

present a further £57,058. Even taking in the special reserve fund of £3,000, the suspense account of £2,268, and the leasehold redemption fund of £3,174, these show a debit on properties of nearly £11,000. The company holds £3,557 in cash, £2,048 is lent on mortgage, and £551 is due from sundry debtors, but on the other hand £689 is owing for interest, £3,418 to sundry debtors, and the dividends just declared call for £4,294, so that there are absolutely no free assets available and further capital will shortly have to be raised.

Gaiety Theatre.

The prospect of changing from the old theatre into the new seems to have upset this concern somewhat, the profits for the year to July 4 last falling to £8,925, a drop of about £11,000 compared with the preceding twelve months. Gross income was £72,833 and the expenditure £63,908, stage and general expenses, rents, rates and taxes, and advertising and bill posting, being the biggest items. Notwithstanding the decline in income no reduction is made in the dividend, which will again be 20 per cent., but the carry forward is nearly extinguished, being only £243 against £3,317 brought in. The wisdom of this policy seems rather open to question, because although the new Gaiety will probably enjoy as much popularity as the old, we must not forget that already four months of the company's current financial year has elapsed. Financial position, however, is very satisfactory, cash in hand and at bankers standing at £34,791, while the reserve fund of £12,279 is invested in Consols.

Palace Theatre

The receipts of this popular place of entertainment during the year to July 26 last came to £69,403, which transfer fees and bank and other interest increased to £70,005. Total expenses were £51,442, and £18,563 remained as net profit. Mortgage interest takes £3,400, and after paying dividends aggregating 15 per cent., or 5 per cent. more, the balance forward is increased from £15,163 to £16,759. No reserves are possessed, and very little was spent on the upkeep of the properties. The company has £10,000 invested in Consols, which it bought and still values, at 110, and it is about time this matter was set straight.

Maturata Tea Co., Limited.

This Ceylon company is a very modest one, with a share capital of only £12,000, and a debenture debt of £5,500, but as far as can be judged from the meagre information in the report the estate, which is valued at £19,254, is a good one. Ffor the year ended June 30 the crop was 15,546 lb. below that of the previous season, but the average price realised rose from 8.17d. to 8.30d., and the net profit, after payment of debenture interest and London charges, amounted to £1,477. To this was added £2,835 brought in, making an available total of £4.312, out of which the preference dividend was met, and the ordinary shares received 12 per cent. for the year, leaving £3,112 to be carried forward. This result seems very satisfactory, especially as £500 of the debentures were repaid during the year, making the total redeemed to date £2,500. It is a pity, however, that no attempt has been made to write off anything for depreciation, nor even to create a reserve fund.

Rochdale and Manor Brewery.

In face of an increased profit, this company reduces the allowance for depreciation of leaseholds, plant, etc., from £1,294 to £916, so that the revenue is returned at £16,629, against £14,135. Interest, etc., comes to £41, making £16,670, and after providing debenture and other interest, directors' fees, etc., the net balance is £8,983, the period covered being the year to September 30 last. For the preceding twelve months the profit was £7,601, and in 1900-1 £6,859. With a larger balance of £2,998 brought forward, the sum for disposal is £11,981, compared with £10,101, and we are sorry to see that the board again takes advantage of the improved profit to further increase the dividend on the ordinary shares by 1 per cent. to 5 per cent. This means that the question of starting a reserve fund is still ignored by the directors, who have quickly forgotten the nasty muddle the company was once in. Depreciation allowance, too, is absurdly inadequate on properties valued at nearly £290,000, and clearly there is no justification for increasing the dividend. Balance carried forward is £3,837.

Enfield Cycle Company.

Profits of this concern fell off somewhat during the twelve months ended August 31, the decline compared with the preceding year being £2,645, at £16,275. The directors meet part of the loss by reducing the amount spent on repairs and allowed for depreciation by £1,333 to £5.667, and as bad and doubtful debts required £787 less at £805, the net balance is £8,257 against £8,479, a drop of £222 only. Balance brought forward was £3,997 compared with £1,859, so that the sum of £12.254 available for appropriation shows a considerable increase. Therefore, besides providing the preference dividend, and paying the usual 5 per cent. on the ordinary shares, the directors add £2,000 to reserve, and carry forward £3,881. Again the additions to properties, plant, etc., outstrip the amount allowed for depreciation, so that the item is higher at £45,617. Cash and bills are up nearly £2,000 to £12,586, trading accounts are substantially in the company's favour, and stock has been reduced to £20,893, so that the financial position is not unsatisfactory. Reserve stands at £12,000, invested in the business, and goodwill, patents, etc., remain at £58,074.

Rudge-Whitworth.

This moderately capitalised cycle company has always been able to render a good account of itself, and comes forth with an excellent profit statement for the year ended August 31 last. After providing for debenture interest, directors' fees, depreciation, and reserves for bad and doubtful debts, the net profit is returned at £34,105, or £3,753 more than in 1901-2. Adding £8,685 brought forward, there is £42,763 to deal with, an advance of £6,000, so after providing the preference dividend the directors add a 5 per cent. bonus to the regular 10 per cent. dividend on the ordinary shares, making the total return 15 per cent. They are quite entitled to do this seeing that £10,000 can still be placed to reserve, and the carry forward advanced to £13,993. Reserve is now £55,062, and therefore almost eclipses the goodwill, agreements, and patents. We note that stock-in-trade is up from £79,651 to £89,052, and although it is taken at or below the cost, the item must not be allowed to grow too fast. As usual 10 per cent. depreciation is allowed on plant, machinery, loose tools, etc., but additions during the year cause the value of these to be higher than twelve months back. Trading accounts are largely favourable, but cash and bills continue poor, at £3,210. The directors propose in future to close the financial year on July 31, a month earlier than heretofore.

Monte Video Telephone Co., Limited.

The revenue for the year ended July 31 showed a substantial increase of £1,082 at £12,224, and with £1,064 brought in, the amount available came to £13,288. Out of this £5,000 is again transferred to reserve, and after meeting the preference dividend, the ordinary shares receive a distribution of 3 per cent., compared with 2½ per cent. a year ago, and the balance carried forward is raised to £1,783. Capital expenditure is steadily growing, and now amounts to £185,360, owing to the purchase of the rights, privileges, and properties of the undertaking known as La Hispano Uruguaya, comprising a system of telephone lines and exchanges outside the City and Province of Monte Video. Nothing has been added to depreciation fund, which stands at £8,000, but this is not a matter of much moment as the reserve fund, with the present addition, mounts to £31,500, represented to some extent by investments of £23,072; and the two together come to rather more than 20 per cent. of the outlay. In other respects, however, the balance-sheet is not particularly strong, £6,932 being due to sundry creditors, against which £2,887 is owing by sundry debtors, £1,100 is held in bills receivable, and only £364 in cash.

The Aberdeen Property Investment Building Society.

This company, now fifty-two years old, continues its modestly prosperous career, and the accounts for the twelve months ended August 8 last show a profit of £2,728. Of this £2,222 is carried to members' account, representing interest at the rate of 4 per cent. per annum on the sums at their credit, and £250 is added to the reserve fund, raising it to £2,000, leaving £256 to be carried forward. The business is of the usual character, and appears to be conducted with much vigilance and prudence, but there would be no harm in some enlargement of the reserve.

Santiago Nitrate Company.

This company's profits dipped a little during the twelve months ended June 30, but the total was still satisfactory. After providing debenture interest, and all expenses the net balance was £60,379, against £68,329, sums brought forward and included being £329 and £1,376 respectively. First, the directors allow £11,520 for redemption of debentures, and write £1,000 off the expenses of their issue, leaving £47,859. Interim dividends already paid absorbed £24,000, and notwithstanding the drop in profits, the directors increase the final dividend 2 per cent. to 8 per cent., making 20 per cent. in all, compared with 18 per cent. in the preceding year. This means a decline of £12,500 to £7,500 in the amount placed to reserve. Floating liabilities are further reduced to £68,408, but debtors owe only £7,447, and cash continues meagre at £1,338. Stocks, of course, are substantial at £54,215, most of which have been sold but were not delivered at the date of the accounts. Reserve now stands at £27,500, and is invested in the business. The directors state that the increasing demand for nitrate leads them to hope that the necessity may not be found pressing to reduce the production quotas in the ensuing year, though the addition of several new oficinas will increase the productive power.

Liverpool and North Wales Steamship Co., Limited.

The season ended October 3 was much more untoward than its predecessor, and considering that, except for a short period at Whitsuntide, the weather has been unfavourable for the enjoyment of sea trips, this company has done remarkably well. Gross profits, including interest on investments, etc., after deducting all working expenses, amounted to £10,708, or £2,776 less than a year ago, but at that time the revenue received substantial help from the special sailings during the Coronation holidays, while there have been no corresponding extra sources of profit during the past twelve months. Deducting advertising and other expenses, £3,640 written off for depreciation, and the usual £500 set aside for outgo to December 31, the net profits were £3.896, compared with £6,524, and with £1,257 brought in, the available balance came to £5,153, out of which £1,000 is added to reserve against double that amount in 1902, and the dividend is reduced by 1 per cent. to 5 per cent., leaving £968 to be carried forward, subject to directors' fees, etc. Trading balances are against the company to the extent of £1,975, but £9,733 is held in cash, and there is in addition £8,666 invested in railway preference and other stocks, so that the positon seems fairly strong.

PUBLIC INCOME AND EXPENDITURE

The following are the receipts into and issues out of the Exchequer between April 1, 1903, and October 17, 1903:—

Revenue and Other Receipts.

—	Estimate for the year 1903-1904.	Total Receipts into the Exchequer from April 1, 1903, to Oct. 17, 1903.	Total Receipts into the Exchequer from April 1, 1902, to Oct. 18, 1902.

Treasury, October 20, 1903.

SOUTH AFRICAN MINE RETURNS.

These returns are increasing but slowly, and give the mine bosses additional excuse for shouting for Chinese labour, otherwise gold production may cease entirely. The total output for September from the Rand was 267,513 oz. of fine gold, and from the outside districts 8,684 fine oz., being a total of 276,197 oz., compared with 271,918 oz. for August, an increase of only 4,279 oz.

The value of the gold was £1,173,211, or £18,172 more than in the month preceding. For the first nine months of the year the production amounts to 2,113,331 oz., or nearly half the rate of output before the war. Individual returns, as our table shows, are again in numerous instances irregular, and perplexing. Although the Robinson mine returned 615 oz. more, the profit fell from £31,718 to £30,400. The Bonanza figures are once more unsatisfactory, and the future of this mine is most uncertain. According to the latest estimate, sufficient ore remains in the Main Reef and the South Reef to supply the whole battery (55 stamps) for twenty months, during which period the profits (not allowing for the Government tax), will be about £14,000 to £15,000 per month. Respecting prospects, all the hopes the management can hold out are:—"The large body of low grade main reef ore in the mine will probably extend the life of the mine, as there is reason to believe that a portion of it will prove payable." These are very indefinite views. In contrast with the Robinson, the Geldenhuis Deep, records a smaller output, but a larger profit, whilst the outcrop mine, the Geldenhuis Estate, produced more gold for a smaller profit. The figures of the Crown Deep show big increases under both heads, which may also be said of the returns of the Rose Deep, Glen Deep, and Langlaagte Deep. On the other hand, the figures of the Nourse Deep, Jumpers Deep, Glynn's Lydenburg, and Transvaal Gold Mining Estates are very poor.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Delhi, Umballa, Kalka.—Final dividend on the ordinary stock of £2 10s. per cent., making, with interim dividend, 5 per cent. for half-year ended June 30.

Rohilkund and Kumaon.—Usual dividend for the last half-year of 3 per cent., and in addition a bonus of 1 per cent.

San Paulo (Brazilian).—Dividend on the ordinary stock for past half-year at the rate of 10 per cent. per annum, with a bonus of 1 per cent.

BANKS.

Bank of Montreal.—Dividend for half-year ending 31st inst. at the rate of 10 per cent. per annum.

English, Scottish, and Australian.—Dividend of 4 per cent.

INSURANCE.

Fire Reinsurance of London.—Interim dividend at the rate of 6 per cent. per annum for half-year ended June 30.

London and Lancashire Fire.—Interim dividend of 5s. per share.

BREWERIES.

Dunville and Co.—Dividend of 14s. per share. This, with interim dividend paid in April last, makes total dividend of 24s. per share for year ended Sept. 30.

John Lovibond and Sons.—Interim dividend on ordinary shares at the rate of 10 per cent. for six months ended Sept. 30.

Rochdale and Manor.—Dividend of 5 per cent.

MINES.

Alaska Mexican.—Dividend of 10 cents per share and a bonus dividend of 10 cents per share, payable 28th inst.

Alaska Treadwell.—Dividend of 37½ cents per share, payable 28th inst.

Anaconda Copper.—Dividend of 50 cents per share, payable Nov. 16.

Camp Bird.—Interim dividend of 9d. per share, for quarter ending October 31, payable Nov. 7.

No. 2 South Great Eastern.—Dividend (No. 63) of 1s. and a bonus of 6d..

Nundydroog.—Interim dividend of 1s. 6d. per share, payable Nov. 17.

Queen Cross Deep.—Dividend (No. 34) of 2s. per share, payable Nov. 7.

Victoria and Queen.—Dividend (No. 13) of 6d. per share for the month, payable Nov. 2.

MISCELLANEOUS.

A. and F. Pears, Limited.—Dividend on ordinary shares of 10 per cent. for twelve months, and on deferred ordinary of 2½ per cent., adding £5,000 to reserve.

Alliance Investment.—Interim dividend at the rate of 4½ per cent. per annum on preferred stock for half-year ended October 15, payable Nov. 2.

Anglo-American Debenture.—Interim dividend of 3½ per cent. on ordinary shares for half-year ended September 30, payable Nov. 2.

Callender's Cable and Construction.—Interim dividend of 5s. per share, being at the rate of 10 per cent. per annum, on ordinary shares.

Cardiff Channel Dry Dock.—Interim dividend at the rate of 6 per cent. per annum for half-year ended Sept. 30 last.

Carlton Hotel, Limited.—Dividend at the rate of 10 per cent., making 10 per cent. for year, on the ordinary shares, adding to reserve for amortisation of leases £2,265, to general reserve £20,000 and carrying forward £13,675.

Central Province Ceylon Tea.—Dividend on ordinary shares of 2 per cent.

Eastern Produce and Estates.—Interim dividend of 1½ per cent. on ordinary shares, payable Nov. 4.

Globe Telegraph and Trust.—Interim dividend of 2s. per share on ordinary shares.

Hotel Cecil.—Dividend of 1 per cent. on ordinary shares, carrying forward £15,772.

J. and P. Coats.—Final quarterly dividend at the rate of 20 per cent. per annum for year ended June 30, placing £700,000 to reserve and carrying forward £420,720.

Joseph Lucas.—Dividend of 5 per cent. per annum on ordinary shares for year ended August 31.

Kettner's.—Dividend of 2½ per cent., carrying forward £216.

Metallic Seamless Tube.—Dividend of 5 per cent. on ordinary shares.

Montevideo Gas.—Interim dividend, payable on November 21, of 6s. per share, for half-year ended June 30.

Morris Aiming Tube and Ammunition.—Interim dividend for first six months of 1903 at the rate of 10 per cent. per annum, payable 31st inst.

Moss Isaacs.—Dividend of 5 per cent.

National Safe Deposit.—Dividend at the rate of 4 per cent. on ordinary shares, carrying forward £243.

New Hudson Cycle.—Dividend of 5 per cent. on ordinary shares.

New Paccha and Jazpampa Nitrate.—Interim dividend on preference shares at the rate of 8 per cent. per annum, for the period Jan. 1 to Sept. 30.

Nuwara Eliya Tea Estates.—Interim dividend of 6s. per share.

Oriental Telephone and Electric.—Interim dividend of 3 per cent. on ordinary shares, payable 31st inst.

Portmore Tea of Ceylon.—Interim dividend of 5 per cent., being at the rate of 10 per cent. for the year.

Realisation and Debenture of Scotland.—Dividends for the year to August 31:—Preference stock at the rate of 5 per cent. per annum, allocating an additional 2 per cent. to preference stock reserve; ordinary shares at the rate of 8 per cent. per annum; founders 2s. per share.

Santiago Nitrate.—Final dividend of 8s. per share, making 20 per cent. for year.

South Africa.—Final dividend of 10 per cent., making 25 per cent. for year ended June 30.

Swears and Wells.—Dividend of 12 per cent. on ordinary shares for year ended August 31, carrying forward £1,936.

Texas Land and Mortgage.—Interim dividend for half-year to September 30 at the rate of 10 per cent. per annum, payable Nov. 11.

Triumph Cycle.—Dividend of 2 per cent. on ordinary shares.

Western Telegraph.—Final dividend of 3s. per share, making total dividend of 6 per cent. for year ended June 30, and, in addition, bonus of 2s. per share.

Wilsons and Clyde Coal.—Further dividend of 9s. per share on ordinary shares.

MINING RETURNS.

Briseis Tin.—Black tin, 36 tons 12 cwts.

British Broken Hill Proprietary.—4,764 tons crude ore produced 856 tons concentrates, which contain 488 tons lead and 23,968 oz. silver.

Brookfield Mining (Nova Scotia).—700 tons of ore for 300 oz.

Caylloma Silver.—29,000 oz. in export ores, 14,000 oz. in bullion.

Central Chili Copper.—Production of regulus, 243 tons.

Chinese Engineering.—Output, 12,500 tons; sales, 14,500 tons; consumption, 1,650 tons.

Cobar Gold Mines.—Value of bullion, £8,374.

Collie Proprietary Coalfields of W. A.—Output and sales, 5,654 tons.

El Oro.—Crushed, 9,080 tons, producing from new mill $120,512; from old cyanide plant, $5,500.

Gibraltar Consolidated.—Tributers crushed 284 tons of ore for 250 oz.; 13 tons of concentrates produced 87 oz.; from tailings, 23 oz. New Mines.—Tributers crushed 47 tons of ore for 61 oz.; 5 tons of concentrates produced 10 oz.

Komata Reefs.—Crushed 1,320 tons; bullion, £3,200.

Mount Lyell.—Total of 26,735 tons of ore treated, being 22,006 tons from Mount Lyell and 4,729 tons from North Mount Lyell Mines. In addition to above there has been treated 1,263 tons of purchased ore and metal-bearing fluxes. Converters produced 602 tons of blister copper, containing copper, 596 tons; silver, 54,984 oz.; gold, 1,695 oz.

New Modderfontein.—Crushed, 8,832 tons, yielding 2,662 oz.

New Queen Gold.—270 tons crushed for 259 oz.; public crushing, £50; tributors, £60.

No. 2 South Great Eastern.—Crushed, 3,350 tons for 4,412 oz.

Ouro Preto Gold.—6,097 tons of ore for 2,013 oz.

Pahang.—1,910 tons of stone crushed, produced 43 tons of black tin.

Pahang Kabang.—480 tons of stone crushed, produced 15 tons of black tin.

Queen Cross Reef Gold.—2,072 tons for 6,051 oz.

St. John Del Rey.—Gold produce, £7,362.

Tyne Valley Colliery.—Output, 7,022 tons.

Victoria and Queen Gold.—380 tons for 539 oz.

Waihi.—18,190 tons crushed, yielding, inclusive of concentrates, £50,266.

Wolhuter.—10,580 tons crushed, 3,180 oz.

COMPANY MEETING.

CENTRAL URUGUAY RAILWAY COMPANY OF MONTE VIDEO.

The ordinary general meeting was held on Thursday, at River Plate House, Finsbury Circus, Mr. Loftus Fitzwygram presiding, in the absence through illness of Mr. Henry G. Anderson, the chairman of the company. At the outset of the proceedings the secretary read a telegram, dated the 20th inst., from the local committee.

Mr. Henry C. Allen, having thanked the directors for electing him a member of the board, promoting him from the executive, afterwards read the address which had been prepared for the meeting by the chairman, who expressed great regret at the loss which the company, in common with several other River Plate enterprises, had sustained by the death of Mr. R. J. Neild. Dealing with the past year's working, the chairman stated that it had been considered necessary somewhat to modify the system of making up the revenue account of the parent company, and also all statistics which were in any way affected by the working expenses of the main line proper, in order to put before the shareholders the more or less actual results which would have been obtained by this company, independently of the extension companies working in connection therewith. Instead of crediting the working expenses with the amount retainable by the parent company under the respective working agreements entered into with the extension companies, they had merely deducted from the working expenses the cost of working so far as this could be ascertained, showing the profit or loss, as the case might be, realised under the working agreements as a net revenue debit or credit. As this year a fairly substantial profit had been made on working the extensions, this would have had the effect of materially reducing the ratio of the expenses of the main line to its gross receipts, but the former would have been entirely misleading, as these expenses would have contained a sum of no less than £21,882 which would be found embodied in the net revenue account. In order that a proper comparison might be made with the previous year's figures a similar deduction had been made from the working expenses, the profit during that period having been £766 only. No doubt the shareholders would agree with the board that, taken as a whole, the report might be considered the best which the directors had been in a position to issue for some years. Compared with those of the year ended June 30, 1902, there had not only been an increase of £44,044 in the gross receipts of the combined system, but the gross receipts of the main line showed an advance of £20,414. With the exception of those of the boom year—1889-90—the latter constituted a record in the company's history; while in the case of the combined system there had been a reduction of £14,333 in the working expenditure and in the main line a decrease of £10,365, leaving increased net profits respectively of £58,376 and £30,779. These satisfactory results had only been attained by the exercise of the most rigid economy and the closest supervision by the general manager and his staff in Monte Video, and the board had every reason to believe that the line and its equipment had been properly maintained. There had been a considerable increase in the number of passengers carried and the receipts therefrom, and while there had been a decrease in the total tonnage of goods traffic handled, this was practically accounted for by the disappearance of the items of "extension materials" and the large decrease in the quantity of "company's materials" carried; and, had it not been for the failure of the grain crop in the western districts and the decrease of 12,476 tons in maize, there was every probability that this year's total would have been almost, if not quite, equal to that of last year. The business of the country was steadily, if somewhat slowly, developing, and no doubt if the political disturbances in March last had not occurred business generally would have been better, with the consequence that the company would have benefited in some measure. The North-Eastern line had shown improved results, the estimated loss for the year to the Central Company having been £14,838, compared with £25,551 in 1900-01 and £20,865 in 1901-2. In the directors' report the results obtained from the working of the several extension companies were set out. The total expenditure on capital account during the year was £66,807. For the fourteen weeks and four days ended the 10th inst., the aggregate receipts of the Central Company showed an increase of £12,928 as compared with those of the previous year. From this it might be concluded that the prosperity of the company for the past year was being sustained—at any rate, for the moment. The chairman then proposed, and Mr. Henry Bell seconded, the adoption of the report, which was unanimously carried.

BUENOS AYRES GREAT SOUTHERN RAILWAY.

The ordinary general meeting of the shareholders of the Buenos Ayres Great Southern Railway was held on Tuesday, October 20, at the River Plate House, Finsbury Circus, E.C., Mr. Jason Rigby, in the absence of Mr. Frank Parish, presiding.

The Chairman, after apologising for the absence of Mr. Parish, who, he said, was confined to his room by a bad cold, proceeded to express the deep sorrow felt by the directors at the lamented loss the board had sustained by the death of their colleague, Mr. Reginald J. Neild.

Mr. H. C. Allen (the Secretary) then read the statement prepared by Mr. Parish. The actual figures now before them, Mr. Parish stated, showed that the net revenue had not only been sufficient to maintain the highly satisfactory dividend of 7 per cent. upon an additional £2,250,000 of ordinary stock, representing £157,000 increased charge, but also to enable them to put by £25,000 to the reserve fund, and £5,000 to the pension fund, and to carry over even a larger balance than they brought in—namely, £96,425. They had established another record year, and their anticipations, optimistic as they might have appeared to some, had been fully realised, and, taking into consideration the favourable views entertained by Mr. White, in his annual report, regarding the economical position of the country, he thought they might fairly look forward to an increased development and prosperity for the Republic. He thought they would agree that the past policy of the board had not only been essentially progressive, but also protective, for by complying with the reasonable demands of those interested in the production and development of the province of Buenos Ayres, they had rendered it both unnecessary and unremunerative for competitors to invade their territory, and they hoped that a continuance of this policy would not only render the administration of the property popular in Buenos Ayres, but also profitable to the shareholders. As regarded the report submitted, the broad results of the revenue figures showed that they had earned £2,500,000 in gross receipts, which was an increase of £162,000, at an increased cost of £83,000, with the result that they had £76,000 additional net revenue, or £78,088, after taking into consideration various adjustments, their total net revenue being £1,485,696, and after deducting all fixed charges, including no less a sum than £42,486, under the head of income-tax, they were left with £606,425 for distribution, from which the board were proposing to transfer £25,000 to the general reserve fund to recoup it to a certain extent for the losses they had sustained as the result of the heavy depreciation which had taken place in Consols, and £5,000 to the pension fund, and they recommended the payment of a balance dividend of 4 per cent., making, with 3 per cent. paid in April, 7 per cent. for a whole year, carrying forward the substantial balance of £96,475. Dealing with the various paragraphs in the report, Mr. Parish said, in response to a very urgent appeal on behalf of the inhabitants of the district lying to the north-west of their line, between Carhue and Bahia Blanca, they were proposing to run a short branch from a point between Puan and Goyena, in the direction of Guatrache, about 40 miles in length, and should the results of this branch justify further extension, it would no doubt be policy to acquiesce in similar applications with regard to the adjoining territory, and in order to empower the board to meet any just and reasonable demands in this direction they were asking the proprietors for their formal approval to a resolution which would be found in the notice of meeting. The capital account of the company disclosed the fact that in addition to the balance of £293,442 standing at its credit, they collected on July 1, after the closing of the accounts, a further sum of £290,000, so that they had at the beginning of the current year about £600,000 available for the capital works now in hand. In conclusion, Mr. Parish expressed the hope that their future might present the shareholders, with a further record, and thus continue to merit their confidence and goodwill. The Chairman then moved the adoption of the report and accounts, which was seconded by Mr. Shennen and agreed to. The resolution authorising the construction of the branch line was passed, and the proceedings terminated with a vote of thanks to the Chairman.

NEXT WEEK'S MEETINGS.

MONDAY, OCTOBER 26.

Cooper, Cooper, and Johnson.—Winchester House.
D. M. Wilson's Options.—Winchester House, noon.
Kilsyth and Bonnybridge Railway.—Glasgow, 2 p.m.
Midland Uruguay Railway.—71, Finsbury Pavement, 2 p.m.
Mexican Southern Railway.—Winchester House, noon.
National Safe Deposit.—1, Queen Victoria Street, 4.15 p.m.
Santiago Nitrate.—Winchester House, noon.
West End Clothiers Company.—Cannon Street Hotel, 2.30 p.m.

TUESDAY, OCTOBER 27.

Australian Mortgage and Finance.—Cannon Street Hotel, noon.
Bank of Tarapaca.—97-8, Bishopsgate Street, 2 p.m.
Buenos Ayres and Pacific Railway.—Winchester House, 12.30 p.m.
Highland Distilleries.—Glasgow, noon.
Lauder Light Railway.—Edinburgh, 1.15 p.m.
London Corn Exchange.—Mark Lane, 12.30 p.m.
Ooregum Gold Mining of India.—Cannon Street Hotel, noon.
United Railways of Havana.—Winchester House, 11.30 a.m.

WEDNESDAY, OCTOBER 28.

Associated Tea Estates of Ceylon.—Cannon Street Hotel, noon.
Carlton Hotel.—Carlton Hotel, Pall Mall, 12.30 p.m.
English, Scottish, and Australian Bank.—Winchester House, noon.
North Western Associated Gold Mines.—Winchester House, 11 a.m.
Pears.—Holborn Restaurant, 2 p.m.
Richardsons, Westgarth.—Harrogate, 1 p.m.
Scottish Trust and Loan of Ceylon.—Edinburgh, 3.15 p.m.

THURSDAY, OCTOBER 29.

Crystal Palace Company.—Cannon Street Hotel, noon.
Danish Gas.—13, Victoria Street, 2 p.m.
Hodgson's Kingston Brewery.—Kingston-on-Thames, noon.
Hotel Cecil.—Hotel Cecil, 2.30 p.m.
International Plasmon Company.—Cannon Street Hotel, 3 p.m.
Montevideo Telephone.—Winchester House, noon.
Northern Banking.—Belfast, noon.
Singapore Gas.—Cannon Street Hotel, 4 p.m.

FRIDAY, OCTOBER 30.

Anglo-American Land Mortgage and Agency Company.—750, Leadenhall Street, noon.
British Columbia Electric Railway.—Winchester House, 11 a.m.
Liverpool and North Wales Steamship.—Liverpool, 3 p.m.
Salviati Jesurum.—Winchester House, 2.30 p.m.
White Pass and Yukon Railway.—Winchester House, noon.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended Sept. 18, $16,578; increase, $6,018. Aggregate from January 1, $452,280; increase, $13,264.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended Sept. 12, Rs. 40,435; increase, Rs. 14,625. Aggregate from July 1, Rs. 3,25,112; increase, Rs. 29,664.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended Sept. 12, Rs. 8,805; increase, Rs. 3,807. Aggregate from July 1 Rs. 83,895; increase, Rs. 22,283.

Bengal Central Railway.—Traffic receipts for week ending Sept. 19, Rs. 51,532; increase, Rs. 15,960. Aggregate from July 1, Rs. 365,674; increase, Rs. 75,775.

Canadian Northern Railway.—Traffic receipts for week ended October 14, $74,100; increase, $20,300. Total, from July 1, $922,700; increase, $375,000.

Lucknow Bareilly Railway.—Traffic receipts for week ended Sept. 19, Rs. 15,833; decrease, Rs. 836. Aggregate from July 1, Rs. 2,45,735; increase, Rs. 5,640.

Quebec Central Railway.—Traffic receipts for the 2nd week of October, $12,443; increase, $575. Aggregate from January 1 $554,323; increase, $19,123.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended Sept. 19, Rs. 18,300; increase, Rs. 33. Aggregate from July 1, Rs. 1,01,362; decrease, Rs. 271.

Salvador Railway.—Traffic receipts for week ended Oct. 17 $9,975; increase, $2,475.

White Pass and Yukon Railway.—Traffic receipts for the week ended Sept. 30 amounted to $127,846.

English.

Cleator and Workington.—Gross receipts for the week ending Oct. 17, £1,197; increase, £12. Total receipts from July 1, £17,394; decrease, £156.

Cockermouth and Keswick Railway.—Receipts for week ending Oct. 17, £866; decrease, £28. Aggregate from July 1, £17,041; decrease, £959.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending Oct. 17, £419; decrease £19. Aggregate from July 1, £6,111; increase, £411.

Liverpool Overhead Railway.—Traffic receipts for week ending Oct. 18, £1,594; increase, £74. Aggregate from July 1, £27,133; increase, £1,833.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending Oct. 17 £544, decrease £21; aggregate from July 1, £8,964, increase £240.

Belfast Street.—Traffic receipts for week ending Oct. 17, £2,552, increase £21; aggregate from July 1, £44,569, increase £1,748.

Birmingham and Midland.—Traffic receipts for week ending Oct. 16, £805, decrease £66; aggregate from July 1, £13,452, increase £155.

Birmingham City.—Traffic receipts for week ending Oct. 17, £5,132, decrease £97; aggregate from July 1, £83,613, increase £3,081.

Blessington and Poulaphouca.—Traffic receipts for the week ending Oct. 18, £11, decrease £3; aggregate from July 1, £437, decrease £42.

Bristol Tramways and Carriage.—Traffic receipts for week ending Oct. 16, £5,048, increase £242; aggregate from July 1, £83,667, increase £2,982.

Burnley Corporation.—Traffic receipts for week ending Oct. 17, £805, increase for week £87; aggregate from July 1, £14,013, increase £2,379.

Dublin and Blessington.—Traffic receipts for week ending Oct. 18, £127; aggregate from July 1, £2,625, decrease £131.

Dublin and Lucan.—Traffic receipts for week ending Oct. 18, £116, increase £8; aggregate from July 1, £2,281, increase £168.

Dublin United.—Traffic receipts for three days ending Oct. 17, £4,892, decrease £37; aggregate from July 1, £86,578, increase £7,378.

Edinburgh and District.—Traffic receipts for week ending Oct. 17, £4,355, increase £209; aggregate from January 1, £179,275, increase £18,441.

Edinburgh Street.—Traffic receipts for week ending Oct. 17, £455.

Harrow Road and Paddington.—Traffic receipts for week ending Oct. 16, £248, decrease £23.

Isle of Thanet.—Traffic receipts for week ending Oct. 17, £395, decrease, £33; aggregate from July 1, £19,753, decrease £956.

London General Omnibus.—Traffic receipts for week ending Oct. 17, £22,703, decrease £302; aggregate from July 1, £395,999, increase £8,247.

London Road Car.—Traffic receipts for week ending Oct. 17, £8,550, increase £794; aggregate from July 1, £125,226, decrease £645.

Rossendale Valley.—Traffic receipts for week ending Oct. 16, £182, increase £2; aggregate from July 1, £2,944, decrease £9.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending Sept. 21, £6,857, increase £2,227; aggregate from January 1, £223,619, increase £54,171.

Barcelona.—Traffic receipts for week ending Oct. 17, £2,390; decrease £59, aggregate from January 1, £97,213, decrease £3,343.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending Oct. 17, £343, increase £136; aggregate from January 1, £12,287, increase £6,709.

Brazilian Street.—Traffic receipts for the month of July Rs. 35,553; increase Rs. 63. Total receipts from August 1, 1902, Rs. 473,933, decrease Rs. 7,662.

Brisbane.—Traffic receipts for the week ending September 2 £2,218, decrease £77.

British Columbia Electric.—Traffic receipts for the month of August, $61,893, increase $8,597. Net earnings from July 1 to August 31 $45,695, increase $12,797.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending Sept. 20, £3,237, increase £265.

Buenos Ayres Grand National.—Traffic receipts for week ending Sept. 19, $47,574, increase $6,533; aggregate increase from April, 1903, $31,401.

Calais.—Traffic receipts for week ending Oct. 17, £178; increase £17; aggregate from July 1, £3,406, increase £34.

Calcutta.—Traffic receipts for week ending Oct. 17, Rs. 32,634, increase Rs. 5,908; aggregate from July 1, Rs. 529,808, increase Rs. 100,900.

Carthagena and Herrerias.—Traffic receipts for the month of September, £3,252, increase £341; aggregate to Sept. 30, £33,421; increase £3,014.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of August $365,466, increase $41,933; aggregate from January 1, $2,648,590; increase $321,165. Net traffic receipts $209,912, increase $24,348 aggregate from January 1, $1,406,627, increase $140,111.

The Investors' Review.

The Cagliostro of the Dear Loaf and Naval Extravagance.

He had a grand field day at Liverpool on Tuesday, our Dr. Balsamo, and came off as usual triumphant, being a man above all facts and logic. He having spoken, the *Times* and all newspapers that screed ditto to it fell down and worshipped and called upon us to listen to the voice of a god, the god of "Empire" and the empty belly. Well, perhaps he is a god, our Mr. Joseph, for assuredly he does not take the merely reasonable or honest way of meeting his opponents. He avoids facts and truth almost with the assiduity of a fallen angel, but then do not "the wicked walk on every side when the vilest men are exalted?" He did not answer Sir Robert Giffen's neat question about the total import of "foreign" manufactures, and all he could say in reply to Mr. Asquith's taunt of "dumpophobia" was to confirm what that gentleman said about the unreasonableness of any terror of the kind. We should now gather, however, that Mr. Joseph was never guilty in his screw vending days of buying up a bankrupt stock cheap in order to make a profit. He would have scorned to add to his wealth in that fashion, and does not mean that the nation shall be allowed to do so if he can get his way. Having no facts to give us he was great in prophecy, and on "Empire." "Trust in me," he says. "If you believe in my sincerity and will accept my proposals I will pledge myself that they will not add one farthing to the cost of living for any family in the country, and in the case of the poorest families will somewhat reduce the cost." Proof of this is not given, and cannot be necessary to those who recall with what faithfulness the ex-Colonial Secretary's promises and pledges have always been fulfilled. We have all got our three acres and a cow, you know, our old age pensions and our cheap housing in towns. There are no longer any ground rents exempted from imperial and local taxation, and the country fairly bursts with prosperity, thanks to the great revenue flowing into it from the annexed Republics in South Africa. The mine magnates are giving us that £30,000,000 which the good man dangled before our eyes when he came back from posturing and banqueting in South Africa, and about whose receipt even Mr. Ritchie had no doubt at Budget time. We have had so many of such fulfilled promises that it is impossible to doubt any longer. Those people, therefore, who go about digging holes in the great man's argument, pointing out that he has misstated facts and defied truth, that he is ignorant of economic teaching, and appears to have no acquaintance whatever with the laws governing the interchange of commodities between nation and nation, are wasting their time. The great prophet has spoken, it is for us to pay up, and we shall do that bravely, no doubt, for have we not all experienced how beautifully rich we have grown under the increased taxation of the Cecil-Chamberlain Government with which we have been blessed for the past eight years. The more we pay in taxes the more we have to spend. That is a well known economic truth according to Joseph. Why, then, object to still further taxation? As the *Morning Leader* cartoonist points out, if the loaves are smaller the cupboard will hold more of them, provided we have the money to buy, and naturally Joseph will see to it that this money is forthcoming, were it but "poker-chip" money. Let us therefore all obey the call of the *Times* and fall down and worship, surrendering reason and common sense, honour and common honesty. Here is the one man of wisdom, the true leader of the people by whom no one has ever been deceived, whose pledges have all been fulfilled and who is to-day the one triumphant "statesman"—it is his own description—that the world possesses.

Why does not the glorified bagman expound to us the reason for the monstrous and appalling increase in the cost of the navy? This is a subject upon which, if space permited, we should like to enter at great length, and from time to time, as opportunity offers, we intend to pursue it, for it is one of the utmost importance to the nation and to the "empire."—How much is the gracious Seddon going to contribute out of his loans towards its upkeep?—As is well known Mr. Chamberlain's favourite year is 1872, a year of inflated prices and gap-filling business with France and Germany. Our decadence began later, he says—at the time of the swine fever perhaps. In that year anyhow the expenditure upon our navy was £9,900,000, and the aggregate outlay upon that branch of our empire-protecting fighting services for the five years ended March 31, 1874, was just under £49,000,000, or an average of something less than £9,800,000 per annum. We did the greatest export trade, according to Joseph, and the most profitable ever known with foreign nations during that period, and the country seemed reasonably satisfied with its position, fairly confident that, were a row to arise between blood-shedding potencies, it could take care of itself, and of its over-sea commerce. But it must have been all wrong, and in the most horrific danger, for when we come to the five years ended March 31 last we find that the total expenditure on the navy was nearly £142,000,000, or an average of almost £28,500,000 per annum, and the figure rose to £31,170,000 in the last year of the five, while for the year now running the expenditure is put at almost £34,500,000, and to this there will certainly be additions. In almost the last year of a Government of sense and moderation, viz., 1893-4, the outlay upon the navy was only £14,048,000. What is the reason of this stupendous increase? Is the country in any more danger to-day than it was thirty years ago? Why should the outlay for the five years ended March 31 last be about 190 per cent. greater than in the five years ended March 31, 1874? Perhaps the select enthusiasts who devote themselves to applauding every

word Mr. Chamberlain utters, no matter how far from the truth it may be, will take the trouble to ask him for an explanation of this staggering augmentation of the nation's burden. Where does the danger arise? What are we afraid of? Is the money really wasted, and because of the waste have we the sham and dishonest outcry about our trade? Were the proper kind of war vessels provided to-day, war vessels adapted to cope with the enormously increased capacity of artillery, would not one-third of this money be sufficient? And is not the waste of iron and steel consuming the country's store of the metal? Is there any greater folly than that represented by the construction of vessels costing £1,000,000 to £1,500,000 each when one well planted shot from a trumpery gunboat, costing perhaps less than £200,000, might send any one of these vessels to the bottom? Has not the madness about monster battleships compelled us to expend endless millions upon dockyard extensions, harbours of refuge, and vanities of that kind, and how much better shall we be at the end of this expenditure than before? Are we become a population of slaves so cowardly that the idea of invasion keeps us from sleeping, unless we impoverish ourselves at a continually augmenting speed in order to build these monster ships of war that are only safe when in harbour and not always then? It is worth while pondering over the aspect of the sham fiscal agitation these quotations suggest in order to see what it is so crudely meant to hide. "You must not think of the way the money is wasted, of the tens and hundreds of millions squandered," our craven, ignorant, corrupt or dead broke tariff "reformers" tell us, "you must only think of "downing" the foreigner, and of preventing him from dumping at a low price on our markets the goods his insane protectionism prevents him from selling at home. Verily the ass snuffeth up the east wind. But if the nation does not turn its attention to the devastation of its resources now in progress it is bound to have protection as preliminary to many sorrows.

Australian and New Zealand Notes.

Melbourne, September 23.

How Mr. Chamberlain's Resignation has been taken.

There is not a patriotic Australian who is not delighted that Mr. Chamberlain is no longer at the head of the Colonial Office. Men in active politics view his resignation differently, according as they are Australian nationalists, protectionists or free-traders. Sir Edmund Barton regards Mr. Chamberlain as the greatest minister living in the empire, and his retirement makes no difference in his (Sir Edmund Barton's) desire to see Mr. Chamberlain's policy successful as regards the cohesion of the empire and the establishment of preferential trade. Sir John Forrest has been indulging his usual blatherskite about Mr. Chamberlain's policy of "maintaining the power and supremacy of the British people throughout the world," and has quoted a communication to him in which Mr. Chamberlain used these words: "After all, it is the large schemes that succeed; it is no use peddling and shrinking nowadays; those who want to succeed must risk something, and courage finds its own reward." Mr. Chamberlain's resignation shows, however, that ambition has overleaped itself. Mr. G. H. Reid, the leader of the Federal Opposition, has received the announcement of Mr. Chamberlain's resignation with thankfulness. "This proposal of Mr. Chamberlain," says Mr. Reid, "was one calculated to work enormous misery and distress in the British Empire. Therefore it was with feelings of thankfulness and delight that he announced the resignation of the Colonial Secretary." Mr. Reid was addressing a political meeting in Sydney when the news was conveyed to him, and the announcement was received with loud cheers. Generally speaking, public opinion in Australia is that Mr. Chamberlain's exit is a happy release. It is the title-hunters only who deplore Mr. Chamberlain's retirement, as it discounts their chances of knighthood, which they have been striving for so desperately, and which was the true explanation of the passage of the Naval Subsidy Bill in a dying Parliament against the wishes of the people. No grosser misrepresentation of Australian opinion could be conceived than that contained in Sir Edmund Barton's cablegram to Mr. Chamberlain last Saturday: "Your great policy commands the support of Australia. We know that you will persevere," and the Prime Minister, in an interview has had the colossal impudence to say: "I think there is a certain fiscal clique both here and in England which remains of the Little Englander type, and which exults at anything which happens to impose any check upon the development of the empire as a unit." Commenting on the subject, last Monday's *Argus* says editorially: "Sir Edmund Barton has sent Mr. Chamberlain an encouraging cable message, which, however, is utterly misleading as to true Australian feeling. Notwithstanding Sir Edmund Barton's gushing message, it may be doubted if, as it is developing, this new movement be a great policy at all. Instead of a policy of 'expansion of England,' is it not one of shrinkage and contraction? What is offered by the Federal Prime Minister and by protectionist associations? A mockery." In its opposition to Mr. Chamberlain's scheme, the *Argus* represents the public opinion of Australia, and gushing and misleading cablegrams by the Premier of a discredited Ministry do not alter that solid fact.

Economic and Financial Notes and Correspondence.

The Condition of the Transvaal.

It surely concerns investors not only in Kaffir mines but in the Transvaal guaranteed stock and other investments which may be offered to them that the truth should be known. Therefore we append here with very little comment two extracts illustrative of what is going on. The first is taken from a letter written by Miss Hobhouse, from Belfast, Transvaal, to the *South African News*, under date July 15. That letter sets forth the condition of the people after peace has returned. The imminent danger of starvation, the niggardliness with which help has been applied, the way money designed by the nation for the relief of the people has been squandered or misappropriated, and the extortionate rates at which advances have been made or stock and implements sold, all combine to constitute one more disgusting scandal. It seems unnecessary to point out that treatment of this description is not calculated to improve the capacity of the Transvaalers to meet the obligations we have, without their consent, thrust upon them.

"I want to write about these land settlements (not of immigrants, but of Boers). The one I am brought into contact with has at its head a man who does not know the very peculiar farming of this country. By utter destitution the Boers are pressed into this scheme, while a few former soldiers and a sprinkling of National Scouts also go believing prosperity awaits them.

"They have to sign a contract to stay for seven years, and to give half their produce to the head (I presume on behalf of the Government). In return everything is to be supplied them in the way of food and necessaries until they have reaped. But I gather this promise was by word of mouth. Wood and zinc for house-building is provided, as well as implements and seed for ploughing, but all this has to be paid for in a couple of years.

"They came to the bare ground (about eight to 18 acres each), and each had to build his own house first. It was begun in December—too late for that year's crops, and the seed supplied had to be kept over for this year. They got some mealies in and some potatoes, but very few, and a great hailstorm destroyed all the crops in this district. Some only got back their seed; none made money. A few months after they had come and had spent much labour on their places, a man came round, and said they must sign a paper saying they would each take six oxen at £20 10s. apiece, which must be paid for in five years, and if not interest on the value must be paid. If they would not do this they must go. They could not afford to lose their labour, etc., and perforce must consent. They were told they could further use the oxen by coming into town for transport purposes. Soon after a rinderpest order was issued forbidding any of these oxen coming into town. They are burdened with animals which on their small patches they do not want and have no forage for. They have nothing coming in, and no chance that even next year's crops, if they are good, will support them for the year. Clothes they could get on credit up to June 1. Since that date they must pay cash, and as

they have no cash those who did not buy on credit can get none now and must go without. Twelve men refused to sign for the oxen, and had to leave and start again elsewhere.

"I met a Boer from the settlement this week, pressed out of it by starvation. He had left wife and family behind, and tramped 30 miles till he found work on a farm. He told me the same story, and that he must leave the place to earn cash for bare food, but he may not take family or oxen away.

"To-day Mrs. F., the wife of a Natal Englishman, who had served in the Imperial Light Horse, came in with a Mrs. N. from the settlement mentioned, both half starved. She told me all these things and much more. She is half English, and the young couple had settled there hoping to make a good beginning. They were all in the same boat, about 35 families, now reduced to 23, and all without cash. The promise to supply with food had been badly kept. Rations had been given on December 22 for two months, and a very bare allowance of flour, bully beef, coffee, and sugar it was. When February 22 came no rations appeared; they were, four days late, given on the 26th. For some reason she could not explain the ration tickets which were then supplied for three months were marked March 30, and from that day, February 26, they have received no more up to to-day, July 15. She herself had lived on porridge for several days, three times a day, till her stomach would take no more. She had two fowls, which produced one egg every other day. No salt even. The other night she could not sleep for starvation, and so in the middle of the night she got up and killed the cock and cooked it there and then. They are worried and anxious about the debt with which they are saddled and do not see a way out of their difficulties. The poor woman looked hollow with hunger. She had had no bread for long. Her friend was expecting a baby next month, but cannot buy a shred of clothing for it. Mrs. F. said it was hard indeed for herself and husband, but far worse for those who like most, had children. Everyone is upset about these people, but all are too poor to take them out.

"I think I told you the settlement at —— is in the hands of a speculator, and that at —— in the hands of a syndicate. Major Leggatt, late of the Concentration Camps, is in charge of the whole department. Schooling is given free. The people at this one seem to feel that they have been misled, and think faith has been broken with them.

"I took Mrs. F. to the store, and bought for the three families I know there what I could in the way of fruit and vegetable stuffs. Meat is so dear and impossible.

"The big farmers must be put on their legs, and then they can employ and help all round them. But how? My host has applied for the Government loan, having no cash, but it is refused to him and his son for no reason. It is imperative help should come soon. One may tinker away at relief here and there, but as things work out in this country if these big landowners could stand again all the others could get work and food and help. They help each other so very much.

"Another man, a large farmer, told me yesterday he had applied for the Government loan and had been refused. He asked for £200, not feeling able to undertake more, and it was refused because he had asked for so little, they said they would not loan him under £2,000. He dared not take it, and so is penniless and unable to begin.

"I cannot get on from here for lack of conveyance—among men who had their 50 and 80 horses apiece formerly, and could drive any distance. I have passed through this great district so good for sheep, but not one is to be seen, the vast rolling hills are bare of all life."

Having mastered the contents of the above letter it may be well now to turn to another side of the subject, viz., the cost of the Milner-De Beers administration. The appended facts are contained in a letter from a Rand correspondent published in Tuesday's *Morning Leader*, under the significant heading of "The Transvaal from Within." By the way, what has become of the once-so-popular Percy Fitzpatrick? We have heard a woebegone tale of lost mental powers. The whole letter from which we make the following extract is full of interest, but we deal only with the composition and cost of the administration. It is mentioned that out of 176 leading officials only 30 are ex-Burghers or ex-Uitlanders, and only 74 have had South African experience of any kind before the war. Well this is how such "dumped" raw material is treated. President Kruger and his attendants were paid £8,050 per annum amongst them. The Lieut.-Governor and his attendants now get £12,750. The late State Secretary (Mr. Reitz) took £2,300, and his assistant secretary £500. The new Colonial Secretary gets £3,000 and two assistants £1,500 each, in addition to which there is Lord Milner with his £11,000, but some of that may be laid against the "income" of the Orange Colony. Let the appended table illustrate how things stand and again ask, merely as an investor, how this kind of generosity can be conducive to the ability of the starved and homeless people to meet obligations thrust upon them. We know our present brilliant Government maintains that the more taxes people have to pay and the greater the extravagance of the officials they have to nourish the richer they become, but that teaching is not yet quite in accordance with experience.

	Late Govt. £	Present Govt. £
Chief, P. W. Dept.	1,000	1,800

The above by no means exhaust the list, and in connection with the figures it must be remembered that while the work has not increased to any extent the staffs have increased threefold.

Is it any wonder that the white population of Johannesburg is about ripe for real rebellion, not the sham revolt of the Jameson raid days; or that the *Times* Cape Town correspondent wires to soothe fears about financial collapses, and to repeat the assurance that all will be well when the mines get labour and when the Chinaman comes like the locust?

The Austro-Russian Notes on Macedonia.

Under the Austro-Russian scheme of Macedonian reform, contained in the two notes presented to the Porte last week, it is quite possible the trouble may be aggravated rather than lessened. For the scheme contains too much Austria and Russia to be palatable either to Germany or Italy, who have their own axes to grind in the Balkans. In the first place the two assessors to be attached to the Muslim Inspector-General are to be an Austrian and a Russian, while the Consuls of the two Powers are also suggested ex-officio members of the mixed Christian and Mohammedan tribunals to be appointed to investigate the political and other crimes committed during the recent disturbances. The scheme further provides for the setting aside of special funds to be applied towards the repatriation and support of those Christians who have fled to Bulgaria and the rebuilding of the houses, churches and schools destroyed by the Turkish troops, the money being found by the Sultan. But here again Austria and Russia make their influence felt, as although the distribution of the funds is to be made by mixed commissions, their Consuls are to exercise a general supervision over them. The other clauses refer to changes in the government of the province when once order, or a semblance of it, has been established, to the impartial administration of justice and to the dismissal of the Ilavehs or second class reserves, and the final disbandment of the Bashi-Bozouks, to whose charge are laid the majority of the excesses and cruelties committed. On paper the scheme looks well, but on examination its defects become apparent. The most serious objection to it is the rivalry between the two Powers most interested, a rivalry which the Sultan and his tools are bound to use in order to sow discord and dissension between their mentors. Had Austria and Russia suggested a supervision by the Concert ,this danger would have been lessened, as the interests of the Western powers would have been neither so petty or so overlapping as their own. But they have preferred to press their selfish claims to hold the reins rather than to study the wants of Macedonia and

the neighbouring states. It is a most opportune moment to do so as they know the government here is too feeble and inept to move, while France, for the moment at any rate, is safe to follow her Russian ally's lead in this matter. The war-god of the Teutons, much as he may dislike to see himself shunted, dare not act alone, for his Empire, groaning under the weight of its huge military and naval burden, could not stand the cost of a war, even with Italy's assistance. For these reasons, therefore, Austria and Russia think they see their way clear to intrigue and scheme, one against the other, for the mastery of the Balkans. The mixed commissions are another weak spot in the proposed reforms, nearly as dangerous as the Powers' rivalry. At the present moment all or nearly all the important Bulgarians have left Macedonia, and the Christian portion of the commission will therefore be drawn mainly from the Greeks, who hate the Bulgar as much as the Turk. How then can the Bulgarian left in Macedonia expect justice from a tribunal composed of two such enemies?

The Sultan and his ministers recognise all these difficulties, and no doubt are considering the scheme with a view to finding the best point at which to breach it, a task that should offer no difficulties to their oriental cunning. At the same time they are sounding the chancelleries of the other Powers to ascertain what assistance, if any, they can rely on should they elect to treat Austria and Russia with defiance. Meanwhile, to keep Bulgaria quiet and to induce her to continue the withdrawal of her forces from the frontier, orders have been given to demoralise part of the Turkish troops, but there is a wide gap between an order and its execution, particularly where the Sultan is concerned. Should the remaining Powers hold out no hopes of assistance either moral or physical, Abdul Hamid can still fall back upon his favourite game of playing one Power off against the other, a task in this case always easy. And so, as we said at first, the proposed scheme looks more like widening the area of trouble than lessening it, which may possibly have been the motive that induced Austria and Russia to put it forward. Yet, though the area is widened, the irritation still remains, and next spring may see the situation far worse than it is now.

J. and P. Coats.

We always look forward to the annual report of this wonderful cotton thread combine, because there is something fascinating in the contemplation of magnificent wealth, even though one does not share in it, and in these days of poverty and depression the sight of real millions quite soothes the jaded mind. Although speculation has been singularly absent from the Stock Exchange during recent months, dealers in the miscellaneous market thought they saw excuse for a little flutter in the vastness of the profits earned by Coats, and in the hope that a 5 per cent. bonus would be added to the 20 per cent. dividend for the past year they lifted the £1 ordinary shares to nearly 5¾. But a little calm reflection served to show that even the prospect of an extra shilling scarcely justified such an extravagant price for that part of the capital which must take all the risk of trade vicissitudes and cotton corners, and notwithstanding that certain operators still clung tenaciously to their anticipations of an increased return, the quotation was back to 5⅛ on the day the dividend was announced. As is by now quite well known, the directors did not see their way to fulfil the hopes of the sanguine ones, and these gentlemen indicated their disgust and the measure of their disappointment by marking the shares down to 4¾. The satisfied contingent, however, were ready buyers at such level, and the price was quickly restored to over 5, and stands there now. Those who had looked for the announcement of an enlarged distribution should have kept in mind the words of the chairman when referring to the dividend question at the annual meeting held a year ago. He then clearly pointed out that should the directors in future years feel justified in recommending a larger distribution on the ordinary shares—an excess over the 20 per cent. payable in four quarterly instalments—it would take the form of a bonus to be distributed after the annual meeting. Not under any circumstances, therefore, would a bonus have been announced with the dividend, and although it is quite possible that something extra may yet be offered to shareholders, the manner in which profits have been allocated gives no encouragement to such hope. From the comparative statement given below it will be seen that the income of the trust reached the enormous sum of £2,706,647, or £47,818 more than in the preceding year, and with important increases in "other revenue," and the amount brought forward and a decline of £10,000 in the administration charges, the disposable sum is larger by £146,961 at £3,054,996. For 1900-01 the aggregate sums put to various reserves was £843,000, ordinary reserve receiving £290,000, dividend reserve £450,000, employees pension fund £100,000, and premium account for debenture redemption £3,000. The total amount now proposed to be set aside is £850,000, of which £700,000 goes to ordinary reserve, £100,000 to suspense account for depreciation in investments, and £50,000 to employee's pension fund. In addition a sum of £90,793 is allowed for income tax, the quarterly ordinary dividends being paid free of deduction, and after paying the dividends of 20 per cent. on the preferred ordinary stock and ordinary shares the sum carried forward is over £50,000 up at £420,720.

† 50 per cent. ‡ 20 per cent. on preferred ordinary stock and ordinary shares.

With the allocation now proposed the ordinary reserve will stand at £2,700,000, depreciation of investments account at £200,000, and employees' pension fund at £150,000, while the funds to which no additions are made—marine and fire underwriting account and dividend reserve—remain at £300,472 and £450,000 respectively. Regarding the assets side of the account, we are much interested in a note appended to the auditors' certificate because there seems some prospect of light being thrown on a question we never could understand. It runs: "With regard to the depreciation account the directors inform us that it is now under their consideration, with the view of revising, and, if found necessary or desirable, altering the basis or method of dealing with the account." We have frequently commented on this matter as the only visible allowance for depreciation for years past have been sums varying between £35,000 and £40,000 on properties valued at £9,000,000 and upwards. For the period under review the sum set aside was £36,965, but from this we have to deduct £36,142 for "renewals and transfers of amounts previously reserved against machinery at Ferguslie, now superseded." To attempt to explain what that means would be pure guessing, and all we can be actually sure of is that the discernible allowance for wastage on properties valued at £9,467,899 is £823. Book debts show little movement, but bills receivable are up £49,846 to £629,835, and cash is £335,075 smaller at £726,752. Stocks have increased from £1,291,813 to £1,427,182,

investments, loans, and advances against mortgages have risen £535,385 to £1,774,913, owing to the investment of reserve funds, and advances to subsidiary companies are a little higher at £870,361. The balance-sheet adds up to almost £16,000,000, and the company's career is a remarkable illustration of the manner in which fortunes can be made out of a particular industry so long as the controlling trust is powerful enough to keep less powerful rivals in complete subjection.

Retrenchment without Reform.

What is this *The Times* correspondent at Johannesburg telegraphs about a policy of retrenchment being carried out by the Government? Are the salaries of Milner and his satellites going to be reduced, or is the retrenchment to be confined solely to stopping the expenditure on roads and on other public works which is the shape it has taken so far? The former is not likely to emerge, as it would hurt the pocket of this poor over-paid official, while the latter only bears on the poor over-taxed people. In addition to public works, three departments, the constabulary, the land settlements, and the repatriation have been selected for the cutting down operation. So far as the first is concerned we have nothing to say, as we have always contended that the charge for policing the colonies was far beyond the requirements, except perhaps in Johannesburg, the home of the mining bosses. The cutting down of the land settlement and the repatriation department are, however, another matter, and will intensify and increase the misery and hunger already prevailing in many parts of the country. Had the settlement of the land been managed in an intelligent and businesslike way by men with a knowledge of the people and their wants, the work of the department would not have cost nearly so much as it has. Even the thick-and-thin supporters of the government themselves are bound to admit this when they remember the success which has attended the burgher land settlement scheme managed by the Boers themselves. But the most farcical part of the "retrenchment" policy is the cutting down of the expenses of the repatriation board. By this time we suppose it has sucked as much out of the £3,000,000 as it dare, a not inconsiderable portion as, no doubt readers remember, we showed by an extract quoted from the *Manchester Guardian* in the Investors' Review of September 5 last. Since this source is no longer available to pay salaries and expenses the government is going to retrench and let the burghers go homeless and hungry because the money we gave has been scandalously wasted.

But not content with wasting over £1,400,000 out of the £3,000,000 in expenses of management, the repatriation board appears to have bought large numbers of horses and cattle and quantities of farming stock which it has been unable to sell or hire to the burghers. Now that this talk of retrenchment is in the air the question arises "what is to become of all this stock live and dead?" Is it to be sold at knock-out prices on the closing of the smaller depots, or is to be gathered together in four or five large centres. Either course will involve hardships on the burghers, the first on those who have already taken their supplies and the latter on those who have yet to do so. To sell horses and cattle for any price they will fetch would be unfair and unjust to those Boers who paid the full prices asked in the early days of the repatriation scheme. Yet if everything is massed in four or five central depots it will mean in many cases long and arduous journeys for the farmers who wish to avail themselves of our "generosity." So it comes to this, whatever happens the precious board is in a hole, out of which it can only scramble over the backs of the burghers. But who cares? Is not the lot of the vanquished sorrow, and the privilege of the victors to make promises and break them?

An Andre-Mendel Smash.

Aided and abetted by Sir A. J. Newton and other financial swells, the firm of Andre-Mendel has indulged in some curious company-promotion in the course of a varied career, not the least remarkable being the transformation of the Stratford drapery and furnishing business of one J. R. Roberts into a limited liability undertaking with a capital of £202,500, and borrowing powers of £100,000, which, needless to say, have been exercised to the full. Exactly how much water was pumped into the affair in order to make it large enough for public consumption and to provide promoters' profits it would be a little difficult to say, but we may be sure those behind the scenes did the thing nobly. Equally certain is it that a declining business was sold to the public, and soon after the conversion the inevitable settling down of profits commenced. The extent of the collapse is illustrated by the subjoined statement, and the performances of the past two years made it evident that nothing but a miracle could save the concern from complete collapse.

Year.	Net profit.	Stocks.	Div. on Ord.
	£	£	pc
1894–5	19,356	40,218	9
1895–6	21,452	42,465	8½
1896–7	20,328	46,?94	7
1897–8	19,096	54,884	7
1898–9	18,490	53,325	7
1899–1900	18,668	60,212	7
1900–1	12,379	54,650	2½
1901–2	7,189	42,402	nil
1902–3	8,236	39.660	nil

Such, unfortunately, has not come to pass, and so desperate is the position of affairs that Sir A. J. Newton & Co. have been compelled to stoop to the undignified course of asking the mere common shareholders to meet them next week to see if anything can be done to prevent a break-up. They do so on the following terms:—

> In view of the Directors having been unable to declare an interim dividend on the Preference or Ordinary Shares of this Company, I have been instructed to invite your attendance at a meeting of the principal shareholders to be held on Tuesday, November, 3 1903, at the Institute of Chartered Accountants, Moorgate-place, Moorgate-street, E.C., at 11.30 o'clock, to confer with the Directors on the position and prospects of the Company.

It will be noted that only the big proprietors are asked to attend, the prospect of rubbing shoulders with the "little" holders of five or ten shares being too terrible to contemplate by the great imperial outfitter of the C.I.V.'s. The simplest way out of the difficulties would be to return the money taken for a business not worth anything like the sum at which it was capitalised, and this course we advise the promoters to follow.

Mr. Wybergh and White Labour.

This Mr. Wybergh is Commissioner of Mines, an office he has held for nearly four years. Prior to the war he was a consulting engineer and was for some time in the employment of the Consolidated Gold Fields of South Africa, as assistant consulting engineer. He told the Labour Commission he had seen the statement put in by the Chamber of Mines as to the requirements of the mining industry in the matter of native labour. Any figures arrived at in the way he conceived these had been, begged the question, and begged a very important question. That is to say, it was begging the question as to how far white labour could be introduced, therefore he placed no reliance upon those figures and did not suppose the gentlemen who had compiled them would maintain their mathematical correctness. The figures, in fact, had very little value in answering the question as to how far it was possible to substitute white for coloured labour. He knew, he added, that 129,000 was the number of natives said to be required to work all the stamps at present erected under present conditions, but the number of stamps erected ought not to be taken as the basis of calculation, because there were a good many mines in the Witwatersrand that had never paid and would not be worked under any conditions. Asked if he anticipated a considerable demand from any new district for native labour, he replied in the negative. "There will be an increased demand, but I do not anticipate any very great or sensational increase anywhere. I have had exceptional facilities for finding out what is going on and I think there is no likelihood of a great immediate demand for labour in the outside districts. I know nothing personally of the experiments which have been made in the use of white unskilled labour on the mines, but I have followed the controversy with great interest. My opinion with regard to the use of white labour is expressed in the adage 'where

there's a will there's a way.' If there was a great desire to extend the employment of white labour I cannot help thinking it could be done. I look upon it primarily as a political question of great importance. It all depends upon the policy to be pursued." He was asked if politics had anything to do with his leaving the Consolidated Gold Fields and he replied he left because they wished him to alter or suppress his political opinions. He had, in fact, been subjected to political pressure. Questioned by Sir George Farrar respecting the motives of the mine bosses, Mr. Wybergh said he did not think unskilled white labour had had a fair trial; it had not been made under the most favourable conditions, and had not been carried out with a will. In reply to Mr. Goch, he gave it as his opinion that by getting in a large white population the cost of living would be ultimately reduced. He did not, however, think any trial of white labour would be adequate unless the mine owners were really anxious to make it a success. Up to the present the number of whites employed on any one mine had not been very large; therefore, to sum up, he thought, in the first place, the owners, or some of them, had not been anxious to make the experiment a success, and in the second place, the experiments had been on too small a scale. He estimated that a period of three years would be adequate for necessary trials. Yes, but the mine boss has been all through such a perfect fool, so short-sighted, so completely governed by mere market considerations, that he cannot be expected to see anything from a natural point of view. He wants a "boom" to trade off more shares, and thinks Chinese will give him one. Therefore bring in Chinese.

London Guarantee and Accident Company.

Considerable interest has been excited in insurance circles by an agitation started to force directors of this important and vigorously managed company to increase the dividend to the ordinary shareholders. A circular dated Aberdeen, September 15 last was issued to the shareholders by Messrs. Edward Coleman, Brixton Hill, London,, and William Mackinnon, 75, Union Street, Aberdeen, in which use was made of the figures in the balance-sheet in a way that appeared to indicate perfect ignorance on the part of these gentlemen regarding the risks and responsibilities attaching to the business of the company. They bluntly demanded that the dividend should be doubled, or rather that, instead of a dividend of 8s. per share and a bonus of 2s., making 10s. in all, 20s. per share should be paid as dividend. Balance-sheet figures were set forth in a manner that seemed to prove such a payment feasible. After meeting it, the two malcontents contended, there would be £12,391 available for accumulation, of which apparently they would be graciously pleased to allow £5,000 to be put to reserve. What was to be done with the balance of £7,391 they did not condescend to say. It is hardly necessary to point out that the whole of this reasoning is based on a fallacy or on ignorance. The London Guarantee Company has lately been extending its business abroad, principally in the United States and Canada. Thanks to this extension, as the latest balance-sheet dated December 31, 1902, shows, the premium income has expanded until it then showed an increase of about £35,000 on the figure for the year immediately preceding. This increased income, however, implies augmented risks and liabilities; it is therefore a mistake to treat the balance left at the end of the year as if it were profit. A large portion of what is left, after meeting claims and all current charges, ought to be set aside as a reserve against unexpired risks. As was pertinently remarked in a circular issued to rebut the fallacious arguments of Messrs. Coleman and Mackinnon, "there is nothing in the reports or accounts issued to justify the assumption that the balance in the revenue account is profit; in fact, out of last year's balance the directors cautiously carried only £5,000 to reserve. They know that a growth of £35,688 last year in the premium income meant a considerable addition to the outstanding risks which had to be provided for before any question of profit could arise." And the writer proceeded to express a desire to "know what amount should be set aside in the balance-sheet to fairly meet all the outstanding liabilities." This is undoubtedly the true principle to apply to the business of a company like this, and it would be suicidal on the part of the board to adopt the short-sighted recommendations of the discontented shareholders. One might imagine their object to be the creation of a favourable market for shares they desire to sell, so wild are their assertions. Assuredly their action is not calculated to strengthen the company in any direction. As the circular just quoted adds, quite 50 per cent. of last year's income would be needed "to meet the unexpired risks as on December 31 last. On this basis £125,000 would have to be set aside, leaving only £56,000 free as a balance out of which dividends could be paid. The whole story of the insurance business conducted by British offices in the United States is full of warning against treating what looks like free income at the year's end as money to be spent. If, therefore, the directors of this company fail to accumulate a large reserve they put future dividends in peril. We can thus only regard the action of Messrs. Coleman and Mackinnon as mischievious.

Cooper, Cooper and Johnson, Limited.

Heroic measures have been necessary in the efforts to bring this unfortunate company out of its mess, and even yet the liquidator is by no means at the end of his troubles. Several schemes have been brought forward for the resuscitation of the business, but so far the only thing effected has been the separation of the wholesale and retail shops from the estates, and the sale of the former to a new undertaking for the purpose of providing sufficient funds to meet the pressing demands of the creditors. This left the estates to be dealt with, and several plans have been proposed only to be abandoned. The suggestion accepted by the various classes interested, at meetings held in July, 1902, was refused consideration by the Court until the necessary alterations in the articles of association had been passed by the shareholders, and was then formally dismissed because an alteration had to be made after the meetings had been held. An amendment of the scheme was made to get over this difficulty, but no sooner had this been done than fresh trouble awaited the liquidator and the agents of the company, Messrs. Antony Gibbs and Sons, withdrew their support, rendering it necessary to find a firm willing to take over the agency and the debt to Messrs. Gibbs and Sons. Even this obstacle has now been overcome, and the indefatigable Mr. Husey presents a scheme, which is practically that of August last, for consideration. The first clause of the proposed arrangement provides that a sum not exceeding £31,500, and bearing interest at 5 per cent. per annum, shall be raised, out of which the agents' loan is to be repaid. This loan is to be secured by the £10,600 first mortgage debenture stock, and £16,800 second mortgage debenture stock now held by Messrs. Antony Gibbs and Sons, and by a first charge for £12,000 and interest, to be given either upon the crops of the Ceylon estates or upon £24,000 first mortgage debenture stock now held by the London and County Banking Company and the National Bank of India, which is to be redeemed as noted below. The funds raised by these means, and by the issue of £40,000 nominal of "B" mortgage debenture stock bearing interest at 4 per cent. per annum, together with the profits for the two years ended June 30 last, are to be applied in discharge of Messrs. Gibbs and Sons' loan, payment of arrears of interest to that date due to holders of first mortgage debenture stock, other than holders of first mortgage debenture stock other than of interest to the P. and O. Company for its loan, redemption of £11,000 stock held by the London and County Bank for £8,220, of £20,400 held by the National Bank of India for £16,476, and of £4,000 held by the P. and O. Company for £3,145, payment of debts due to all unsecured creditors, the nominal value of whose debt is under £5, and the odd shillings and pence of all above that sum, and lastly the remuneration of the receiver and manager and liquidator of 1½ per cent. on receipts, and the costs, charges and expenses. Provision is also made for the redemption of the debenture issues out of revenue, to the entire exclusion of the long suffering shareholders, and it is arranged that until the first debenture stock is reduced to £188,000, the holders of this security are to appoint four out of the six directors of

which the board is to be composed, while a fifth is to be appointed by the agents for the time being, so long as any moneys shall be due to them, leaving the shareholders with one representative. The salvation of the company is likely to be a long and wearisome business, and shareholders will apparently have to make heavy drafts upon their stock of patience, but the affairs are in such a tangled condition that the shareholders have been wise in accepting this plan which holds out a prospect of some return, even though that return cannot be expected for a very considerable time.

British Aluminium Company.

The directors of this unfortunate undertaking are in the happy position of conveying to debenture and shareholders a little pleasing intelligence. It will be remembered that a year ago the company found itself in such straits that it was forced to ask debenture holders to agree to the postponement of payment of all interest for a period of one year, and to authorise their trustees in their absolute discretion to consent to suspension for a further period of twelve months. At the same time power was sought for the raising of £10,000 in priority to the debenture stock, and after a good deal of opposition all the proposals were agreed to. When the report for the twelve months to December 31, 1902, was issued a few months back, proprietors discovered that the position of the concern had improved somewhat, and will now be gratified to hear that, owing to the better state of affairs prevailing, the directors do not feel justified in asking the trustees to agree to the additional postponement. The current half-year's interest will be paid on December 31 next, and therefore the interest will be met half-yearly on its due dates. Further, of the £10,000 authorised to be borrowed, and which was duly raised in January last £7,500 has since been repaid. This statement caused a sharp rise in the value of the company's securities quoted on the Stock Exchange, and later on, perhaps, some of the subjoined shareholders may receive a slight return on their investment. In the meantime the directors make an effort to assist the recovery by bringing forward a scheme for capital reduction. At present the capital stands at £400,000, divided into 10,000 "A" 6 per cent. cumulative preference, 20,000 7 per cent. cumulative preference, and 10,000 ordinary shares, all of £10 each, and the proposal is to reduce it to £310,000 by writing off £9 from each ordinary share, leaving the preference issues untouched. We doubt if the writing down is severe enough to meet the company's rather sad case, but it is a move in the right direction, and will doubtless be agreed to at the meeting called to consider the position on November 4 next.

† Directors.

Queensland Investment and Land Mortgage.

This wretched concern has now been in existence about twenty-five years, and the principal labour falling upon its directors during that time has been the formulation of plans to save it from collapsing. All kinds of expedients have been resorted to to keep the affair on its legs, but since none of them included the performance of a miracle, very poor success attended the efforts, and the time has now arrived for the submission of another scheme of resuscitation. Curiously enough shareholders are not asked to provide more money, or submit to a further attenuation of their capital, and as most of them have probably written off as lost the amount already sunk in the concern, the proposals will doubtless be accepted with indifference. Along with the plan of reorganisation comes the directors' report and statement of accounts, productions much in the usual style, that is to say revealing a debit balance. After paying interest on debentures and on amounts paid up in advance of calls, the loss for the year to June 30 is £5,918, increasing the total to £14,995, but the directors are not disturbed in the slightest by such trifling incidents. There is the splendid cattle company, you know, which works the pastoral leasehold estates, and the freehold properties, and whose counted stock is worth £16,000 more than the £50,000 of capital invested in it by the Queensland Mortgage Company. True, no return of any sort has been obtained for the money put into this Cattle company, and the rent received for two properties leased this year is more than £2,000 less than the amount obtained prior to the drought, but what does that matter so long as the stock valuation wipes out the parent company's debit balance? The directors preface their keep-the-company-alive scheme by telling shareholders that their policy for many years past has been to conduct its business so as to avoid making further calls, and by realising assets judiciously for the redemption of debentures, to pave the way for reducing the large liability now existing on the shares, which so adversely affects their value. In the confident belief that the assets of the company, apart from any of the large uncalled capital on either "A" or guarantee shares, may ultimately prove on the aggregate of the value at which they stand in the books, the directorial programme is to continue the company, and to work for the extinction of the £5 per share liability on the whole guarantee shares. An Act of Parliament has been obtained to assist them in their praiseworthy endeavours, and its provisions, together with the board's comments, seem worthy of record:—

1. For the reduction of the amount prepaid in advance of calls by the repayment of £5 per share, carrying 6 per cent. interest on the (guarantee) shares paid up in full. The directors believe that, under the financial provisions contained in the Act, they will soon be able to give the requisite two months' notice for carrying this into effect. The result should be an improvement in net revenue of some £2,000 a year.

2. For the repayment on six months' notice of the whole of its debentures at par, and alternatively authority is given to the perpetual debenture holders by resolution to consent to such variation in their security as they may think proper, subject to the consent of a defined majority.

3. For the restriction of the company's operations, and the consequent diminution of the shareholders' liability by the reduction

of borrowing powers from upwards of £765,000 to £500,000, and by the repayment of the £98,745 prepaid guarantee capital which, subject to the debentures, was also a liability of the company.

On the prepaid capital being returned the amount paid up will be £312,875, and the subscribed but uncalled capital will stand at £767,028, consisting of £1 per share on 127,838 "A" shares, and £5 per share on 127,838 guarantee shares, the latter specially pledged to debenture holders. Thus, taking the invested funds at £800,000—their present balance-sheet value—there would be a total of over £1,567,000 against a debenture liability of £500,000. The directors believe that they may comparatively soon be able to realise with advantage to revenue some £200,000 of assets, and think it should then be practicable to arrange with the present or new debenture holders to waive their claim to the guarantee capital and continue advances, then restricted to £300,000, on security of the company's investments of £600,000 and uncalled "A" capital of £127,000. This will be their policy, and they submit a series of proposals for definitely defining the position. With the unproductive properties realised and the saving in interest effected by the repayment of the 6 per cent. shares, the directors tell us that they see no reason why in time moderate interest should not be realised on the capital now in the company. Maybe the directors are favoured with an abnormal range of vision, but we should be sorry to pick up the company's securities with the idea of grounding ourselves with an old-age pension.

United States Trade and Finance.

It must be a sincere pleasure to economists of the type most popular in the United States to find that in September the foreign trade of the Republic was conducted at such a magnificent loss. The exports of merchandise amounted to $110,332,000, and the imports to $81,947,000. This gave an excess of exports over imports of $28,385,000. It follows that for every dollar's worth of goods sent out of the country the nation got back less than 75 cents' worth. This is much worse than the exhibit of the two preceding months, and therefore the satisfaction must be all the more profound. So intensely benevolent are these American traders and their economic teachers that they seem never so happy as when they are getting as little for their dollar in foreign markets as they possibly can. If they had their way, it may be inferred, they would be content and full of joy were the return only 25 cents to the dollar. This is the way in the new world to get rich, and it is quite interesting and beautiful. Up to the end of September—and by the way September appears this year to have thirty-one days in the United States, according to the New York *Commercial Chronicle*—the excess of exports over imports amounted to about £46,000,000. No wonder the United States is happy and Mr. Chamberlain eager to put England in the same position. Buy dear and sell cheap is the one way to wealth, according to the economic gospel as expounded by Joseph and his Yankee friends, and above all clap on the taxes.

However, as long as the United States are in a position to keep paper money in circulation to any extent it does not much matter. There is an interesting official table issued every month, and the latest brings the figures down to October 1. From this we gather that the amount of gold coin in circulation on that date was $622,551,000, and of gold certificates $394,098,000. Together these figures give a total of $1,017,000 of gold, or paper representing stored gold, as the hard money in circulation and forming the practical, every day basis of the gold standard. In addition to this, however, there was, leaving out of sight the standard silver dollars and the subsidiary silver coin, no less than $1,217,000 of paper money pure and simple, or of silver certificates which constitute paper money circulating upon a false valuation. There is thus a considerable dilution of the gold, and comparing the figures with those of twelve months' back it is found that the money in circulation has increased by nearly $130,000,000, of which about $38,000,000 consists of gold coin and gold certificates—mostly certificates—and the other $41,000,000 odd of additions to the pure paper money, that is to the notes of the National Banks. In fact, the notes of the National Banks alone in active circulation have increased by about $53,000,000 within the twelve months, legal tender or greenback money having shrunk. If the stories that come over to us are true this inflation of the Bank and Treasury created paper money, is about to be stimulated in quite an unusual manner in the near future. And a country that carries on its trade at such a stupendous loss, or excessive cost, as the figures quoted above exhibit, will need all the paper money it can get.

Philanthrophy!

It is really astonishing what a number of generous and unselfish men exist in this hard world of ours, men whose sole delight is to enrich their fellow-creatures. Gifted with an exceptional knowledge of the stock markets, or having gleaned some important piece of information in a wine-bar, they foresee an enormous rise in a certain share-counter, which will return a dazzling profit on any sum put into it. Were these open-handed fellows built like ordinary mortals they would keep this golden news to themselves, but as they are of superior clay they at once send circulars broadcast to tell the world the glad tidings. "Buy now when Atchisons are 67 or 70 for in a day, a week, a month, they will be up to 90 or more, and you will net a nice little profit." Such is the burden of their song, and in order that the prize may be within the reach of all they add to their generosity by offering to deal in the stock no receiving so much cover. Lest they should be accused of pride and self-advertisement these benefactors usually hide their identity behind a company, which somewhere in its name has the high-sounding words "Investment" or "Financial Corporation." This looks better, and is moreover safer in case the tip fails to come off, and angry dupes come to desire a personal interview with the tipster. For not every tip rains "golden sovereigns," as Dick the voluble would say, and as one gobey snare found out only the other day. Week after week it puffed the shares in an oil company which was said to own one of the most, if not the most, valuable oil-field in the world. Figures galore were published to show how £20 invested in the shares of this company must in a very short time change into £100. Alas! the oil company went into liquidation, and the prophets have leisure to count their swag in bitter grief and sorrow no doubt at the hard lot of the victims.

Another class of individuals who thirst to assist their fellow men are those benevolent gentlemen so overburdened with superfluous cash that they are ready to lend it out in any sum from £50 upwards on a mere note of hand. Think of it, ye unhappy City folk whose bankers require all manner of security for even a little loan. With these philanthropists you have simply to let them know how much you want, when they will send along their representative to call on you with the cash, for so liberal and generous is their scheme that they feel sure the whole matter will be settled there and then. From their point of view it is, no doubt, as easy as burglary, but the borrower only starts his troubles when the date of payment comes, and he finds the interest charged not quite what he expected. However, so careful are these estimable moneylenders of youthful morals that they absolutely refuse to lend money to a minor, and to prevent their circulars getting into the hands of the young and innocent carefully address them "Senior.' Surely the world should realise by now the true meaning of all this apparent generosity. Men of this description do not seek to benefit others without endeavouring to benefit themselves far more. Day after day we hear of cases where an unhappy wretch in the grip of moneylenders of this stamp has paid interest far exceeding the amount of the loan, and without decreasing the principal by more than a fraction. Yet still these horse leeches find victims. With the case of the bucket-shops it is different. They play upon the gambling spirit present in every man, and seek to rouse it by tempting visions of easily earned profits. "To buy cheap and sell dear is the soundest advice that can be given," one of these concerns sapiently observes, though the gambler too often finds he has bought at the top price, and instead of a profit has made a loss. But then caught fish are only good for cooking.

Critical Index to New Investments.

**** To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

City of Cape Town Corporation 4 per cent. Loan.

It is announced by the Standard Bank of South Africa, Limited, that in its capacity as financial agent to the Corporation of Cape Town it will receive applications for £1,000,000 of this stock offered at a fixed price of 97 per cent. The loan forms a portion of £1,388,454 sanctioned by the Cape Legislature, and will when issued raise the debt of the Corporation to £2,157,650. According to the prospectus the money will be spent upon a comprehensive drainage and sewerage scheme, additional water storage, the construction of storm water sewers, the building of a City Hall, electric installation, washhouses, baths, etc., but £300,000 of the money will be used in converting a temporary loan of that amount into the new stock. The official valuation of the movable property liable to rates within the jurisdiction of the corporation is £13,242,420 for the current year, and the principal assets of the City are given as being worth £3,272,150, of which £2,347,050 consists of lands and buildings. Revenue and expenditure have both risen with great rapidity. In 1892, for instance, the income of the City Council was £79,015 and the expenditure £98,652, but in 1902 the income rose to £298,643 and the expenditure to £293,376. This is pretty good for a population of 64,171 or a town and suburban population of 141,608, of which the day town proportion is estimated at 85,000. Still Cape Town debt is, perhaps, the best security South Africa can at present offer. The list of applications will be closed on or before Thursday next. Allottees may pay up in full under 3 per cent. discount.

Metropolitan Trust Co., Limited.

This company has a fully paid up capital of £300,000, and now offers for subscription at par a similar amount in 4 per cent. debenture stock, redeemable after January 1, 1916, at 103 per cent. on six months' notice. The investments held stand in the books at a cost of £434,570, of which £330,374 is in bonds, debentures or debenture stocks, but the valuation made as of January 1, 1903, gave a total of £460,415, and a recent valuation shows that this excess has been more than maintained. The undertaking is very capably managed, and has paid dividends since its formation in August 1899 of £5·7 per cent. per annum for the period ended January 1, 1901, and of 6 per cent. for each of the two following years, in addition to building up a reserve of £80,315, so that the new issue should prove a good enough investment.

International Sponge Importers, Limited.

This company has been formed with a capital of £300,000 in 125,000 6 per cent. cumulative preference and 175,000 ordinary shares of £1 each, to acquire three businesses of sponge importers and merchants, and chamois leather dealers, which have been established for periods ranging from half to three-quarters of a century. The assets taken over, including £89,138 for stocks on hand, are valued at £115,149 only, but by adding £143,831 for goodwill the purchase price is brought up to £258,980, of which £92,080 is payable in cash or preference shares and £166,900 in ordinary shares. Messrs. Cresswell Brothers and Schmitz take £49,373 in cash or preference shares and £66,079 in ordinary shares, including £53,686 for goodwill, Messrs. Henry Marks and Sons gets £30,125 and £45,821, including goodwill £38,290, and Messrs. L. and M. Cohen £12,582 and £55,000, including £51,855 for goodwill, and as these estimates for goodwill represent over five years purchase on the base of the average profits in the two first cases and nearly eight years in the third, it will be seen that the vendors are fairly modest in their valuation. Profits of each business are set out for the four years ended December 31, and in the case of Messrs. Cresswell Brothers at any rate have been on a dwindling scale. The other two, however, have fluctuated less, and the average for the three works out at £24,335 per annum, before deducting interest on capital, depreciation, etc. Only the preference shares are offered for subscription, and as the dividends on these require no more than £7,500 they would appear to be safe enough in this respect, but the security cannot be looked upon as first class, considering the nature of the assets.

Kallikote Raj Sterling Loan.

Difficulties seem to be pressing upon the Rajah of Kallikote and Atagada, and in order to pay off existing incumbrances and other debts and liabilities the ancestral estates, excluding only the private residences with their appurtenances, temples, and royalties on minerals, are to be pawned as security for a loan of £135,000 5 per cent. first mortgage debentures. These debentures are redeemable at 102 in 31 years by means of a cumulative sinking fund with annual drawings, the first payment being made on January 1, 1905, and are offered by Messrs. Arbuthnot, Latham and Co. at par. The average annual income for the three years ended June 30, 1902, taken at an exchange of 1s. 4d. per rupee works out at £17,906, and although the result for the year to June 30, 1903, is expected not to exceed £14,000, this would still leave ample margin, as £8,800 only is required to meet interest and sinking fund requirements.

United Kingdom Oil Refineries, Limited.

The scheme propounded in this prospectus is no doubt ingenious, but we fear it is hardly convincing enough to attract the investor. After stating that this country is dependent on foreign imports for the vast bulk of the petroleum products which it consumes, the document goes on to say that the new company intends to produce mineral oils of a quality superior to any now supplied to this market, and to pay especial attention to motor car spirit, illuminating oil, high-class lubricating oils, and refining crude petroleum. Refineries are to be built and equipped in London and Manchester, and the raw material brought from Russia and Roumania, and altogether the project is a large one, yet the undertaking is capitalised at £60,000 only, divided into 50,000 cumulative preference and 10,000 ordinary shares of £1 each. The preference shares are entitled to dividends at the rate of 7½ per cent. per annum with a quarter share in the balance of profits available for distribution, and of these 40,000 are offered for subscription, the balance being taken, together with the ordinary shares, and £500 in cash by the originator of the idea for services rendered and to be rendered, and for using his best endeavours to obtain subscriptions to and underwriting for the capital.

Margate Palace, Limited.

This company has been formed with a share capital of £60,000 divided equally into preference and ordinary shares, £60,000 6 per cent. first mortgage debentures and a like amount of 6 per cent. second mortgage debentures, for the purpose of acquiring from Mr. A. Kellett the freehold and leasehold property of about two acres adjoining the landing jetty at Margate, and of contracting with Mr. Kellett for the completion of the buildings and transfer of licences. For the freehold and leasehold properties the price payable is £12,000 in cash and £16,000 in second debentures, and for work carried out and the completion of the work Mr. Kellett receives £38,000 more in second debentures, £24,500 in cash, and £10,000 in preference shares, out of which he is to provide his co-directors with their qualifications by transferring to them 2,500 preference

shares each. Only the first debentures are at present offered for subscription at 97 per cent., and this arrangement with the contractor it is said leaves the proceeds, after payment of the two sums above mentioned, avalable for redecorating and furnishing the buildings, and for working capital, that is to say £23,500, which does not seem an over lavish allowance. A good deal of time and trouble seems to have been spent in making fancy calculations as to probable revenue derivable from every conceivable source, including boot cleaning and sale of photographs, and only the privilege of breathing within the building appears to have been inadvertently overlooked. By drawing on the imagination freely in this manner an estimated net revenue of £15,760 is produced, and on this flimsy foundation it is asserted that the first debenture interest is covered at least four times over. The proposal seems fairly impudent.

Passing Events.

It is pleasant to see the growth of intercourse between British men of business and French, and nothing but good ought to come out of the visit of two hundred delegates from the City of London International Commercial Association to France. There may be a good deal of high falutin indulged in at the banquets and receptions accorded to these visitors, but behind that there is the increased acquaintance of men and women of both nationalities with each other and the cultivation of a spirit of increased friendliness. The more this goes on the less likely is it that misunderstandings, trade jealousies and hatreds, can again grow up between the two neighbours. And, as Mr. Courtney reminded us the other day, in spite of monster armaments, the upkeep of which is ruining so many nations, the cause of peace does make progress, peace and arbitration when disputes arise. Narrow as the Arbitration Treaty between France and England is in actual scope it has established a principle and will powerfully aid in the spread of happier ideas on international relations.

Russia and Japan are like the minister who on receiving a "call," went upstairs to pray for guidance, but left word with his wife to get ready for the move. Both nations are loudly proclaiming their friendship towards each other, and their intention to arrange their differences pacifically—while the agents of both are busy buying up all the steam coal they can lay hands on. Lloyds with its keen nose for trouble, has put the insurance premium on vessels carrying coal to Japan up to a war basis, much to the grief and distress of that country, which piteously asks "Why?" Count Katsura, the Premier, and Count Hayashi, the Ambassador here, have both told the press that negotiations are proceeding smoothly and before long all differences between their country and Russia will be arranged. War is the last thing we desire to see, and we wish we could believe them. But looking at Russia's diplomacy and Japan's position, we fear the present calm is only that before the storm. If Russia grants concessions she will be sure to take more than she gives somehow or somewhere, either now or in the near future. At present her forces in the Far East are not sufficient to enable her to crush Japan off-hand, and the Trans-Siberian railway is too narrow a vein through which to pour in more men and supplies. Moreover, the Bear wants money and her ally France is not so anxious to lend as she was. Once she has concentrated her forces by sea and land in the Far East and raised a loan from a confiding capitalist or two, her tone may change abruptly.

"What will Australia gain," asked a heckler of a candidate the other day, "if we do not give her a preference on wool?" Having omitted to get a leaflet from "Consistent" Birmingham, or a hint from our only statesman, on this point, the unhappy candidate had to confess he didn't know, which was honest if not clever. But had he known the fate in store for him he would have given some specious answer and evaded the question. For his ignorance has raised the wrath of some unknown "economist" to whom the *Times* has opened its columns in order that he may read a lesson to all such feeble props of the new policy. As it now stands, this writer declares, Mr. Chamberlain's policy is all that Australia desires, and to talk of a preference on wool would detract instead of adding to its beauties. Though wool is by far the most valuable of Australia's products, agriculture and dairy farming employ more people. These, this unknown writer contends, are the small men in the Commonwealth who bother their heads but little about Imperial questions so long as they earn their daily bread, and it is to them that the benefits of closer relationship with the mother country by means of preferences, must be presented. But would it not do just as well to present these benefits by advocating entire free trade and the destruction of those tariff walls which hamper and restrict the natural growth and development of the colonies? What good will it do the colonial agriculturist if we first impose a tariff on his produce and then knock off a little bit for his benefit? The consumer here must anyway pay more for what he requires and with his power of purchasing restricted the colonial will find his market smaller. This, however, is the foolish economic aspect of the question which the unknown pundit tells us is purely secondary, since the subject is political and not economic. For this reason it has the support of the Colonial Premiers, all anxious to draw closer the bond between their states and us, in order that they may be nearer our pockets. Here again we are falling foul of the unknown, who believes the new and direct relationship will abolish the nasty debtor-and-creditor suspiciousness with which this country so often regards her children. Well, let him wait until one of the Australian colonies thinks fit to repudiate her debt, and he will see how we shall be behave, preferences or no preferences. Why, it would be enough to make us go debt-collecting with our fleet as we did in Venezuela.

From a newspaper cutting some Australian has sent us we gather that the "undeveloped resources" of New South Wales are not quite so valuable as they were. The Government of the colony, it says, selected the small hours of a Friday morning to quietly put through a clause amending the land bill in virtue of which the upset auction price of certain blocks of land is to be reduced from 25s. per acre to 15s. Why is this done? Because the colony wants money and wishes to tempt land monopolists to buy great stretches of country by offering them at a low price. Money thus obtained, as has been the invariable custom in New South Wales, will be utilised as revenue. We are disposed, however, to think that the upset price is even now too high, and that it will have to be brought down lower still, because the monopolists are so locked up. In order to raise money New South Wales will therefore have to try again.

After all the Right Hon. "Dick" Seddon has not selected 5 per cent. as the rate of interest he is going to generously offer all and sundry who may be willing to lend the colony money. The opposition, it seems, kicked up a dust about it, and after the 5 per cent. limit was inserted as a maximum the Premier went back upon himself and reduced that figure by ½ per cent., the Agent-General, he said, having advised him that 4½ per cent. was a "safe" rate of interest. Is it? We should think it was rather a bankrupt's rate for a colony, and cannot subscribe to the opinion of the good Mr. Reeves. He based it perhaps upon the apparent success of the Victorian conversion loan, which is said to be going through very nicely at a price meaning something less than 4½ per cent. to the payers. We shall see. The great and Right Hon. "Dick" added that he intended to borrow within the colony at 4 per cent. and we hope he may, although agreeing with the opposition that the mopping up of all available local floating capital by the Government would be detrimental to local industries. But what did the opposition mean by insisting on the establishment of "sinking funds"? If we are to believe the Government, sinking funds already exist, and the "net" debt is always chucked at our heads when we talk of the speed at which the liabilities are mounting. Explain, oh, Seddon and Ward, explain.

By calling in Count Stephen Tisza to form a ministry in Hungary, the Austrian Emperor is thought to have given

way, to a certain extent, in his quarrel with the Magyars. Whether the appointment will lead to the settlement of the questions in dispute beween the Crown and the Constitution is, however, a matter of considerable doubt, as the attitude of the Hungarian Liberal party is one of "No surrender," and Count Tisza's programme in the main adopts that of the Liberal party, though it contains concessions to the Crown, and on these he may be defeated by the defection of Count Apponyi and his followers. The deadlock is, therefore, far from at an end.

We thought the rule of the children of Balliol was about the worst on earth, but it seems the palm must be awarded to the United States Governor of Porto Rico. So great is the indignation and hatred of the inhabitants for this man that on the day of his return from a visit to the States they held a mass meeting to condemn him and his satellites and their ways. The speakers accused him of oppression and persecution, of appointing men to hold office whom he knew to be corrupt, criminal and unworthy in every way of the confidence of honest men, and of protecting them until they and their methods had been exposed by the public press in the States. In addition he has imposed oppressive taxes on the island, already saddled with a burden heavier than it can bear, and when asked by the elected Legislative Council to give an account of the expenditure of his department insolently told it that the people had no power to investigate or call to account one of the departments of his government. To such a man the arrest and imprisonment of members of the council upon false charges would come natural, but in addition he has persecuted by every means within his power members of the American Federation of Labour, an organisation which is striving to introduce American customs and liberties into the island. These, we learn from the *San Juan News*, are the chief charges brought against him by the inhabitants of the island, whose meeting by the way was broken up by the armed Insular Police. Really, Cousin Jonathan, we think you might devote the intervals between investigating the ways and methods of trust creating to an enquiry into the state of your colonies and to the reorganisation of their government. If not you will have a nice little revolution or two to deal with, for the Filipinos seem far from satisfied with your beneficent rule.

The Italian budget for 1902-3 is said to have been finally made up with an available surplus of 69,500,000 lire, after taking into account extraordinary expenses, railway construction, and the military outlay in China. This is the best news we have heard from Italy for a long time, and when we add to it the prospect of the accession to power of a really progressive and popular ministry under the presidency of Signor Giolitti there is much for every friend of Italy here to rejoice over. By and by we shall hope to see Italy becoming more of a free trade country. It only requires to shake off militarism to become wholly that. Militarism is the greatest curse from which mankind at present suffers.

A note from the St. Petersburg correspondent of the *Financial News* says that there is a great hunger for loans on the part of Russian municipalities. Up to the first of this month the Government is said to have authorised the issue of no less than 98,430,000 roubles of new municipal loans. Of this total St. Petersburg wants 39,000,000 roubles, Warsaw 33,000,000 roubles, Odessa 10,000,000 roubles, Moscow 8,370,000 roubles, Riga 3,000,000 roubles, Tekaterionislow 2,500,000 roubles, and Kharkow 1,500,000 roubles. These loans will not all be issued immediately, but as expressing the desires of the municipalities the figures are suggestive.

We should judge that it was the paper makers who are struggling along with antiquated machinery who went in so heartily for protection at their meeting the other day and disregarded the prudent and sensible advice of Mr. Frank Lloyd, the head of one of the greatest paper making firms in the world. Were they alarmed that Messrs. Harmsworth should be buying Swedish paper to print their superpatriotic news sheets upon as cheaply as possible, or did they really imagine that duties upon imported paper would enable them to bear up against the competition of up-to-date mills like those of the Messrs. Lloyd? If the poor fellows had the latter idea they will find themselves terribly deluded.

The Canadian Pacific Railway Company is going to cut down its expenses with energy and vigour, and thinks its neighbours in the States will have to do likewise. Can it be that the grain crops in the North-West have been spoilt?

All things considered the market took the news "no dividend for Consolidated Gold Felds shareholders" very quietly. Insiders, however, have been selling "bears" for days past in anticipation of the news. Then the figures look so fine, £390,111 gross profit after meeting working expenses and debenture interest, and £301,021 net after deducting preference share dividend, French Government taxes, and income tax here, but none of it can be distributed, presumably because it is all paper and not cash. Therefore the balance of £1,675,927 brought forward is raise dto £1,976,948, and shareholders are told that this is not all, lots of other profits might be shown if investments were valued at market figures. It is magnificent, but alas only paper, and where is your contango money to come from?

The new Water Board began its work in earnest this week, the first claim submitted to it being that of the East London Water Company, which demands £7,248,112. It will be time enough to comment on the proceedings when the Board has finished sittings, but while they are going on Protectionists should study the evidence carefully to pick up a few wrinkles from the companies in the art of inflating figures.

MINING NOTES AND NEWS.

The account which has been in course of settlement this week has been an improvement upon its immediate predecessors, inasmuch as prices moved in a direction more favourable to speculators for the rise. For several accounts past it has been the depressing rule to see an array of losses in the making-up list, this time the list has not been so cheerless. Readers will also recall that many failures have been dreaded, averted only by outside assistance, but this week has been made notable by no such fears and alarms. Some of the rises have been substantial, the principal being 13-16 in City and Suburban and Welgedacht, ¾ in Crown Deep, Angelo, Geldenhuis Deep, and Ferreira, 11-16 in Rand Mines and Geduld, ⅝ in Rose Deep, ½ in East Rand Mining Estates, H. E. Proprietary, Jubilee, and Frank Smith Diamond, 7-16 in Robinson, ⅜ in Village Main Reef, Robinson Deep, Driefontein Consols, Ferreira Deep, Henry Nourse, Meyer and Charlton, De Beers deferred, Crown Reef, Nourse Deep, and one or two others, 5-16 in Cinderella Deep, Anglo-French, East Rand Proprietary, New Goch, Geldenhuis Estate, and Durban Roodepoort Deep, ¼ in Apex, New Comet, Consolidated Gold Fields, Glen Deep, General Mining and Finance, A. Goerz, Langlaagte Estate, Modderfontein, Luipaard's Vlei, Roodepoort United, Rietfontein, Village Deep, Wemmer, Treasury and Tanganyika, with smaller gains in a number of other shares. West Australians likewise generally moved upwards during the fortnight, though they were far outstripped by Kaffirs, the highest rise being 5-16 in Great Fingalls, the rest being mostly fractional. The West African list exhibited a preponderance of losses; in fact, there was not a gain worth mentioning. Amongst Egyptians, Central Egypt Exploration advanced ⅜, and United African Exploration 3-16, but only a share here and there in the miscellaneous group showed any change. In coppers, Rio Tintos were conspicuous with a rise of 3.

Rates in the Kaffir market were, as anticipated, again light. Speculators generally were takers-in of the leading shares. The charge on Go'd Fields, East Rands, Rand Mines, Modderfonteins, and Randfontein Estates, was 4½ to 5½ per cent., whilst Barnato Consols and Johnny's Investment were carried over on a basis of 6 to 7 per cent.; in fact, the general run of shares was continued at the latter figure, with the exception of De Beers, at 3½ to 4½, Jagers at 4½ to 5½, and Chartered at as low as ½d. to 1d., about 5 per cent. On Rhodesians, West Africans and Egyptians the contango ruled from 6 to 8 per cent., and on West Australians from 7 to 9 per cent. Amongst the latter the exceptions were 5 to 7 per cent. on Lake View Consols, and "even" to 2 per cent. on Cosmopolitans. At first, the charge on Golden Horseshoe and Perseverance was 5 to 7 per cent., and went off later to 4 to 6 per cent.

For the new account Kaffirs were at first declared to be wonderfully cheerful, and punters tried their utmost to feel happy. Prices certainly soared to loftier heights than they have risen to for some time, but the impetus to the flight was not outside buying. The advance was due merely to "bear" covering, but even this was not sufficient to keep quotations at the highest figures. For the improvement has not been sustained, prices have sagged again, because there is no solid buying behind the market. The report of the Labour Commission has been awaited with undisguised

impatience and eagerness, and punters have displayed considerable fretfulness at the delay. According to the cables the cause of the delay is stated to be the efforts made to obtain unanimity, which is hardly surprising even amongst a body of probable sympathisers, seeing the nature of the contradictory and irreconcilable evidence laid before them. Should these efforts prove unsuccessful, a majority report, with possibly two dissentients, will, it is added, be published in the course of a week or so.

According to the Johannesburg correspondent of the *Financial Times*, negotiations are proceeding to secure the permission of the Portuguese authorities for the disembarkation of Asiatics at Lourenco Marques when Chinese labour has been sanctioned. "I understand," he adds, "that the Legislative Council is to be increased by the addition of eight new members." What is the meaning of this? And when you get those Chinese?—Alas, poor dupes! you will be no nearer your fortunes.

Westralians have been the most active section of the mining market, the effect, it is said, of a fairly large volume of Colonial buying. One or two jobbers have even deserted the Kaffir market for the Kangaroo department. Accordingly, most of the leading shares have advanced. Even Associated Northern Blocks have strengthened, principally on rumours that good news has been received from the mine. If it be true, then news continues to reach the market before it is known to the shareholders, and for this Mr. Landau cannot be held responsible. The advance has been checked temporarily by profit-taking, but the close of each day has invariably found slight gains on balance. Quarterly dividends at the usual rate have been announced by the Boulder Perseverance and Golden Horseshoe companies.

At one time it looked as if West Africans intended to assert themselves, for one or two shares in this group hardened. The energy thus displayed, however, quickly exhausted itself, and the market relapsed into its chronic condition of dullness.

Very slight attention has been paid to the miscellaneous group, and changes here are few and insignificant. Egyptians have been irregular, without definite tendency. Coppers have, on the whole, been just a trifle better, Rio Tintos being the most conspicuous exception, with a biggish loss on balance. Indian shares have scarcely moved either way.

Coolgardie Gold Syndicate.—In their report for the fifteen months to the end of December last the directors say the balance of the profit and loss is £9,626, which has been carried to the contingency account, now standing at £102,416, against £151,680 (nominal) of various investments, debentures and sundry debtors. In his certificate the auditor reports the profit to be unrealised, "and, although carried to a contingency account, and the total deducted from the book value of the assets, it is impossible to certify these assets as being of the definite value of £49,264, as shown in the balance-sheet." However, the cheerful directors "hope the assets will eventually realise considerably more than this sum." The profit and loss account is likewise credited with £3,000 representing some bonus shares received, whilst the balance-sheet shows a loss of £19,156 on shares sold and on shares in a company liquidated since the previous account. What appears to be the only fingerable asset is £666 in cash.

Welgedacht Exploration Company.—The name Welgedacht is one familiar to the readers of this Review, as it is the appellation of one of the most speculative shares in the Kaffir market, the price of which shoots up and down almost daily, in an apparently irresponsible manner. As the report and accounts have been issued for the twelve months ending June 30, we know a little more of the company, but, after all, that is very little, as nothing but boreholing is being done. "During the year," says the report, "very considerable work has been done on your farm. We met with various difficulties to begin with, involving delay, but once fairly started, the drilling proceeded in some cases at an unusually rapid rate in such operations," though it is not added that the shares have often been hoisted up with similar rapidity. Particulars of the boreholes are then given. For instance, the South Reef series of the Van Ryn and Modderfontein companies was struck at the following depths:—In No. 1 borehole at 2,170 ft.; in No. 2 borehole at 1,912 ft.; in No. 3 borehole at 2,568 ft.; and the Main Reef series at the following depths:—In No. 1 borehole at 2,723 ft.; in No. 2 borehole at 2,385 ft.; and in No. 3 borehole at 3,090 ft. "Although the assays have been low," it is added, "the true value of the reef cannot be ascertained from the small core obtained from a drill. Boreholes are put down only for the purpose of locating the reef. We have, then, to congratulate shareholders on having proved the gold-bearing series of reefs to exist on your farm at a workable depth." Two more boreholes are to be sunk, but the distance from boreholing to profit-earning is a long one, to say nothing of the expense of shaft-sinking, developing, providing plant, machinery, etc. However, the company possess a nice little lump of cash in its coffers, no less than £126 699, the greater portion of which is out on loan, probably to the market. The issued capital is only £95,000, but premiums have brought in no less than £170,000. As soon as the market is favourable, it is likely portions of the farm will be sold to subsidiaries, and profits be made on their promotion.

Peak Hill Gold Field.—The directors of this West Australian company have issued a circular stating that a number of letters have been received seeking information respecting the present position of the mine. Accordingly they take the opportunity of saying that the latest news from the manager is of a very favourable character. "In the interests of the shareholders," they add, "Mr. Hall very wisely decided that under no circumstances can the full and proper development of the property be neglected, in which decision the board has entirely concurred, with the result that the sinking of the main shaft to the 5th level was put in hand in the early part of this year. During this operation (recently completed), the lower levels at the mine were available only to a very small extent, and for the three months—June, July, and August—only 703 tons of ore, out of 15,529 tons crushed, were raised from the 3rd and 4th levels, the remainder being from the open-cuts, and the No. 2 level. As reported on October 5, the drive from the No. 5 level (to again cut the main lode), was in about 30 ft., and on this work being completed, towards the end of next month, four levels will be opened out, by which the returns should be largely benefited. This is the most important development work that has yet been carried out on the mine."

Transvaal Chamber of Mines.—The executive of this philanthropic institution, which brought on a glorious, liberty-rescuing war to give Britishers and whites a vote—a political power which the mine bosses now quakingly dread, and are bringing in Chinese as their saviours from the dangers of freedom—has now determined that its sphere of benignant influence and of beneficent work have become so widespread and fruitful that it has determined to be directly represented in the City of London. Accordingly, it has been officially intimated to the Press this week that, pending the completion of arrangements for obtaining permanent premises, temporary offices have been opened at 87, Wool Exchange, Coleman Street, E.C." From these offices the declaration of the monthly gold production of the Transvaal will be made, and information relating to the mining industry will be circulated." Good. But Messrs. Barsdorf surely deserve a word of thanks?

WEST AUSTRALIAN CRUSHINGS.

For the month of September the crushing returns for all the gold mining companies were:— Ore treated, 183,567 tons, yield of gold 186,088 oz., average yield per ton, 1 oz. 0 dwt. 6 grs. This is an increase of 2,291 oz. on the figures for August, but is a poorer return than for the corresponding month of last year, when 173,365 tons were treated for a yield of 186,927 oz. The gold export and mint returns gave a total of only 201,404 oz., being a considerable drop on the preceding month's return; in fact, it is the lowest figure since March. The average yield continues poor. Our usual comparative table is appended.

TRADE AND PRODUCE.

Wheat.—The cargo market is as apathetic as ever, and though the tone continues steady and values apparently firm it is difficult to gauge the exact position in the absence of anything like good bidding. Nor have futures shown any activity, occasionally prices have gone a little higher, but no business has resulted and spot parcels, in better demand for a day or two show the same listlessness. English wheat arrives in fair amount on the market, but much of it is in poor condition and commands a low price in consequence. All that is dry and good however gets full rates and keeps up the average. Farmers' deliveries for the week were 40,256 qrs., averaging 25s. 10d. per quarter against 48,270 qrs last week averaging 25s. 8d. American markets have devoted themselves chiefly to December wheat, which was more or less steadily held till Thursday, when a break occurred through foreign unloading and local liquidation. Export business has been pretty good there this week, and reports on the crops are generally favourable. Bradstreet estimates the crops in sight east of the Rockies this week at 39,216,000 bushels against 38,216,000 last week, and 58,815,000 in the same week last year.

Wool.—Trade is quiet everywhere, depressed by the unfavourable weather and the state of affairs generally. Prices in yarns are kept up in the markets by the dearness of stocks throughout the country, but the new level of values is slightly lower than a short time ago. Fine crossbreds are in less demand, these and merinos both dropping in price, and medium and coarse grade crossbreds barely maintaining their position. Export trade in yarns does not show signs of much new business, though enough is being put through to maintain a firm tone, and in piece goods also there is a steady if limited flow of orders.

Linen.—The autumn trade is certainly not coming up to expectations. This week it has dragged in almost every branch. Irish flax coming into the markets is poor and the returns from the Scotch mills very disappointing. Russian flax is still reported good, but in some districts the crops have been caught by the snow, and prices of all kinds are likely to be high for some time. Yarn and piece goods values, therefore, are not likely to break, and the position of the markets is solid enough if dull. Foreign trade continues fairly steady, keeping up to the average of the past few weeks, without any approach to briskness. The business transacted is mostly of a hand to mouth order; Cross Channel buyers decline to give orders freely, complaining that the present uncertain position of affairs, financial and political, presents any speculation for the future, on their part. United States orders also are hesitating and uncertain, offers to do business at slight concessions being firmly declined by the Belfast merchants. Continental trade is progressing slowly, and our Colonial markets hold their own.

Cotton.—Reports of killing frosts in many parts of the cotton area caused a sharp advance in Americans this week, and at one time October fixtures touched 5 70d., but some ten or twelve points of this were lost on profit-taking, and on larger receipts coming down to the United States ports. The general feeling is, however, decidedly dull, and several spinners have covered their requirements for months ahead. Egyptians were also firmer, and a good business in them went through during the week. From the weekly circular issued by Sir Jacob Behrens & Sons we learn that the demand for yarns, both home and export, has improved, and at present, spinners of twist and weft find no difficulty in disposing of their production. But unless more looms get to work, the pressure to sell may be increased, and if so a shrinkage of margins is bound to take place among the producers. Among spinners of American yarns there is considerable difference in opinion as to the future of prices, some freely selling future deliveries while others show no inclination to meet buyers with concession for the future months. Of the foreign markets both China and the Continent are operating more briskly, and some spinners have booked orders which will keep them fully engaged until February next. In the cloth market there has been practically no change, and though enquiries are plentiful, business does not result from many of them. Calcutta is at last showing some improvement, but its idea of prices is not yet eqnal to that of many manufacturers. In none of the other markets is there much doing, and whatever business there is does not run into large quantities.

With the contradiction of the rumours of war between Russia and Japanese, unfavourable weather reports and a demand to cover contracts, prices in the States began to move slowly up last Friday and Saturday. Frost in the south quickened the movement until operators began to think that the market had oversold, which at once brought about a reaction. This, however, did not last long, as no improvement in the weather was reported from the South. Prices therefore quickly recovered, and on the whole, moved up rapidly for the rest of the week. Though Liverpool closed quiet on Friday, prices or spot were steady, middling American being quoted at 5·74d., and Egyptian brown, fair, at 6 12-16d. All other descriptions were also firm, and values in some cases slightly higher. Futures were firm, 5·71d. being asked for October, and 5·57d. for October-November. Later positions ranged from 5·52d. for November-December, to 5·49d. January-February, 5 48d. March-April, and 5·47d. May-July.

Coal.—Much complaining is still heard, and trade depression continues, but coal has shown greater activity this week in most of its branches. Dark and cold days are having their effect upon gas and house varieties, and the tonnage of these rent from the Sheffield district to London, and the Eastern Counties is said to be heavier than usual at this period of the year. Prices keep pretty firm, though in some instances the advance of 1s. per ton is not insisted upon. Engine fuel from Lancashire is more in demand for mill purposes, while in steams, the large contract orders from abroad placed in Wales and the North compensate to some extent the apathy of the inland trade. From Cardiff about 25 steamers have been chartered to the far East, the Egyptian Railway contract has been confirmed, Japan and Russia are rumoured to have placed large orders for Welsh steams, 200,000 tons have been ordered by the Royal Mail Steamship Company and other large contracts are under negociation.

Copper.—The closing of the Montana mines of the Amalgamated Company sent prices up with a bound at the beginning of the week both cash and three months showing an advance at one time of nearly £4 per ton. Sales to realise occasionally set prices down, but at bottom the tone of the market was decidedly dull. The settlement of the Montana dispute will be a matter of considerable time and this has kept values firm even when dealings have been small. At the close last night the market was quiet, cash being quoted at £59 5s., and three months at £58 17s. 6d.

Tin.—The market opened firm early in the week, though business was not very active, then it weakened in sympathy with poor advice from the East. Later it rallied again, once more in sympathy with Eastern cables, and considerable activity was shown in transactions though it closed quiet last night with cash at £118 10s. and three months at £119.

Iron and Steel.—Glasgow displayed a firmer tendency this week since the possibility of America dumping raw iron in any considerable quantities, is thought to be more remote than ever. Dealings in warrants were limited again to Cleveland, prices for which rose sharply at the beginning of the week, the variations for cash being from 43s. 3d. to 43s. 11d., though for delivery in seventeen days or a month they ranged between 43s. and 43s. 3d. Scotch hematite and Cumberland warrants were still neglected in spite of prices being lowered to 48s. 11d. and 53s. 11½d. The output from the works is steady, with little iron being drawn from the public stores, most of the demand is met direct by the works. In Scotch hematite pigs, there is a steady consumption, the merchants' price being 58s. 6d. per ton delivered at the West of Scotland Steel Works. The manufactured iron trade is fairly busy, though it can hardly be described as brisk, but makers are reaping some benefit from the reduction that has taken place in the price both of fuel and material. Steel manufacturers have also a considerable amount of work on hand, most of it being structural work, though there are prospects of an increase in the demand for shipbuilding material. In the North of England, not only was there more business put through this week, but prices were better and the position of sellers was more favourable than it has been for some time past. Shipments for the month are also good, and in fact have only been exceeded this year by those in March and June. So great has been the demand that the works have not been able to meet it and the stocks in public stores were therefore drawn on heavily until now they are lower than they have been since July 1902. This improvement is, however, confined to the trade in Cleveland pigs, the condition of that in hematite being far from satisfactory and several more furnaces have been turned on to make ordinary iron. Manufacturers of finished iron and steel report better business, though the makers of iron bars were forced this week to follow the example of their Scotch competitors, and reduce their prices 2s. 6d. per ton to £6 5s. for common, with proportional reductions for the higher grades. Shipbuilding yards and engineering works are slack, except those of the latter turning out pumping engines and colliery machinery, for which there is a fair demand. At Barrow the trade in hematite pig is in a very dull state, and in spite of the number of furnaces shut down the production continues in excess of the demand. Steel makers are said to be busier, though the general impression is that the activity will not last till Christmas.

Tea.—The firm tone of the past few weeks is fully maintained. Moderate auctions and animated bidding have strengthened the markets still further; 42,077 packages of Indian tea were offered and obtained an average price of 7.96d. against 7.94d last week, common teas being a trifle dearer, and Pekoes more in demand. Ceylon offerings amounted to 16,575 packages, averaging 8.26d. the package, against 7.96d. last week, greater strength being shown in tea up to 8d. per lb. The small quantity of Javas offered showed very little change from last week, but sold steadily, and Messrs. W. J. & H. Thompson's circulars shows that China teas are improving in demand as regards the common sorts, but medium and fine grades remain dull.

Sugar.—At the end of last and the beginning of this week the market was easier and improved prices 1d. on the strength of the factory estimates. Better weather reports however soon caused this to be lost on every position except October which the bears had to cover up to 9s. when a relapse of 3d. took place. Were it not for the stagnation in actual sugar the tendency of prices all round might have been firmer. The movement in beet according to Mr. Czarnikow's circular were this week: October, from 8s. 9½d. to 9s. to 8s. 10½d. November-December 8s. 8½d. to 8s. 8¾d., to 8s. 8¼d., and January-March 8s 9¾d. to 8s. 10½d. to 8s. 10d. In cane there was but very little doing and the small quantities of crystallised West Indian, offered at the auction, were only partly disposed of, though rates kept firm. In America Congress is expected to pass the Cuban Reciprocity Bill next month. For this reason buyers are reserved, and the tone of the market dull notwithstanding the fact that between now and the end of the year refiners have considerable requirements to fill. Quotations are unchanged, yet the landings at the three ports this week only totalled 20,000 tons, while meltings were 30,000 tons, reducing stocks to 129,000 tons.

Messrs. Alfred Marshall and Co., the insurance brokers, have sent us copies of their new issue of their Comparison Tables, which are undoubtedly of great assistance to agents and others interested in life assurance work. Considering the labour involved in compiling them the price is by no means high, that for the Life Offices and the £10 premium tables being 1s. each, and for the Accident Offices 6d.

Notes on Books.

The Stock Exchange and Its Machinery. By G. A. H. Branson, London Chamber of Commerce. Price 2s. 6d. —This is the substance of a course of lectures delivered by Mr. G. A. H. Branson, a lawyer of some repute, in connection with the London Chamber of Commerce scheme of "higher commerical education." The lecturer does not pretend to have covered the vast ground of Stock Exchange procedure with its complicated and involved rules and regulations, having applied himself more strictly to an examination into the rights and liabilities acquired and incurred by the public and by members in the course of dealing. It seems that the Chamber desired this limitation, and therefore thought it better to have the lectures delivered by a lawyer with no practical knowledge of the Stock Exchange, rather than by a member of the House not well versed in the law. We had not the pleasure of listening to Mr. Branson, but are sure that those who had derived considerable instruction from his lucid exposition of a peculiarly technical and abstruse subject. Naturally there was much that was elementary in his deliverance, but it is safer and more likely to be productive of good to assume that one's audience knows little or nothing than to take it for granted that knowledge up to a certain point is possessed. Lectures of this kind undoubtedly serve a very useful purpose, and the Chamber should now carry the subject further by arranging a course from a member of the Exchange, who can exceed the limits capable of attainment by any one not in the House.

Annual Financial Review—Canadian. Compiled by W. R. Houston. (Montreal, "The Annual Financial Review," 22, John Street. London: Effingham Wilson. Price 12s. 6d. net.).—This is the third volume of a Stock Exchange annual devoted to Canadian securities, and, so far as it goes, is a most useful compilation. The book largely consists of the latest balance-sheets published by limited liability companies either of Canadian origin or working in the country, together with extracts from the annual reports and records of the highest and lowest prices of the securities on the Montreal and Toronto exchanges for a number of years. In addition, valuable statistics are given of the public finances from 1868 to 1902, and of the commerce of the country during the same period. It would be impossible, we suppose, to compile a book more on the lines of our Stock Exchange Official Intelligence or the Stock Exchange Year Book, giving a complete history of the various companies from their inception, but the value of Mr. Houston's work would be greatly enhanced if he could see his way to reproduce in each successive volume a short resumé of the information previously given, or even such particulars as dividends paid in former times.

Answers to Correspondents.

[*A Fee of Five Shillings per query is charged for replies under his heading. Letters, Five Shillings extra per letter.*]

D. J. B.—No, it is not a good policy at present to average, and I think you should just wait. Circumstances are adverse at present and may remain so for some time. If you can get a profit on your proportion of the new capital sell and take that; if not let the shares alone.

N.J.—The company may continue to pay its present dividend for some years, but there is very little between it and poverty, and I think it ought to try to accumulate some reserves to protect the shareholders. You should therefore buy only a very few shares. The assets are good enough, only there is nothing between shareholders and bad times. For further particulars see last week's Investors' Review.

PUBLIC INCOME AND EXPENDITURE

The following are the receipts into and issues out of the Exchequer between April 1, 1903, and October 24, 1903:—

Revenue and Other Receipts.

—	Estimate for the year 1903-1904.	Total Receipts into the Exchequer from April 1, 1903, to Oct. 24, 1903.	Total Receipts into the Exchequer from April 1, 1902, to Oct. 25, 1902.

LOANS.

The LIST WILL CLOSE on or before THURSDAY, November 5, 1903.

COLONY OF THE CAPE OF GOOD HOPE.

CITY OF CAPE TOWN CORPORATION LOAN.

ISSUE of £1 000,000 FOUR PER CENT. STOCK, to be inscribed in the books of the Standard Bank of South Africa, Limited, 10, Clements-lane, Lombard-street, London, E.C., transferable free of Stamp Duty.

FIXED PRICE OF ISSUE £97 PER CENT.

Interest payable January 1, and July 1.
Full half-year's interest payable July 1, 1904.
Principal repayable July 1, 1953.

Payment will be required as follows:—5 per cent. on Application, 22 per cent. on Allotment, 35 per cent. on December 15, 1903, 35 per cent. on February 15, 1904. Interest at the rate of 4 per cent. per annum payable January 1, 1904, on instalments paid to date. Discount at the rate of 3 per cent. per annum will be allowed on calls paid in anticipation.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED, LONDON, as the duly appointed Financial Agents of the Corporation of the City of Cape Town, WILL RECEIVE APPLICATIONS for £1,000 000 of FOUR PER CENT. INSCRIBED STOCK, being portion of £1,388,454 sanctioned to be issued under the authority of Section No. 104 of the Act No. 26 of 1893, and Section No. 1 of the Act No. 9 of 1894, and Section No. 20 of the Act No. 25 of 1897 of the Legislature of the Cape of Good Hope, and by virtue of Resolutions passed at the Meeting of the ratepayers held on January 21, 1897, and by the majority of votes recorded at the poll of the enrolled voters of the City, taken on July 20, 1897, on July 4, 1901, and on February 3, 1903.

The present borrowing powers of the Corporation upon the security of the City rates, under and by virtue of the above-quoted authorities, amount to £2,546,104, of which sum £1,157,650 has already been issued, and the present issue is a portion of the unissued balance of £1,388,454, and will rank pari passu with previous issues.

The objects of the loan are to provide payment for certain contemplated works, and for the completion of other works in course of construction, such as a comprehensive drainage and sewerage scheme, additional water storage, construction of storm water sewers, city hall, electric installation, washhouses, baths, and other works of a permanent and reproductive character, and to convert into a permanent loan a temporary loan of £300,000, which has been raised for the improvements stated above.

The City of Cape Town is the oldest, most populous, and wealthiest city in Cape Colony, of which it is the metropolis and seat of Government. The City has increased very rapidly in extent, population, and value of property during the last decade. At the Census of 1902 the population of the City numbered 64,171, and of the suburbs 77,437. The day population of the City is estimated at 85,000.

The official valuation of the immovable property liable to rates within the area under the jurisdiction of the Corporation was:—

In 1898	£5,690,280
In 1903	13,242,420

In addition to the above, the Corporation have the right to levy rates on the municipality of Green and Sea Point to meet expenditure in connection with waterworks and waterworks loans. The rateable value of immovable property in this municipality is £1,360,000.

The principal assets of the City consist of:—

Land and buildings, valued at	£2,347,050
Waterworks, reservoirs, mains, &c.	665,400
Electric light installation (including power station, engines, boilers, high pressure pipe track, accumulator station with batteries, mains, &c.)	200,000
Markets	59,700
	£3,272,150

Buildings valued at £255,275 have been erected on Corporation lands let on building leases, of which the City retains the freehold and right of reversion.

The liabilities of the City consist solely of loans, which amount to £1,440,900, of which £300,000 will be immediately extinguished when a permanent loan is issued.

The principal sources of revenue are:—

GROSS RECEIPTS, 1902.

(1) Water, supply of	£72,936
(2) Market dues	10,359
(3) Lands, buildings, wayleaves, &c., rent of	5,940
(4) Electricity, supply of current	46,351
(5) License fees	3,482
(6) Quarries, supply of building stone	2,537
(7) Rate, levied under the provisions of Act No. 26, 1893, and rate derivable under Crown Property Rating Act, 1891	147,574
(8) Annual payment in lieu of rates by the Table Bay Harbour Board	2,500
(9) Annual payment by the Divisional Council, being proportion of certain road rates	4,464

The maximum rate which may be levied annually is 4d. in the £. In 1901 the rate levied was 3½d. in the £, and in 1902 the levy was 2¾d. in the £.

The actual revenue and expenditure of the Council was:—

Year.	Revenue.	Expenditure.
1892	79,015	98,652
1897	146,580	141,307
1902	298,643	293,376

The Harbour Works connected with the Port, on which the permanent prosperity of the City largely depends, are the finest south of the Equator, and consist of a breakwater—the outer 3,640 ft. and the inner 2,300 ft. in length respectively—affording extensive and secure anchorage in the roadstead. The water area of the docks is 77 acres, where the largest vessels can be accommodated alongside the quays. The graving dock has a length of 500 ft. on blocks, and has accommodated vessels of over 9 000 tons register. In addition, there is a patent slip, capable of dealing with vessels up to 1 000 tons. These works have cost the Colonial Government approximately £3,000,000, and have yielded most successful financial results.

The number and tonnage of vessels which entered the port of Cape Town (Table Bay) were:—

Year.	Steamers.	Sailing Vessels.	Tonnage.
1887	293 ..	299 ..	801 033
1892	460 ..	299 ..	1,379 460
1897	620 ..	328 ..	2 345 899
1902	1,011 ..	319 ..	4,840,992

The total mileage of railways connected with the City amounts to 5,260 miles, including direct communication with Kimberley, Bulawayo, Johannesburg, Pretoria, Delagoa Bay, Durban, East London, and Port Elizabeth.

The total value of imports into Cape Town amounted:—
In 1892 to £3 085 468
In 1897 to 5 921,351
In 1902 to 14 423 314

The total value of exports from Cape Town amounted:—
In 1892 to £8 659,383
In 1897 to 15,972,824
In 1902. In consequence of the war, any comparison of exports for the year 1902 would be misleading.

The Loan—for which Provisional Scrip Certificates will be issued after payment of the amount due on allotment, such Certificates being convertible into Inscribed Stock on presentation at the Standard Bank of South Africa, Limited, London, so soon as they are paid in full—will bear interest at the rate of 4 per cent. per annum, payable half-yearly, on January 1 and July 1, by interest warrant (which, if desired can be sent by post at the Stockholder's risk), payable at the Head Office of the Bank, 10, Clements-lane, Lombard-street, London, E.C., or at the Branch of the Bank at Cape Town.

The first full half-year's interest will be payable on July 1, 1904.

The Stock will be inscribed in books to be kept by the Standard Bank of South Africa, Limited, London, and will be transferable without any charge.

The principal will be repayable at par, at the Office of the Standard Bank of South Africa, Limited, London, or at the Town House, Cape Town, as the holder may desire, on July 1, 1953; but thirty days' prior notice of the place of payment desired must be given.

LOANS — *continued.*

Application will be made in due course for a quotation upon the London Stock Exchange.

Applications in the form annexed for sums of not less than £100, or multiples of £100, of Stock will be received at the Offices of the Standard Bank of South Africa, 10, Clements-lane, Lombard-street, E.C.

The LIST OF APPLICATIONS WILL BE CLOSED on or before THURSDAY, November 5, 1903.

In case of a partial allotment the balance of deposit will, so far as may be necessary, be applied towards the next instalment.

In the event of the balance not being duly paid, the relative allotment, with the deposit and instalments paid thereon, will be liable to forfeiture.

Copies of the powers under which the present Loan is issued and other documents relating thereto can be seen at the Standard Bank of South Africa, Limited, London.

Prospectuses and Forms of Application may be obtained from the Standard Bank of South Africa, Limited, London, and also from

Messrs. WHITEHEADS AND COLES, 39, Throgmorton-street, E.C.;
HOLLEBONE BROTHERS AND TRENCH, 18, Birchin-lane, E.C.
MILLN AND ROBINSON, 2, Austin-friars, E.C.

THE STANDARD BANK OF SOUTH AFRICA, LIMITED.

Mirabaud, Puerari & Co., Bankers, 56, Rue de Provence; in London, at the offices of Messrs. A. Rüffer & Sons, 39, Lombard Street, E.C.

The Investors' Review.

The Week's Money Market.

Bank Rate 4 per cent. (Advanced from 3 per cent. on September 3.)

Norfolk House, Friday Evening.

Two influences have caused money to stiffen early in the week, first the payment for the £2,000,000 of additional Treasury accommodation bills on Tuesday and next the borrowings of the Bank in order to deprive the market of its surplus short credits. Add to this the effect of the Stock Exchange settlement and end of the month preparations and no further explanation is necessary of the rise in the rates for short advances to 3½ and 4 per cent., or even more. The Bank did a moderate business on Wednesday, yesterday and to-day in loans at 4½ per cent., and it also bought a few November bills on Wednesday. Many people think the loan market certain to become easy again in the beginning of next week, and it may, but we can have no certainty upon the point simply because the credit position is such that an accident any hour might upset all calculations. Open market call loans were this afternoon done at 4½ per cent., but bankers did not get more than 3½ per cent. for seven day money, and a few sums were lent at 3¼ per cent. The India Council has usually been calling money in.

Discount rates have not moved up in accordance with the advance in money quotations. If anything the rate on three months' remitted bills was until yesterday weaker than when money could be had at 1½ to 2½ per cent. on call and 2¼ to 2½ per cent. on seven day notice. The source of the weakness was principally foreign competition. Continental bankers are always in our market and willing to take paper slightly below the rate at which London houses are ready to work. Thus when the leading

discount houses have been quoting 3 11-16 ¾ per cent. as their rates for such bills, Continental bankers have been buying paper of all dates up to six months at 3⅝ per cent., and until this morning the rate on sixty day bills was generally no better than 3½ per cent. From this morning sixty day paper falls due in the new year and consequently the rate has hardened to 3⅝ and 3¾ per cent. All rates, indeed, went up to-day until 3 13-16 per cent. became the firm minimum quotation for three months' bank paper. Several leading houses quoted 3⅞ per cent. for January bills and 3¾ ⅞ per cent. for all paper of longer usance. There is a demand for cable transfers on New York account and this will probably lead to exports of gold to the States, and if only £1,000,000 were taken it would upset things here dreadfully, for one thing, bring a 5 per cent. Bank rate upon us at once. Some of the American houses declare that the gold will be taken from Paris and not from London, but even that would have a bad effect here, as it would check the competition of French banks for bills on our market, and might cause Paris to draw metal from London. It is expected that another considerable sum in gold will be taken from the Bank to-morrow for Egypt. The Paris exchange to-night was a shade firmer at 25.14.

Considerable movements of credit were shown in the Bank return issued yesterday, the largest being a decrease of £3,529,000 in the other deposits which are now down to £39,383,000. That means joint-stock banks are hard up. A larger decrease would have taken place but for the return of £146,000 in notes and £260,000 in coin from the active circulation. In addition £528,000 in gold came in from abroad, £500,000 of it being sovereigns consigned here by the Simla Government. These additions brought the reserve up by £933,000 to a total of £23,465,000, so that the total resources swept away from the market including the decrease in the other deposits amounted to £4,462,000, that is to say £2,600,000 was utilised to reduce Government securities and £1,243,000 ran off other securities, in addition to which Government balances were increased by £613,000. Of the Government securities £2,000,000 represents the proceeds of the Treasury bills utilised to reduce the floating debt of the Exchequer to the Bank, and the other £600,000 may represent stock belonging to the Bank pledged for money with in the open market. Part of the decrease in the other deposits may also be due to borrowing by the Bank, but probably it mostly signifies the running off of bills held.

Gold movements have been quite insignificant throughout the week, apart from the 500,000 sovereigns received from India. The Bank did not get very much of the bar gold in the open market on Monday, although the price at which it was sold to foreign purchasers was only 77s. 10⅛d. per oz. Hopes are entertained that it may get a larger portion of the £400,000 due in to-morrow.

SILVER.

The market for bars further weakened last Saturday on the reported cessation of buying by the United States Government, and as Indian prices were also affected no support was possible from that quarter. Free offerings of Mexican dollars helped to drive quotations down, and they at one time touched 27 13-16d. per oz. for cash and 27⅛d. per oz. for delivery two months' forward, notwithstanding the announcement of a French tender for 35,000 kilos. to be delivered in December. At this point speculators came in as buyers, and as there was at the same time a good trade demand the decline was checked, and on advices being received that the American Government still required the metal and had bought 300,000 oz., values rebounded to 28d. and 27½d. per oz. respectively. India, however, has not followed our rise to a sufficient extent to allow of business between the markets and this recovery was not maintained long, the final figures being 27 13-16d. and 27 5-16d. per oz. Applications for the Rs.40,00,000 Council drafts on India on Wednesday amounted to Rs.25,245,657 in bills, and Rs.20,00,000 in telegraphic transfers. The whole sum was again allotted in bills, and tenders as 1s. 4d. per rupee received about 15 per cent. Next week another Rs.40,00,000 will be offered.

BANK OF ENGLAND.

AN ACCOUNT pursuant to the Act 7 and 8 Vict., cap. 32, for the Week ending on Wednesday, October 28, 1903.

Stock Market Notes and Comments.

We have nothing to say about markets this week of an interesting description. They are going through a breathing space between the spasms, and every effort is being made to simulate strength, but a glance at the transactions recorded in the official list indicates that it is strength without public support, therefore without solidity. There has been some outside buying of Home Railway stocks, of the lighter ones more particularly, and both in the Home Railway market and in the Kaffir Circus there has been a considerable amount of repurchasing to close accounts open for the fall, but almost everywhere else domestic business has been on the most restricted scale, and at no point is there the appearance of widespread public interest in the markets. This is just as well, as the markets are in no better position than they were when everybody thought that a destructive crisis was about to overwhelm them. Under the surface markets are hollow, and the play of manipulating agencies, option gambling shops, and large financiers has no other object than the old one of endeavouring to entice the public to come and buy. We still insist that the public should not yield to temptation. If it does it will lose its money just as it hitherto has done. Least of all ought Kaffir shares to be purchased, for assuming that everything prophesied is realised by the importation of Chinese labour, years must elapse before the full gains are reached. We do not believe that any good will come of Chinese or any other imported labour, but putting our well grounded faith aside, why buy until near the time when the gold is coming out of the ground in millions of additional ounces and dividends on the point of being paid? Take warning by the Gold Fields report. Huge paper profits there, but no capacity to pay a dividend because a dividend means the distribution of cash. That is an epitome of the market all round. While it remains possible to keep up the semblance of strength, to prevent quotations from drooping to a point representing an approach to real values we shall have these intervals of calm, but always the crisis will come on again, and more houses or firms will have to be liquidated in secret so as to prevent banks from closing their doors and bucket shops from vanishing like the morning mist.

The Week's Stock Markets.

Those who still have heavy blocks of securities to unload did not throw them on the market during the past week, and the Stock Exchange seemed quite grateful for the opportunity thus afforded it of taking a little breath. Operators indeed made a brave effort to shake off some of the depression so long surrounding them, and when contango rates showed not only a material reduction in the speculative account open for the rise, owing to the recent liquidation, but also the existence of a fair sized "bear" account, prices were inclined to go ahead. Some assistance was derived from the absence of disquieting news regarding the position between Japan and Russia, but unhappily the professional efforts received no encouragement from the public, and the upward movement could not be long sustained. Quotations, however, did not slip back, which is something to be thankful for, and probably the steadiness could be traced to the smooth progress of the settlement. It passed off without a hitch, and actually only one big firm was said to have been bled dry.

Consols were rather flabby at first, and at one time touched 88 for cash, but a few buyers were about at that price, and when the political atmosphere cleared a little prices readily responded. Business, however, was always very modest, and quotations fell off again, closing ¼ lower for money, and the account commencing on Tuesday at 88 1-16 to 88 3-16. Khaki stock rarely moved from its old price of 97½, but Transvaal scrip, after falling to 1¾ discount, recovered with Consols, and closes unchanged at 1⅝ discount. Bank of England stock was marked down 2, and Bank of Ireland stock fell 3½, but all other British funds stood as before. Home County and Corporation stocks rarely altered, and we have only to record declines of 1 each in Leeds and Ramsgate 3 per cent. Colonial Inscribed stocks were all unmoved, but City of Cape Town 3½ per cent. went back when it became known that a new loan was about to make an appearance, and dropped still further on the actual issue, because the whole thing was arranged and underwritten without the assistance of the Stock Exchange, and that body was accordingly disagreeable.

Foreign Government bonds made a pretty good start, and except for a slight reaction under the lead of Japanese bonds, which relapsed on news that a large order for coal had been received at Cardiff on behalf of the ,apanese Government, went steadily ahead. Japs soon picked up when the news from the centre of disturbance seemed more pacific, and on the discovery that bonds were in short supply, and after being well below last week's closing quotations, leave off ½ to 1 better. Chinese issues were not often disturbed, and finish much as before. Amongst South Americans, Argentines firmed up on a cable from Buenos Ayres announcing that the crops promise a yield 30 per cent. larger than in 1902, and that the Customs receipts of the first nine months of the current year were £1,200,000 in excess of those for the corresponding period of 1902. Germany bought the Northern Central Railway fives and London the Waterworks loan, and most issues close rather better. Brazilians, Chilians, and Uruguays were also modestly supported, and show small improvements here and there. Little was done between bourses in European stocks and movements were merely fractional. Rates were light at the carry over on Tuesday, and it was seldom that money could be lent profitably. On Japanese the rate ran off to "even," and there was likewise no contango on Russians. Spanish were continued at 3 per cent., Portuguese, Turks, and Greeks at 4 per cent. Italians at "even" to 2 per cent., and Argentines, Brazilians, and Uruguays at 3 to 5 per cent. The making-up list showed that Japanese old fives had lost 4¾ in the fortnight, but Turks were up ¼ to 2½, Servians rose 2, and Bulgarians 1½. Brazilian Funding loan put on 1, and Guatemala declined 3.

The effect of the steady stream of small investment buying which has been going on in the Home Railway market for some time past was shown at the settlement which commenced on Tuesday by a substantial reduction in the size of the account to be arranged. At any rate this and "bull" closing combined greatly lessened the demand for money and carrying over charges ranged usually between 4½ and 5½ per cent., and rarely touched as much as 7 per cent. The steady liquidation, however, which went on throughout the fortnight considerably exceeded the public support, and as jobbers showed a reluctance to buy large amounts of stock on the chance of peddling it out in small lots prices naturally dwindled and the majority of the changes shown in the making up prices were consequently adverse. Most of them, however, were unimportant, and the only ones we need record were losses of 6 in Brighton ordinary and deferred, 5 in City and South London, and 3 in Great Eastern and South-Eastern deferred. The lightness of the account and the cheerful feeling which prevailed in other sections caused prices to rebound sharply and a further batch of discouraging traffic returns was ignored. Too much importance, the market carefully explained, should not be attached to these, owing to the bad weather, the condition of the cotton trade and the fact that they compare with large increases in the corresponding week of last year, all good reasons for looking upon the falling off with a lenient eye, but at the same time affording a poor consolation for the possibility of reduced dividends. Business, however, became distinctly better, and in addition to the impetus given to quotations of the lighter stocks by "bear" covering on a market not over well supplied, public interest was more in evidence, and fair recoveries are shown on the week, notwithstanding some profit taking at the end. Brighton ordinary improved 3 and the deferred 2½, Great Eastern also rose 2½, South-Eastern deferred put on ¾, Great Northern deferred gained 1 and Great Western and Lancashire and Yorkshire 1. Amongst underground lines Metropolitan came in for a good deal of attention and finished 2½ higher, while District advanced 1½ and Central London ordinary 1. Scotch stocks suffered a relapse at one time on renewed fears of trouble in Glasgow, but recovered and went out unaltered with the exception of North British deferred which held a rise of 1¼. South-Western ordinary exceptionally lost 2.

Notwithstanding the array of untoward circumstances against which they had to contend, the financial magnates of Wall Street were able to make at least a display of strength and pushed quotations up in a fairly substantial fashion throughout the past account. Making up prices of last Tuesday consequently showed advances of 5 each in Milwaukee and Louisville, 4¼ in Atchison ordinary, 3 to 3½ in New York Central, Southern Pacific, Southern preference and Union Pacific common, 2½ in Baltimore ordinary, and Denver preference, and 1 to 2 in most of the other active issues. The account open on this side is still insignificant, we are glad to note, and contangos were light at 3 to 5 per cent., with rates in some cases purely nominal. The excitement provided by the development of financial matters in the United States was of a very mild

description, although it was essentially of a nature which should have opened the eyes of speculators to the really dangerous state into which affairs are rapidly drifting. Depositors started a run on the Mississippi Valley Trust Company of St. Louis, which is said to be one of the largest of such institutions in the States, and the fright spread to the depositors in the Mercantile Trust and Lincoln Trust companies. All demands were met—in what manner the necessary funds were obtained seems immaterial—and all kinds of reassuring statements were promptly put out, one being that several millionaires had guaranteed the deposits to the full extent of their private fortunes, and another that the banks had certified that the Trusts required no financial assistance. The second story is a most astonishing and incredible one, as it is well known that these institutions make a practice of keeping only a very trifling proportion of their assets in cash or readily realisable securities, and the announcement that they intend to enforce their rights as regards notice of withdrawals has an ominous look. True or false, however, the reassuring messages had the desired effect, and once more the thin ice has to all appearances been safely negotiated. The professional gamblers are by no means free from risks of immersion even yet, as the public persists in distrusting the market, and is not likely to be tempted in by any show of activity in face of the indications of declining prosperity in industrial circles provided by the closing down of steel and iron works and coal mines. Professionals, however, are not as yet discouraged, and with the help of "bear" covering here and on the Continent contrived to raise quotations by anything from $\frac{1}{2}$ to $2. The advance brought out sellers towards the end of the week, and the best prices were not altogether maintained, but Atchison ordinary and preferred finished ¾ to 1½ up, Baltimore preferred rose 3, Wabash preferred 1½, and the income debentures 2, New York Central gained 1½, and Erie seconds 2. Baltimore ordinary, Milwaukee, Pennsylvania and Southern preferred improved ½ to 1.

Amongst Canadian Railways Canadian Pacific shares were made up 1¾ higher on the fortnight, but Grand Trunk stocks showed losses ranging from ¼ in the ordinary to 3 in the second owing to provincial liquidations. Carry over rates on the speculative issues of the latter company ranged from 5½ to 5¾ per cent. on the first and second preferences from 2¾ to 3 per cent. Canadian Pacific shares were pushed up as much as 2 in the early part of the week, but slipped back a little before the publication of the monthly traffic statement, and on the announcement that notwithstanding an increase of $286,000 in gross earnings the net revenue was $208,000 lower, they relapsed further and closed ½ easier. The Grand Trunk return was more satisfactory with an increase of £11,900 in net revenue, but prices had suffered earlier on the weekly figures proving disappointing to the optimistic prophets of the market, and on steady realisations from Glasgow and Liverpool, so that changes were small, declines of 1 each being marked in the first and second preferences. A little notice was taken of Indian Railway securities this week, and several annuity issues were lifted a point or two. Making up prices, however, show a decline of 10 in East Indian deferred annuity "D," and an improvement of 1 in Madras 5 per cent. stock.

Continuation rates in the Foreign Railway market ruled round about 6 per cent. on most South American stocks, and from 6 to 8 per cent. on Mexicans, but there was not much of an account to be arranged. Bahia Blanca and North-Western preference was 6 down on the account, Cordoba Central first preference lost 3, Entre Rios preference 2½, Buenos Ayres and Rosaria preference stock 2, and Mexican preferences and debentures were from 1½ to 3 lower. Buenos Ayres and Rosaria ordinary, however, rose 1½, and there were signs of a shortage of this stock at the settlement, Cordoba Central debenture stock improved 2½, and Midland Uruguay debentures 3. A moderately good business went on in Buenos Ayres and Rosario ordinary, and it closed 4 higher, carrying the deferred up with it to the same extent. Buenos Ayres and Pacific ordinary also attracted enough attention to lift the price 6, one or two Cordoba Central issues advanced 2 to 2½, and Buenos Ayres Great Southern ordinary and Buenos Ayres Western improved 1 and 2. Bahia Blanca and North-Western preferred on the other hand was sold rather persistently, losing 2, and the debenture stock fell 1. Entre Rios also lost 1, and Argentine North-Eastern ordinary debenture stock issues were both ½ lower. Speculation in these stocks seems likely to be checked as locusts have made their appearance in the North-West of the Republic. Amongst other South American lines San Paulo ordinary recovered 2 and Guayaquil and Quito first mortgage bonds relapsed 2. Mexican Railway stocks were sold with some vigour at first, but the market later turned round and supported them so that they finished with advances of 1 in the first and ½ in the second preferences.

Miscellaneous securities continue very neglected, and there is little to say concerning them. Peruvian Corporation isues met with rather vigorous support on the hope that for the past year the full interest will be paid on the debentures with ½ per cent. on the preference stock. James Nelson ordinary were persistently pressed for sale and close 3-16 lower, but other Meat shares were tolerably steady. Liptons continue very dull, while Aerateds, Lyons and Slaters remained at previous figures or added a fraction The Sweetmeat automatic traffic decrease of £215 was comparatively trifling, and the price held. Coats ordinary, after being supported, fell away, only to find fresh buyers and to finish ⅛ better. Gas Light stock recovered 1 and South Metropolitan kept steady at 118½. Business was a little more active in one or two Iron and Steel things and some fractional improvements were recorded. Breweries were rather off colour. London General Omnibus stock declined 1 on a small offering. Royal Mail Steam fell 1 and so did London and India Docks deferred. Southwark and Vauxhall Waterworks ordinary stock recovered 5. Rates were much as usual at the carry over on Tuesday.

The torpor of markets was more pronounced to-day than ever, and rotten spots in Glasgow appear to be still weighing upon the minds of some of our telephonic jobbers, whose huge Glasgow accounts could not be carried over in the beginning of the week at the contango rates generally charged. At least, on one Glasgow gambling account in "Trunks" the contango was nearly 20 per cent. above the general rate. Fears of gold exports to New

York and a general slackening off affected the entire market. We hear that the Bristol Corporation is offering 4 per cent. bonds of five years' currency convertible into a 3 per cent. stock at 92, and as the market is not in the deal it is hostile. But the security should be of the very best.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Mexican Railway.

Stock Exchange operators are not always expert in the art of guessing, and once more were a trifle over-sanguine in estimating the dividend on Mexican "firsts." They looked for a distribution at the rate of 2 per cent. per annum for the months ended June 30, and got only 1⅞ per cent., so promptly lowered the stock a pound or so. In the half-year the gross receipts were $2,727,504, or $206,126 more than in the first half of 1902, national goods traffic increasing $113,085 and foreign goods traffic $98,359, while a small decline took place in passengers. The average sterling value of the dollar in the six months was 19.44d., compared with 21.30d. in the corresponding period, meaning of course an increase in the cost of fuel, other imported stores and wages. As a result working expenses were up $142,506 to $1,726,563, so that the gain in net revenue was only $63,621 at $1,000,941. Unfortunately all this and more was wiped out on conversion, the sterling equivalent being no more than £81,076 against £83,187, and with other receipts suffering in the same way, the total net balance is £3,830 smaller, at £84,603. Adding £847 brought forward, and deducting debenture interest, the total still remaining is £25,450, which admits of a dividend on the first preference stock at the rate of 1⅞ per cent. per annum, against 2¼ per cent., with £1,505 carried forward. In answer to the petition of the railway companies asking for some relief in view of the continued fall in the value of the silver dollar, the Mexican Government granted as from September 1 to December 31 of the present year, permission to increase by 15 per cent. the current tariffs for passengers and goods, excepting the rates on maize, wheat, cotton, firewood, charcoal, coal, and exported goods, it being understood that if the premium on gold falls to and continues at 120 per cent. or less, at which premium the value of the Mexican dollar is approximately 22½d., the increase may, under the agreement with the Government, be suspended during the continuance of such rate of premium. At the moment the market price per oz. is equivalent to something under 23d., and will probably remain round about the level for a little time, as any increase above existing quotations for silver will mean the suspension of Philippine purchases which by restricting supplies have largely contributed to the recent rapid rise. In accordancee with the statements made at the last two half-yearly meetings, important adjustments have been made in the present accounts. Stocks and stores and floating assets in Mexico have been reduced from their value in dollars at 48d. to the actual exchange value of 20⅛d., current on June 30, the date of the accounts, involving a sum of no less than £156,309. Of this £132,552 has been written off various reserves, leaving £23,757 to be charged to capital account. The last named has also been debited with £26,923 for cost of new works, additional rolling stock, etc., making a total of £50,680, and reducing the capital credit to £194,532. The entire system of accounts, we are told, has been the subject of careful revision. They will be kept on an improved and modernised system, which will render their working more readily intelligible. There was certainly room for improvement, and shareholders are doubtless grateful for the concession.

Yokohama Specie Bank, Limited.

Gross receipts for the half-year to June 30 were much smaller than for the corresponding period of 1902, and with 38,305 yen less brought in, showed a decrease of 599,538 yen, at 6,625,134 yen, but current expenses, interest, etc., were reduced by 619,710 yen to 4,639,889 yen, so that the net profits were actually 20,172 yen up at 1,985,245 yen. Nevertheless the dividend is reduced from 13 to 12 per cent. per annum, as the directors prefer to adopt the wiser course of strengthening the reserves, and although they transfer only 150,000 yen, or 50,000 yen less, to general reserve, this is more than offset by the appropriation of 200,000 yen to the special reserve to meet depreciation of the silver funds against 100,000 yen last year, and the balance carried forward is increased to 555,245 yen. There was a substantial increase of 22,838,672 yen to 78,112,857 yen in current and fixed deposits, but the liabilities on bills payable, etc., have been reduced by 11,382,343 yen to 58,822,997 yen. Against these cash in hand and at bankers is down 5,742,740 yen, at 7,919,880 yen, or 10.14 per cent. of the deposits, bills discounted, loans, etc., are 6,995,709 yen higher at 46,227,024 yen, bills receivable and other sums due 6,932,200 yen up at 85,676,930 yen, and investments in public securities stand at 25,724,753 yen, or 3,589,316 yen more.

British and Chinese Corporation.

The names of the men forming the directorate of this undertaking are a guarantee that everything will be done for the best, and although for various reasons progress so far has been rather slow,

there is now every indication that matters will move more rapidly. According to the annual report just issued, after protracted negotiations, the final agreement for the Shanghai-Nanking Railway loan was signed on July 9 last, and a staff of engineers selected by the Corporation's consulting engineers, left for China at the end of the month to make the final survey of the railway route. The arrangements for the financing, construction, and equipment of the railway are being proceeded with as rapidly as possible. The preliminary arrangements, which have been entered into for the Soochow-Hangchow-Ningpo Railway loan and the Canton-Kowloon (Hong Kong) Railway loan provide that the final agreements for these railways are as far as practicable to be on the same terms and conditions as the final agreement of the Shanghai-Nanking Railway, a provision which should facilitate matters. Under an agreement with the Pekin Syndicate, a company will be formed to take over and deal with the railway interests of that concern, and of this company north of the Yangtse. The arrangement does not include the Pekin Syndicate's Railway in Honan and Shansi, nor does it extend to or affect the position occupied by the British and Chinese Corporation under the Northern Railway Loan Agreement. Boring operations on the Nanpiao coal field were resumed last July, and information of a very encouraging nature is being obtained. A colliery expert sent out recently in consequence of the advices received is now on the field collecting data for the preparation of plans and estimates for laying out the intended colliery. The Imperial Chinese Railway administration are jointly interested with this corporation with the undertaking. Interest, agency, and transfer fees for the year gave a net sum of £1,132, against which the expenses were £5,290, leaving £4,158 to be deducted from the credit previously existing, reducing it to £4,314. Outlay on concessions in the year was £5,699, making a total of £23,127 to date less £4,834 claim for compensation in respect of damage to property during the Boxer rising, in course of liquidation by the Chinese Government. The capital of the concern is £50,000, and there are investments of £42,198, part of which have been deposited against a loan of £9,177.

Crystal Palace.

The directors of this unfortunate enterprise continue to battle bravely against adversity, but their efforts to attract an unappreciative public met with scant reward during the opening half of the current year. Under the dual disadvantages of cheerless weather, and the altered arrangements with the railway companies involving an increase in the combined fare from 1s. 6d. to 1s. 9d., the number of visitors declined 173,494 to 1,262,259, compared with the corresponding period of 1902, and the receipts from admissions dropped £4,951 to £17,332. Then season tickets produced £1,876 less, and inevitably these decreases were reflected in the revenue from reserve seats, etc., and in miscellaneous receipts including programmes, cloak rooms, skating rink, etc., which were £2,280, and £3,320 lower respectively. In other directions the contraction in income was on a smaller scale, and it is satisfactory to find the rather important item of rent for space in building and grounds showing the substantial advance of £1,696. Nevertheless the ordinary revenue was down over £10,000, but thanks to the fact that the Handel Festival was held within the six months, the entire receipts showed an advance of £1,389, at £67,238. Looking to the expenditure side, we find that the expenses of this attraction were £9,891, and as the net balance is a few pounds better at £11,288, obviously ordinary outlay has been drastically reduced. On special attractions, for instance, only £20,533 was spent, against £27,152, and small declines are to be seen under almost every other head, general management, etc., schools of art, science, engineering, etc., and directors' fees being exceptions. From the mentioned net revenue of £11,288, the interest on first, second, and third debenture stocks absorbs £8,181, and the balance of £3,107 reduces the debit from £24,233 to £21,126. The accounts present a rather forlorn appearance, and we note that since December 31 last the loans and interest account has risen from £48 082 to £51,395, while the debit to capital account remains at £26,388. Sundry creditors are £2,000 higher, but bills payable are down from £8,659 to £7,099, sundry debtors have risen £6,000, and cash comes to £3,497 against £2,623.

Western Telegraph.

During the six months ended June 30 this company received a total revenue of £229,090, including £14,790 received as dividends on investments in other telegraph companies, against which the working expenses were £65,707, and repairs of cables, and expenses of ships drew away £29,084. Balance remaining was £134,298, from which debenture interest and sinking fund absorbed £13,579, and income-tax £3,239, leaving £117,480. Adding £5,332 brought forward, the sum for disposal is increased to £122,812, and the directors commence by placing £35,000 to general reserve, and £2,000 to maintenance ships' reserve. An interim dividend of 1½ per cent. has been already paid, and it is now proposed to pay a further 1½ per cent., together with a bonus of 2s. per share, making 4 per cent. for the half year, and 7 per cent. for the complete twelve months, or the same as in 1901-2. A balance of £2,640 is carried forward. Total reserves now reach the splendid sum of £855.761, of which £515,660 is separately invested, and well distributed over an excellent selection of securities. In addition there is a debenture sinking fund of £60,159, and we note that against floating liabilities of only £51,210, the concern has cash, bills, and debtor balances, etc., of no less than £178,128. The company's interests in kindred undertakings are valued at £410,817, and the return on them for the period under review was well over 7 per cent. per annum. Altogether a very fine position, and one which must cause those who sacrificed their holdings at the time of the senseless Marconi scare to keenly regret their action.

Royal Mail Steam Packet Company.

The interim report of this undertaking will not bring much joy to proprietors, but they will doubtless note with more than passing interest that Mr. James Head, late of the Financial News and Welsbach Incandescent Gas Light Company, the latter in its days of maladministration, is still one of their directors, notwithstanding his unsuccessful action for libel in May last against the proprietors of the *Morning Post*. But then the board also contains Sir Joseph Savory and Sir James Fergusson, and it is hardly fair perhaps to direct attention only to the presence of Mr. Head. Concerning the company's position, the "court" tells us that fully recognising the necessity of providing new vessels it has ordered on favourable terms three powerful cargo steamers of large carrying capacity, while the important question of still further strengthening the fleet will continue to engage the most careful consideration. The *Para*, built in 1873, being no longer suitable for the company's service, has been sold. Perhaps later on one or two more of the company's relics of a bygone age will be dispensed with. It is pleasant to hear that the mail steamers, by reason of the recent improvements both in the victualling and general service, are receiving a larger share of public patronage, and that a steady development of the business both on the South American and West Indian routes is likewise visible. Unfortunately the rates of passage money and freight continue low, and the results of the trading for the period now being reviewed do not admit of the payment of a dividend, a very unhappy ending to the directors' otherwise pleasant chatter. The draft of the supplemental charter which the shareholders unanimously sanctioned at the annual meeting in April last is still under the consideration of the Privy Council, awaiting the approval of the Crown, so that the directors have nothing further to say regarding the capital reconstruction scheme.

Edison and Swan United Electric Light Company.

It would be difficult to imagine anything more unsatisfactory than the position of this undertaking, and nothing short of a complete clean up and capital reorganisation can keep it on its legs. For the year to June 30 the profit is brought out at £30,835, from which debenture interest takes £18,761. Then £11,805 is allowed for depreciation, freehold and leasehold property taking £900, plant £4,790, and stocks £6,174. Reserves on account of bad and doubtful debts makes away with a further sum of £1,168, and as £1,000 is reserved for future stock depreciation, we find the year's trading resulting in a loss of £1,959, increasing the total debit to £4,027. These are nice results for a business which cost £443,451 to establish, including the amount paid for goodwill, and it is obvious that there is very little value to be attached to this asset standing at such a ponderous sum. Then there is the Altrincham Electric Supply Company, in which the company is interested in various ways to the tune of £70,578, and regarding which the auditors have something to say. They tell us that the interest accrued during the year on the debt of this concern has been credited to profit and loss, although interest accrued and goods supplied to June 30, 1902, are still outstanding. Goods supplied since December, 1902, have been regularly paid for, but clearly the directors have no right to take credit for accrued interest with the knowledge that previous sums owing had not been met. Lower down on the assets side of the balance-sheet we come upon an item called "balance of special charges, £58,473," and should judge that to be about as valuable as the goodwill. Stock and plant all included under one head, are valued at £245,516, a nice little figure, and doubtless that £1,000 reserved for depreciation will come in handy. Perhaps another £50,000 would also prove useful. The concern is poorly supplied with cash, having only £11,479, but trading accounts are favourable, and there is an investment of £7,000 in National Telephone preference shares.

A. and F. Pears.

This well known business issues a good report for the year to June 30 last. Including interest the total revenue is returned at £158,901, or £1,391 more than in the preceding twelve months, and as a saving of £4,563, at £99,707, was effected in the general outlay, the net balance, after providing £4,766 for depreciation and leasehold redemption, is £5,900 better, at £54,428. Debenture and preference interest take £22,000, and the ordinary shareholders get their regular 10 per cent. After that both reserve and deferred shares stand in, the one receiving £5,000, and the other 2½ per cent., in each case against nothing a year ago, but to accomplish these things, the carry forward is reduced from £3,268 to £946. The financial position leaves little to be desired. Goodwill and properties are valued in the balance-sheet at £598,965, against which the depreciation and leasehold redemption funds amount to £72,362, and the ordinary and special reserve funds to £50,000. Moreover, these savings are separately invested, mostly in gilt-edged securities, but unfortunately there is a depreciation upon them of £10,275, which must presently be provided for as there is very small chance of it being made good in full. Trading accounts are well in favour, cash comes to £46,406, and bills receivable to £9,610, altogether a good display.

Gramophone and Typewriter, Limited.

Entertainment caterers when they succeed in catching the popular fancy generally find that their business is more profitable than a gold mine, and the record of this company proves no exception to the rule. During the twelve months ended June 30 the trading yielded a profit of £252,285, including £38,555 earned by foreign companies in which this concern holds a controlling interest, to

which is added £115,599 brought in, making a total of £367,884, and after paying income-tax, directors' fees, the bonus of 2 per cent. on account of the previous year, and gve quarterly dividends on the preference and ordinary shares at the rate of 5 and 6 per cent. respectively, there was still a balance of £308,529 to be dealt with. Out of this it is proposed to pay a bonus of 10 per cent. on the ordinary shares, and to carry forward £260,821. Since the closing of the accounts, further interim dividends have been paid on the preference and ordinary shares at the rate of 5 and 10 per cent. per annum, absorbing £12,880. No attempt has been made to form a reserve fund, nor has anything been written off patents, trade marks, and goodwill account, the chairman at the meeting claiming that these items are more valuable now than when the company was formed, but in putting forward this argument, he appears to overlook the two facts that patents have at best a limited life, and that public tastes are proverbially fickle. Adequate provision, however, is said to have been made for depreciation of machinery and plant, fittings, etc., and in all other respects the balance-sheet shows an exceedingly strong position.

British Columbia Electric Railway Co., Limited.

So far as gross revenue was concerned, this company showed a satisfactory increase of $95,717 during the twelve months ended June 30, but was only able to add $39,172 to net earnings. Deducting £10,446 for renewals maintenance, £1,495 for bonus to employees, £1,000 written off preliminary and issuing expenses, and £1,595 for addition to capital amortisation fund, the net profits came to £37,865, compared with £39,544 for the previous fifteen months, and with £533 brought in, gave an available total of £38,398. Of this debenture interest took £11,119, and the dividends on the preference shares and preferred ordinary stock having been met, the deferred ordinary stock receives 5 per cent. or 1 per cent. more than a year ago. £1,000 is transferred to contingency fund, and £3,000 to reserve, leaving £1,099 to be carried forward. The balance-sheet, however, is far from being a strong one, and most assuredly does not justify the increased distribution. With the present additions to the various reserves, the total amounts to no more than £48,016, or less than 6.5 per cent. of the capital outlay, a proportion altogether inadequate, considering that the company has now been in existence more than six years, and even this figure is merely represented by a book entry. Then preliminary expenses are still carried as an asset to the extent of £3,582, and at the present rate will take four years to wipe out. Trading balances are slightly adverse, and the cash in hand stands at a mere trifle of £7,542, while the dividends now declared will require £10,680, so that money will apparently have to be borrowed to meet the liability on these. Work on the Vancouver Power Company's installation, which was commenced in July, 1902, has been pushed on with commendable activity, and although the original plans were enlarged to give an initial supply of 0,000 horse-power, with provision for 30,000 horse-power, instead of 6 000 and 15,000 horse-power respectively, it is expected that the company will be able to commence delivery of 2,000 electrical horse power by the beginning of December. This alteration of the scheme will involve an additional outlay of about £60,000, and it is proposed to offer the unissued balance of £45,000 4½ per cent. Vancouver Power debentures to the shareholders at an early date. Capital expenditure already amounts to a heavier sum than seems justified by the business done yet in addition to financing the Power Company, the directors announce that they are taking the most peculiar step for an electrical company of purchasing the undertaking of the Vancouver Gas Company.

Aerated Bread Company.

The recent severe slump in the value of this company's shares gives considerable interest to the annual report made up to September 30 last. In spite of increased taxation, profits were easily maintained, were, in fact, £3,771 more than in the preceding twelve months, at £76,279, but balance brought forward was nearly £2,000 lower, at £9,766, and rather less at £4,047 was received on account of bonus shares issued, so that the net balance of £90,193 shows an improvement of £1,452. The directors therefore pay the usual dividend of 8s. 6d. per share, or 42½ per cent., and carry forward £9,498, after again writing off £5,000 from plant account. All this is very satisfactory, and the position so far gives no apparent ground for the collapse in the market price of the shares. But as we have all along said it would, the pernicious system of issuing bonus shares at par has at last made its influence felt, and quotations have gone back with a rush. In a recent issue we explained the reasons why the number of bonus shares issued had gradually grown smaller and must continue to decrease, and need now only say that in addition to their dividend shareholders have the privilege of subscribing for one new share at par for every 60 at present held, this meaning a bonus at current quotations of about 3s. 4d. per share. A year ago the proportion was one in 45, and only a few years back it was one in 30. The financial position, however, is strong, investments, mostly high class, standing at £133,662, and cash at £28 661. We note though that the Consols and India stock were bought at big prices, and the heavy depreciation on these should receive early attention.

D. and W. Murray.

This undertaking does not circulate its accounts to the press until after the annual meeting is held, which is a pity. Most of the ordinary shares, however, are held by the vendors, and this may be the reason for the directors' action. Speaking at the mentioned gathering, the chairman of the company deplored the fact that owing to the collapse in trade, consequent on the prolonged Australian drought, the year's business had not been very profitable. The efforts of the directors had been turned to the reduction of stock, and a strict supervision of accounts, a process not generally productive of much revenue. After meeting all charges, together with debenture interest and preference dividend, the net balance for the twelve months to July 19 is £16.400, a big falling off compared with the preceding year. So the dividend on the ordinary shares is reduced 4 per cent. to 6 per cent., nothing is placed to reserve, against £10,000, and the sum to next account falls from £5,109 to £3,509. The savings, however, amount to £85,000, against the goodwill of £133,197. The company's principal assets consist of stock, this amounting to £350,120, in addition to the goods in transit of £138,808. These important amounts are not carried on credit as with so many similar companies, because we find cash and trade creditors of £235,823, and bills payable £4,171, against debtors £183 406, bills receivable £107,730, and cash £29,610. Freehold and leasehold properties are valued at £198,464, and plant and fixtures at £9,610.

Rover Cycle Company.

This company's balance-sheet has a much nicer appearance now that the capital has been reduced, and the goodwill, patents, etc., brought down to the more reasonable figure of £45,000. The item used to stand at £124.505, and the directors got rid of the difference by cutting down the capital 50 per cent. to £75,000. Trading profits for the twelve months ended August 31 were £20,527, or £1,531 more than in 1901-2, and with £44 received for transfer fees, the total balance amounted to £20.571, against £19,015. It is pleasant to observe the directors taking advantage of this improvement to considerably increase the depreciation allowance, the sum set aside being £1,084 more at £3 065. Then leasehold sinking fund absorbs £276, and after providing these sums, together with debenture interest, directors' fees, etc., the net balance is £520 better at £13,081. So the directors carry nearly £800 more at £6,000, to reserve, and pay a dividend of 10 per cent.—equivalent to last year's 5 per cent.—the sum to next account being £3 less at £1,702. Trading accounts are moderately favourable, but owing to a sharp advance in the stocks to £35,399, cash and bills are £6 638 lower at £5,024. Reserve now amounts to £24,500, besides the leasehold sinking fund of £1,314.

Humber, Limited.

We must confess to considerable disappointment with the display made by this company for the year ended August 31 last. Profits have collapsed in a really alarming fashion, and the directors tell us that the expenses incurred in developing the motor departments have been much greater than were anticipated, thus causing a considerable diminution in revenue. But on reference to last year's report, we find the board therein saying that the patented design of motor bicycle secured by the company had been thoroughly tested and improved, resulting in the production of a machine giving great satisfaction to the public. It seems, however, that during the year the directors gave instructions for the manufacture of light motor cars in the cycle department quite independently of the cars made in the large machine department. After experimental cars had been thoroughly tested, a portion of the cycle works was devoted to their production, but it was not until June that the deliveries could be commenced, and the initial expenditure on this part of the business, apart from new plant and machinery still further reduced the income. Business is now so great we are told that it is impossible to keep abreast of the orders, and the directors are satisfied that the money has been well laid out. We hope so, because the shareholders in the company have suffered severely, and get no dividend for the past year. Trading profits were only £6.877 against £21.087, and after adding royalties and transfer fees, the total revenue is returned at £9,896 or a drop of £15,233. A small sum of £3.539 is allowed for depreciation, law costs and auditor's fee take £366, and interest and bank charges £738, leaving £5.254 to be added to the balance brought forward, making £9,609. The financial position is not at all satisfactory. No reserves are possessed, and the amount of £3,539 allowed for depreciation is on properties valued at £358,234, including £7,401 added during the year. Worse still the company carried as an asset the sum of £32,508 alleged to be due by Mr. Harvey du Cros, on his guarantee in respect of the John Griffiths Corporation, and as judgment was obtained for £7,000 only, including costs, the balance, together with the law expenses, has been added to properties, increasing that item to £384,688. Trading accounts are still a good deal in the company's favour, but stocks are up over £40,000 to £100,072, and cash, which two years ago stood at more than £28,000, is now down to £480. Investments remain at £28.476, and show a depreciation of £835, but there is a bank overdraft of £27,305.

New Hudson Cycle Company.

This business did pretty well during the twelve months ended August 31, and reports an advance in total revenue of £3,177 to £15,037, compared with the previous year. After providing £4,540 for repairs and upkeep, and meeting other charges, the net balance is £8.201, or £2,194 more, to which is added the much larger sum of £6,652 brought forward, making £14 853, against £10,205. It is pleasant to find that the directors do not distribute any of this increased wealth amongst the shareholders, but continue to restrict the ordinary dividend to 5 per cent., and by so doing can write off £2,500 from the Diamond Cycle Components and Engineering Company goodwill account, and again substantially increase the carry forward to £8,556. The accounts, too, show considerable improvement. A year ago the company held a stock of ammunition valued at £11,220, but it has now been reduced to £3,923, and part of the money thus set free has gone to redeem bankers' loans, which are £4,590 down, at £9,281. Then trading accounts are almost £12,000 in the company's favour,

against only £3,779, stocks in the cycle department are £1,000 up at £16,486, and cash and bills are £4,730, or a drop of £537. Fair amounts have been allowed for depreciation, and after the mentioned writing off the goodwill account will stand at £12,072.

Triumph Cycle Company.

There is nothing particularly triumphant about the report which this company issues for the twelve months ended August 31. Profits, indeed, were much the same, being £17,437 against £16,175 in the preceding year, and therefore were poor. Rather larger sums of £939 and £3,701 were allowed for repairs and depreciation of freehold property and plant, machinery, tools, etc., and after providing these, setting aside £100 more at £700 for bad and doubtful debts, paying directors' fees, etc., the net sum remaining is £11,067, an advance of £652. Balance brought forward, £1,007, was £491 higher, so that the total for disposal is £1,143 better at £12,074, and this time the ordinary shareholders get a look in although they should not. True the amount allotted to them is only 2 per cent., but it means a reduction of £1,250 in the amount placed to reserve, and goodwill is big. The amount set aside is £2,500, besides which £1,500 is carried to special reserve against investments, and £750 to reserve against debentures, and after meeting debenture interest, the amount carried forward is £1,363. General reserve will now stand at £7,500, against goodwill, trade marks, and contracts of £80,000, and as the investments, chiefly consist of holdings in the German Triumph Cycle Company, and the Gloria Cycle Company, the accumulation of £9,500 should come in useful. Depreciation allowance seems fair, and stock appears moderate at £18,834.

International Plasmon.

This undertaking made a modest profit during the year to June 30, but the directors are a little too anxious to commence dividends, and seem rather neglectful of the company's future. Revenue was £10,739, transfer fees gave £6, and £1,720 was brought forward, making a total of £12,465. From this £168 was allowed for depreciation, £308 was written off preliminary expenses, the directors draw £812, and auditors' fees require £105, which left £11,072. At the very least half this sum should have been kept in hand, and put to reserve, because on looking at the balance-sheet we find it chock full of intangible assets. Purchase of patents, goodwill, and business amount to no less than £138,829, and advertising £14,050, would not fetch much if it came to realisation. Then the amount of preliminary expenses not yet written off is £308, and the company is very poorly supplied with liquid resources. Trading accounts are adverse to the extent of £2,625, and there will be mighty little cash left after the final dividend is met. These points, however, do not impress the directors in the slightest, and out of the net balance of £11,072, they pay two dividends of 2½ per cent., absorbing £8,500, and carry forward the balance of £2,571. The company holds 2,500 $100 shares in the Plasmon Company of America, being the consideration for sale of American and Canadian patent rights, and these are valued in the balance-sheet at par, but it should be pointed out that this is merely for book purposes, and no shares were issued or any actual consideration given in connection with these rights.

National Safe Deposit.

This company's revenue is singularly inelastic, the total for the year to September 30 being £17,498, compared with £17,416 in the preceding twelve months. Deducting ground rent, rates and taxes, salaries, directors' fees, and sundry other charges, and the sum for disposal is £5,812, balance of £201 brought forward included. Preference dividend having been met, the distribution on the ordinary shares will again be 4 per cent., with £450, or £50 more, to sinking and reserve fund, and £243 carried forward. This sinking and reserve fund now amounts to £1,597, but as the lease of the company's premises expires in 1951, and is valued in the balance-sheet at £117,676, the account must be more rapidly increased if the capital is to be returned in full at the date mentioned. Creditors amount to £4,385 against £2,975 owing by sundry debtors, and in latter item is still included £700 which has accumulated for several years and other amounts for lesser periods. Shareholders ought to be told the actual postion of this asset, and whether the directors consider the debts perfectly sound and good. Investments amount to £1,103, and cash to £4,419.

Colonial Gas Association, Limited.

The business of this Australian company still continues to improve—so says the report—and in consequence of an increase of 5¾ per cent. in the average consumption of gas, the net profits for the twelve months ended June 30 were £239 higher, at £5,166. Including £221 more brought in, the available total, after writing off £500 for depreciation, and meeting debenture and other interest, came to £4,378, compared with £3,970 a year ago, and in their haste to prove their statement as to the progress of the company, the directors raise the dividend from 4 to 4½ per cent., leaving £567 to be carried forward. For the second year in succession the reserve fund gets nothing, so that it stands at the trifling figure of £2,432, or 2.25 per cent. of the capital outlay, although the company has now been in existence over fifteen years. The allowance for depreciation, too, seems miserably inadequate, as the capital account, including £031 spent during the year amounts to £108,141, and much of this must be represented by wasting property. Trading balances are well in favour of the company, £2,018 being due to it against £413 owing to sundry creditors, but there is a temporary loan of £800 to be considered, and the £1,120 cash in hand is insufficient to meet the dividends declared, so that the boasted progress of the company is more apparent than real.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Bengal and North Western.—Usual dividend of 3 per cent. for the half-year ended June 30.

United of the Havana and Regla Warehouses.—Dividend of 3 per cent. on preferred stock.

BANKS.

Anglo-Egyptian.—Dividend of 5s. per share for half-year ended August 31, making, with interim dividend, 10 per cent. for year, adding £50,000 to reserve, and carrying forward £17,000.

Canadian of Commerce.—Dividend at the rate of 7 per cent. per annum for half-year to November 30.

MINES.

Butters Salvador Mines.—Fourth interim dividend of 10 per cent. (2s. per share), payable 29th inst.

Great Boulder Perseverance Gold.—Quarterly dividend to September 30 of 1s. 3d. a share, payable 25th prox.

Golden Horseshoe Estates.—Third interim dividend for 1903 of 6s. per share, payable Nov. 26.

Mount Morgan Gold.—A dividend of £12,500, being 3d. a share for October, payable Nov. 2.

Witbank Colliery.—Dividend (No. 2) of 7½ per cent.

MISCELLANEOUS.

Blackpool South Shore Pier.—Dividend of 3 per cent. per annum for past year.

Brunner Mond.—Interim dividend at the rate of 30 per cent. per annum on ordinary shares for half-year ended September 30 last.

Clan Line Steamers.—Interim dividend for half-year ended June 30 at the rate of 5 per cent. per annum.

Coburg Hotel.—Interim dividend of 4 per cent. for half-year ending 31st inst., payable Nov. 5.

Grand Hotel, Eastbourne.—Balance dividend of 3 per cent. for six months ended Sept. 30, together with a bonus of 4 per cent., making, with interim dividend, 10 per cent. for the year.

Imperial Accident, Live Stock, and General Insurance.—Interim dividend for half-year ended June 30 at the rate of 7½ per cent. per annnum.

International Plasmon.—Dividend of 2½ per cent., making 5 per cent. for year, carrying forward £2,571.

J. W. Benson.—Dividend at the rate of 10 per cent. per annum for six months ended Sept. 30 on ordinary shares.

Land and Mortgage of Egypt.—Interim dividend at the rate of 8 per cent. for the six months ended Sept. 30.

Lambeth Waterworks.—Dividend on £10 and £7 10s. per cent. stock for past half-year at prescribed rates, with the addition of 1 per cent. per annum on account of deficiencies of previous dividends, carrying forward £45,700.

Meters.—Interim dividend to September 30 last on ordinary shares at the rate of 5 per cent. per annum.

Nalder and Collyer's Brewery.—Interim dividend on the ordinary shares at the rate of 10 per cent. per annum for the half-year ended September 29, payable on Nov. 17.

R. H. and S. Rogers.—Dividend on ordinary shares is 5 per cent. for year.

Rover Cycle.—Dividend of 10 per cent., adding £6,000 to reserve, and carrying forward £1,702.

Transvaal and Delagoa Bay Investment.—Dividend of 25 per cent., equal to 5s. per share.

MINING RETURNS.

Australasian Gold.—135 tons of quartz; yield 97 oz.

British Broken Hill Proprietary.—4,887 tons ore produced 935 tons concentrates, which contain 533 tons lead and 25,245 oz. silver.

Cecil Syndicate.—Partial clean up, 270 tons for 352 oz.

Day Dawn Block and Wyndham.—2,250 tons crushed, yield 915 oz.; from company's works at Burdekin River and Old Wyndham Mills: 3,826 tons tailings.

Eaglehawk Consolidated.—800 tons crushed, 369 oz. realised, 102 oz. from cyanide.

Frontino and Bolivia.—(Inclusive of £240 pyrites), £1,070.

Golden Gate.—Crushed 1,326 tons for 2,638 oz.

Golden Gate Consols.—220 tons for 657 oz.

Hyderabad (Deccan).—Output of coal from Singaremi Collieries, 21,921 tons.

Jourdie Hills Gold.—414 tons, yielded 270 oz.

Malacca Diamond Mines.—123 loads washed, producing 107 carats diamonds, 2,175 lb. tin.

Queensland Copper.—121 tons matte.

Queensland Menzies.—Crushed 610 tons for 620 oz. Cyanided 480 tons for 130 oz.

Queensland Mining.—1,089 tons ore for 1,198 oz.

St. John del Rey.—Gold produce, £7,470.

Sulphide.—15,883 tons ore milled at Central Mine producing 2,995 tons leady concentrates and 3,553 tons middlings treated, producing 1,785 tons of zinc concentrates. At Cockle Creek 2,290 tons leady concentrates, 557 tons residues, and 2,116 tons purchased ores smelted, yielding 1,333 tons lead, containing 87,978 oz. silver and 10,130 oz. gold.

Victoria Proprietary.—102 oz. from 300 tons crushed.

Ymir Gold.—Crushed 4,600 tons ore, producing 910 oz.; 260 tons concentrates, shipped; cyanide treated 3,050 tons tailings.

COMPANY MEETINGS.

OOREGUM GOLD MINING.

An extraordinary general meeting of the Ooregum Gold Mining Company of India, Limited, was held on Tuesday, October 27, at the Cannon Street Hotel, E.C., for the purpose of considering a proposal to increase the capital of the company. Mr. Malcolm Low presided.

The Secretary having read the notice convening the meeting,

The Chairman said: Gentlemen,—We are met to-day for the purpose of considering, and, if approved, of passing the resolution which you have just heard read for increasing the capital of the company by £50,000 by the creation of 100,000 additonal ordinary shares of 10s. each, to be issued at a premium of 10s. Thus the scheme provides for an increase of the cash resources of the company of £100,000, but involves only the addition of £50,000 in the capital upon which our dividends have to be paid. Now, I would like, in the first place, to remind you that during the fourteen years of our profit-earning existence we have received in dividends over £1,200,000; that is, a return in dividend of over four times the amount of our present capital and over three and a-half times the amount of our capital as it will be when this increase is sanctioned. During those fourteen years we have only once called in aid of our cash resources the addition of any fresh capital—that was some years ago. Then it was £26,500. Every penny spent on the mine outside that additional capital of £26,500 has come either out of our original capital or out of the mine itself; and, as regards future dividends, I find that if we can only get back to the standard of our divided profits in the year 1901, when they were £135,000, that will more than suffice to give us on the whole capital now intended to be increased dividends equal to those which we divided in the year 1902. In the abstract, of course, we shall all admit that it is not an agreeable thing for any company to increase its capital; necessity must be shown, or, at least, the strongest advisability; but, given the necessity, it is, I think satisfactory to be able to adduce reasons for believing that the step will not result in any protracted diminution of our dividends, and that is the object of the considerations which so far I have been submitting to your judgment. How and why the necessity has arisen in the present case is very amply and very carefully set before you in our circular of the 16th inst. Following the practice which has always existed, happily, in the history of our company ever since it was incorporated ,we take our shareholders into our fullest confidence; we hide nothing, we keep back nothing whther good or bad. Just as the necessity arose some years ago for providing additional capital for, amongst other things, the sinking of our main Oakley shaft to serve the mine in depth in the southern portion of our property, so now has arisen the need for providing additional capital for, amongst other things, the sinking of our great new main shaft to serve the mine in depth in the northern portion of the property. Had we failed to find the funds some years ago for Oakley shaft and for our present powerful battery we should by this time have arrived, I am afraid, at almost a standstill, and the profits would have ceased; so now, if we should neglect to find the means for sinking this great new shaft and doing the other work enumerated, I have no doubt that before many years are over our head we should have arrived at a state of congestion and inefficiency. The work must be done when necessity is admitted. Of course, there was an alternative as to the method of providing the funds. We might have asked you for a time to forgo your dividends, but this heroic way of providing money for what is most strictly capital expenditure appears to me to be apiece of self-denial that is not in any sort of way called for. It would have resulted, moreover, not only in depriving yourselves for a time of your legitimate profits, but also, as I think, in a depreciation of the value of your shares far severer than that which we now—I hope it is only a temporary matter—see before us. But I need not labour the argument. You would never have consented to that course; it would never have commended itself to you, whereas we gladly gather from the vast amount of individual support, which our scheme has received, that our shareholders generally, fully weighing the position and the circumstances as they stand, are in entire accord with the directors in the course they have pursued. I can, therefore, very heartily recommend this resolution to your adoption. The Chairman then read a memorandum explaining the method to be adopted for the issue of the new capital should it be sanctioned and confirmed, and where it would rank for dividends. Before formally doing so, I should like to read to you a cablegram which we have just received from the mine. We thought that it would be very desirable to get the very latest information from our superintendent as to the position of the mine on the very important points only of our operations at the present moment. This is the cablegram:—"Taylor's shaft—2,410 ft. level south—lode 12 in. wide, assaying 1 oz. 8 dwts. per ton. 2,310 ft. level south—Driving through the dyke. 2,210 ft. level south—Winze No. 2 has been sunk to a depth of 70 ft., assaying 1 oz. 18 dwts. per ton. Lode 3 ft. wide." That, as Mr. Edgar Taylor will tell you, is really a most satisfactory piece of news with regard to the vitally important points of the mine. I should also like to say that I hope Mr. Edgar Taylor, in seconding the resolution, will favour us with some observations upon the present condition of the mine.

Mr. Edgar Taylor, in seconding the resolution, gave a brief description of the work that had already been carried out at the mine and the results which it had given.

The resolution was then put and carried unanimously.

A vote of thanks to the Chairman concluded the proceedings.

WELGEDACHT EXPLORATION CO., LIMITED.

At the second ordinary general meeting of shareholders of the Welgedacht Exploration Co., Limited, held at Johannesburg on September, 29, 1903.

The Chairman (Mr. Wm. McCallum) declared the meeting duly constituted, and the secretaries read the notice convening same.

The Chairman, in moving the adoption of the directors' report and accounts, as per copies laid on the table, stated:—I cannot add very much to what the directors' report contains. That report gives you a pretty clear history of the year's operations. At the beginning of our financial year drilling operations were going on in all directions, and we had difficulty in getting suitable drills for our work. We succeeded, however, eventually, with the result that during the year we had the pleasure of reporting to you by circular the striking of the reef in each of the three boreholes, Nos. 1, 2, and 3. I think shareholders have every reason to congratulate themselves on the results so far. As you will see from the directors' report, No. 1 borehole reached the reef at 2,723 ft., No. 2 borehole reached the reef at 2,385 ft., No. 3 borehole reached the reef at 3,090 ft. Now, No. 2 is much further from the supposed line of outcrop than No. 1, yet it reaches the reef at 340 ft. less depth, and No. 3, which is, approximately, the same distance from the assumed outcrop as No. 2, reaches the reef 700 ft. deeper than No. 2. From these figures you will readily understand that some "folding" or "faulting" has taken place between the three boreholes, and, acting on your consulting engineer's advice, we have agreed te put down two more boreholes at points marked on the map attached to the report. With the results of the two new boreholes before them, your engineers will be much better able to locate the sites of the shafts, and that is a most important matter so they are now busy preparing for the sinking of shafts as soon as the two new boreholes gives the information which we are looking for. The gold results obtained from the drilling are not very great; but, as we on the spot know, we do not drill on the Rand to ascertain so much the reef values. Acting upon the drilling results before us, we decided, during the year, to exercise the option to purchase the Farm Welgedacht. Transfer was taken on February 2, 1903. This farm is now your freehold property. Now, with regard to your interest in the New Rand Exploration Co., Limited, first, I may say that you were called upon to pay up during the year 16s. per share on the working capital shares of this company, and since our books were closed a further call has been made and paid, making these shares now fully paid. So far as we can see at present, the New Rand Company will require to raise further funds, and steps are being taken in that direction. The funds of the New Rand Company have been employed entirely in drilling operations and in the payment of option rents on their farms. Drilling operations were started by the New Rand Company as soon as machines were available, and very fair progress is being made. The two farms selected for testing by the consulting engineer are Olifantsfontein and Vlakplaats. I am sorry that I cannot give you the results of the drilling on these farms meantime. I believe it is in your interest that I should not do so. Knowing the results, I may say that I am quite satisfied. Speaking generally, we have a big undertaking in front of us, which is full of promise. At Welgedacht we have proved the presence of the Main Reef Series throughout our large property, which is sufficiently large to support three substantial companies for many years.

Mr. W. E. Hudson seconded the adoption of the report and accounts, which was carried.

It was proposed by the Chairman, and seconded by Mr. Kitzinger, and carried, that the appointment of Mr. Charles H. Mullins as a director of the company, in place of Mr. E. Siemert, resigned, be confirmed. There being no further nominations, the Chairman declared Messrs. W. McCallum, C. H. Mullins, and David Risk Wardrop re-elected directors of the company.

It was proposed by Mr. C. H. Mullins that the retiring auditors be re-elected auditors to the company for the ensuing year, and that their remuneration for the past audit be left in the hands of the director. This was also agreed to.

This brought the business of the meeting to a close.

SANTIAGO NITRATE CO., LIMITED.

The fourth annual meeting was held on Monday, October 26, at Winchester House, Mr. Henry W. Lowe presided.

The Chairman stated that the company made a gross trading profit during the year ended June 30 last of £70,939, and after providing for debenture interest and redemption, the current working expenses, and the interim dividend of 12 per cent. which had been already paid, a balance of £23,859 remained. The directors recommended a final dividend of 8s. a share, free of income-tax, making a total distribution of 20 per cent. for the year, and the transfer of £7,500 to reserve, leaving £359 to be carried forward. He thought that they had good reason for mutual congratulation at the continued success of the company. Practically half of the debenture debt had already been repaid, no less than £138,000 had been distributed in dividends, and £27,500 had been carried to reserve account. These items made a total of over £215,000 on their entire capital of £300,000. He saw no reason why similar results might not be anticipated in the future. The nitrate market and nitrate affairs generally appeared to be settled on a firm and sound basis, and they might reasonably expect as good prices in the future as they had been receiving in recent years. It was true that some new oficinas would shortly come into operation, and would somewhat augment the productive power, but there was the cheering prospect of increased consumption, and he

entertained a very strong hope that the increased production would be met in a large measure by the greater demand. The work at the company's oficinas had been progressing satisfactorily, but he was bound to point out that their cost of production continued gradually to increase. Last year they made practically the same amount of nitrate as in the year before, and it was sold at the same average of prices, but they made £7,000 less profit. The whole of this sum had gone in wages. In order to combat the mischievousness of the reports which had been circulated recently about the impoverishment of the company's grounds, the latter had been carefully surveyed, and the report which had been received by the board showed that there was ample nitrate in them to last the company for another 14 years at the present rate of production. There was, moreover, no doubt that that number of years would be considerably increased, for in working the grounds more nitrate was always found than was originally estimated, especially where costra was used, as the company were doing. He might also refer to what he stated at a former meeting—that on one part of their large grounds a discovery of first-class nitrate was made where none had been supposed to exist. He therefore urged the shareholders to take notice of reports such as those to which he had alluded. With respect to the long-pending suit which the company had had with the Liverpool Nitrate Company, he was glad to say that the recent negotiations which had been proceeding for an amicable settlement were likely to end satisfactorily. A mutual understanding had been arrived at, but there were a few minor details to be arranged, which however he did not think affected the general main principle. He hoped that these details would soon be arranged, that the settlement would be finally signed, and that there would be an end to the troublesome and expensive litigation which had been going on. He then moved the adoption of the report and the payment of the dividend recommended.

Mr. T. P. Baptie seconded the motion, which was carried unanimously, and the proceedings then terminated.

A. AND F. PEARS.

INCREASED BUSINESS AND PROFITS—THE RESERVES STRENGTHENED.

The eleventh ordinary general meeting of the shareholders of A. and F. Pears, Limited, was held on Wednesday, October 28, at the Holborn Restaurant, under the presidency of Mr. Thomas J. Barratt, Chairman of the company.

The Secretary (Mr. Edward Praill, F.C.I.S.), read the notice convening the meeting and the auditors' report.

The Chairman said: Gentlemen,—This is the eleventh year that I have had the privilege of occupying this chair, and I think I am not saying too much when I assert that during every year of that period the shareholders have had excellent reason to be satisfied with the results of the trading of the company. (Hear, hear.) In respect of ten of those eleven years you have received a dividend of 10 per cent. per annum on your ordinary shares, and in one of the earlier years 8 per cent., and that during a period when money has been earning not more than 3 per cent. taken all round. This cannot but be satisfactory to every one of you. (Hear, hear.) Last year the dividend was 10 per cent., and that for the year now under review is also 10 per cent., and I am glad to say we have done more business during the past year than we did in the previous year, with a resulting net profit of some £6,000 in excess of that year; so that, after writing off, as we always do, very liberally in respect of depreciation of plant and of leaseholds and freeholds—and, as I have told you, perhaps ad nauseam, in my humble opinion, very largely unnecessarily, because we could not again build our premises, nor could we obtain our leases at anything like the prices which we did, or at which they stand at present in our books—after these writings off we have been enabled this year, after placing another £5,000 again to reserve, which last year, for the first time, we were unable to do, to pay on the deferred shares a dividend of 2½ per cent., which I have no doubt will be very satisfactory to them. (Hear, hear.) There is very little for me to say to you this year other than what I have had occasion to say in all previous years. It is monotonous, although eminently satisfactory, to tell you that the trade is well and profitably maintained. We are dealing with all the peoples of the earth —sometimes more at one port than at another, but, as I have already told you, the business collectively is in excess of that of last year, with the aforesaid satisfactory result. Had it not been for the cycle of high prices which appear to be ruling for raw materials, we should have had, according to our past experience, a much larger sum to distribute this year. In one item alone—fats—we have had to spend fully £4,000 beyond the average of the past fifteen years.

DEPRECIATION AND RESERVE FUNDS.

Our depreciation and reserve funds you have before you. You will see that we have £45,000 standing to the credit of the reserve fund, including the £5,000 which we have placed there on this occasion. You have a special reserve of £5,700 and depreciation of plant £64,000, which, as I have already said, is, in my opinion, quite unnecessary; also a leasehold and freehold depreciation fund of £8,300. The whole of that even is not necessary, because, as I have told you before, the longest leases are written off to the life-time of the shortest. You thus have depreciation and reserve funds to the amount of £123,000. You have, in addition, gilt-edged investments at cost £124,000, on which, consequent upon the general depression of capital throughout the country, there is some £10,000 of depreciation. I think I have now told you all that pertains in a general sense to the past year's trading. I am personally entirely satisfied with it, and I feel convinced that all my fellow shareholders are also. (Hear, hear.) Before sitting down I should like to take a brief review of our position after eleven years of existence. We have actually solid property, after paying all our debts, which is more than sufficient to pay out all the debenture holders, all the preference shareholders and a very large proportion indeed of the ordinary shareholders. We have a goodwill which has had spent upon it, during the life of the company only, a sum which will shortly amount to a mililon sterling. That, I think, is a statement which will surprise you all. From that you may judge of the power of the name of Pears' soap throughout the world.

THE DIRECTORS' HOLDING IN THE COMPANY.

The amount of shares held by us at this table is actually larger than the whole amount held by all the other ordinary shareholders put together. That, too, I think, must be a gratification to you, because it ensures our serious and earnest attention to your affairs. (Applause.) We have all of us gone through a period of depression in prices of investments during the last few years, but a particular source of gratification which we, as Pears' shareholders extract, is that amongst all securities Pears have held their own. There has been, I think, no diminution in their market value, and that is very gratifying to the directors, because it shows the confidence which you repose in them. You sit very tight on what you have got. Once before I asked the shareholders and debenture holders, of whom there are 2,500, to be good enough to regard themselves as peripatetic commercial travellers in the interests of the concern; they can do this with perfect ease and without any unnecessary exertion on their part. Our goods are sold by retailers at a profit on their cost to them of some 10 per cent.; formerly, when the trade was very much smaller, they obtained a higher remuneration; but to-day the sum total of profit which is divided by them amongst themselves upon the sale of our goods is immensely in excess of what it was in day of yore. I am oorry to say, however, that in some instances there has been, on the part of ome of them, a disposition to indulge in what is known as substitution, which is simply the recommendation of other goods in lieu of Pears' wherever they are applied for by the consumer. Our net results show that even these efforts are not successful, because the trade has shifted from one set of retailers to another. In spite of such opposition as this, we have increased our business, and we believe that we shall continue to do so. Nevertheless, the shareholders—2,500 of them—can become very valuable to the company by each one investigating the reason for and objecting to any proposed substitution. (Hear, hear.) Within the past two or three days I have had some letters from interested people who are afraid, in consequence of "A Colonist's" letter in *The Times*, that people will no longer wash themselves. (Laughter.) Well, you know there are several branches of our business, and if people discontinue washing themselves, it will be obviously very necessary to fall back upon the perfumery branch of the business. (Renewed laughter.) As a matter of fact, although "A Colonist" from the Cape has said that he has been immune from rheumatism, an immunity which he assumes to be attributable to the non-use of soap, presumably he may also have been immune from other complaints—housemaid's knee, for illustration—and there seems to be about as much relationship between the non-use of soap and immunity from rheumatism as there is between soap and the feminine complaint to which I have referred. (Laughter.) We do not regard these letters as of any more importance than the big gooseberry ones which appear at the silly season. I would say that, owing to the vast clientele which Pears' soap possesses, it is quite impossible for us to change either the marked retail price of the goods we sell or the price at which we sell them to the trade; and we have to take, so far as we are concerned, good years with bad ones. We have to take, as we have been doing, the high prices of raw materials which have ruled, against the low prices which we hope we are about to gain experience.

"PEARS' ANNUAL."

Amongst the assets of this company there ii a very valuable one, in my opinion, which never appears at all in our balance-sheet, and that is "Pears' Annual." It is, I believe, the largest, the best and the most appreciated advertising medium which exists in the world. That is a bold statement to make, but I believe it is an entirely true one. No other illustrated publication has a similar circulation. Our issue this year will be 500,000. We have not yet published a single copy, but our orders are in excess of all the 500,000 we have printed, an dthe money is lying at the bank. I do not think there is anything further for me to say except to repeat my congratulations upon the success of our joint venture, and to move—"That the report of the directors, as produced, together with the annexed statement of the company's accounts to June 30, 1903, duly audited, be now received, approved and adopted." (Applause.)

Mr. Frederick Gordon seconded the resolution.

Mr. H. W. Birks remarked that the Chairman had begun the proceedings by suggesting that they should take the minutes of the last meeting as read; he then suggested that they should take the report and accounts as read; and he might even have gone a step further and suggested that they take his speech as read. Although it was interesting to hear their Chairman when he addressed them on the history of the company during the previous year's working, it was quite true, as he said himself, that it became a little monontonous, because year after year he had to tell the same agreeable tale of very successful working. But although the repetition of that might be monotonous, he thought he was speaking the feeling of the shareholders when he said they con-

gratulated the board on their achievements and said that if this were monotonous, let the board please give them a bit more of it. (Laughter, and hear, hear.)

APPRECIATION OF THE BOARD'S EFFORTS.

It would be an ungrateful thing on the part of the shareholders if, year after year, receiving excellent reports such as they did, they were to allow the meeting to dissolve without sme one of them expressing their appreciation of the successful efforts of the board. It was not without significance that at a time like the present, when securities of all descriptions, from the very highest to the lowest, had depreciated seriously, the shares of this company should positively be standing in the market higher than they did a year ago. The shareholders welcomed that as a very eloquent expression of the market estimate as to the nature of the investment. In relation to one comment the Chairman had made, he thought he might make some reference to the feelings of those people who had a superstitious veneration fnr "the morning tub." It was satisfactory to think that the board could rightly estimate these matters, and to hear that here was no reason to apprehend that people were not going still to indulge in what, in England was believed to be a necessity—namely, a wash. He observed that the Chairman told them that, apart from that, they could see their way te develop the perfumery branch of the trade, and he could not help thinking that under such circumstances as suggested, the development of that department would be very necessary. (Laughter.)

The Chairman observed that the colonies were taking more good soap, despite the disposition mentioned by *The Times* correspondent. That was a refutation of the suggestion that they were better off in the colonies without soap than we were at home.

The motion was then unanimously agreed to.

The Chairman announced that on this occasion Mr. Frederick Gordon was the director to retire. He begged to move his re-election, and was assured it would meet with the unanimous approval of the meeting. (Hear, hear.)

Mr. Andrew Pears seconded the motion, which was at once agreed to.

THE SERVICES OF THE MANAGING DIRECTORS.

Mr. Gordon thanked the shareholders for his re-election, and said he would like to tell them his belief that the great success which had attended this company during the past eleven years had been due mainly to the faithful services of the managing directors, Mr. Barratt and Mr. Pears. He wished to testify to the unvarying good work that those two gentlemen had performed during the lost eleven years. Mr. Barratt, as they all knew, was a master of advertising, and of making known to the world wares which he had to sell, and also in finance and accountancy and the other departments which pertained to the commercial branch of the business; while, as to Mr. Pears, he had such an intimate knowledge as regarded the manufacture of the chief article the company produced, and, indeed, of every department, that they were very safe, so far as concerned the manufacture of their goods. During the last eleven years, whenever the interests of the shareholders had been in question, Messrs. Barratt and Pears had shwn a keen regard for the ordinary shareholders. During that period they had put by £40,000 to the prejudice of the deferred shareholders, and he was not sure that that sum need have been set aside; but their managing directors had never opposed the placing of reasonable sums to reserve. He thought, however, that as time went on, some limit should be placed on the amount added to reserve, as it was not a company where a very large amount available was necessary, because all their buildings were freehold, with the exception of the Oxford Street premises, and, as they knew, freeholds were constantly improving in value. As the Chairman told him the other day, it would be utterly impossible to erect their great factories at Isleworth at anything like the value at which they stood in the books. He should think it would cost at least 25 per cent. more than the amount at which they appeared in the balance-sheet. (Hear, hear.)

The Chairman then moved:—"That the following dividends for the six months ending June, 1903, be now declared out of the net profits of the undertaking—namely, on 200,000 preference shares at the rate of 6 per cent. per annum, making, with the interim dividend already paid, 6 per cent. for the year; on £260,000 worth of ordinary shares a dividend at the rate of 12 per cent. per annum, making, with the interim dividend already paid, 10 per cent. for the year, and on 150,000 deferred ordinary shares, a dividend of 2½ per cent. for the year."

Mr. Edward H. Byas seconded the motion, which was unanimously carried.

The auditors, Messrs. Turquand Youngs and Co., having been re-elected,

THANKS TO THE OFFICERS AND STAFF.

Mr. Byas moved a vote of thanks to the officers and staff at London and Isleworth. He remarked that their business could not have been the success it had been, even with Mr. Barratt and Mr. Pears at the head of it, if they had not had very able assistance. They had at the head of the staff in London Mr. Praill, who was a most able accountant, whilst as to the manufacturing department, over which Mr. Pears presided, he could only say it was one of the best factories of the kind in the country, everything being conducted on scientific principles. It was a great regret to the board when Mr. Pears' son died. He held an important position at the works, and thoroughly understood the business, but he (Mr. Byas) was glad to say that they had the assistance of a second son of Mr. Pears, who had been there some time and was well qualified for his position.

The vote was unanimously accorded.

Mr. Pears remarked that, so far as concerned the factories, of which he had control, his first experience there was when he was about fourteen years old, and he was now approaching 60, so that he might claim that it was a fairly long one. In his opinion things were never better at the works than at the present time. (Applause.)

The Chairman said that before closing the meeting, and while thanking the shareholders for their attendance, and their cordial response to all that had been proposed that day, he should like to add a few words in reference to "Pears' Annual," and supply a few statistics which he thought would be of interest. He had already told them that they had printed and sold 500,000 copies. It might amaze them to know that it had taken 326 tons of paper to print them, while those who were interested in horseflesh would know that for the purpose of distributing that number they required 350 pair-horse vans, or 700 horses to move it. Now, let them take a flight of fancy and imagine a tower formed of 500,000 copies of their publication, one on top of another. It would be 20 times the height of St. Paul's Cathedral. (Hear, hear.) Now, let them look at the extent of the paper they had used. It would cover 534 acres, and that was as large as Regent's Park, Primrose Hill, and St. James's Park combined. Their pages and pictures, placed in a line, would cover 6,858 miles, or a greater distance than from Londn to Bombay or from London to New York and back again. The coloured pictures alone, without the book itself, represented 25,300,000 separate pulls, and they had been a year doing it; and it was satisfactory to know that the whole work was done in the British Isles. (Applause.)

A vote of thanks was accorded the Chairman on the motion of Mr. Birks, and the proceedings then terminated.

CRYSTAL PALACE COMPANY.

The half-yearly meeting was held on Thursday, October 29, at the Cannon-street Hotel. Mr. Ernest Schenk presided, and, in moving the adoption of the report, said that he thought it might be regarded as very satisfactory. The profit of £11,288 compared with £11,251 in the first half of 1902. The total number of visitors, about 1,250,000, fell short by 170,000 of those in the corresponding six months, and the responsibility for the reduction must be divided between the increased third-class fare from terminal stations and the abnormally bad weather. The receipts from admissions were not actually so much less as would appear from the form in which the accounts were made up, owing to a considerable amount being credited direct to the Handel Festival. Rent for space showed a satisfactory advance, about £1,700, and this was a source of revenue from which a still further improvement might be expected. The expenditure side of the accounts called for no special comment, and he would only say that the board had aimed at controlling every item with scrupulous economy. Turning to the balance-sheet, he called attention to the fact that it had been thought better to give the comparative figures at the close of the previous half-year, rather than those at the close of the corresponding half of last year, and added that they were £3,000 to the good on the net revenue account since December 31 last. With regard to the company's prospects, he stated that, so far as he was able to judge the figures for the third quarter of the year, and assuming normal conditions for the last quarter, he should be disappointed if the results were not equal to those of 1902, and, if this anticipation should be realized, in circumstances which had not been, in many respects favourable, he should consider that they would have every reason to be satisfied. The question of electric tramways was an important one as affecting the company's future. The plans for the lines authorized to the Penge entrance of the Palace from Croydon were, he understood, in course of preparation, and the construction of the tramway would no doubt be commenced at an early date. He looked to a considerable increase in revenue from that source; but of far greater importance would be the extensions of the County Council tramways from the London side. With the other members of the board, he met a committee of the London County Council recently on this subject, and so unanimous was the opinion in favour of the construction of the extensions, so obvious was the necessity, and, he might add, so certain the profit, that although they might have to be patient in waiting for them, he was satisfied that they would have all the electric tramway feeders that they required in the near future. It was a great disappointment to them all that Dr. Mann's health did not permit him to undertake the heavy work of conducting the Handel Festival, although, of course, he must share in the honour of the great success which was attained. Dr. Cowen, who took his place, added to his great reputation by his successful handling of the immense choir and orchestra, and it was safe to say that no previous festival performance had quite equalled those of last June. A very promising new department, which was only beginning to get well under way, was the exhibitions organization department, under the management of Mr. Collins Levey. The arrangements for a number of successive exhibitions were well in hand, and were likely to yield a considerable revenue. No appointment had yet been made to the position of general manager in place of the late Mr. Henry Gillman; but the several appointments referred to in the last report had enabled the general administration of the business to be carried on satisfactorily. The widow of the late general manager was left inadequately provided for, and the directors had felt that it was their duty to make some provision for her. The company having no power under their Act of allowing any grant or pension, a committee was formed to raise a fund for the purpose, and a concert in its aid was given at the Palace which was so well supported that the committee had been able to purchase Mrs. Gillman a life annuity of £100. He afterwards alluded in sympathetic terms to the death of Mr. William Gardiner, who died last June, shortly after resigning his position as secretary. Mr. Gardiner had been in the company's service

nearly 50 years. Captain The Hon. Arthur C. E. Somerset seconded the motion, and after a short discussion the report was adopted unanimously.

BUENOS AYRES AND PACIFIC RAILWAY.

The ordinary general meeting was held on Tuesday, October 27, at Winchester House, Mr. Phillipps, M.P., presiding.

The Chairman, in moving the adoption of the report, stated that the past year had been by far the best which had yet been experienced by the company. One of the proposals put before the proprietors by the directors on that occasion was that the company should build their own access into Buenos Ayres. According to the board's estimates this could be done for £800,000, but certain additions might be necessary afterwards which would cost another £200,000. For his own part, he hoped that when their own entrance into Buenos Ayres was built—and it would take three years to carry out—it would be necessary to spend £200,000 more, because this would mean that their traffic had greatly increased in the meanwhile. When a proposal such as that in question was put before proprietors, the latter might think that the estimates of cost were not accurate. With such a work as that proposed one was liable to make mistakes, but these arose most frequently from uncertainty as to the price of the land. In the present case, however, the company had bought almost the whole of the land that was required. Another uncertainty might arise from the nature of the foundations, but they knew that there was a good foundation to build upon. They had not only their own borings, but the experience of the docks which had been built on one side of them, and of the sea wall which had been built by the Rosario Company close to them on another side. The directors' estimates as to the cost of former works had hardly ever been exceeded, while their estimates as to the results which might be expected from the outlay had always been exceeded. Taking an average over the last three years, the company had actually paid to other companies £40,000 a year to get their goods down to the dock in Buenos Ayres. What they would pay this year on the increased traffic, the directors could not tell exactly, but it would, at any rate, be about £50,000. If the proposed entrance were built they would save from £40,000 to £45,000 out of his £50,000, but against this saving there would be the additionalf expenses caused by working the new station and by maintaining five miles of new line. These expenses, however, would be more than set off by the economies which would be effected in the use of their rolling stock. This was not the whole of the advantage of the proposal. There was now a great deal of traffic of other railways which this company could not attempt to handle, but they would be able to do so with their own entrance into the city and the dock facilities they would thus obtain. Their record in the past four or five years had been one of substantial and almost continuous progress, and this would in all probability continue; and on every additional ton of traffic carried by them in future, unless they had their own access into Buenos Ayres, they would have to pay money to other companies. The cost of building the proposed entrance would be distributed over three years, and the greater part of it would fall on the last year; and during the next two years it would, therefore, be necessary to issue very little capital for the purpose. Another proposal which the directors had submitted to the proprietors for their decision that day was that powers should be taken to increase the company's ordinary capital by £250,000, bringing up the amount of this capital to £1,000,000. Prosperity had come to them by putting additional money into the business and by developing the property in every conceivable way, and every sovereign thus put into it had not only earned its own interest, but something beyond for the original investment. At present they could not issue ordinary stock as it did not stand at par, and there were great difficulties in issuing stock under par; but, if the directors should determine to make an issue of the £250,000 which it was now proposed to create, and if the stock should be offered to the shareholders at par, he did not think there would be much grumbling among the latter when the time came. As to the company's immediate prospects, from the crops of the past year it might be said that their traffics were safe, at any rate, until the month of December, but after that they must depend upon the new crops. A much larger area of land was being put under cultivation, and the increase in acreage might make up for the diminution in yield, if there should be a diminution. So far locusts had done no harm to the crops

The report was adopted, and resolutions were also passed approving the proposals mentioned.

GRAMOPHONE AND TYPEWRITER.

The third annual general meeting of the shareholders of the Gramophone and Typewriter, Limited, was held on Thursday, October 29, at the offices, 21, City Road, Finsburg Square, E.C., M. E. T. Lloyd Williams presiding.

Mr. S. W. Dixon having read the notice convening the meeting,

The Chairman said: I will take you as rapidly as possible through the report. On the first page there are three items which are naturally first looked at, and which are the only three items to which I need call your particular attention. They are the result of our trading, the proposed bonus and the carry forward. The result of our trading this year amounts to £252,285. Last year it was £137,268, and the year before £79,348. I think you will agree with me that this is a good progressive showing of which we may all be proud. The carry forward this year amounts to £260,820. Last year it was £98,256 and the year before £23,855. The bonus which your directors propose should be paid this year is 10 per cent., making 16 per cent. for the year. Turning over the page of the report, you will see an item called "matrix account," to which we call your attention, and which I think requires some comment. Last year this account stood at £1,500; this year it stands at £20,747. The amount of such outlay has been written down with a view to the whole being extinguished in a short period of time. I will ask you to accept that statement as sufficient, and to rely upon your directors' discretion in this matter. The next item I call your attention to, which appears for the first time in your report this year, is the amalgamated statement of the net assets of the company. These assets amount to £412,477, and that statement, I think you will agree is a valuable indication to the shareholders of the status of the business, and, particularly, should make the preference shareholders very well pleased with their investment. At the end of the report your directors tell you that the aggregate sales for July, August, and September, this year, are largely in excess of those of the corresponding months of the year; and I am able to supplement this information by telling you that the proportion of actual excess is 47 per cent., and I may add that the figures for October, so far as we have got them, exceed this proportion. Turning to the balance-sheet, there are very few items to which I need call your attention, for to most of them I have already alluded; but the first item on the asset side of the balance-sheet—namely, that for patents, goodwill and plant—I may mention that I have often been asked why it has not been written down. Now, in the first place, the patents that your company hold at the present time are far more numerous and, in our opinion, far more valuable than when you purchased the property. In the second place, when you purchased this property you purchased it as a going concern which was then earning some £70,000 a year; at the present time the earning capacity is over £250,000 a year. In addition to this, you must not forget that the item includes the company's holdings of shares in the foreign companies. The value of these shares naturally increases with the respective earning capacity of such companies, and their respective assets. First, then, I have been asked why is there no mention made of the typewriter? Well, there is not very much to tell you about the typewriter. We have found that it does not sell very easily through the existing agencies for the sale of gramophones, and in future it is not likely for this reason to appear in the company's accounts to any extent. Another question I have been asked is, "How do you keep track with the finance of your foreign companies?" This is done by auditing the accounts of all the foreign companies and most of the agencies, twice a year, and this also explains why the auditors' fees are so large. Mr. Lloyd Williams then explained that the reasons the board did not declare a bigger bonus when the carry forward was so large was because what further working capital was required was taken out of revenue. Another question I have been asked is in this form:—"This is all very wonderful, even miraculous; but how long will it last?" To that I answer: It is not wonderful, it is not miraculous, but it is a natural steady growth of an unusually fine industrial business, and that at present, in the opinion of those connected with your management, it is only in its infancy. I now beg to move:—"That the report and accounts, dated June 30, 1903, now presented, be received, approved and adopted."

Mr. W. Barry Owen seconded the motion, which was at once agreed to.

Resolutions were then passed approving of the interim dividends that had been paid and giving the directors power to continue them.

In accordance with the articles, the whole of the directors retired, but resolutions were unanimously passed re-electing them to constitute the Board.

Mr. H. L. Storey moved the reappointment of Messrs. Cooper and Cooper as auditors, which was agreed to.

An extraordinary general meeting followed, at which certain alterations were made in the articles of association to comply with the requirements of the Committee of the Stock Exchange with a view to an official quotation of the company's shares.

The proceedings then terminated.

BRITISH COLUMBIA ELECTRIC RAILWAY.

The seventh ordinary general meeting of the British Columbia Electric Railway Co., Limited, was held yesterday at Winchester House, Old Broad Street, Mr. G. P. Norton presiding.

The Secretary, Mr. F. Hope, having read the notice calling the meeting,

The Chairman said: I regret very much the absence of the Chairman of the company. It is to his very conspicuous ability and business foresight that very much of the success of the enterprise in which we are interested must be attributed. He has been unfortunately ordered by his doctor not to attend this meeting. In his absence I have very much pleasure in moving the adoption of the report and the payment of the dividends recommended therein. You will gather from the report and accounts that during the year under review there has been a considerable development and progress in all directions. After December next when we hope to have the advantage of a partial utilisation of the water power installation, we have every reason to hope that our progress will then be even more rapid than hitherto. It is never wise to indulge in prophecy, but from all the evidence which comes to us from British Columbia, I think we may safely assume that the undertaking in this company will continue to develop and extend for many years to come. It will in all probability grow into a business of very considerable magnitude, and this will mean constant additon to expenditure, and capital outlay. In confirmation of these views the shareholders will doubtless be interested to know that since the close of the financial year the earnings for the three months ended September 30 show an increase upon

the earnings of the corresponding period of the preceding year of £3,647. The undertaking of the company has for the past five or six years been gradually but surely establishing itself upon a strong and permanent basis, both financially and as a steady dividend-earning enterprise, and as an institution supplying public needs and rendering services indispensable to the comfort and prosperity of the people. It is necessary, however, that the company should keep pace with the requirements of the communities in which it operates, and as the population and wealth of these communities increase, capital must be provided for a corresponding development of the company's operations. We believe we have an organisation in British Columbia which it would be difficult to improve, and our reports as to the general equipment both of the railway and of the lighting plant are all of a highly satisfactory character. I desire the shareholders of the company to realise fully the character of the enterprise in which they are embarked. There are great possibilities before the company; its outlook is encouraging; but I repeat that one essential to success is that we should have the support of the shareholders in providing funds for necessary extensions. I direct your attention, gentlemen, to the paragraph in the report which announces that £45,000 of the Vancouver Power bonds will be offered on an early date. The directors think that these debentures are an excellent investment, and they will first be offered to the existing shareholders; and probably during the month of December this will be done. I formally move the adoption of the report and the payment of dividends as indicated in the report. You will notice that this year we propose to pay what is equal to 5 per cent. per annum on the ordinary stock. (Hear, hear.)

Mr. E. L. Evan-Thomas seconded the resolution, and it was carried unanimously.

On the motion of the Chairman, seconded by the Hon. M. R. Gifford, C.M.G., Messrs. R. K. Sperling and E. L. Evan-Thomas were re-elected directors.

On the motion of Mr. Slade, seconded by Mr. Duckworth, Messrs. Helliwell and Sampson were reappointed auditors.

The Chairman then moved:—It is hereby resolved that the prohibition cntained in Article 92 of the Articles of Association shall be suspended or rlaxed, so that a director of this company, who is also a director of any company promoted by this company, or in which this company may be interested as vendor, member, creditor, or otherwise, whether he hold the office of director of such company as a nominee of this company or not, may vote in respect of any contract or arrangement entered into between this company and any such other company as aforesaid." He explained with regard to the object of the resolution that under a recent decision, the directors were not able to sit as directors of the Vancouver Power Company, and it was to enable them to do so that this resolution was proposed. They practically owned all the shares in that company, except one or two held for qualification purposes.

Mr. Slade seconded the resolution, and it was carried unanimously.

The Chairman having replied to a vote of thanks, the proceedings thtn terminated.

ENGLISH, SCOTTISH AND AUSTRALIAN BANK

The eleventh ordinary general meeting was held on Wednesday, October 28, at Winchester House,

Mr. Charles J. Hogan, who presided, said he ventured to think that the statement submitted that day would be considered satisfactory by the shareholders. It was to be regretted that the directors were not able this year to propose the payment of an increased dividend, as they did the year before, but in addressing them a year ago he was careful to foreshadow the probability of this happening. The terrible drought in Australia had for so many years now figured prominently in the speeches mad at the meetings of that and similar companies that it could not be wondered at if some waxed impatient at hearing the oft-told tale retold—of the heavy losses it had occasioned to the pastoral and agricultural industries, and the crippling effect it had had upon the export trade of the Commonwealth. It was, however, impossible to ignore its effect in any review of the operations of an institution such as theirs doing business in Australia, for bad as the state of things was in many parts of the continent a year, two years, and three years ago, the cumulative effect of these seven years of drought had greatly intensified the mischief. One of the latest estimates of the number of sheep surviving in the four States of New Suth Wales, Victoria, South Australia, and Queensland was 42,000,000, whereas twelve years ago the numbers were estimated at 102,600,000. It might at first sight be thought that statistics such as these concerned, the pastoral companies rather than the banks, but it was not so; a decrease in the number of sheep meant a corresponding decrease in the number of bales of wool for export and a decrease in the bills of exchange offering in connection with its shipment. Nor was the pastoral industry the only one which had directly suffered. In some parts, especially in South Australia, the agricultural industry was quite as important, if not more important than the pastoral, and the suffering among the small farmers in that State was at one time very great. Relief, however, came to them sooner than to the pastoralists. Then there were the frozen meat and the butter industries, both of which, though started in comparatively recent years, had already become important factors in the export trade of the continent. Both of these industries came to a complete standstill in the later stages of the drought, and they were only now beginning to look up again. Owing to this falling off in the natural produce of the country, the export trade from Australia had suffered during the last year or two very considerable diminution. Luckily, the demand for gold in various parts of the world came to the assistance of those who had to make provision for commitments at this end, and very large shipments of specie and of bullion had been made, amounting in the aggregate to over £13,000,000, in the course of the past nine months; otherwise the balance of trade would have been seriously dislocated. These figures pointed to the immense reserve of power which Australia had at her command in her gold mines, even in times like these. Although he believed that there still remained a few unfortunate localities which had had little or no rain, yet the pastoral and agricultural districts as a whole had had an abundant rainfall—spread, fortunately, over a cnsiderable period of time, the country thus escaping those disastrous floods which so often attended the breaking up of a drought. From every quarter came encouraging accounts of the situation all over the continent. The harvest in the chief wheat-producing State bade fair to approach the record. In the pastoral districts they heard of creeks running and lakes full of water which had been dry for years, the only complaint heard being that while there was abundance of "feed," there were not enough sheep to eat it. This was a point which must not be lost sight of. The shortage in the flocks, which amounted, as he had stated, to about 60,000,000, had to be made good, and this could not be done in one or even in two years, for there was nothing but the natural increase of the flocks to bring it about. While the outlook at the present moment was most promising, they should content themselves with looking forward to a gradual return of prosperity to this, the most important industry of Australia. From the financial point of view, moreover, matters looked more satisfactory than they did a year ago. Within the last few weeks the situation had greatly improved by the conclusion of the arrangements for the renewal of the £5,000,000 of Victorian bonds, which matured at the end of the current year. Operations of this nature—for dealing with previously existing indebtedness—were sure of a sympathetic reception here, tempered, of course, by the exigencies of the moment and the condition of the Money Market. In this case, moreover, the resolute way in which the present Victorian Government had set to work to reduce expenditure and to put their finances in order had won widespread approval, and had contributed not a little to the success of the operation; but borrowings for the purpose of fresh expenditure would not meet with so favourable a reception. Quite recently we had read in the newspapers that the question of building a brand new city to form the capital of the Commonwealth had again come to the front. To those who knew Melbourne and Sydney—both of them cities of which Australians were justly proud, and either of them well fitted to be the capital of a continent—it was difficult to recognise either the necessity or the wisdom of the course proposed, for it must involve a considerable outlay of money, which would have to be borrowed. Turning to the balance-sheet, he stated that, comparing the figures with those of last year, a gratifying increase would be noticed in the deposits, and at the same time a large reduction in the liabilities to the public. The latter was chiefly caused by the repayment of the penultimate instalment of their terminable deposit receipts, and it was pleasant to think that by the time they met again the final instalment would have been paid. Ten years ago their obligations under this head amounted to nearly £1,000,000. Their cash assets amounted to over £1,088,000, against cash liabilities of £1,156,000, which was equal to no less than 17s. 9d. in the pound; while, analysing the figures from another point of view, the proportion which their liquid assets bore to their total liabilities other than the perpetual stocks, it worked out at very nearly 12s. 9d. in the pound. They were thus in an exceptionally strong position—unnecessarily strong, he might almost say—but certainly in a position which would enable them to take full advantage of the improvement which seemed to be now generally anticipated, and for which they had all waited so long. He concluded by moving a resolution for the adoption of the report and the application as therein recommended of the amount available for distribution.

Mr. James Tulloch seconded the motion, which was unanimously adopted.

ESPIRITO SANTO AND CARAVELLAS RAILWAY.

The seventh ordinary general meeting was held on Friday, October 23, at Winchester House. Mr. Robert H. C. Harrison, who presided, reminded the shareholders that twelve months ago they received a dividend for the first time after a period of five or six years, during which a great deal fas done towards putting the railway and the trapiche, or warehouses, in good working order. The traffic of the railway had continued to improve, with the result that the gross receipts for the financial year ended April 30 last showed an increase of £1,300, while the expenses had been reduced by about £700. For the previous year the net profit was only £800, whereas for the past year it amounted to the substantial sum of £2,876. The line had been well maintained and was now in a better condition than was the case a few years ago, and the same might be said of the rolling stock. So far during the current year the traffic had not been quite so satisfactory as it was during the corresponding months of 1902, but now that the coffee crop had begun to be moved it was hoped that the returns would soon increase again, and that the next accounts would be fairly satisfactory. With regard to the warehouses, situated at Rio de Janeiro and at a considerable distance from the railway, he stated that the earnings had aggregated nearly £3,000 net, exclusive of £700 spent on its up-keep. Having mentioned that the guaranteed interest payable by the State of Espirito Santo had been received up to December 31 last, he said that they might not require to fall back on the guarantee

next year if the traffic should go on growing. It would be very satisfactory i fthey could pay their dividend without having recourse to Government assistance. Out of the available balance of £6,958 it was proposed to recommend a distribution of 5s. per share, less income tax, leaving £2,174 to be carried forward. The Leopoldina Railway had been extended to Cachoeiro and so brought into contact with this company's line. Probably some arrangement would be made to connect the two systems, and it was thought that the extension would ultimately ten dto bring traffic to their railway. The Government of Brazil were proposing to carry out improvements at the port of Rio de Janeiro, and it appeared that the plans included the acquisition to carry out improvements at the port of Rio de Janeiro, and it appeared that the plans included the acquisition of the company's warehouses. The board also learned that a Bill was recently passed through the Senate under which the expropriation value of their warehouses would be seriously prejudiced. Instead of getting 20 years' purchase, which would be a moderate price, they would secure only 15 or, perhaps, not more than 12 years' purchase, should the provisions of the Bill be strictly carried into effect. All the negotiations the board have had in this matter have rather hampered them in dealing with the trapiche. Some time ago they were approached and asked if they would name a price at which they would dispose of their warehouses, but before the negotiations had proceeded very far the prospective buyers found that the warehouses would be included in the new dock schemes, and the Government thought then, even of reducing the value of the land and warehouses that they expropriated for their purposes. The company, it has been clearly shown, can earn a profit of £3,600 a year net, and the proposal would mean a considerable loss to it. The board were using their best endeavours to safeguard the interests of the shareholders, and had been in communication with the Foreign Office with a view to a protest being lodged against the proposed action of the Brazilian Government, as it affected the company's property. The board can only hope that something may come out of these negotiations, as it can hardly believe the Government is going to take over the property in the manner they propose. It is not as though the warehouses were in a bad condition, tumbling away and so forth. He had made enquiries about this lately and understood from people who knew the property and are quite independent, that they are the best in Rio. Not only that but the company has spent the substantial sum of £700 this year in keeping the pier and warehouses in thorough order. He concluded by moving the adoption of the report, which was seconded by Mr. Walter Henty and agreed to.

WHITE PASS AND YUKON RAILWAY.

The sixth ordinary general meeting of the White Pass and Yukon Railway, Limited, was held yesterday at Winchester House, Old Broad Street, E.C., Mr. Charles Colin Macrae, chairman of the company, presiding.

The Secretary, Mr. W. H. P. Stevens, having read the notice calling the meeting,

The Chairman, in the course of his speech, said:—Turning to the report you will see the gross profits are £126,515, interest on debentures £5,268, and sinking funds £16,462, making a total of £69,000 odd. The expenses amounted to £13,438, making a total of £82,568, which deducted from £126,515, gross profits, leaves £43,947, as a net profit balance for the year. Adding to the £82,590 brought forward from last year, you get a balance to the credit of profit and loss of £126,537. Out of that we propose the apportionment you see in the report, which includes the payment of a final dividend of 5s. per share, making 5 per cent. for the year, leaving to be carried forward a balance of £44,326. It has been very gratifying to me, as a railway man, to find that your traffic has not fallen off. You might have thought, looking at the figures, that that was so, but an analysis of the figures shows that there is no falling off in freight which is the most important thing. On the railway you have a falling off of 5,376 tons, but you have carried 5,455 more tons, on the river, so that practically the one counterbalances the other. That I call a very satisfactory feature. Another satisfactory feature is the economy in working, which resulted on the railway of a saving in expense of $183,916. The percentage of working expenses to gross revenue is higher, but when you come to the betterments I do not think you will be surprised. But when you come to look at the earnings, the result is different. Although you carried practically the same number of passengers and the same amount of freight as in 1901, the earnings are less. There is a fall in the earnings of the railway and river divisions from 2,600,000 dollars gross earnings of 1901 to 1,874,000 dollars in 1902, and when you come to net earnings you get a reduction from 769,000 dollars to 263,000 dollars or nearly 66 per cent. But fortunately you bring in the earnings of the winter mail service which have not been included in previous accounts. These amount to 90,000 odd dollars, which reduces the total loss in earnings from 769,000 dollars in 1901 to 353,000 dollars, or not less than 50 per cent., in 1902. The cause of the reduction in the earnings is that we have been suffering from a rate war, of which you have heard. Though we suffered in the fight, we did not succumb, but maintained and even strengthened our position as we have worn down the competition which was disastrous to both parties, and trade has settled down to its normal condition. I should now like to turn to two general topics. There will be shortly circulated among you a pamphlet out of which I shall read a few brief extracts. It contains extracts from the official report of the Goldfields of the Yukon for the season 1903. These official reports give the most valuable information. It appears from the report of the Deputy Minister's report, that he had personally visited the district, and he says that as the result of his personal observation he fully concurred in the commissioner's opinion as to the permancy of the country as a mining district. The days of inflation and extravagant prices were passed, and the district could be said to have entered upon an era of steady progress and staple improvement. He also said that the mineral resources are only beginning to be understood and were pronounced to be practically in exhaustible. The commissioner and Deputy Commissioner also referred to two important discoveries in the territory traversed by this river, one a copper mine near White Horse, with regard to which the deputy minister fully satisfied himself as to the richness of the ore. The importance of the development of this mine cannot be overlooked. There are coal districts, and coal seams, which are likely to promise very well. The chairman then read an extract from the report of the commission, and continuing, said, before I sit down I should also like to allude to the Alaska boundary award. It has a special interest for us as it settles the question as to the jurisdiction over the first twenty miles of railway between Scagway and the summit of the White Pass, which will continue to be American as heretofore. As British subjects, we must regret that the British contention was not sustained by the award, and that the whole of our railway will not be under the British flag, but we must bear in mind that this is more a matter of sentiment than of business. We have a natural gateway giving access to this enormous region, both British and American, and both nations must continue to use this gateway in common. A good deal has been said about all Canadian and all American routes to Yukon, but this can only be when the territory has been developed sufficiently to support it. At present an all Canadian route which would have to run through hundreds of miles of barren mountains would be too expensive, and could not possible earn enough to pay its working expenses. Nothing can deprive your route of its natural advantages. I now move the adoption of the report and accounts.

The Hon. Sidney Carr Glyn, vice-chairman, seconded the adoption of the report and it was carried unanimously.

The dividend having been declared, a special vote of thanks was passed to Mr. Newell and the staff abroad, for their services in overcoming the rate war.

Mr. Graves addressed the meeting at some length on the prospects of the company, explaining the difficulties against which they had to labour, which militated against large profits being earned.

The resolution was carried unanimously, as were also resolutions re-electing the directors and re-appointed the auditors, and a vote of thanks to the chairman concluded the proceedings.

NEXT WEEK'S MEETINGS.

Monday, November 2.

Aerated Bread Company.—Cannon Street Hotel, noon.
Bank of China and Japan.—Cannon Street Hotel, noon.
Mercantile Bank Assets.—Inns of Court Hotel, noon.
New Zealand Agricultural.—Institute of Chartered Accountants, 2.30 p.m.
Swazieland Corporation.—Winchester House, noon.
San Pablo Nitrate.—Winchester House, noon.

Tuesday, November 3.

American Pastoral—85, London Wall, 2 p.m.
Bucknall and Son.—Cannon Street Hotel, noon.
Colonial Gas Association.—Suffolk House, 1 p.m.
Imperial Continental Gas.—Cannon Street Hotel, 2.30 p.m.

The Investors' Review.

The Consolidated Gold Fields of South Africa, Limited.

One's first impulse in dealing with the report of this company's board for the year ended 30th June last is again to mock. The INVESTORS' REVIEW has mostly indulged in derision and mockery when dealing with the reports and accounts of this Pretoria bubble company in past years. Now, however, we hesitate, for its story is beginning to be suffused with tragedy, the harvest of its past misdeeds and folly, long foreseen by us, seems about to be reaped, and it is therefore proper to deal with its affairs in sorrow rather than with contempt. On the side of the directors and those who have made their piles out of the concern in the past mockery and disgust still come uppermost; but when we think of the tens of thousands of people throughout the kingdom who have been ensnared by the devices of those who originated this company the mind becomes charged with pity and regret. Who can imagine the sufferings which must have fallen to the lot of these victims since the days when the late Cecil Rhodes and his pal C. D. Rudd gloriously annexed to themselves 100,000 shares in the company, just when the price of these shares was about £18 each, in order to relieve it from their founders' claims, and went away triumphant. We notice, by the way, in the report just issued that the surviving C. D. Rudd has now slipped out of his seat at the board and gone. What can we infer from this step but that the company is no longer of use to him, he likewise having "made his pile." But there are thousands of shareholders throughout the kingdom and on the Continent who cannot, or will not, get out, who sit hugging their investment in a spirit of despair, and to whom the news that no dividend could be paid on the ordinary shares for the past twelve months must have come almost like the crack of doom.

What, then, is this company whose balance-sheet still foots up to more than £8,000,000? Ostensibly it is a company organised for the purpose of furthering the mining industry in the Transvaal. It is supposed to devote all its energies to the discovery and development of gold bearing reefs, and to look to making its profits out of the dividends yielded by the mines it has brought into bearing condition. That is the view of its functions invariably put forward in the reports of the directors. You always find there the same fustian or piffle about the prospects of this mine, the good results obtained from that boring, the excellent reports made upon such another piece of ground. Estimates and actual results, when any, are used as the stock-in-trade of the cupidity-exciting report concoctor, and this year, failing much to say on results, with nothing to boast of either in "deals," pen power of the directors and of their managers and engineers in South Africa is concentrated upon the Chinese labour problem. They suggest nuggets galore as product of imported coolie labour, in the language of the vulgar, "go for it bald-headed," their real, their invariable, object being to try to beguile their miserable shareholders and the ever gullible public into buying more shares—to "average" or as "a paying spec"—in order to reap that awful profit, sure to come when the Chinaman is down in the bowels of the earth digging out the gold.

Does the Gold Fields Company reality in any measure correspond to this ideal picture of a company strenuously labouring to make the mining industry a profitable one? No, it does not. Has it ever done so? No, it never has. The INVESTORS' REVIEW has described it from the first and throughout as a finance "bubble" and bucket shop, and that is truly what it is, and always has been, a thing true men and self-respecting would never have touched with the longest of Joe Chamberlain's long spoons had they known its real character. Its capital has been piled up precisely as bubble or wind-blown share capitals always are. The thing began with shares created and handed round to take over sundry interests and rights in the Transvaal owned by C. D. Rudd and the late C. J. Rhodes, who accepted 200 founders' shares as the "purchase money," shares that entitled them to one quarter of the net profits, whatever these might be. In 1892 the company was reorganised in order to absorb, for more shares created and given away, three other companies, and so it has gone on throughout until at the present time the share capital is £3,250,000, most of which is merely wind paper wealth in shares created out of nothing and handed over for the shares of other companies acquired, which shares were also paper and little or nothing more. Originating thus the company has never been and is not now an efficient developer of South African mineral resources. That is not its true object. It is to-day what it has always been a share manufacturer and vendor, a market operator, playing with shares to make profit for the privileged few first, for its own shareholders afterwards, *longo intervallo*. It raises prices and depresses them at will. It is a great dealer in options. It buys and sells to make a profit out of you simpletons, whenever opportunity offers, and always from a privileged position, because it holds so much of the "capital" in many of the companies it has fathered, or helped to bring into existence that it can generally make prices what it pleases, could do so always before the post-war blight fell over markets, and began to bring the Gold Fields down to its true level.

From this point of view the whole story of the company is one of repulsive deceptiveness, and the bulk of its profits have often been in the nature of plunder of contango money and fortnightly "differences" wrung out of the unfortunate wretches who bought shares "dumped" upon them at high prices, and clung to their disastrous investment until their resources were exhausted. As markets seemed to give scope they could play "bull" and "bear," always with a view to piling up gains, gains representing losses by the

public. That has been the history of the concern since it ceased to be able to put a stream of new companies on the market at preposterous or downright robbing figures in the Hooley, William Mendel, or Whitaker Wright manner. The business has, therefore, in our view, been saturated with the company promoter's kind of dishonesty from first to last, with nothing genuine and sincere about it, nothing upright and honourable, only a perverted ingenuity in utilising every market device with a view to gain. Therefore we have throughout poured contempt upon the company; mocked at it, derided it, denounced those who used it for loaded-dice play upon the market; and now the justness of the Investors' Review's attitude is beginning to be apparent even to the poor misled crowd which is always so fascinated by the interested prophecies of vendors and tempted to lose its money. What a wise man C. D. Rudd was supposed to be when, in the November days of 1898, he declared that the Simmer and Jack was going to produce £24,000,000 of gold of which £10,000,000 would be profit. That the total 3,000 claims owned by the Consolidated Company would yield some £210,000,000 in gold, 35 to 40 per cent. of which would be profit. And when he went on to say that in his opinion the true cash value of the deferred shares of the Consolidated Gold Fields Company was £100, everybody said "what a great prophet this is," while the Investors' Review was a brimstone pessimist. Ah! well, and to-day C. D. Rudd has slipped out of it, all without saying good-bye or thank you. He has probably made his "pile" and the Consolidated Gold Fields Company interests him no more. Would you have not been happier or richer, good reader, if you had believed the voice of one who had nothing to vend in those days?

We never get a list now of the shares held or created for vending purposes by the company. The publishing of such lists gave an inconvenient handle to those who ventured to criticise its affairs. Also the profit and loss account no longer contains any information with regard to the sources of the "profits," so that we are unable to say how much came last year from gold mining, how much from market operations, contangoes, differences sucked out of the market, from option money pocketed, and from that good trade with the esurient in "Northern Coppers." In the year ended June 30 last, for example, the profit and loss account tells us that the gross income was about £472,850 obtained by "sales of investments, dividends, commission, and sundry receipts, less amount written off." That is all dark enough, but the report of Manager Webb to the board mentions incidentally that the Simmer and Jack Proprietary Mines made a profit of £99,387, and the Robinson Deep one of £153,408 last year, and as the bulk of the capital of both these concerns is probably still the property of the Consolidated Gold Fields Co., presumably they received their share in these profits, but that cannot have amounted to half the sum credited as gross profit on the year in the books, especially as Webb's figures come down two months later than those of the balance-sheet.

So the larger share of the year's gains came from market play, for the company cannot have done much in the way of earning commissions upon fresh capital issues or on supplies to the mines in its control, because business was so poor, and because new companies could not be floated. There seems evidence also in the balance-sheet that its mere trading account must be small for "stock and sundry assets" amount to only £5,836, or £62 more than a year back, and we may be quite sure that if the company had been doing a large business in dynamite supplies, in machinery and tools, in provisions for the mine hands, and so on, the stock, etc., could hardly have been so small as this. Ah, but wait until there are 650,000 human machines at work in the mines and on the railways. Then you shall see new companies by the score, and the hundred.

What does the balance-sheet reveal to us with regard to the company's chief business? A table is appended which will enable the public to draw inferences. Some, however, of the points in that comparative table may be emphasised here by way of instruction, and the most notable is the diminished contango money employed on the Stock Exchange. Reduced speculation has evidently compelled the board to take up a great quantity of shares, which twelve months before it was carrying for outside buyers and earning money upon. We draw this inference from the fact that the item "investments in shares at or under cost" has increased between June 30, 1902, and the same date in the current year by £1,037,000 to a total of £4,548,000. At the same time the "loans on short call," that is to say the fortnightly contango money employed on the Stock Exchange in bolstering the price of the company's wares, has declined by £1,016,000. Sundry debtors, moreover, owe the company £721,000 less than they did on June 30th, 1902, so that the company has found the demand for its help decidedly smaller. That is the most pleasant inference we are able to draw from the comparative figures of the two years' balance-sheets. It shows that a good many people have taken our advice and cleared out. Some of the other items are suggestive enough. About £19,000 more, for instance, has been invested in "properties and ventures," but the total amount therein is singularly tiny in view of the professed objects of the company, only £108,000. "Mortgages and cash advances," however, have gone up by £122,000, and that is presumably money lent to dependent concerns, and "real estate and buildings" have risen by £33,000 to £161,000. Even office furniture, an item that we should have thought a company of this stunning wealth would have written off long ago, shows an increase of £454; but there is £29,000 more cash in hand.

The total of the balance-sheet is about £542,000 less than it was twelve months back, and part of that decrease is no doubt due to the fact that the bold board paid a dividend of 25 per cent. on the ordinary shares for 1901-2, thus sweeping away £500,000 at a blow. It was not able to play the same game this year, for its resources are diminishing, and, indeed, the balance at the credit of profit and loss after the undistributed profits of the past year have been added is £199,000 below that on June 30, 1902. There seems also to be a decrease of £365,000 in the amount borrowed from the company's bankers. The floating debt, however, is still £1,370,000, and adding the £425,000 of debentures still outstanding the company owes altogether £1,795,000, exclusive of bills payable, which have gone up in the twelve months by £44,500 to a total of £78,000. Naturally, as its debtors paid it off, it reduced its borrowings.

Is the sum at credit of profit and loss real? All depends upon the value of the shares which the company owns, and has invested in during the past year. The auditors give us no information worth a rap as to what the real position is in that respect. All that Messrs. Turquand, Youngs and Company say is that the investments, "after making such provision for contingencies as is considered necessary by the directors are taken at or under average cost price and in no case over market price on June 30 last." But who makes this price in most cases? Surely the Consolidated Gold Fields Company itself, and the larger its proportion of the capital of its various dependent companies the more absolute becomes its command over market quotations. Therefore the figure against investments in shares at or under cost may mean anything or nothing, and we should like to see how the balance of credit at profit and loss would show up after, say, a compulsory liquidation.

One fact is plain enough. Including the bills payable, the accrued interest on debentures, and the dividends unpaid and unclaimed, the company owes as floating debt £1,447,000 compared with £1,765,000 a year back.

No wonder, it dared not pay a dividend for the past year on its ordinary shares. It has not the means, for a mere 10 per cent. would have swept away £200,000 of its cash, and where is more to come from in these times? All the money at command will be required in sustaining the market, and should the mining industry in South Africa really become alive again, with or without Chinese labour, millions of fresh capital will be required in order to bring the properties the company has played with so long at the public expense into bearing condition. That is the truth about the Consolidated Gold Fields of South Africa, Limited.

One touch of the grotesque may be given in conclusion to lighten the gloom. The directors gravely inform share-

holders and all concerned that they undertook to guarantee £1,000,000 of the first £10,000.000 to be subscribed or guaranteed by the Johannesburg magnates towards the £30,000,000 contribution of the Transvaal to our war expenditure. To this amount the company's liability is limited, they declare, and we quite believe that, but they go on to say that the first instalment must be issued at par bearing 4 per cent. interest. Thus delicately is the news conveyed that no loan can now be issued at all. There is just about as much chance of this company or of any one of the mine share manufacturing potentates of Johannesburg and Park Lane contributing £1.000,000 as £30,000,000 out of their own resources, to the costs incurred by us on the war as there is of a scientific utilisation of the substance of the moon in the manufacture of green cheese. Neither the Gold Fields Company nor its associates ever intended to find one farthing of this money. All they looked for was a commission on its issue. Was it 10 per cent. they underwrote it for. or what? The report before us does not tell, but its solemnity in handling the subject is worthy of a congregation of barn owls.

Prosperous Argentine Railways.

It is quite a relief in these days to be able to place on record something of a pleasant character, and we feel quite grateful to the railways of the Argentine Republic for affording us the opportunity of making a few cheerful observations. Six months ago we headed an article dealing with the railway position "Booming Argentina," and the lines since have done their best to justify the use of such attractive words. Most of the companies complete their annual accounts to June 30, and during the fiscal year to that date enjoyed prosperity greater than has been experienced for many a day. Last year looks all the better because comparison is made with a period disturbed throughout its length by the possibility of war breaking out with the neighbouring Republic of Chili, and we trust the marked recovery from the universal depression inevitable in such times will teach the people of South America and other countries that their true interests lie in living at peace with their neighbours, and not in indulging in senseless wars with their attendant ruin and disaster to all concerned, victors and vanquished alike. We have had a bitter lesson here, and from it others would do well to profit.

A glance at our first table will show that an enormous expansion has occurred in gross earnings, and since Argentina is essentially an agricultural country it need hardly be said that abundant harvests are chiefly responsible for the highly gratifying increases. From all parts of the land we hear of largely increased areas under cultivation, and some idea of the splendid character of the crops can be gathered from the fact that the quantity of wheat and barley carried by the Buenos Ayres and Rosario Company during the six months ended June 30 last showed an increase of no less than 310 per cent. compared with the opening half of the preceding year. True the latter period was a particularly bad one, but nevertheless the rise is remarkable. Other undertakings, if not reporting quite such sensational advances, also did wonderfully well, excellent results being shown by the Buenos Ayres Western, Buenos Ayres and Pacific, and even the unhappy little Entre Rios Company. Not only was the quantity of wheat exceptionally great, but the quality was reported to be much improved, and is, we are told, destined to rank high amongst the world's supplies. With such abundant crops it was inevitable that prices should have a tendency to give way, and for this reason the cereals were not so readily marketed as they would have been had quotations held, so that notwithstanding the big amounts already carried, in some directions there was still a good deal of traffic to come into the current year, notably on the Buenos Ayres and Pacific. Next in importance to cereals, perhaps, is the considerable development in live stock carriage, notwithstanding the closing of the United Kingdom ports to the importation of Argentine cattle.

The growth is largely due to the spread of freezing establishments, considerable activity having been stimulated by the extraordinary profits made by certain companies during recent years. The business, however, is a very uncertain one, liable to very marked fluctuations, and too much dependence should not be placed on the continued expansion of this source of revenue. Of other goods traffic there is a rather notable decline in wool, and it is perhaps inevitable, that with the growth of agriculture, sheep rearing should be inclined to fall away. Much higher rents are paid by agriculturists than can be obtained by sheep farmers, and naturally the land goes to the highest bidder. On the Great Southern system, however, prospects for the current year are held to be satisfactory, and a development of the wool output is looked for should the seasons be favourable. This line and the Buenos Ayres and Pacific report big increases in hay traffic, but the Western shows a quite modest improvement, and the Rosario a decrease. It is probable that on all railways this traffic will fall away in the current year as, with the stoppage of live stock export, less hay is brought to Buenos Ayres, and we must not forget the gradual supersession of horses by electric traction by tramway companies nor the falling off in the export to South Africa. Of the wine carrying lines the Argentine Great Western can point to an increase, but the Buenos Ayres and Pacific shows slight contraction, for although the grape harvest in the Andine provinces was up to the average business affairs generally have not yet recovered from the crisis of the past two years. A project for the abolition of the inland revenue tax of 2 cents. per litre upon wine is before Congress, and there seems every prospect that it will become law and take effect from January 1st next. The measure should afford relief to the trade, and will, we hope, tend to improve business in the Cuyo provinces. It will be noted that the Buenos Ayres Great Southern Company does not report a sensational advance in any particular branch of traffic, but steady improvement is observable in general business, particularly passengers. Other lines also did well in this respect, the advances being the usual outcome of prosperous general conditions. It is noteworthy, however, that the competition of the Anglo-Argentine electric tramways caused a falling off in certain suburban traffic of the Buenos Ayres Western.

Coming now to working expenses, these of course advanced with the much heavier traffic handled, but on the whole the ratio to gross income still shows a tendency to decline. The Buenos Ayres and Pacific and Rosario Companies have improvements approaching 4 and 3 per cent. respectively, the Buenos Ayres Western was better

by almost 1 per cent., and of the two advances in proportion, one, the Great Southern, was less than ½ per cent. The Argentine Great Western makes the poorest display, the rise being well over 1 per cent. We must not forget too that the improved sterling value of the paper dollar means increased charges under certain items of expenditure, and that advantage has been taken of the

flourishing conditions to increase the outlay on the upkeep of properties. On maintenance the Great Southern Company spent an additional £38,557, while the extra cost of handling traffic larger by £162,558, was only £25,369. Then in the Western Company's increased outlay of £107,389 we find special charges of no less than £76,200, while the excellent Pacific figures call for no qualification. Our next table sets forth the amount of net earnings on operations, and the total balance available for appropriation, and these of course, present a very satisfactory appearance.

* On Preference Stock.

The Rosario Company has an advance in the sum disposable of over £300,000, with a consequent rise in the dividend from 2 to 4 per cent. per annum, and an improvement of over £100,000 in the sum carried forward. The Buenos Ayres and Pacific has about £86,000 more to deal with, and so small is the quantity of its ordinary stock that a 5 per cent. dividend is easily paid and a much larger sum carried to reserve. Next we have the Buenos Ayres Western dividend up 1 per cent., and the amount placed to savings £70,000 higher, while the Great Southern merely maintains the old rate, owing to its increased capital. It, however, sets aside an additional £20,000 to meet in part the shrinkage in value of the reserve fund Consols. One or two matters distinct from actual operation are worth mention, and perhaps the most important is the contemplated spending of something between £800,000 and £1,000,000 by the Pacific Company in obtaining access to the port and docks of Buenos Ayres. Practically all the land necessary has been acquired, and complete plans are before the Government for approval, and as there will be a big saving in terminals and charges now paid to other railways, it is hoped that the outlay will not mean an additional charge upon revenue. Details have already been published concerning the breaking of the agreement arrived at in June last between the Buenos Ayres Western and Bahia Blanca companies, and although the directors of the former are quite within their rights in refusing to carry out the proposed purchase, if they did not consider it advantageous to their shareholders, it seems a little strange that a proper examination of the Bahia Blanca system was not made before an agreement of any sort was arrived at. But it is now practically admitted that the Buenos Ayres Great Southern, with which the Western would have been a formidable competitor had it acquired the Bahia Blanca lines, had much to do with the breakdown. Concerning prospects for the current year, on all sides most optimistic language is indulged in. Increased areas are being put under cereal cultivation, abundant harvests—30 per cent. bigger than last year—are looked for, camps and live stock are looking well, and we are told that only normal conditions are required to ensure prosperity for the coming year. Certainly traffics to date are wonderfully good, and for the present at least there is no dark side to the picture, unless it be that locusts are reported in certain of the northern provinces. Let us hope that this terrible scourge will not make its dreaded appearance in the great grain producing districts just when everything seems so bright, and that the Government by careful administration and vigorous retrenchment will do its share in promoting the interests of those entrusted to its care.

Economic and Financial Notes and Correspondence.

The Road to Revolution.

In his speech at Bingley Hall, Birmingham, Mr. Chamberlain took good care to avoid any reference to the reforms outlined by Sir William Harcourt at the close of his masterly speech at Rawtenstall on the previous Saturday night. "Gentlemen," said Sir William," the object of the party of progress is not to make things dearer, it is to make life easier and more comfortable to every class of the community," and he went on to indicate some of the reforms this party demands—land reform, education reform, ecclesiastical reform, electoral reform, and so on. These appeals to high ideals find no echo in the mind of the Birmingham prophet of hate. All he is capable of is to hound the nation on towards unknown dangers, towards a breaking up of that Empire he continuallly brags about as if he had created it, and towards a probable domestic revolution. From his point of view, however, it is likely enough that he regards his proceedings and harangues as exhibitions of unusually successful "statesmanship," and he can certainly congratulate himself upon having diverted the minds of politicians of all parties from the urgent questions of the hour to waste energy in a heated discussion of about as much practical utility as a dispute between two parties at a fire whether or not there was enough water available to put it out. Free Trade statistics are quite unanswerable, and so is the teaching of history, of experience; but all that has no bearing upon the campaign of Mr. Chamberlain and his associates, a campaign of destruction, disintegration, class antagonism, and ruin; a campaign also of lies. It is to be feared, therefore, that little progress is being made in drawing the democracy of this country away from its real enemies, for Mr. Chamberlain appeals with great success to the brute side of mankind, and would seem to have brought from South Africa his latest conception of the proper attitude of traders towards their customers. An old South African trader, who used to wander up and down the veldt, told us once that he always kept a heavy club at hand on his counter, so that he might be able to quiet a nigger discontented with his purchase by a bash on the head. That may have been a successful method of conducting business on the veldt, but until Mr. Chamberlain proclaimed it we did not know that the manufacturers and merchants of this country found their advantage in dealing after this fashion with their civilised foreign customers. Now we learn that their line of action must be governed by truculence, and the foreigner compelled to buy whatever we offer him, under penalty of having his head broken. This is interesting, and may lead us far.

Meanwhile the prophet Joseph is unquestionably successful in turning aside the minds of the people from the

ghastly state of affairs now obtaining in South Africa. Nobody cares about the threatened importation of Chinese labour, the starvation existing over the greater portion of the annexed Republics, the discontent of Johannesburg, the criminal extravagance of the new administration, the danger of a native rebellion in the great territories blighted by the Chartered Company fraud; and our various little wars are no more thought of than if they were merely a row between Irish factions in Belfast or Limerick. With equal effectiveness the minds of the people are beguiled into forgetting the unspeakably dangerous state of domestic finance. The income tax is in this time of alleged peace 450 per cent. higher than it was in the Brummagem's false prophet's golden age, 1874, but nobody heeds, nor is there any well organised and steady agitation for the diminution of our burdens, whether in this or any other direction. The War Office and the Admiralty continue to spend tens of millions more than necessary or than there is anything to show for, and nobody challenges them for their criminal extravagance, or seeks to probe the corruption which lies beneath. So completely oblivious are we to the dangers threatening us, not merely in national affairs, but in private credit, in banking, in all our industries—embarrassed as they are by the withdrawal of capital through the tax collectors, to be as much devoured and wasted as if the money were collected in lighters and dumped on the Nore—that the Opposition leaders who triumphantly refute the economic balderdash emitted by Mr. Chamberlain and his assistants or hunger-gnawed backers scarcely ever allude to this side of the subject. Yet the danger is unspeakably great and the catastrophe of the profligate grows every day more imminent.

But it is perhaps just because financial dangers threaten us at so many points that the support given to this outrageous Birmingham quack is so widespread among classes above that of the mere ignorant and drink-brutalised working man. The present unclean and wholly disreputable protectionist agitation finds much support amongst that now large class of people who have "made money" by converting their businesses into limited liability companies on the basis of a swindling capitalisation. Such people will support protectionism or any other rogue's "remedy" in the hope of thereby hiding the consequences of their unprincipled rapacity. Tens of thousands of more or less ruined speculators throughout the length and breadth of the land follow these mawworm guides, keen for protection because they desire some pretext for becoming bankrupt with a show of decency. Merchants who have forsaken their business in order to gamble on the Stock Exchange will help in their thousands to swell the somewhat motley array. The esurient of all breeds are with Joseph. And land owners, who in the mass are ever amongst the most extravagant and thriftless of mankind, and whose riotous living has in the past generation multiplied mortgages and charges of all kind which the nominal owners are unable to pay off, and the burden of which they are no longer able to carry, naturally bellow for a protective tariff, because they think it will artificially raise the value of land and give them deliverance. Their farmers follow their lead because the English farmer in the mass is a stupid lout, often drunk, incapable alike of understanding the simplest principles of business and of tilling the soil with intelligence. Thus the protectionist outcry, essentially hooligan as it is, has behind it a multitude of all classes among the interested who cheat or who have been cheated, and the rank and file is formed of passion nurtured mobs, to whom the cry of "down with the foreigner" is the embodiment of all political wisdom. Humane political ideals are thus thrown back more than a century, but should the Birmingham agitation succeed those with a "stake" in the country may have plenty of leisure for reflection, unless they get hanged by crowds become wolfish. In a few years there may be no necessity to maintain a Colonial Secretary, and a War Minister will have to be dispensed with because there will be no money with which to pay his salary. Perhaps Mr. Chamberlain is after all consistent. He began his career as a revolutionist and revolution is obviously still the end he is pursuing with all the energy of his narrow, malignant and uninstructed mind. And the basest, most "foreign," most corrupt portion of the press is all on his side.

Sir Michael on Joseph.

Sir Michael Hicks-Beach did well in Manchester on Thursday, and "trounced Joe proper," proving himself to be a free trader of the good old sort. He repeated Lord Goschen's confession, and said he had made a mistake in voting for the small corn duty demanded by that ravening South African war, but he did not seem to be aware how the sequelæ of that war are plunging us into protection whether we wish it or not. The "free trade" truth of the Jingo Imperialist is thus little better than economic platonism, and protection with its attendant social results and destruction of wealth at the source is as certain to be upon us as a national bankruptcy if we go on as we do now. A "peace" expenditure such as the nation groans under means more taxation and the shifting of the burden on to the shoulders of those least able to bear it, and who, time given, will revolt. Also, it means the triumph of rascaldom in all its degrees, from the degraded and corrupt newspaper owner, who sells his soul for a half-penny or a penny, the minister who yields and yields to the popular, or supposedly popular, clamour, and the official who "boodles" down to the meanest human rat that crawls and squeaks.

"I am not a little Englander," Sir Michael declared. No, he is not. Would that he had been in the days when that gutter-snipe's taunt was meant to express hatred towards all who clung to the, alas, now legendary ideal of England's greatness. Had he been penetrated with love of English freedom and fair play, filled with a genuine, deep solicitude for the prosperity of the 40,000,000 odd of human beings heaped together in these islands, and mostly poor, Sir Michael would not have had to bemoan himself over his late colleague's ingratitude as he did. A certain pathos colours his lament, and it may excite regret for several reasons in many minds; yet is it no more than a confession of helplessness, the moan of a man who knew better and was weak enough always to give way. The passage is worth quoting:—

> Gentlemen, I was charged last night with being a "Little Englander" in practice. (Laughter.) I was an Imperialist; I preached the doctrine of the permanent union of the Empire in England—and in Canada itself—thirty or more years ago, when Mr. Chamberlain's politics did not go beyond Birmingham. (Loud and prolonged cheering.) I am not a "Little Englander" because I refuse to accept a new policy which I believe will injure the United Kingdom and substitute for goodwill friction between ourselves and our colonies, because it is labelled "Imperialism." (Renewed cheering.) No, gentlemen, and I don't think it was generous to utter that taunt against myself and others who as colleagues of Mr. Chamberlain supported him through the South African war—(cheers)—and perhaps specially against myself, who not only at that time, but time after time, at his wish produced large sums from the Exchequer to develop our Crown Colonies, or to relieve distress within them, or to unite the Empire by the Pacific cable. No, gentlemen, I don't think that is quite fair. (Cheers.) I am a wider Imperialist than Mr. Chamberlain. (Cheers.) I look first, in considering the Empire, to the mother country, which bears nearly all the great burdens of Imperial defence, which is the kernel and centre of the Empire, and without which the Empire would end. I think the interests and the welfare of forty millions of our people here are more important than the wishes and, as I believe, the mistaken policy of eleven millions of our fellow-countrymen in the self-governing colonies. But I am a wider Imperialist than Mr. Chamberlain because I look upon the Empire as a whole. He has made—well, half-a-dozen great speeches. He is the great, almost the sole, exponent of this new policy. I admire the ability and the energy with which he carries on his work; but he has never said a word about those portions of the Empire which contain an enormous majority of the total population of the Empire, and to which he seems never to have given a thought.

Commendable above all else that he uttered was Sir Michael's succeeding reference to India, that hunger-smitten land unknown in the geography of our Birmingham caucus manager. The "empire" so much vaunted by that abandoned political reprobate nevertheless hangs by India. Without the wealth drawn from it we should cut but a poor figure in the world, for the debt-swathed white colonies that still fly the British flag could not come to our help financially even if they would—and we may be quite sure they would not. But India can be made to pay, does always pay, whatever we please, and the trade of India is of the utmost importance, not only

to Lancashire, but to the whole kingdom. And it is not in Joseph's "plan." God help us, idiots that we are, to run after this fellow and hang on the words that fall from his blatant tongue. Read rather what Sir Michael says about India and the colonies right out and assimilate the wisdom in his words.

Mr. Chamberlain has never said a word about India—(cheers)—and about those portions of our dominions, the Crown colonies and elsewhere, which are practically under a non-protective tariff. (Hear, hear.) Now what is the position of India? India is in prosperous years not very far short in her exports of wheat to this country of the exports of Canada. Well, are you going to protect Canadian wheat against Indian wheat? (No, no.) Because I may remind you that the Canadian tariff is protective, and is intended to remain protective, against your manufactures as compared with their own, but the Indian tariff is on the basis of a much lower duty. Well, I think it is clear that if you give a preference in wheat to Canada, you must also give a preference in wheat to India. (Hear, hear.) But further, in considering the preference of corn, of wheat, or dairy produce, no doubt Mr. Chamberlain considered properly what were the principal exports of the self-governing colonies of this country. You must do the same with India. India can fairly ask for a preference on rice and on tea. So can Ceylon. Give them that, and there is an end of the proceeds of your tea duty. Then there is something more, and more important still. We have imposed on India, for the finances of which, as well as of the Crown colonies, the Imperial Government is almost as responsible as it is for the finances of the United Kingdom, what is virtually a system of Free Trade. We are told by those who can speak with greater authority than myself that there is a strong protective opinion in India. They are content to accept a Free Trade system as long as this country maintains it for herself. Let this country adopt the principle of Protection, and what will they say? (Hear, hear.) They will say, "Give us the freedom that you give to your self-governing colonies. Let us do what you yourselves think best to do for your own interest. Let us adopt Protection in India." What will the great cotton industry here say to that? (Cheers.)

Dalgety and Co.

No doubt the directors of this big Australian business derive much satisfaction from announcing that since the accounts were closed the drought which so long prevailed in Australia has completely broken up, copious rains having fallen over all the States with the exception of a comparatively small district in Queensland, and that the general outlook is materially improved. But what of the effect of those waterless years on that wonderful item in the company's balance-sheet, "advances on land, stations, stock, wool, and other produce, including property held by the company"? The figure at which it is entered in the accounts for the twelve months ended June 30 last just issued is the stupendous one of £4,345,572, or £89,489 more than at the same date last year, and we hope that the further severe drop in the dividend paid by the undertaking will lead shareholders to insist upon a complete disclosure of the composition of this great asset, and the method of its treatment during say the last seven or eight years. Shareholders in public companies are usually incapable of looking further ahead than the date of their next dividend warrant, and when a business regularly distributes to its ordinary shareholders dividends at the rate of 8 per cent. per annum details are never pressed for, and those chiefly concerned indignantly resent any attempt to open their eyes to the fact that the apparent prosperity is perchance somewhat fictitious. Until last year Dalgety and Co. returned 8 per cent. per annum to its ordinary shareholders with monotonous steadiness, but then came a 1 per cent. drop to 7 per cent., and for the past twelve months we get a further decline of 2 per cent. to 5 per cent. Naturally this falling away is reflected in the market value of the company's shares, and may be proprietors will now see that our past criticism of the company's ways and manners was deserving of attention instead of anger, and that the time has arrived for shedding the fullest light upon its affairs. Let us know the yearly amounts written off for depreciation on the lands, stations, stock and properties, on which the company makes such enormous advances. Are the directors in a position to assure us that, despite the long and terrible drought, the value of all this material fully covers the amount lent upon it? What is the value of the stock lost against which advances have been made, and has it all been duly replaced? Are assets which used to provide a return of 8 per cent. for the ordinary shareholders still valued at the old figure now that they produce only 5 per cent., or have they been correspondingly written down before profits were arrived at? What proportion of the £4,346,000 could be turned into cash at short notice? These are details which shareholders are entitled to know, because the floating liabilties of the company are enormous and are nothing like covered by the discernible free assets. Sundry creditors' and customers' balances alone amount to £1,296,551, besides which there are bills payable £298,790, liabilities by endorsement £160,741, and balances in transit between branches £136,112, or a total of £1,892,000. This leaves out of account £53,800 payable for debenture interest and final dividend, which will swallow up most of the cash balance of £82,680, so that there are only sundry debtors and customers balances, etc., £465,451, bills receivable £231,404, and about £30,000 cash to meet the mentioned liabilities. Freehold and leasehold premises £385,152 we take to be the buildings in which the business is conducted, and the reserve of £130,000 is in freehold property in Bishopsgate Street, where the company's offices are situate. Profits for the year, after providing an unnamed amount, which we should like to know, for bad and doubtful debts are returned at £271,880, from which expenses absorbed £120,420 and debenture interest £102,635, leaving the net profit at £48,825, a drop of no less than £36,023 compared with the preceding twelve months. The amount will not even provide the 5 per cent. dividend which the directors recommend, and the amount carried forward is £50,705 against £51,885 brought in.

Rand Experts and White Labour.

A meeting of members of the various South African scientific societies was held in Johannesburg on October 3, and it was convened to discuss the world-shaking problem of the shortage of native labour. With considerable pleasure we record the momentous decision of this wise, learned and, we believe, unbiassed body of men, to the effect that: "In view of the very unsatisfactory state of the Transvaal mining industry, we, as scientific and technical men, thoroughly conversant with the requirement of the said industry, and with the economic conditions prevailing here, and having carefully considered the various alternatives that have been proposed, are fully convinced that the permanent employment of large numbers of unskilled white labourers is too expensive, and that there are no present indications that the demand for unskilled labour can be materially reduced by the further adoption of labour-saving devices, and we are, therefore, strongly of opinion that immediate steps should be taken for the introduction of unskilled Chinese or other coloured labourers, under proper restrictions for their importation, employment and repatriation." It appears, however, this resolution was not carried unanimously, for there were no less than six dissentients, so Mr. Creswell and Mr. Wybergh are not alone in their convictions that white labour can be employed profitably and that the shortage of labour is, to a large extent, artificial. Mr. Creswell was present and made a sound, important speech. The true solution of the difficulty lay, he thought, in the employment of white men and the use of mechanical devices. The objections to white labour had been put before them with great skill by the mover and seconder of the resolution, but, if they would forgive him saying so, he did not think they had studied the subject free from Kaffir ideas, to which they were all wedded in the country. The white man was not a Kaffir, and systems and organisations suitable to the black were foredoomed to failure when tried with whites. He would not weary them with his own views, he said, seeing they had been freely expressed elsewhere, but he would like to point out one or two things as to the mechanical way of dealing with the subject. It was said that one white cost 10s. a day and one Kaffir 3s., and the former did twice as much work as the latter, therefore the net result in cost was as 10s. to 6s. They had only to look into that method of reasoning for a moment to see the idiocy of it. There was a Legislative Council in the country, and he believed they drew from the revenues £500 a year each. Now he would wager all he possessed that he would find two Kaffir indunas for every Legislative Councillor who would do the work for £20 a year, but he was confident none of them would endorse an economical

suggestion of that kind. The argument in regard to white versus Kaffir labour was based on a foundation no whit sounder. We gather from the report that Mr. Creswell evoked laughter from his audience, though whether it was of the derisory or approving kind we cannot judge. Another argument used, he went on to say, was that it was not desirable to have such men in the country at 10s. a day. He saw many of his friends in the body of the hall who four years ago did not object to the same man coming out to be shot at at 1s. 2d. a day, and if he chose to come out and earn 10s. a day what right had they to fake up all sorts of argument to convince themselves he was not desirable? Another objection urged was that the white man would not come. What had they done to get him? Nothing. No single company had proclaimed it to the world that white men were wanted. With regard to mechanical appliances he thought the resolution said more than they could affirm. It did pat them on the back and stroke their stomachs and tell them they had solved all the engineering problems, but that was not the position in which a body of scientific men should place themselves. With respect to the importation of Chinese, they were asked to commit themselves without any inquiry. In the evidence offered to the Labour Commission by the Chamber of Mines, they had placed before them the idea of an industry and a community whose prosperity was based on the work of 350,000 indentured labourers, living in compounds, in a state of servitude, without their women. Was that a natural foundation for the prosperity of any country? No, emphatically not. Two years ago they were told the solution of all their troubles was a reduction of Kaffir wages to 30s. The scheme was tried and the result was disastrous. A year ago they were told that Mr. Chamberlain would make things all right, that he was going round Uganda, and they would get all the natives they wanted from Uganda and Central Africa. Did that come off? Now they were saying that China was a short cut. Were they filling their bellies with the east wind again? It seemed to him they were. Thus Mr. Creswell, but his reason and his wisdom were spoken to the deaf. The bosses went to war to liberate whites from injustice and give them a vote. Now they want to turn every white man they can out of the country and fill his place with a Chinaman.

Charter-Blessed Rhodesia.

The short-sighted folly of those responsible for the conduct of that monster of human folly, the Chartered Company, and their desperate expedients to raise a revenue by hook or by crook, are brought to light in a startling fashion by Mr. Stanley P. Hyatt in a letter to the *Financial News*. Utterly oblivious to the past, and blinded by the assumption that the British are little less omnipotent than the Almighty the rulers of the vast territory known as Rhodesia confidently assert that the native recognises the futility of further resistance and the blessings of the white man's rule. In the security of this conceit they have promulgated a new taxation law raising the native's annual contribution to the revenue from 10s. to £2 per head, and have chosen to demand the money at a time when the agricultural industry is paralysed by the cattle plague, and when the mining companies are refusing to employ the natives as being incapable of heavy underground labour. This step in the opinion of Mr. Hyatt, who is on the spot, is likely to be fraught with very grave consequences as the natives are believed to be on the eve of another revolt, and "unless the unforeseen occurs, within the next nine or ten months, the civilised world may once again be horrified by tales of massacre and mutilations, followed by reprisals almost as repulsive." Mr. Hyatt suggests that the ordinance should remain a dead letter, but there is little hope of that as the Chartered Company is too desperately hard up to forego any chance, however small, of increasing its revenue. Although the men controlling its interests are no doubt fully aware of the dangerous game they are playing, they are growing reckless in their efforts to keep up the game long enough to get out at a profit by inducing this country to take over the territory, paying the price, and will no doubt attempt to enforce the collection of the tax. In that event the rising will certainly be precipitated, but if Mr. Hyatt's views of the feeling amongst the younger generation of the Mashonas are correct—and they seem to have good foundation in the thefts of a considerable number of rifles and ammunition from the police and volunteers—it is highly improbable that war would be long averted even if the tax were abandoned altogether. When the outbreak does occur it will be of a totally different character to the two preceding ones, as in them the fighting was mostly on the high veldt where Maxims could be used effectively, while the principal combatants now will be Mashonas who are a mountain race, and will therefore confine their operations to the hill country. Mr. Hyatt calls attention to still another danger signal in the appearance of a fresh M'Limo—a prophet corresponding to the Somali Mullah. No one knows who he is or where he is to be found, but he is at work inflaming the minds of the natives, and will have to be reckoned with. A rising, Mr. Hyatt somewhat cynically remarks, might be a fortunate occurrence for the promoters of most of the Rhodesian gold mining companies. These ventures floated on the strength of extravagant estimates are now in a very bad way, few being in a position to continue operations without early reconstruction, and the rising would furnish a pretext for closing down the properties without the necessity of a public confession of failure. But the probable loss of the country and the certain heavy expenditure of blood and money is a heavy price to pay for saving to these gentlemen the few rags of self esteem they still possess.

The Amalgamated Copper Company's Tactics.

A correspondent writing to the *Financial News* throws a great deal of useful light upon the motives actuating the controllers of the Amalgamated Copper Company in shutting down their mines as the result of what is known as the Heinze litigation. It is hardly the action of men who have received a crushing blow from unmerited misfortune, and we shall not risk going far astray if we assume they have not submitted to a voluntary sacrifice for the benefit of the world at large, American financial magnates do not work or live on these ideal principles. However, let us see what this correspondent says. He reminds us that the aim of this company has been to control the production of copper, and has always kept its operations secret from inquisitive inquirers. "Its vagaries have often disorganised trade, with great profit to itself." Quite so, precisely what we have said many times. Since it was organised it has been involved in a mass of litigation with the Heinze interests. Suits and cross-suits have been brought and a legal fight has been waged such as could only be carried on by parties with enormous monetary resources at their backs. The manœuvres of the combatants have been so complicated that it is impossible to follow them in detail, but the two outstanding facts are that Mr. F. Augustus Heinze contested the ownership of the Minnie Healey Mine, said to be worth £2,000,000, whilst an associate, Mr. John MacGinnis, brought an action against the Boston and Montana Mining Company to restrain them from transferring their capital stock to the Amalgamated Copper Company. In both cases the district court of Montana decided in favour of the Heinze interests. The matter is to be taken to the Supreme Court, and meantime the Amalgamated Company has shut down its properties. The MacGinnis suit, says the correspondent, is the more important of the two, as it threatens the very existence of the Amalgamated concern. The grounds of this suit were that the Amalgamated Company had acquired more than two-thirds of the stock of the Boston and Montana Company contrary to the laws of Montana forbidding monopolies, and the relief prayed for was that the court should adjudge that the Amalgamated Company had no right to these shares, but that they should be cancelled and surrendered to the Boston Company. There had been a previous suit on similar grounds, in which the Amalgamated Company was made a party, but as it is a New Jersey Corporation it was able to have the case transferred to the Federal Court, where it practically succeeded. Nothing daunted, Mr. MacGinnis had already commenced another suit, against the Boston and Montana Company alone, thus leaving no excuse for the case to be transferred elsewhere. It is this

suit which has now been decided by the District Court of Montana. The Boston and Montana, next to the Anaconda, is the most valuable property owned by the Amalgamated Company. It appears the Amalgamated people show no surprise at the decision, saying all the decisions given in the Montana courts are in favour of the Heinze interests. The principle laid down by the judge was that, under the common law, and in spite of the statute laws to the contrary, the Amalgamated Company had no right to own and hold the stock of the Boston and Montana Company. It is pointed out that if this is true the principle must also apply to the United Copper Company, which is controlled by the Heinzes, and which is, like the Amalgamated, a corporation under the laws of New Jersey. If, therefore, the Amalgamated has no legal right to own stocks in Montana companies the United Company has likewise no right to do so. If, by any possibility, the same decision should be sustained in other States, it would affect, it is declared, countless numbers of New Jersey corporations, like the United States Steel, American Smelting and Refining, United States Realty, and the Virginia-Carolina Chemical Company. The shutting down of the Amalgamated Company's Montana properties affects more than twenty companies and about 20,000 men are thrown out of work. It is, of course, impossible to say how long this shut-down will continue, but Reuter cabled on Monday last to the effect that the Mediation Committee having been unable to reach a decision acceptable to both parties, the only hope now lies in a special session of the Legislature. In any case, it is considered it will take weeks, if not months, before the problem can be solved. It is the natural belief that this section will advance the price of copper, and copper producers are rejoicing accordingly. On the other hand, no one knows how much copper the Amalgamated Company has in stock.

Mr. Skinner's Report on Chinese Labour.

The full text of it has reached this country at last, despite the laudable efforts made to keep it secret until the powers-that-be chose to publish it at what they considered to be the psychological moment. The Johannesburg correspondent of the *Financial Times*, for instance, writes to say "it was really amusing to notice what efforts were made to prevent leakage at Tuesday's meeting of the Chamber of Mines; it was not merely a meeting of closed doors, but of closed ventilators." However, copies were subsequently generously distributed to the press, and the South African papers give us lengthy extracts. Such a momentous document, for which the world has been waiting with almost agonising suspense, surpassed only by the anxiety with which it yearns for the report of the Labour Commission, is, doubtless, of importance, for Mr. Skinner was the envoy of the Chamber of Mines despatched to the East to investigate. And we may say at once that he favours the employment of the Chinaman as a labourer in the mines, but he details many difficulties; so many are they and so formidable do they seem as to drive us to the conclusion that if the labour problem is to be solved in this manner it will take a precious long time. Assuming that the Commission reports in favour of the importation of Chinese, and that legislative sanction is given, then the troubles will commence, not end, as the thoughtless optimists have been prophesying. There is in this report one important—supremely important—omission. It is silent on the question of cost. Locally, as is but natural, this has given rise to animated comment and criticism, and it will create no less astonishment and wonder in this country. Why this silence? we may ask, but the mine bosses are too wise to answer. Because it would be too dear? "Oh, no, bless you," the press has been assured verbally. "It is not prohibitive," at least the correspondent we have quoted has been given to understand so. This is not written in black and white, the mine bosses will evidently not commit themselves so far, but to interviewers and such persons they can run the risk of giving off-hand, indefinite replies. Mr. Skinner says he has omitted the figures in view of the publicity that will be given to the report, which we should have thought the very reason why they should be published, having regard to the vast number of persons directly and indirectly interested. Seeing they can invent only a paltry excuse of this kind, which is really an insult to the shareholders in Rand companies, it is but reasonable to conclude the magnates fear to publish the figures, for, if they could get the labour cheaply and easily, they would be only too glad to let everybody know. The *Financial Times* correspondent says he understands the cost will work out at about £4 per head, including importation and repatriation, and wages at about the rate of 50s. per month. If this be correct—and the correspondent thinks it is not likely to be much less and may even exceed the figure—then it explains this reticence of the mine bosses, for coolie will be much dearer than black labour and probably a little dearer than white would be.

Mr. Skinner, of course, thinks the Chinaman will be fitted physically for work in the mines, but, working under equal conditions, he hardly thinks he will give a better output than the ordinary Kaffir. Only the good characters must be selected, is his advice, care must be taken to weed out the bad. "From a health point of view it is most essential that physically strong men be sent, as, even using every precaution, it will be difficult to keep the death rate normal until the emigrants become acclimatised and used to their new surroundings. From an economical standpoint also, careful selection is imperative. The same initial cost applies to the unfit as to the fit, and the former has to be paid, fed and housed for, say, three years, and returned again to his country. All this expense is a very serious matter, unless a fair return is given in labour." Quite so, and we have no doubt the bosses will see to it that they do not employ the maimed and the lame. Before, however, it will be possible to get a goodly supply even of the fit the mines must wait until the pioneers can send back to China reports of local conditions and of how they like the work and the country. This will help to encourage others to come, but will not be the sole inducements. For Mr. Skinner admits "the best recruiting agent in China will be the regular remittance by the emigrant of a portion of his wage." Therefore, easy means of interchange between Africa and China should be arranged, he advises, and even payment of a portion of the wage made in China should the coolies desire it. "In recruiting," he adds, "it will be of great assistance to be able to give the assurance that if any coolie dies in South Africa, and the return of his bones to China is desired, the wishes of his relatives will be duly executed. This will be looked upon as a gracious concession, and will remove one abjection to emigration from the minds of many coolies." Of course, it will be necessary to keep a sharp eye on the sanitary conditions of these gentlemen, whilst permitting native customs, domestic habits and manner of living. Tact will be required, nevertheless, Mr. Skinner thinks "it can be done." In fact, he disposes to his complete satisfaction of most of the objections to be urged against the employment of coolies and gives abundant advice as to how to deal with them, in order to make them feel thoroughly at home, happy and comfortable, on good terms with themselves and their kind-hearted masters. In this manner he paints for us a beautiful idyllic picture of Celestial contentment and peace. Before, however, it will be possible to get even a pioneer the following terms must be offered him: (1) A free passage to and from South Africa, with food; (2) an advance, before leaving China, in order to purchase clothing and other necessaries, and to leave some money with his relatives, such advance to be deducted from his wage; (3) an average wage for adult male labourers at the rate of so much per day; (4) free food, and sufficient nutriment to sustain him for the performance of good work, the food to be agreeable to the Chinese; (5) free housing and medical attendance; (6) facilties for purchasing Chinese clothing and other necessary articles; also religious material at moderate prices. But when will they reach the Rand in numbers sufficient to materially increase the gold production? It needs no strong intelligence to foresee that it will be a long, long while. We have yet to wait for permission to be given to employ them before the preliminary steps can be taken to start recruiting. However, it is sufficient to take Mr. Skinner's own views on this question, for investors and speculators will learn even from him that Chinese labour is not going to end their trouble yet awhile.

"If the reports to China from the Chinese labourers are favourable, I consider that it would only be a matter of months before the labour supply from China would begin to affect very appreciably the production of these fields." Suppose the reports are unfavourable, what then? And how about the "prosperity" of South Africa itself?

The Water Arbitration.

When the East London Water Company had finished its attempt to convince the Arbitration Board that its undertaking was worth seven and a quarter millions, the arbitrators decided three points which had arisen during the arguments. Every one of the decisions must have given the Water Company an unpleasant shock, for they were all contrary to its aims. The first relates to the question of the sinking fund, payments to which, the company considered, should not be included in the transfer. To this the Water Board objected, and the arbitrators upheld their view, so when the East London undertaking is transferred the sinking fund will go with it. With reference to unused powers, the arbitrators went further even than the Water Board, for they declared that in their opinion the mere possession of a statutory power, though unexercised, was sufficient ground for abatement if it could be shown to have strengthened the company's position. But the third decision was the unkindest cut of all, for it wiped out the company's chance to squeeze the citizens by a valuation based upon last year's profits. These, by a judicious omission of certain items of expenditure, the East London Company had worked up to £165,000, and now the arbitrators have said they are inclined to take an average for ten years rather than for one year. What a wonderful difference this should make in the value to be put on the property.

These points settled, the Water Board proceeded to lay its side of the question before the arbitrators. The principal contention is that the East London Company is only just abreast of its present needs, and therefore its estimates of the water available for supplies are very wide of the mark. To support this statement a long array of expert witnesses are being called who so far have dealt only with that portion of the water drawn from the Lea, the volume of which in their opinion is totally inadequate to meet the growing demands of the district. In addition to being deficient in volume the witnesses unanimously condemn its quality on account of the sewage pollution its source contains. The smell of the filter beds is described as disgusting, Sir Alexander Binnie going so far as to say that "he never thought filters could give off such a disgusting odour." He also declared one of the recent famines in the company's district was caused by a leakage in the mains through frost, and should a similar frost occur the same thing would happen again since no alteration had been made in laying the pipes. Other witnesses told of the microbes they had found in the water supplied by the company, and the figures they gave are simply astounding, even in the case of samples taken after filtration.

Critical Index to New Investments.

**** To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Agricultural Bank of Egypt.

This bank, which was created in May, and commenced business in June, 1902, seems to have already done good work in the way of helping the small farmer by loans at a moderate rate of interest. It has an authorised capital of £2,500,000 sterling, of which half has been issued and paid up in the form of 248,000 ordinary and 2,000 deferred shares, of £5 each, and the whole of the money and more has been lent. On October 1 the total of the loans outstanding amounted to £E237,000 in 37,576 separate loans not exceeding £E20 each, and £1,536,000 in 46,964 loans not exceeding £E300 each, secured by mortgages on land of an estimated value of more than £E3,000,000. In order to provide for the loans in excess of the issued capital 62,500 4 per cent. cumulative preference shares of £10 each were offered for subscription this week through the agency of the National Bank of Egypt. One of the statutes creating the bank provides that whenever in any financial year during the fifty years of the company's duration the income falls short of certain requirements, the reserve fund is first to be drawn upon, and if that is insufficient the Government is to provide any deficiency. On the basis of the whole capital being issued the annual sum assured in this manner would be £75,000 against £50,000 required for dividends on the preferred shares. The bank is undoubtedly doing a very good work and as Egypt is now a progressive country the new shares would appear to be a sound investment.

Victorian 3½ per cent. Stock and 4 per cent. Treasury Bonds.

The London and Westminster Bank announces that it is instructed by the Government of Victoria to offer this stock and the Treasury bonds to the aggregate amount of £1,598,900 for public subscription. The sum represents the balance of the £5,000,000 4½ per cent. debentures that remain unconverted under the scheme announced some time ago, and buyers can have which form of investment they like best. The stock is offered at £92 12s. 6d. per cent. with six months' interest payable on April 1 next, and the Treasury bonds, which will mature on July 1, 1906, will be sold at £98 15s. per cent. with six months' interest due July 1, 1904. The same conditions as to redemption which applied to the original arrangement will apply to this 3½ per cent. stock, and the whole of the money must naturally be paid up before the end of the year, 80 per cent. of both classes of security upon December 22.

Passing Events.

Abdul has declined the Austro-Russian proposals for Macedonian reforms, with thanks. In their place he made certain counter-proposals in the hope that while these were being discussed, he might be able to detach one or more Powers from the Concert, Austria and Russia, however, mean to stand no nonsense, and are reported to be prepared to make the Sultan adopt their scheme by force, if necessary, and all the other countries have agreed to lend their moral support. So it seems as if the Turk was at last to be brought to his senses. But what about the Vilayet of Adrianople?

We are glad to see that a new ministry of a description on the whole progressive, has been formed in Italy under the presidency of Signor Giolitti. He has found an excellent Minister of the Treasury in Signor Luzzatti, and the new Minister for Foreign Affairs, Signor Tittoni, is credited with great ability and excellent patriotism. Altogether the prospect is full of encouragement, and we trust one of the first things this ministry will do is to dissociate itself completely from participation in our Somaliland war. Italy has nothing to do with that.

The Canadians continue furious against the Alaska award, and Sir Wilfred Laurier has almost gone so far as to intimate that the painter had better be cut. He wants complete independence in negotiating with other powers. This is rather untoward for Joseph and his "imperial" all-one-show-me-atop agitation, but, perhaps, Canada means to take the advice of the stupendous Carnegie and "annex" the United States. Why not ask that gentleman to form a trust to "run" the government of the whole Continent? He could use the bonds allotted to him for his share in the "deal" in establishing free libraries from the North Pole to the Equator.

The United States are apparently succeeding in getting their indemnity from China with greater ease than we are.

making 75 per cent. in all, and the remaining 25 per cent. is promised next month. Up to now Great Britain has only received 50 per cent. of the sum due, and may possibly receive another 10 per cent. in January. The Tientsin correspondent of *The Times* declares this delay to be greatly hampering business. That may be, but why did we endeavour to squeeze the utmost farthing out of the Chinese and to force that unhappy and excessively poor country to bear the whole loss of a falling exchange? By the bye, will the Chinese indemnity money come in handy to pay for our various little wars, or will the Government imitate France and Germany and make it the basis for yet another loan to enable it to make good the deficit, the yawning deficit to come. We do not know and cannot honestly say that we much care. That Transvaal mine boss' £30,000,000 has not arrived yet.

A great howl has arisen over the victory of Tammany in New York. Corruption triumphant, the basest form of dictatorship established over a great commercial metropolis, and much more to the same effect. We are not quite sure about it, because it does not seem to us that the Government of Mayor Low was the perfection of purity. Unless evil tongues and venomous pens have been over busy that estimable member of the Republican party contrived to gather around him a good many shady characters to help him in administering the city's affairs. And the Republican party as a whole is certainly disqualified from instituting purity of government in any direction. It maintains an election bribery fund of about £37,000,000 per annum in the form of pensions so as to fix the federal power in its grasp, and when we find corruption on a gigantic scale fostered and maintained by that party in the interests of a knot of protectionists out of which multi-millionaires are manufactured to the injury of the country's business, to the impoverishment of the great bulk of the people, it is hard to believe that any mere municipal government controlled by it could be a model of purity. And there must be something more in Tammany than mere bribery and corruption and unlicensed drink selling with all the other corrupting forces with which its enemies endow it. Some honest people must support Tammany else it would die of spontaneous putrescence. Therefore we shall wait a little to see what comes of this latest victory before cursing over-much.

Some time ago the Government of the United States appointed a wandering commission to go round the world and see what could be done to rehabilitate silver. That was the idea underlying the appointment of the men who wandered from Mexico all through Europe to China in order to discover a remedy for the variability of exchanges and the tendency of silver currencies to depreciate. This commission has now issued its report, and we are just as wise as before. It is not an altogether stupid document, however, for the worthy gentlemen see that the establishment of a fixed rate of exchange between gold and silver issuing countries is squarely impossible. They think, however, that this difficulty may be got round by endowing China, Mexico, and other silver issuing countries with a gold "standard," bless it, with no gold coinage to back it. They propose that a silver coinage for Government account at the rate of 32 in silver to 1 in gold should be set up and kept at par by gold credits in the leading financial centres of the world, against which credits exchange could be sold. In this way they arrive at the comfortable conclusion that the fluctuations which have done so much to disturb trade between gold and silver issuing countries would be done away with, and everything go smoothly for ever and a day. An interesting and benevolent speculation truly, and we really do not care much whether the United States tries the experiment or not. It might work, in back washes, for a time, that is to say for as long as credit on a fancy basis could be used to liquidate debts instead of cash. That any proposal of the kind would mean robbery of the poorer country really does not matter to great imperial nations like the federal republic of North America, for some of its citizens might be enriched. These worthy commissioners, however, seem to have one fear, viz., that the ultra conservatism of the Chinese might prevent them from falling in with such a nice plan to strip them, and perhaps that is a practical difficulty, only practical difficulties never interfere with theories. Why should they?

Whether a few years of City experience would do anything to convince Mr. Chamberlain that to change the fiscal bases on which the wealth and commercial supremacy of this country have been constructed would be a short cut to financial ruin, none can say, but the ex-Colonial Secretary ought to be interested in the opening words of the President of the Institute of Bankers, Mr. J. Herbert Tritton, when delivering his inaugural address on Wednesday last. As a partner in the old-established banking firm of Barclay and Co., and himself a banker of high attainments, Mr. Tritton is well qualified to voice the opinion of far-seeing men regarding the desirability at the present juncture of even discussing the great change which the volatile Joseph desires to bring about, and we quote the following passage from his speech without comment, because none is needed:—"Over foreign politics we have little or no control, but what shall be said of the man or men who, however great their political ideals, when all the commercial and financial signs in this country pointed to its need of a period of quiet, of caution, of relief from harassing and unsettling anticipation, so that the natural recuperative forces might have undisturbed play after the strain of a great war, ignored all but politics, precipitated a Cabinet crisis of the first order, and drove Consols, low enough before, to below 87. The effects of the war are bad enough, but the effects of such ill-timed action may be worse. Whether the proposals now before the country are good or bad, acceptable or not, the common sense of the country after hearing both sides will determine at the hustings. We may not be agreed as to the issue to be desired, but I do not think there can be much difference of opinion among City men as to the inopportuneness of the proposals." Other parts of Mr. Tritton's address were also full of interest, and we shall return to it in an early issue.

What is the meaning of this mysterious expedition against Tibet? So far, no reason has to be given to explain why an apparently unprovoked attack should be made on the Grand Lama, and all the public knows is that troops are being collected for the raid. Is the whole scheme a creation of officials thirsting for decorations and titles, or is it intended to divert public attention from some scandalous piece of misgovernment? An inquiry into the truth might be awkward. Surely this country will not permit the Indian officials, military and civilian, to waste public money in this fashion without an explanation of some sort. Besides it is quite possible that the raid, like its evil predecessor in South Africa, may lead to a war as costly and more disastrous than the recent one. And if it does, is poor India to find the money?

Really these West African tribes seem to have no appreciation of the glories of the Empire. Sir Frederick Lugard kindly annexed a huge tract of country some few months back, but the natives instead of worshipping him as benefactor, fight his soldiers, and generally squabble. Some of them in Nigeria attacked a body of troops last month, and wounded twenty-eight of them, which hardly looks like peace reigning within our borders.

The Mullah too, is most inconsiderate. By all the rules of the game he should be smashed, at least the War Office thinks so. Yet, instead of accepting his defeat like a man, he has actually raided Italian Somaliland, and generally made himself unpleasant. His followers naturally are deserting him, according to our Intelligence Department, but he manages somehow to get a few men together to sack a village or two, and plunder inside our frontiers. He must, therefore, be mad, and we are going to kill him if we can, should it cost £10,000,000. We can still borrow under 5 per cent.

Another little war is going on round Aden and its Hinterland, in which the Arabs have succeeded in killing and wounding some of our men. Have all these fights in different parts of the Empire been got up to justify our huge expenditure on military services, or are they only the result of coincidence? The cost of this Aden affair will, we presume, be borne by India, which already pays more

dearly than any other part of the Empire for the privilege of belonging to it. But then, it has no votes.

Panama has revolted and severed her connection with Colombia. This looks like another move by the United States canal gang, who see visions of boodle in the scheme, and were naturally annoyed when the Colombian Senate refused to ratify the Treaty. But the patriotic inhabitants of the Isthmus were all for the ditch, and rather than have it burked have proclaimed their independence, feeling sure of support from the States, should Colombia try to crush them. How beautiful is the boodler's philanthropy?

Investors in this country are happily not interested in that model swindle of the Yankee company promoter, the United States Shipbuilding Trust. That is just as well, for we have plenty of similar deceptions of our own. It may, however, be of some interest to mention the fact that the company was capitalised at upwards of five times the value of the assets taken over, said assets being worth, according to the books, $12,442,000, which modest sum the promoters converted into $67,997,000. That is to say, they added $55,555,000 to the capital account, and endeavoured to get that or most of it to themselves as profits. The Official Receiver, as we should call him, Mr. Smith, characterises this effort as an "artistic swindle." It seems to us to be just the very reverse. It was a clumsy swindle, quite as clumsy and vulgar as anything our Ernest Terah Hooley could perpetrate. One concern which was experimenting with motor cars, a baker's dozen of which it had sold, was bought for $1,100,000, precisely in the Hooley fashion, a mere crude application of the bellows in the hope that the public would come forward with hard cash in exchange for volatile gas. The thing did not succeed, and the promoter, Mr. Charles Schwab, of the United States Steel Trust and Monte Carlo glories is now threatened with a demand for restitution. It will be extremely interesting to see whether anything comes of that demand or whether the original conspirator against the people's purse is not as immune from every kind of danger or effective threat of restitution in the United States as such appears to be here.

From the New York correspondent of the *Pall Mall Gazette* we get some particulars regarding that Consolidated Lake Superior Company agglomeration, which has come to grief. It was a company formed to absorb a number of other companies, including the Lake Superior Power, the Michigan Lake Superior Power, the Sault Ste. Marine Pulp and Paper Company, the Tagona Water and Light Company, the Algoma Central Railway, the North Shore and Manitoulin Railway, the International Transit Company, the Trans-St. Mary Traction Company, the Algoma Commercial Company, and the British American Express Company. The aggregate paper capital of these companies was £7,670,000, and nearly every one of the concerns thus absorbed and consolidated had suspended operations. Consequently no earnings came from them to the Consolidated Lake Superior Company, and the property, with the exception of the ore mines, is steadily depreciating.

A large power house on the Canadian side, which cost over £200,000, has been so completely damaged by water that it will have to be rebuilt. Everything is at a standstill in the City of Sault Ste. Marie Ontario, as well as in the American city of the same name, and misery has spread over a very large area of Ontario in consequence of the suspension of work. Nearly 4,000 men were at one time employed in the mines alone, all of whom have been discharged with the exception of a few to look after the mine openings. Several thousand men employed in the timber tracts have also been left in the lurch. The wages represented about £250,000 a month. Some idea may therefore be gathered of the horrible misery which has resulted from the collapse of this gigantic imposture. The artificer of all the misery is a man named F. H. Clergue, who is described as "one of the greatest international promoters in the history of America. He may be, though we should think him a small creature compared with J. Pierpont Morgan, and not much more than a head taller than Charles Schwab, but he seems to have "ploutered up and down a bit," and created a good many companies in the course of his career, all of which have ended more or less disastrously. He even went to Persia and formed a Persian company, which he tried to get British and American capital for. Not, however, until he went to Canada did he blossom into the mighty promoter whose great feat was the formation of the Consolidated Lake Superior Company with a capital of £20,000,000. However, some £6,000,000 in actual money seems to have been expended in developing the various industries, so that the assets should, in good hands, be worth something some day.

The Colonial Office is evidently determined to put unfortunate shareholders of the Netherlands-South Africa Railway to as much trouble as possible, before condescending to pay them what is their lawful right, and publish a nice little list of particulars to be furnished. Those who held shares prior to October 9, 1899, must make a declaration to the effect, and that they have since that date remained in their possession. It must be supported by the following particulars:—The date of payment and the amount of last dividend received in respect of each share. The name and address of the bank by whom the dividend was collected. A certificate from the shareholder's bank that the amount stated was placed by them to the shareholder's account on the date named. Declarations if made, within the United Kingdom, must be made before, and the signature attested by, a J.P., Notary Public or a Commissioner to administer oaths, while declarations out of the United Kingdom must be made before a British Minister, Consul, Vice-Consul, or other British authority. Those who have acquired shares since October 9, 1899, must also set out the circumstances under which they did so, while the ownership of the shares must in all cases be established to a date prior to October 9, 1899, and the contract note for all purchases or sales must be produced. Could'nt the agents think of something else?

The *Morning Leader's* New York correspondent tells us that the floundering Pierpont Morgan, whom he describes as the "potent factor in the billion-dollar steel Trust," has ordered a reduction in the price of finished products of iron and steel in an organised effort to drive German steel makers out of the English market. Has he then joined hands with our Joseph in order to cheapen screws and donkey engines for us, or is this merely a sample of the usual brag such people indulge in? Prices are to be "cut" to a tremendous extent, and the Morgan Steamship Trust is to carry the Steel Corporation's products to England "practically as ballast." Well, this is the way with bankrupt concerns. It is no matter to them what they lose.

The method adopted by the South Western Railway Company in its efforts to issue further capital is not satisfactory, and has raised the ire of Stock Exchange operators. Instead of asking in a straightforward manner for a certain sum of money, it invites applications for "limited amounts" of ordinary, preference, and debenture stocks at £153, £102, and £96 per £100 stock respectively, leaving everyone in the dark as to the amounts which the directors are prepared to take. Moreover, the circular is so carelessly worded that many might suppose that a dividend on the new stock would be paid in February next, whereas the first payment will not be forthcoming until August, 1904. Nevertheless, the preference and debenture stocks look worth picking up. Subscribers must pay 10 per cent. on application, and the balance by December 14, and it may be worth pointing out that the company has power to issue about £998,000 share capital, and £260,000 debenture stock.

To those who like to read vigorous English and enjoy clear statements of facts, emphatic judgments and a well linked argument, we commend Mr. Frederic Harrison's article in the current number of the *Positivist Review* entitled "The Big Fight." It is worth reading many times over.

The *Daily News* should really get up its facts about South African affairs with a little more care. In its Thursday's issue, dealing with the news allowed through from Johannesburg, it made the remark that "both the great groups, the Wernher-Beit, and the Eckstein have now made it quite clear that no English need apply to work the mines bought wirh English blood." It seems these

potentates have been importing Italians as being cheaper than Englishmen. That is quite to be expected, but all the same, Wernher-Beit and Ecksteins are the same firm, Ecksteins being the Johannesburg branch of the Wernher-Beit business, and the firm must be spending a good deal of money in order to get its Chinese cheap labour in. What for did it sell that million of Consols the other week?

Having been to Baku to view things on the spot the Hon. Evelyan Hubbard, the chairman of the Russian Petroleum and Liquid Fuel Company—the best of the English companies operating in Russia—met the shareholders on Tuesday last to tell all about his visit. The first piece of intelligence was not very cheering, for Mr. Hubbard had the unhappy news to convey that the company had been committed by its representative in Russia, Mr. Schumacher, to the tune of £70,000, and that a loss of between £30,000 and £35,000 would be incurred. Happily, this was the only really disturbing statement, for although output had been somewhat disappointing owing to rather lax local management, marked improvement is about to become manifest, and the chairman had no doubt that for many years the company would be able to maintain its production. Good results too were expected from the concern undertaking its own distribution, instead of depending upon the local market for disposing of output, and it is pleasant to hear that the cut-throat competition of the past few months has been succeeded by a mutual understanding and agreement. Prices have readily responded, and the outlook can be described as entirely changed. Ordinary shareholders, however, will be wise not to anticipate much return on account of the past year, although a moderate surplus will probably be shown above the amount required for preference dividend. It is rather interesting to note that the quantity of high-grade American oil "dumped" into Europe during the current year shows an enormous falling off, and that it is being largely replaced by Russian petroleum.

In connection with the above we learn of German Government action against the Standard Oil people, the State having accepted the view put forward by numerous chambers of commerce that the trust's monopoly is a public nuisance. In future everything will be done to encourage the importation of Russian and Roumanian oils, and obstacles are to be thrown in the way of the American Company. The news is distinctly encouraging, and similar action in other directions might do something towards breaking the power of this dangerous crowd, which stops at nothing to achieve its purposes.

Particulars of the organisation of that market shoring device named the African Ventures Syndicate have been filed at Somerset House, and show that the capital is, as rumoured, £2,000,000 in 2,000 shares of £1,000 each. Naturally such shares are not to be offered to the public but the things the syndicate may undertake are too numerous to mention. What is interesting is the list of first subscribers of one share each. The names are J. Wernher, A. Beit, L. Breitmeyer, F. Eckstein, L. Phillips, C. Rube, and L. Wagner. It is therefore a Wernher-Beit institution pure and simple, and we wish it all success in relieving a distressed and beguiled public of its shares.

Chicago newspapers give great accounts of the "retrenchments" being enforced by United States railways. There is no longer any talk of "shortage" of cars, of "congestion" of traffic, and stimulating gossip of that kind. There has been a decided "let up" in traffic. Grain and live-stock traffic is said to have increased, except in wheat, but traffic in merchandise—usually the best-paying, has fallen off. Railway officials are going over their departments and retrenching wherever possible, dismissing servants, especially gangs of workmen, on the lines.

Bondholders had better not become too elated before they see the actual proposals, but according to the Buenos Ayres correspondent of the *Financial Times* the municipality of Cordoba is about to display a little honesty. Proposals of this body for the settlement of the loans of 1887 and 1889 have been delivered to the representatives of the bondholders, and were dispatched to London by the last mail. Much secrecy was observed as to the terms of the offer, but the following are said to be the precise details: The municipality, with the provincial guarantee, proposes to issue the amount of the capital due, namely $3,950,000 gold—interest to be paid for the first five years at the rate of 4 per cent. paper; for the second five years 5 per cent. paper; third five years 4 per cent., half gold and half paper; and subsequently 5 per cent. gold, amortisation to commence after the first 10 years at the rate of ½ per cent. gold. The only substantial difference from the bondholders' proposals relates to the claim of 25 per cent. in respect of arrears which the municipality declares it cannot provide, but this may stand in the way of a settlement, for surely something should be forthcoming in respect of the dozen years of default.

The report of the liquidators of the Alagoas Railway—one of the undertakings included in the Brazilian Government's purchase of guaranteed railways—has just been issued, the period covering being the year to September 18. Of the £745,000 4 per cent. guarantee rescission bonds received for the line £389,400 was applied in paying off debenture stock, £300,000 was divided amongst the shareholders in the proportion of £20 in bonds for each £20 share, and £55,600 has been sold for cash at various prices, realising altogether £42,300. According to the liquidators account the total amount received was £109,700, while the disbursements were £95,100, including £22,462 absorbed in giving shareholders a cash payment of 30s. per share. Balance in hand is £14,645, from which must be deducted a small sum paid away since the close of the accounts, together with liquidators remuneration and expenses up to the definite dissolution of the company, the remainder being divided amongst the shareholders.

We welcome the second number of the *Book Monthly*, with sincere pleasure. It is excellent throughout, and we have been particularly fascinated by the interview with Mr. John Murray, the publisher. The article on "Books Nearly Ready," is most valuable for all book lovers and buyers, and so is the list of books published during the month. The magazine is by reason of this list alone an indispensable thing to file for reference.

What a wonderfully sagacious man Mr. Shaw, the Secretary of the United States Treasury, must be. He has been lecturing England upon its folly in proceeding upon the "American democratic theory" of trade for many, many years. That is to say, we have not taxed the foreigner and have given the United States free access to our markets, so that, according to this worthy second-hand phrase peddler, the United States actually sell $600,000,000 worth of goods every year to Great Britain, while Great Britain only sells about $155,000,000 to the United States. The result of all this, in his opinion, is that the United States has a trade balance in their favour of $500,000,000 per annum. That is to say, the amount lost, or in great part lost, by the Union in conducting its foreign business upon the exclusive, curse-the-foreigner system, amounts to about that sum, and Mr. Shaw and his kind think it profit, being so primed by the bosses who "ring" their intellectual snouts.

A friend conveys the interesting information that the continental edition of the *New York Herald* has never once mentioned Mr. Chamberlain's name since he took openly to the empire bursting line. Even his Bingley Hall performance is completely ignored. Is not this an example to be in some measure followed by newspapers here? Their sane readers are sick of "Joe," and always "Joe."

The working of an interesting elestrical process for the conversion of peat into a smokeless fuel was demonstrated at Charlton last Thursday to a party of journalists. By a simple and inexpensive mechanism the peat can be cut below the water-level and within the space of two hours and a-half the electrical plant transforms it into what is apparently an excellent substitute for coal. This is achieved by placing the peat in iron drums rotating at high pressure, while the water is driven out by the action of powerful fans. If the invention can perform all that is claimed for it, with any class of peat, and at a moderate cost, it should have a great future, especially in a country like Ireland, where we understand an initial plant is to be erected.

TRADE AND PRODUCE.

Wheat.—With the exception of a slight spurt on Monday last, the market has not been shaken out of its usual dullness this week and though the business done has not for the most part been really sufficient to affect values, the tendency has been more in favour of buyers. Farmers' deliveries of 41,412 qrs. averaged 26s. per qr., against 40,256 qrs. averaging 25s. 10d. the week before, but much of the supply was in poor condition, and found little favour. Last month proved, if anything, the most disastrous of all to farmers, who were practically unable to sow any new wheat, and most of the outstanding grain in the late districts is said to be fit for nothing but stock feeding, and poor at that. Prices in the States fell a little nearly every day this week, though occasionally the bulls succeeded in checking the downward movement. Big crop reports from the Argentine and weak European advices were, however, too strong for the speculators, and whatever rallies they effected were promptly discounted by the market. The home movements of grain were also against a rise in prices, Bradstreet's estimate for this week of the quantity in sight east of the Rockies being 43,463,000 bushels, compared with 41,644,000 bushels last week, and 63,430,000 a year ago.

Wool.—Trade continues more or less at a standstill, and very little business is done except where absolutely necessary. Here and there lower prices are heard of, but for the most part values of Colonial wools are very little lower than of late, and spinners complain that they can get no profits from their recent contracts, and will have to advance their quotations in turn. Home grown wools, though steady, are not in such good demand, but prices keep firm in spite of lack of business on account of the dearness of the wools throughout the country. Piece goods likewise lack repeat orders, except in the cheapest of goods, and in proofing cloths, which, in view of the present wet and future promise of the rains, are experiencing quite a run. United States returns of the Bradford exports during October give the value at £167,423, against £207,195 in October, 1902. Linings, wool, and alpaca all showing a large decrease, and cotton cloths, the only substantial increase.

Linen.—As the season advances without any sign of a substantial increase in business, the market naturally feels disappointed, and it is a wonder that no concessions have been made in an attempt to secure fresh orders. Far from this being the case, prices are, if anything, stiffer than ever, and in spite of the surface dullness the undercurrent keeps strong and steady. There is no change to note in any of the made up branches of the trade, dress good share in a good position, housekeeping damasks better, and handkerchiefs slowly improving. Unions also have done well considering the uncertainty of cotton, and bleaching linens and brown power looms keep up to their usual level. Cross-channel business has been depressed by various unfavourable elements, bad weather, shaky finance, and politics, but here also the business done has been at top prices. Exports are quiet and unchanged, except that the United States are doing a little more, but the total shipments of this year to that country show an improvement over last. The yarn market has been more active, orders substantially increasing, and prices, particularly for Continental yarns, getting stiffer. Tows are not in such demand, as lines at present, but neither are in abundant supply, and some counts inconveniently scarce.

Cotton.—In spite of the rapidly increasing supply of American cotton, prices show no sign of falling, and the relief which consumers not unnaturally expected is as far off as ever. At the end of last week further reports of frost sent prices up ⅛d. per lb., but with the turn of the month, it was thought quotations would fall, since the difference between October and November was so wide. So far as futures were concerned, this, to some extent, happened, but for actual cotton there was no change, as the market received another scare when it heard the world's consumption of American cotton for this year was estimated at 10,800,000 bales, or practically the same as last. Should the crop prove to be under eleven million bales, this will spell disaster for the trade, though, as Sir Jacob Behrens and Sons, point out the ultimate yield is still an open question especially when it is remembered that the movement last month was equal to October, 1902 in spite of the lateness of the crop. For Egyptian cotton the demand continued good, and prices were rather dearer. The improvement in the demand for yarn noticed last week was well maintained this, and in consequence quotations gradually hardened. More looms have started, and makers of ring beams are better employed than they have been for some time past, while cop yarns are wanted as quickly as they can be produced. Bombay and Madras have bought certain lines freely, and in some cases have paid better prices. Calcutta, however, is doing nothing, and, when the demand sets in, will find considerable difficulty in filling her requirements. There is also a better feeling in the cloth market, as buyers are more inclined to operate than they were a few weeks back. Unfortunately the last rise in the price of staple upset negotiations, and for the moment has put an end to business that might have gone through. India has improved its enquiry, and offered prices which a few weeks ago would have been accepted, but with China there is but little doing, as makers are holding out for better prices.

In the States the weather still continues the ruling factor, and a very small change is sufficient to cause a variation in quotations. At the beginning of the week the reports were bad, and prices rose steadily until it became known that the weather was not quite so stormy as the market believed, when a sharp reaction took place. The bulls, however, managed to check the fall, and with Liverpool scared at the estimates of the world's consumption, were able by heavy buying to force prices up rapidly.

Last night at Liverpool middling American closed at 5.94d. spot, and all grades below showed an advance on the day of six points, and the other grades one of four points, the quotation for M. F. being 6.20d. Futures were also steady, November being quoted at 5.78d., Nov.-Dec. at 5.72d., Dec.-Jan. 5.69d., and later positions from 5.68d., Jan.-Feb. to 5.64d., July-August. The demand for Egyptian was good 7⅛d., being asked for fair and 8 7-16d. for F. G. fair.

Coal.—The position is a little better, and complaints are not so numerous, but there is still room for improvement. Lancashire, as usual, suffers the most, and instead of the upward tendency in prices usual at this time of the year, collieries have hard work to keep them up to their late level. Elsewhere steam and gas coal contracts keep up a more satisfactory state of affairs. The home trade in these is better, and exports continue good.

Copper.—When the market learnt that the Montana lock-out was likely to last some time, it at once thought it saw an opportunity to keep prices up. But as the week passed and no business came in quotations began to sag, and last night, though the market was firm, cash was quoted at £57 17s. 6d. and three months at £57 7s. 6d.

Tin.—Until Thursday advices from the East were firm, nearly every day seeing an advance in the prices cabled over. The market here tried to follow suit, but without much success as business was decidedly flat, and consumers by no means anxious to buy. At one time it is true quotations were up to £119 cash, and £119 15s. for three months, but they gradually slipped back until last night they were down to £116 2s. 6d. cash, and £117 5s. three months.

Iron and Steel.—The Glasgow pig-iron market was in an unsettled condition all this week, though on the whole the position was easier. Makers, through want of orders, were more disposed to reduce their prices in order to meet the demands of the market, and on top of this came the news that America might soon be expected to send over raw iron. Last week the danger of this dumping was thought to be remote, but it now seems that stocks in the States are far in excess of present requirements, and an attempt will therefore be made to dispose of the surplus here. At the same time the restriction of the output there is not only likely to continue, but to increase, and this may result in the natural absorption of stocks by the home demand. However, the joint effect of the easier state of our markets and the American rumours was to make consumers hold off in the hopes of being able to purchase iron for their future requirements at a lower price than the present quotations, and the actual business done was therefore, comparatively speaking, small. For Cleveland warrants 42s. 10d. to 43s. 1½d. cash, was paid, and 42s. 10d. for delivery in twenty-eight days. Scotch and Cumberland hematite were lower at 48s. 9d., and 53s. 11d., but these figures are practically only nominal values. Ironfounders are fairly busy, but many of the engineering works are very quiet, men in both locomotive and marine shops having been discharged this week. During October the shipping launched on the Clyde amounted to 45,399 tons, or slightly more than in 1902, but the total for the ten months is only 345,339 tons, which is smaller than in any year since 1897. In the North of England iron and steel manufacturers were a little more cheerful this week, as there has been a decided improvement in certain branches. This, in turn has materially improved the position of the makers of pig-iron, and things generally are thought to have passed the worst except for shipbuilders. On the prices now quoted for ships it is impossible to make a profit, and the builders are therefore considering whether they can induce the men to agree to a reduction of wages. At Barrow the hematite trade shows no sign of improvement, and more furnaces have been blown out this week to reduce the output still further. In the steel trade prices however keep firm in spite of the keen continental competition for the few orders that are in the market, heavy steel rails being quoted at £5 5s. per ton.

Tea.—The market continues firm, with little change to note in prices of either Indian or Ceylon. About 40,800 packages of Indian were disposed of, and 12,600 packages of Ceylon, the average prices for the week being much the same as last. Indian a fraction easier, perhaps, though broken Pekoes showed an improvement. Shipments from India, Messrs. W. J. and H. Thompson's circular tells us, continue on a large scale, the total exports from Calcutta and Chittagong showing an increase of seven millions over last year. A good output is expected from Northern India, but the increase altogether will not be more than sufficient to counteract the shortness of supplies from Ceylon, and a still further improvement in prices is hoped for. China teas have had a steady market during the week, for all lower grades, and Javas were offered in rather larger quantity than at the previous auction.

Sugar.—A dense fog at the last moment upset the October liquidation, as it prevented some barges getting up the river in time. A moderate quantity of sugar had therefore to be covered up to 9s. 6d., though the final sales were made at 9s., while Nov. was offering at 8s. 8¼d. The arrivals of latter are as yet small, but during the week some holders resold and this for a time sent prices down nearly 2d. per cwt., part of which was, however, recovered. the movements since last week being Nov.-Dec. from 8s. 8¼d. to 8s. 7¼d., Jan.-March from 8s. 9½d. to 8s. 9d., and April-June 8s. 11¼d. to 8s. 10¼d. For cane prices remained unchanged in spite of the fact that the business done was of a very insignificant character. America still keeps to its nominal quotation of 3⅞ cents, equal to about 10s. 1¾d. c.i.f.. for 96 per cent., and has refused offers to arrive at very much less money. This attitude is attributed more to a desire to see what Congress will do next then to the question of duty on beet, though the latter does undoubtedly affect the market to some degree. Meltings were again in excess of imports, and stocks were further reduced until they now stand at 121,000 tons.

Established 1824.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Advanced from 3 per cent. on September 3.)

Norfolk House, Friday Evening.

All week the Money Market has been living in fear of a 5 per cent. Bank rate. It is a most fascinating spectacle to watch how intimately inter-dependent all the world is in matters of credit. A run broke out on some finance companies in St. Louis, causing a demand to arise for currency upon the New York banks, and immediately the strain was transferred to London. The New York Exchange went down to gold-importing point, and Yankee buyers appeared in our market to snap up all the bullion on offer there, paying 77-10½d. per oz. for some of it. If the Bank of England had been drawn upon, the directors would have had to put their rate at once to 5 per cent. It has not so far been drawn upon, and possibly New York may surmount its present spasm of insolvency without having to pawn the Union's future exports of produce in order to get the metal. But we are not out of the wood by any means, and drafts upon our perilously inadequate stock of gold are only too certain from many quarters. So we think a 5 per cent. rate near, and the market is also pretty much of that opinion.

All the week consequently there has been a continuation of the fight between the lenders of short credits and the discount brokers. Short credits have been cheap, much cheaper than they ought to have been, because so much of the so-called money in the market has really no substance behind it, and because until to-day, when the last of it was paid off, the market had a good run of credit, borrowed from the Bank. Loans could often be had under 3 per cent., and in the early part of the week, when fears of a 5 per cent. Bank rate were most acute, and even when everybody was endeavouring to provide against apprehended dangers seven day money rarely went above 3½ per cent. Bankers got 3¾ per cent. one day, but that was all, and before the week closed the rate had fallen to 3 and 3¼ per cent., with call money occasionally knocking about at 2 per cent., or under. To-day, however, call money rose to 2½ and 3 per cent., so that the excessive supply seems to be disappearing.

In these circumstances the attempt of bill brokers to keep their rate for bank bills of all dates close up to 4 per cent. had usually very little success. It might have had more, seeing that the joint stock banks were unwilling to buy bills even at 3¾ per cent. from the brokers, had not Continental bankers been on the market in competition for the paper available there. Thanks to that depressing influence the working rate seldom went beyond 3 13-16 per cent., although on Tuesday some houses quoted 3 7-8 per cent. subject to a change in the Bank rate. One leading house has given the rate pretty nearly all the week at 3 7-8 4 per cent., but so far as business went that was in the main the expression of a pious hope. We regret it should be so, because discount ought to be hard in view of the dangers surrounding the market, and of the sensitive tenuity of the bullion reserve. The Bank of England has plenty of notes, but these are of little use when an international credit tornado arises such as may burst upon us any day. The New York exchange came again weaker this morning, and concurrently the French exchange has hardened, thanks probably to the large investments of French banks in London bills. It follows that the acute struggle for gold springing out of the distressed position of New York banks will fall upon London and the supply of bullion coming to us is pitifully small. There is only about £170,000 due here in the beginning of the week, and as the enquiry is remarkably eager at 77s. 10½d. per oz. in the open market, every penny of this will be swept away with enough unspecified requirements left to render a draft or drafts upon the Bank extremely probable. No wonder then that the discount market did get rates worked up this morning to 3 15-16 per cent. Very little business was done under that figure, and many people quoted an alternative 4 per cent. We may therefore call the rate to-night 3 7-8 4 per cent., with an upward tendency.

The poor London County Council had to pay pretty smartly for the £500,000 it raised on six months' bills in the beginning of the week. The average rate was just a shilling under 4 per cent., and tenders at 4d. under that rate got about 82 per cent. of the amount applied for. This does not look well for the Treasury bill issue on Tuesday. That amounts to £3,000,000 in bills, £2,500,000 of which is renewal paper and £500,000 new money, so bottomless are the demands of our spending departments. Borrow, borrow is the rule, in spite of excessive taxation. Two of the three millions will be in twelve months' bills and one million in three months' bills, so that the Treasury seems to think it may be able to pay off £500,000 of the old war floating debt some time next quarter. Revenue is not at present coming in after a fashion to justify that hope, but then the Treasury is rather up in the moon now, and the new Chancellor of the Exchequer probably knows less about finance than any man who has occupied that position for, say, three-quarters of a century. Anyway, the market is going to make the taxpayer fork out for the accommodation, and the bills will not be sold at much below 4 per cent. discount.

The only call of importance during the ensuing week is the nominal one of £4,500,000 due on the Transvaal loan on Tuesday, the remainder aggregating less than £450,000. On Friday £187,500 must be found for Queensland 3½ per cent.. and on Saturday £100,000 is due on Ferreira Gold new shares, and £105,000 on Hodgson's Kingston Brewery debenture stock. On the last-named day £3,000,000 new Treasury bills must be paid for against £2,500,000 maturing, and to-morrow (Saturday) the money has to be provided for the £500,000 London County bills allotted on Tuesday last.

SILVER.

India is no longer a buyer of this metal, and quotations for bars have consequently depended very largely upon the extent of the local demand. This at first was quite insufficient to absorb the quantities offering, and prices were allowed to drop to 27½d. and 27d. per oz. for cash and future delivery respectively. At this level buyers were tempted to come forward, and as the supplies were small on Tuesday owing to the holiday in America, a recovery of ⅛d. per oz. for spot and ¼d. per oz. for forward metal was brought about, but there was no real strength in the market, and values have since dwindled to 27⅛d. and 26 11-16d. per oz. making declines of 11-16d. and 5-8d. per oz. on the week on selling from the East, and some forced liquidation, the former induced by a story that the Indian Government has already purchased £2,000,000 worth of the metal and will hardly be likely to require further supplies. Tenders for the Rs. 40,00,000 India Council drafts last Wednesday reached a total of Rs. 3,66,75,000 for bills, and Rs. 12,00,000 for telegraphic transfers. The amount allotted in bills was Rs. 38,72,000, and in transfers Rs. 1,28,000, applications at 1s. 4 1-32d. and 1s. 4 1-16d. per rupee, receiving about 13 per cent. Next Wednesday the amount to be offered is increased to Rs. 50,00,000.

BANK OF ENGLAND.

TREASURY BILLS OUTSTANDING.

Tendery for Treasury bills to the amount of £3,000,000 will be received at the Bank of England on the 10th inst., at one o'clock. They will be dated November 14, 1903. Bills for £2,500,000 replace those falling due on the 15th inst., and bills for £500,000 will be issued under the Act 3 Edw. VII., c. 32. They will be payable as follows, viz.—£2,000,000 at twelve months after date, and £1,000,000 at three months after date.

Amount.	Duration.	When repayable.	Rate per cent.

Stock Market Notes and Comments.

No good has come to the Stock Exchange of the patching up and papering over system of concealing insolvencies. Business gets worse every day of the week and the hunger amongst the poorer classes of members is approaching agony. Hundreds of them will be compelled to leave the Exchange next year if business of some kind does not meantime come to them. We are very sorry for them, but really do not see whence new business can come unless by liquidations in bankruptcy. The nation gets no chance to recover. It is devoured by the tax consuming officials, perplexed and bewildered by the rag, tag and bob tail of the needy and the greedy who wish to institute a new form of plunder in the shape of a "protective" tariff helpful to boodlers. It is beginning to suffer also from the consequences of the most disastrous harvest for a generation or more, and all the while carries a load of unrealisable securities dumped upon it by the associates and backers of the Birmingham political quack, sufficient alone to crush it. How can the markets get better, with prices continually tumbling, with Home Railway stocks shrivelling up under the blight of declining traffic receipts and the prospect of better times so poor; under stress also of continued demands for more capital like that revealed by the South Western Company this week. We are very sorry for the holders of Home Railway common stocks. They have suffered more grievously than any other class of investors during the last four years and we cannot see the end of the lane, let alone a turning in it. Prices must go lower first all down the list.

As for that choice swindle the United States Steel Corporation, it is evidently going to pieces and will, we trust, drag down with it the men guilty of its construction. Such men are essentially the enemies of the human race, inimical to the progress of honest industry, to the development of healthy trade, and to the classes who earn their bread by the sweat of the brow. But the prices of its shares and bonds tumble daily, and still nobody is a penny the worse. It is so all round. We had a Consol settlement this week, and it was amusing to behold with what zeal jobbers and brokers told us that there was no account open in the "House." Really nobody wanted any money, they were all paying it off, the public had absorbed the stock, and the market was actually bare. Nevertheless the contango touched 5 per cent., and most of the business was done at 4¾ per cent., not a rate calculated to enable the unfortunate holder to stick on. And there was a scramble for short money on Thursday afternoon, pay day, which somebody must have wanted, because nobody borrows for pleasure. The truth is all markets are overloaded, clogged and smothered in unvendable rubbish heaps, or masses of unplaceable stock; and people who have new good things to offer, now congratulate themselves if the public takes up more than half the amount offered. "People must still be making money" we are told. Yes, some are, but more are losing it, and even those who are accumulating fresh savings have generally to utilise them to write off old losses. Such are some of the fruits of that war which was a feather in Joseph Chamberlain's cap, and we are a long way from the end of the story yet.

Even the Kaffir Circus is not quite happy in spite of alleged French support, but it is not nearly at the worst yet. Some of those finance houses that have played with it dishonestly and sucked tens of millions out of the public through it, have only to throw up the sponge and confess bankruptcy to bring prices down by the run in all directions. And a few will do that ere long. Ninety-nine out

of every hundred of the securities quoted in this part of the Stock Exchange are therefore still at ridiculously inflated heights. So once more we advise the wise man to sell and be done with it, sell and take the money while there is any money to take. Credit is doing wonders, and may continue for a little while to play substitute for hard cash, but the day must come when cash will be wanted and when shares representing cash will be of no value as media of exchange. Do not wait for that day and then try to sell; sell now while the props are still under the fairy palaces of the manufacturers of paper wealth.

The Week's Stock Markets.

Our Stock Exchange was closed on Monday last owing to the usual November holiday, and New York suspended operationso n Tuesday in order to put back Tammany Hall in control of the City, so that it would be difficult to find a parallel to the past week for business stagnation. Complete idleness prevails in every section of the "House," and it is really distressing to think of the hard times through which a large proportion of members must be passing. It is a complete mystery how many of them manage to exist at all, and unless matters take a decided turn for the better, ere long not a few will be hard pushed to find their subscriptions when the time for payment comes in March next. With the end of the year so near it is next to impossible that any revival can come in the current twelve months, and it looks as though 1903, from which so much was at one time expected, will be one of the unhappiest years in the history of the Stock Exchange. If a tendency existed at all during the past week we suppose it must be called a dull one, the American purchases of gold in our open market with the consequent fears of a 5 per cent. Bank rate causing some nervousness, but movements rarely exceeded fractions, and usually possessed no significance whatever.

With the reopening of the House on Tuesday dealers in the Consol market had the monthly account to occupy their attention, and for once in a way the making up price was in favour of "bulls," the figure being 88⅛, compared with 87¼ at the end of September settlement. Money, however, was decidedly stiff at first, borrowers being charged no less than 4¾ to 5 per cent., notwithstanding the statement that the account open for the rise had been materially reduced. Later the rate went off to 4 and even 3½ per cent., owing to credit becoming more abundant outside, and a lessening of fears that Thursday would bring with it a 5 per cent. Bank rate. As a result quotations hardened a little, but fell off again before the close and finish unaltered at 88 1-16 to 88 3-16 for money and 88 3-16 to 88 5-16 for the account. Khaki stock also lost an early fractional improvement, leaving off at its old price of 97½, but the deduction of the dividend from Transvaal loan scrip made it look rather tempting, the quotation being well over 3 discount, and a few purchases raised it to 2⅞ discount or a gain of ¼, compared with Friday last. India stocks were rather dull with a loss of ½ in the 3½ per cent., but all other British Funds were unaltered, and very little happened amongst Home County and Corporation stocks. Tynemouth 3 per cent. advanced 2 and London County 3 per cent. put on ½, while Nottingham 3 per cent. were 1½ lower, and Metropolitan 3½ per cent. and Sheffield 3 per cent. dropped 1. In the Colonial list Canada 4 per cent. registered gained ½ and Natal 3½ per cent. closed 1 up. The new Cape Town loan seems to have been a moderate success, the underwriters having to take up less than one-third, and as they include a good many insurance people willing to absorb the stock, it seems not unlikely that those dealers who have sold "bears" will be caught short.

The Foreign Government bond market continues to be the least affected by the general depression, and prices of most active stocks showed a disposition to improve. Paris lent a good deal of support to Argentine securities, particularly the Rescission fours, and gains of ½ to 1½ are noticeable in leading issues. Brazils followed the lead in a quiet way, Chilian '95 put on 1, and Uruguay fives finished ½ stronger. Colombian bonds fell sharply on the news of another revolution, closing 3 down, and Costa Rica "A" and "B" went back ½, but the remaining Central American defaulters stood as before. In the European division Spanish lost an early rise, but Turks, after being dull on a little Continental offering, picked up and close as before. French Rentes were supported and gained 1, and Italians, Portuguese new, and German 3 per cent. were steady, and occasionally higher. Bulgarian 1892 put on 1½, while Greek Railway loan receded ½. No intelligence of a disturbing character came from the Far East, and Japanese issues held quite steady, but Chinese silver loan relapsed

3 on the fall in the metal, and the 1898 gold bonds dropped ½.

Home Railway ordinary stocks shared in the general decline produced by stagnation of business on the eve of the holiday, and were further depressed when the market reopened by another batch of poor traffics. The decreases in receipts to date are now considerable, and with the bad harvests there seems not the slightest hope of an improvement for some time to come, so that it is little wonder that operators for the rise are tired of waiting. Quotations picked up a little when Consols marked a recovery, but were once more thrown back by the announcement that the South-Western Company was offering to its proprietors unnamed quantities of ordinary, preference and debenture stocks. The market was inclined to grumble at the form of the announcement, and at the concealment of the amounts the directors wished to sell, but it was rendered still more nervous by the fear lest the steps taken indicated that bankers were pressing the companies for a reduction of their overdrafts, and that it would be followed by further issues. It is, however, officially announced by the company that the issue is not made for the purpose of clearing off adverse balances at the bankers, as there is a very substantial sum standing to its credit at present. The money is required for the prosecution of the important capital works being carried out, notably at Waterloo Station. With reference to the statement that there is an innovation in the amount of stock to be allotted not being stated as in previous issues, it is pointed out the company has used the same terms "limited amount," and the directors have no intention of issuing stock to the full extent of their Parliamentary powers. South-Western ordinary fell 3 and the deferred 4, and other quotations suffered more or less heavily. At the low figures touched, however, the "bears" were tempted to cover, and a substantial rally occurred, especially in the case of the other southern lines. Brighton deferred, for instance, declined to 103½, but closed only ½ lower, and South-Eastern deferred, after touching 47, went out 1½ down on the week at 47½. Brighton ordinary receded 2, South-Eastern ordinary 2, North-Eastern 1½, and North-Western and the two Midland issues 1 each. Great Northern deferred also dropped 1, and Barnsley, District and North British deferred ½. Metropolitan was almost the only exception, and finished 1½ up on a fairly strong demand.

With the holiday in this market on Monday and New York closed for the State elections on Tuesday, there has been little life in Yankee Railroad shares The Continent was induced to lend a little support by the belief that the gold purchased in the open market on American account in the beginning of the week would put Wall Street in a more cheerful mood, and the advance in prices thus produced was at first accepted by operators on the other side. Trading, however, is still left entirely in the hands of the professionals, and as these have appeared to be swayed by simultaneous impulses to buy or sell, the market, whether moving up or down, has been an exceedingly difficult one to work in. The higher quotations reached were not long maintained before a reaction set in owing to persistent liquidation in Steel Trust issues, which resulted in pretty general weakness throughout the list. Atchison and Baltimore were said to be the most favoured stocks for the time, but at the close Atchison ordinary were unchanged, and Baltimore ordinary 1¼ up. No other movement exceeded 1, and practically all were adverse.

Canadian Pacific shares eased off in sympathy with Americans at first, but subsequently hardened in anticipation of a good traffic return for the last ten days of October. This was fully up to expectations with an increase of $101,000, but as it had been fully discounted the publication had no effect on the quotation which then fell back under the influence of Yankees, and closed with a loss of ¾ on the week. The Grand Trunk traffic was well above the prophets' estimate of £10,000, an increase of £22,800 being shown, but the sharp rise which resulted was not altogether retained, and in the end the only movements were gains of ⅛ in the ordinary and ½ in the second preference stock. Mashonaland Railway debentures were weak and 1 lower on the opinion expressed that another native rising in Rhodesia was by no means improbable in the near future.

Business in Argentine Railway stocks seemed in danger of dying down altogether in the end of last week, but a fresh batch of splendid traffic returns gave operators another opportunity of which they were not slow to avail themselves. A stream of orders followed the publication of the figures and prices once more moved upwards, the changes in some instances being of a substantial character. Buenos Ayres and Pacific ordinary improved 2, the first preference and second debenture stocks 1 each, and the second preference stock 2. Buenos Ayres and Rosaria ordinary gained ½,

the deferred and preference stocks 2, the 4 per cent. Rosario debenture stock 1½, and the Central debenture issues 1. Buenos Ayres and Valparaiso B debenture stock, Cordoba Central first and second preferences also put on 2, and that amount was added to the price of Cordoba and Rosario preference stock, while the 6 per cent. debenture stock advanced 4. Bahia Blanca and North-Western and East Argentine stocks rose 1, and the only adverse change was a fall of 1 in Argentine North-Eastern preferred stock. Autofagasta ordinary put on 4, Porto Alegre debenture stock 2, and Central Uruguay of Monte Video ordinary, Entre Rios preference and San Paulo ordinary all gained 1. Mexican Railway ordinary and first preference relapsed 1 and 3, and United Railways of the Havana preference stock lost 2.

The Miscellaneous market remains in a stagnant condition, and the little business that does go on continues to be of the selling order. Cotton and Textile things were weak, and a rumour was put about that the interim dividend on Fine Spinners would be passed. The story was later emphatically denied, it being stated that the usual board meeting will be held on the 13th inst. to decide on the payment. So the ordinary shares which had been sold freely from Glasgow recovered and leave off only 1-16 easier. Sweetmeat Automatic had another traffic decrease of £841 and relapsed sharply on offerings said to come from a good quarter. Aerateds, Liptons, Harrods, and other Catering or supply companies kept steady with fractional advances here and there in Meat shares. Iron and Steel securities, although not much dealt in, held their prices well, Welsbach pref. rose 2, while Gas Lights receded 1. Telegraph securities were better in places, while amongst Waterworks Southwark and Vauxhall ordinary put on 5½, and East Londons ½, although the evidence concerning the latter company, given before the arbitrators, was not very exhilarating. Breweries were heavy and Showells ordinary shares are now down to 7½. In 1899 they touched almost 40, and evidently another bad annual statement is expected next month. The position seems to call for inquiry. United States Steel stocks have found fresh records, and the next dividend on the common has been offered at $1¼, which seems dear.

Markets were flat all morning, and not particularly bright at the close. The Kaffir Circus, however, picked up in places because buying from Paris came to its help, and on the rumour that the "Two Million Syndicate" had begun to operate. That will be good news, if true, because the public will then have an opportunity to sell out. Also it was said that the Rand Mines, Limited, is going to pay a dividend of 100 per cent., but as balance to this there was a rumour that the Chartered Company was in need of more money, and would try to get it by selling fresh shares at 100 per cent. premium or £2 each. The market was a little better pleased to-day with the London and South-Western Railway issue, and seemed to think that the debenture and preference stocks would be taken up pretty freely by the public if not by existing stockholders. Even the Yankee market was a little bit up in the afternoon in spite of the shock given by the Lake Shore Company's necessity to raise £10,000,000, but the close was flat there, too, on heavy offerings of Steel preferences

MINING NOTES AND NEWS.

This has been a short week, by reason of the annual holiday on Monday, and it has likewise been a very quiet one. Dealers turned up on Tuesday in hopes that they would find more business than usual awaiting them, but they were disappointed. The public are still out of the Kaffir market, and two million syndicates are ineffective in advancing quotations. On the contrary, prices have drooped. Dealers are not without their reasons for this persistent weakness and mention such phenomena as the situation in the Far East, the fears of dear money, the strike at the Ferreira mine, and, above all, the delay in issuing the report of the Labour Commission. In the meantime Mr. Skinner's report has been published in the local South African press, and we give a summary of it elsewhere. From this it will be seen that Mr. Skinner himself has to confess it will be some months before a goodly supply can be produced, even if all goes smoothly, which is not very probable. Then the report of the Consolidated Gold Fields Company—with which we also deal at length in a leading article—has not made a favourable impression either upon the shareholders or the public. There are likewise unpleasant rumours abroad respecting the South African Gold Trust, accounting for the decline in these shares. It is said that the company will follow the Consolidated Gold Fields in not declaring a dividend early in the new year. The reason given is that the Trust will receive no interest on its biggish holding of Gold Fields. A large line of the shares is said to have been thrown on the market.

A strike of miners at the Ferreira mine was threatened last Monday. It appears that the company has imported a number of Italians, and the Englishmen said they would go out on strike if the Europeans were employed as skilled workmen. On receiving an assurance from the consulting engineer that the importation of Italians would not reduce wages, the men decided by a large majority not to go on strike. Nevertheless the incident has had an effect upon the market both in London and Johannesburg.

According to a cable from the Johannesburg correspondent of the *Financial Times*, the chairman of the Witwatersrand Native Labour Association left for England on Sunday last, travelling by the *Norman*. Special arrangements were made to keep his departure secret, but the correspondent understands that he may proceed with Mr. J. G. Hamilton to China, in order to arrange details in connection with the immigration of labourers to the Rand. He strongly protests against the policy adopted of suppressing important news from the public at the present moment. "In periods of market activity," says he, "the mining groups are ready enough to use the press for publication purposes. Certain group managers are, I understand, also averse to this policy of secrecy," but he gives no names.

Once more the most active section of the market has been the Westralian, though those who are manipulating the advance are finding it much more difficult to keep quotations up than they anticipated. Some of the mines, notably Ivanhoe South, continue to report good developments, but the share that has attracted most attention is Golden Horseshoe. It is a pity that at such a time the monthly figures of the gold exports should be so poor. The quantity received and exported at the mint during October was only 190,748 oz., valued at £686,824, compared with 194,387 oz., valued at £709,514 in October, 1902. These are a long way the worst figures of any month in the present year. It is said the Continent has been a fair purchaser of Westralian shares.

West African shares have managed to display steadiness, changes being irregular, without any marked tendency. In the miscellaneous list copper shares have strengthened, especially Rio Tintos, though the latter has lost some of its earlier gain. "Bear" covering in Etruscans has helped to a recovery in the price of these shares. Indians have been unusually active, particularly Champion Reefs. The output of the field for October will be found elsewhere.

Transvaal Chamber of Mines.—The monthly report for September of the Transvaal Chamber of Mines contains some interesting figures, likewise interesting paragraphs, bearing upon the labour position. At the end of the month the number of natives employed in the Witwatersrand district was 62,955, which shows a decrease on the preceding month of 96; on the other hand, in the outside districts, there was an increase of 334. A third batch, of 90 natives, arrived at the Association's depot on September 18 from British Central Africa, and these were allotted to the Consolidated Main Reef Gold Mining Company. These make a delivery of 822 natives, out of the 1,000 for which permission was obtained to recruit in this district. A first instalment of 289 natives came from German South-West Africa, on October 3, and were allotted to the Lancaster Gold Mining Company. It is said the physique of these blacks is distinctly good, and that they have entered upon engagements for a period of two years. An arrangement has been made with the Zambesia Company, after protracted negotiations, the effect of which is to open to recruiting a considerable extent of country, hitherto closed, both on the north and south banks of the Zambesi. Arrangements have been concluded for the establishment of a port of entry for natives coming into the Transvaal via Oliphants River, and the Labour Association reports that stations are being established between the Portuguese border at that point and Pietersburg, where the natives will entrain for the Rand. The first batch arrived on October 3. A marked improvement is perceptible in the recruiting results in the northern and eastern districts of the Transvaal. During the month a large number of chiefs visited several of the mines for the purpose of ascertaining on the spot the conditions of employment of the men of their tribes on the Rand, and the Association reports that they expressed themselves satisfied with the environments of their people. The administration of the Central South African Railways has reduced the fares of natives (in batches of not less than 20) travelling by goods train, to ½d. per head per mile for natives proceeding home. These facts go far to show that the prospects of getting supplies of black labour are improving, if only the mine bosses would have patience to wait.

Northern Blocks Syndicate.—This company must not be confounded with the Associated Northern Blocks, with which it has a close relationship. Its property consists of three leases, viz., the Medindie Hill, 24 acres, the Medinde Hill East, 6 acres, and the Iron Monarch, 24 acres, and upon the whole a report has been written by Professor E. H. Liveing. It is a disappointing document, for the professor has to report that, so far, no large or important body of sulphide ore has been met with. However, he does not wish to crush all hopes, so he enunciated the opinion that "no wise man will deny the possibility of valuable ore bodies still being found in this area. The point, however, that you have to decide is, how far does that possibility warrant you expending more money on these leases." This, he says, after confessing that the Syndicate has had little luck to encourage it to further expenditure. "With regard to your leases," he adds, "I am of opinion that if, after expending a total sum of, say, £7,000 on prospecting work, you still fail to locate anything of value, your wisest course will be to hold them, as long as possible, under exemption, and await the possibility of discoveries in the neighbouring properties enhancing their value—for example, should any important new chute of ore be found, at a great depth, in the eastern portion of the Brown Hill mine, pitching southward under the present ore body, then the upward, or northern extension of such a chute might with reason be sought for in your leases. I regret being unable to hold out any more definite hopes at the present time, but I trust the prospecting work at present in the hands of Mr. Roberts may yield you better encouragement before the balance of the £7,000 is spent."

Kaffirs Consolidated Investment and Land Company.—During the twelve months to the end of September this company received £10,339, from interest and profit on investments, and £1,355 from interest on loans, making a total of £11,694, leaving a profit of £10,317, to which is added the balance of £3,695 brought in. A year ago the directors distributed a dividend of 10 per cent., now they recommend the whole of the credit to be carried forward, "having regard," they explain, "to the very valuable assets of the company, which assets require ample cash resources for their immediate and profitable development." The company certainly has a plenitude of cash resources in the shape of £39,247, lent on security, and £24,050 on deposit and current account, but they ought to have foreseen these requirements when they paid last year's dividend. Possibly the latter was distributed with the object of lifting the price of the shares, for during the year £41,300 has been scraped in in premiums, on 27,000 shares. No wonder it has money to lend and owes nothing to creditors. The principal asset is the mixed one of "shares, debentures, and freehold property at Delagoa Bay, and in the United Kingdom, £95,221," but surely this could be particularised? It is stated that a large number of shares are held in other companies not included in the assets, as they have not yet been realised into cash.

Consolidated Gold Fields of New Zealand.—In distributing warrants for a dividend of 1s. per share, the directors of this company say:—"Although for the current year sufficient profits have been earned to pay the usual dividend of 10 per cent., it has been decided to distribute for this year only 5 per cent. So far as can be seen at present, this will leave the company in the strong position of having at least £35,000 cash in hand at the end of the financial year. The reason for the smaller distribution is the large expenditure incurred in development, and the purchase and erection of hauling machinery and plant on the Wealth of Nations and the Golden Fleece properties, and also in sinking the new main shaft of the Wealth of Nations to a depth of 1,350 ft., the cost of which has been provided out of the profits for the year. Under normal conditions, it would have been possible to provide working capital for these properties by converting them into separate companies, but, in the present state of the London money market this is not considered advisable. The directors, therefore, deem it in the best interests of the company to continue to provide the

necessary money out of the earnings of the company, a policy which, although involving an immediate sacrifice on the part of shareholders, should nevertheless prove to their ultimate advantage. An additional reason for husbanding the cash resources and keeping the company in a strong financial position is that the debenture issue of £50,000 falls due in 1906." We hope the shareholders will be comforted by these pleas.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Northern Pacific Railway Company.

For the year ended June 30 the gross earnings amounted to $46,142,105, or an increase of $4,754,725, and operating expenses, including $1,421,434 or $271,543 more for taxes, were $3,015,222 higher, at $25,453,527, or 55.16 per cent. of the receipts compared with 54.21 per cent. a year ago. Including dividends and interest received, the total net revenue came to $21,801,129, compared with $19,792,840, and after meeting interest, rentals, and dividends on the stock, the last item requiring $1,574,997 more, there was a surplus of $4,670,946. Out of this the usual $3,000,000 was appropriated for additions and betterments of existing lines, leaving, with the balance of $8,054,709 brought in, a surplus of $9,725,656. Both passenger and freight services contributed substantially to the increase in earnings, the former yielding $1,417,938 and the latter $3,074,944 more. Lumber and shingle shipments from the Pacific coast to eastern terminals continue to improve, but the west bound traffic does not show a corresponding advance, and the company is therefore hampered by a heavy rise in empty car mileage, which amounted to 29.24 per cent. of the total, against 27.35 per cent. in 1902. Taking the average train load, however, the net tons per train and per car carried rose from 401 to 402 tons, and from 17.75 to 18.56 tons respectively. The passenger branch showed an increase of 725,700 in number, and although the average amount paid per passenger was 0.05 cent smaller, the earnings per train mile rose from 1.542 to 1.599 cent. In operating expenses the largest proportion of the increase was, of course, in transportation charges, which were $1,996,171 up, owing to the higher wages paid, and the heavier cost of materials and fuel. Capital expenditure continues to grow apace, and during the twelve months $8,193,424 was charged to this account, of which $3,924,299 was for new equipment, $2,991,771 for purchase of other railroads or their securities, and the balance for real estate, new branches, and extensions. To meet this outlay the mortgage debt has been increased by $6,467,944 net, after deducting $1,032,056 for bonds purchased and cancelled, etc., making a total outstanding of $183,689,178, exclusive of Northern-Pacific-Great Northern joint bonds and scrip. The total track, including 67 miles of second track, and 2,382 of branches, has been increased to 5,198 miles, and the work of improving the line goes steadily on in the way of substituting temporary for permanent structures—64 bridges being replaced by timber structures, and 164 by-embankment, plate girders, and steel trusses—and increasing the main line standard weight of rail from 72 to 85 pounds on account of the heavy traffic.

Chicago, Burlington, and Quincy Railroad.

This is one of the three great American railroads embraced in the Northern Securities Corporation, the other two being the Northern Pacific and the Great Northern, but the accounts of each company are given separately, and from the report of this Burlington road we learn that its earnings in the year ended June 30 last amounted to $62,638,379. The working expenses and taxes took $40,542,473, leaving $22,095,906 as net income from the working of the property. The small sum of $346,540 was received as interest on securities owned and land receipts, so that the entire net income was $22,442,446, and after meeting all charges in the shape of interest, rentals, sinking fund, etc., a balance of $13,326,108 remained, out of which a dividend of 7 per cent. in four quarterly instalments was paid upon the unconverted fragments of Chicago, Burlington, and Quincy Railroad stock, while the railway company bearing the same name distributed 4 per cent. upon the Northern Pacific, Great Northern Joint C.B. and Q. collateral bonds, issued to purchase the Railroad's stock. This last payment took $8,606,752, and after meeting these outgoings a surplus of $4,491,538 was left. Earnings showed an increase of $8,843,000 in the year, compared with the preceding year, and the expenses and taxes increased by $4,860,000, so that the net income was greater by $3,984,000, and the percentage of expenses to receipts fell by 1.61 per cent. to 64.72 per cent. All branches of business seem to have yielded better returns, so far as volume and gross income were concerned, and the growth in the freight traffic was especially noticeable, but the earnings per passenger per mile fell off slightly to $2.08, and the gross freight earnings per ton per mile also shrunk to a minute extent, so that the figure earned was $0.868 per ton per mile against $0.896. The capital stock of the railroad company is practically unchanged at $110,839,100, only $38,500 C. B. and Q. convertible bonds having been turned into stock during the fiscal year. The funded debt has been increased by $3,978,500 during the year, and now stands at $156,650,900. Altogether the length of line owned, or controlled through ownership of securities, was on June 30 last 8,113 miles, and in addition the company leased a number of small roads bringing the total mileage up to 8,324 miles, of which only 480 miles are second tracked. The average number of miles worked during the year was 8,319. Within the twelvemonth $8,377,302 was spent on construction and equipment, exclusive of about $776,000 laid out upon standard and narrow gauge roads controlled by the C. B. and Q. Of this expenditure $4,436,868 went to pay for new construction, and $2,708,000 to purchase new equipment. The total was made up, it should be added, by the transfer of sundry investments in controlled roads on account of the purchase of the Burlington and Western Railway. Seeing that the road is so long, and has so little double track, it is obvious that capital expenditure must continue at a high rate for many years, if the property is to be kept equal to its traffic.

Wabash Railroad.

The directors of this Gould road seem quite satisfied with the achievements of the year ended June 30 last, and certainly the amount of business handled continues to improve, but there is nothing in the report to lead us to hope that the undertaking will ever be a cause of gratification to its stockholders. Revenue from all sources is returned at $21,608,757, or $2,237,976 more than in the previous twelve months, but nearly all the gain was swallowed up in working expenses, these, including taxes, rentals, and miscellaneous, absorbing $17,350,805, compared with $15,234,017. A large part of this increase was due to a rise in wages, every class of the service receiving from 10 to 20 per cent. advance over the rate paid two years ago. It is estimated that the total yearly addition under this one head will reach $550,000, a serious matter under the best conditions, but one full of gravity when we consider that there are signs of rapid reaction from the Unions recent superficial prosperity. Much money, too, was expended in building up the property, and effecting general improvements, total extraordinary expenditure being no less than $1,908,460, and this lavish outlay must proceed for many years before the railway can even approach a first class condition. In addition to the above mentioned amount $347,412 was laid out on 28,192 tons of 80-lb. steel rails, and nearly all the bridges on the Buffalo division were replaced with modern steel structures, on account of which the Wabash paid over $300,000. It is of course very pleasant to find these heavy charges met from revenue, but we hope later on they will not be capitalised when income ceases to grow and can no longer provide them. These big expenses mean that the increase in net revenue is the insignificant sum of $121,187, at $4,257,951, and as bond interest absorbed rather more at $3,034,512, the sum for disposal is $1,223,439, compared with $1,172,007. Additions to property were reduced $330,367 to $253,133, but $400,000 was set aside for new equipment this, with sinking fund and other charges accounting for $564,156, against $177,048. Sum still left is $406,150, and after again paying a dividend of 6 per cent. on the "A" debenture bonds, the actual surplus is $5,310 lower, at $196,150. The new engines, 50 in number, contracted for last year, are now being delivered, 500 forty-ton steel underbody flat cars were received early in the spring, and 1,500 forty-ton coal cars were contracted for, of which 500 have been received. Further, 42 passenger coaches, chair-cars, postal, and baggage cars were received under contracts entered into during the year, and 12 more are yet to be delivered. On these contracts 15 or 20 per cent. was or will be paid in cash out of the amount appropriated by the board for new equipment, and car trust notes running five years, at 5 per cent. interest, will be given for the balance. Whether these notes, as they fall due, are to be met out of revenue is not mentioned, but we hope they are, because the undertaking is committed to some heavy capital outlay in other directions. We are told that the large increase in traffic and the equipment for moving it, has clearly demonstrated during the past two years the utter inadequacy of the company's facilities for handling the business at the principal terminal points, Chicago, St. Louis, Detroit, Toledo, Kansas City, and elsewhere. Under ordinary conditions the undertaking might have been able gradually to secure the land necessary for these increased terminal facilities, and have paid for them out of earnings, but the conditions were such, owing to the scarcity of choice locations in the large cities, the pressing necessities for immediate relief and the activity of competing lines in purchasing desirable lands, that immediate action on the part of the company was necessary, and delay dangerous. The plan of the terminal bond issue of $10,000,000 was therefore decided upon, $4,000,000 to be used for immediate requirements. So about 11 acres of land within three blocks of the business section of St. Louis, have been purchased, and we are glad to hear from the directors that these terminals will add so largely to the revenues that the fixed charges of the bond issue will be more than met from these sources, and they will hasten instead of delay the time when the holders of debentures and the stocks of the company will receive dividends. We sincerely trust these prognostications will be fulfilled, but should be sorry to advise a gamble in the company's stocks on the strength of them.

Bahia Blanca and North Western Railway.

In its modest way this undertaking shared to the full the prosperous conditions ruling in the Argentine Republic during the past year, and in the twelve months to June 30, earned a gross revenue of £71,950, or £22,286, more than in 1901-2. The additional traffic was obtained at an increased cost of £10,974, so that the ratio of expenditure to total income was reduced from 83.45 per cent. to 72.86 per cent., while the net profit went up £11,312 to £19,527. Passengers did not contribute largely to the improved income, the increase from this source being only £811, but the weight of goods handled rose 37,552 tons, to 79,097 tons, or over 90 per cent. Important increases are to be seen in wool, stone, mole traffic, company's coal, animals and vehicles, skins, hair, and tallow, and grain. Nevertheless the gain in wheat traffic was held to be disappointing, and such was the poverty of the colo-

nists that the company came to their aid and distributed seed to the value of $12,519, payable against the harvest. Notwithstanding the failure of crops, $8,585 was duly collected, the remaining $4,000 being renewed by bills payable at next harvest. Happily the favourable outlook for the current year has given the colonists fresh courage, and the area sown has risen from 13,377 hectares to 21,200 hectares. The advance in animals was particularly encouraging, 77,552 sheep being transported, compared with 18,321 in the preceding year, and the supply of sheep for the freezing establishments promises to bring a good deal of lucrative traffic to the company. Work done in the produce market shows a considerable growth, and the general manager thinks this must always be an increasing business. The plan of the buildings and amount of land acquired will allow of almost unlimited extensions even before the necessity arises for building upper stories. According to the complete year's figures of the Port branch and mole, 17,750 tons were landed, and 11,806 tons shipped, the number of vessels alongside being 25 sailing and 57 steam. We have more than once referred to the refusal of the Buenos Ayres Western Company to carry out the agreement to purchase this company's lines, and as one of the reasons put forward was the unfitness of the system for the former concern's purposes, it is rather interesting to note that the general manager, in his permanent way certificate, says that on a recent detailed inspection effected by himself, with the general manager and resident engineer of the Western Railway, everything was declared by them to be in excellent order, and these gentlemen, on their return journey, made a record run over the line. Further, the Western locomotive superintendent, when on the recent inspection, expressed himself as very much pleased with the condition of everything he saw. To the traffic revenue of £19,527 must be added interest received, making a total of £27,673. From this interest on bank loans takes £3,187, and on first debenture stock £17,582, so that £6,904 is left. The directors again propose to draw from the reserve a sum sufficient to allow with this balance a dividend of 1 per cent. on the preferred stock. Capital expenditure for the year was £41,142, and the total debit to that account is now £129,198.

North of Scotland Bank, Limited.

Though the net profits for the year ended September 30 were £49,998, or £709 more than those of the previous twelve months, the amount available for dividend was only £498 more at £53,305, compared with last year, as £4,307, the sum brought forward, was smaller. Out of this a dividend at the rate of 8¾ per cent. was paid last May, and a further distribution at the rate of 10 per cent. is now proposed. To meet these £37,500 is required, while nother £1,000 is written off heritable buildings, and £12,500 equal to last year's appropriation, is added to the reserve, leaving a balance of £2,305 to be carried forward. The note circulation is down £28,357 to £472,133, and deposits and credit balances at £4,069,424 also show a drop to the extent of £63,632. Cash in hand and at call with London bankers is smaller by £52,744, at £601,312, but bills discounted and loans are up £266,202, to £2,636,044. Investments are valued at £2,367,965, or £308,962 more than a year ago, but at what price the £276,609 Consols were taken is not stated. Also part of the investments consist of £227,000, loans to London brokers, at call and short notice, and £324,662 temporary loans on stocks, and other marketable securities.

Cape Electric Tramways, Limited.

The report for the year ended June 30 is somewhat disappointing for the shareholders, as although the volume of traffic is said to have been maintained at the high level of previous years, expenditure and maintenance have largely increased, with the result that profits show a decided falling off. This company draws its revenue from dividends declared by undertakings in which it holds all the share capital, and the returns from the Cape Town and Port Elizabeth companies for the twelve months fell off by £10,918 to £110,090. In addition to this the working of the Camps Bay line, which has been leased from the Cape Town Consolidated Tramways and Land Company, resulted in a loss of £3,284 for the six months, so that the revenue, including £216 for profit on freight service and £45 for transfer fees, came to £107,068 only, or £14,871 less. After meeting all expenses and providing for debenture interest and redemption, the balance was £14,127 lower, at £66,372, and with £14,540 brought in, the amount available came to £80,912, compared with £96,840, but by cutting down the amount carried forward to the trifle of £912, the directors contrive to pay dividends of 15 per cent. against 16 per cent. last year, and to carry another £8,000 to reserve. The improvements and additions to the car shed and power house, with additional machinery in Cape Town, have at last been completed at a cost of £84,919, or £30,000 over the original estimate, and in order to avoid raising new capital, this expenditure has been met out of the reserve. More money, however, will have to be obtained soon, as it has been found necessary to supplement the rolling stock and proceed with the erection of additional power in Port Elizabeth, and the balance-sheet shows that there are no free resources available. All the reserve fund, with the exception of £37,841 invested in Consols, has been sunk in the business, while £11,655 is due to sundry creditors, £12,127 to Wernher, Beit and Co., and £19,434 to debenture holders for interest accrued and debentures drawn for redemption, and to meet these liabilities the company has no more than £1,614 in cash, and £2,138 owing by sundry debtors. That being so, the board should have paid a lower dividend.

R. H. and S. Rogers, Limited.

The boast made by this company a year ago that it had made a speedy recovery from the effects of the war is proved by the report for the twelve months ended September 30, to have been premature. Serious depression existed during that period in the hosiery and general outfitting trades, and was in some part at least directly attributable to the war, although it was no doubt aggravated by the unsettled condition and extreme fluctuations of the cotton market, to which the directors ascribe it. After setting aside £2,009 or £124 more for depreciation, and paying directors' remuneration, the net profits came to £8,612, or a decrease of £3,060, and even with the larger balance of £1,185 brought in, the amount available was £2,888 less, at £9,797. Accordingly the ordinary shares receive a dividend of 5 per cent. only, compared with 7½ per cent. for the previous year, and while £1,000 was again transferred to reserve, this was only rendered possible by reducing the balance carried forward to £547. Changes in the balance-sheet, except for a further addition of £1,272 to capital outlay, are unimportant. Stocks have been reduced by £930 to £42,785, and cash is £774 lower, at £2,331, while book debts have risen £308 to £33,490, and on the other hand £306 less is due to sundry creditors at £16,037.

Second Edinburgh Investment Trust, Limited.

This company was incorporated in June, 1902, and the report just issued covers the period from that date to September 30. It has a capital of £300,000, divided into 200,000 4½ per cent. cumulative preferred stock, and £100,000 deferred stock, and as the directors have already invested £100,000 over this sum, they propose to issue £150,000 redeemable debenture stock out of an authorised total of £300,000, at the price of 101 per cent. When the accounts were closed the amount invested was £413,954, spread over more than one hundred securities, and without taking into account any interest accrued but not actually received, the net revenue, exclusive of £1,597 profit realised on sale of investments, amounted to £13,818. The dividend on the preferred stock took £9,157, and the interim dividend on the deferred stock £920, leaving £3,151 to be dealt with, out of which the deferred stock receives a distribution at the rate of 4 per cent. from January 31 to September 30, and £712 is written off preliminary expenses, together with the £1,597 above mentioned, eliminating that item from the balance-sheet, leaving £494 to be carried forward. Pending the issue of debenture stock, the company has borrowed £107,054, and also owes £1,806 to sundry creditors, and as it has all this money invested, there is not a penny in hand to meet even the dividends now declared, which is surely very unwise. Regarding the position of its affairs, we can say nothing, as the only entry on the credit side of the balance is the item "investments, £413,954," and stockholders are left in the dark as to the nature of these.

Scottish Trust and Loan Company of Ceylon, Limited.

The improvement in the tea market during the past year benefited this company considerably, as with a small decrease of 866 lb. to 738,144 lb. in the crop obtained, and the average cost of production much about the same as a year ago, an advance was secured in the price realised from 6.39d. to 6.89d. per lb. Including £849 brought in, and £124 from interest on loans, etc., the revenue for the twelve months ended August 31 came to £6,364, or an increase of £1,346. After meeting all administration charges, home salaries, etc., the balance available was £1,499 higher, at £5,048, and the directors take advantage of the increased resources at their disposal to raise the dividend from 6 to 7½ per cent., and carry forward £1,673. Changes in the balance-sheet, although mostly small, are favourable, as a reduction of £600 in the amount due to sundry creditors and on bills payable to £6,746 has been accompanied by increases of £1,162 to £5,882 in estate produce on hand and £172 to £2,009 in cash. Sundry debtors owe £210 less at £987, and £200 of the outstanding loan on mortgage has been collected, leaving £2,000 still to come in. Nothing, however, was added to reserve, which stands at £11,000, all invested in the business, and the allowance for depreciation seems a little inadequate.

Lady's Pictorial and Sporting and Dramatic Publishing Company.

This company's publications continue to enjoy a wide popularity, and amidst the universal depression and falling business it is quite cheering to read that advertisement revenue and circulation have both improved during the year to September 30 last. Profits from all sources were £26,615, or £1,338 more than in the preceding twelve months, and after providing £1,250 for directors' fees, the available sum is £26,615. Preference dividend having been met, the board thinks the ordinary shareholders entitled to another ½ per cent. at 7½ per cent. places a further £2,000 to reserve, and carries forward £4,014 against £2,611 brought in. Reserve now stands at £16,000, separately invested in securities, which show a depreciation of £763, trade accounts are £11,566 to the good, and cash comes to £19,789. Purchase of business and copyrights of course remains at £329,847, and the reserve should be given the benefit of any further advance in profit until the accumulations against this asset are much more substantial.

Leeds and District Worsted Dyers' and Finishers' Association.

This small combine was formed three years ago, and up to date seems to have done fairly well. In the twelve months ended September 30 last the net profits amounted to £20,793, and £2,103 was brought forward, making £22,896 in all. From this debenture interest absorbs £2,835, and preference dividend £3,780, while an interim ordinary payment of 3½ per cent. took a further sum of £3,500. The directors now propose to bring the ordinary dividend up to 8 per cent. by distributing another 4½ per cent., with £5,000 added to reserve, and a considerably increased sum

of £3,281 carried forward. The amount of depreciation allowed on leases, plant, and machinery is not mentioned, but the position looks fairly comfortable. Trading accounts are about £14,000 to the good, cash comes to £11,585, and the reserve of £10,363 is kept apart from the business. Issued share and debenture capital amounts to £226,000, and properties and goodwill are valued at £201,511.

LANCHESTER ENGINE CO., LIMITED.

This company during the year ended July 31 last earned a net profit of £8,667, which the directors carried forward to the next account. Why they did not write off the item in the balance-sheet, of expenses of establishing the business, consisting of purchases, wages, and expenses to July 31, 1902, not chargeable to buildings, plant, machinery, etc., is a mystery, though had they done so it would have brought the carry forward down to £411. Further capital is required for the business and the directors propose shortly to issue more ordinary and preference shares. But where is the security?

Answers to Correspondents.

[*A Fee of Five Shillings per query is charged for replies under his heading. Letters, Five Shillings extra per letter.*]

R. I. C.—(1) This company is well managed, and has a very fine business. You have, unfortunately, paid rather a high price for your shares, but I do not think you should endeavour to sell now. (2) There has been a very severe fall in these shares, and I fear it has been justified by the position of the company. I am afraid its prospects are not very rosy, and think you should sell if there should be any sharp or even moderate improvement in price. (3) This is a good property, and I see no harm in your retaining the shares. There is no likelihood, however, of the dividends being increased, and you should remember that a portion of them should be set aside as return of capital. The life of the property promises to be a long one. (4) Should there be a reaction of 2 or 3 per cent. I think this stock would be worth picking up. The traffics are very good, and should continue so for some time to come. The half-yearly report issued by the company recently showed a very satisfactory state of affairs.

Mont.—This company's report is expected shortly, and a good deal depends on the figures it shows. Various rumours are about, but apparently nothing reliable is known yet. It is certainly the best of its class, but its capitalisation is very heavy, and should there be any sudden upward movement I think you would be wise to take advantage of it. I doubt if you should consider it a permanent investment.

N. J.—I am sorry I cannot answer your question in this column. A letter will be sent you.

INDIAN GOLD MINES.

During October there was a falling off in the output of the Indian mines compared with September, though the decline is nothing to speak of, merely 72 oz., whilst there is an increase of 3,522 oz. over the corresponding month of last year. Nevertheless, the figures are the highest of the current year, with the exception of those for September. There is nothing to call attention to in the individual mines, as the outputs of all show but slight changes, with nothing abnormal. Below will be found our usual tables.

INDIAN MINING RETURNS.

Name of Company.	June. Tons.	June. Oz.	July. Tons.	July. Oz.	September. Tons	September. Oz.	October. Tons.	October. Oz.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Bahia Blanca and North-Western.—Dividend of 1 per cent. on preferred shares.

Burma.—Distribution of £1 10s. per cent. as surplus profits for year ended June 30 over and above the 2½ per cent. guaranteed.

Pennsylvania.—Dividend at the rate of $1.50 per share.

BREWERIES.

Empress.—Dividend of 4 per cent. on ordinary shares, placing £1,000 to reserve, carrying forward £3,345.

Gartsides (Brookside).—Interim dividend on ordinary shares of 6s. per share for half-year ended Sept. 30.

Nalder and Collyer's.—Interim dividend on ordinary shares at the rate of 10 per cent. per annum for half-year ended Sept. 29.

MINES.

Brilliant and St. George United.—Dividend of 6d. per share, payable Nov. 23.

Brilliant Central.—Dividend of 9d. per share, payable on the 14th inst.

Scottish Australian.—Dividend at the rate of 3 per cent. per annum, carrying forward £1,154.

MISCELLANEOUS.

Blackpool Pier.—Dividend of 10 per cent. and bonus of 2 per cent. on ordinary shares, placing £1,250 to reserve.

Bradford Coal Merchants and Consumers.—Interim dividend for six months ended Sept. 30 at the rate of 4 per cent. per annum on ordinary shares.

Chubwa Tea.—Interim dividend of 3½ per cent. on ordinary shares, payable Nov. 30.

Cleveland Salt.—Dividend of 7½ per cent. on deferred shares, placing £500 to reserve and carrying forward £1,504.

Cleveland Trust.—Dividend of 6 per cent. on the ordinary shares, carrying forward £255.

Doom Dooma Tea.—Interim dividend at the rate of 5 per cent. on account of 1903.

Eadie Manufacturing.—Dividend of 6 per cent. on ordinary shares, placing £10,000 to reserve, and carrying forward £13,531.

Entwistle and Stephens.—Interim dividend for six months of the current year at the rate of 6 per cent. per annum.

Federation.—Final dividend at the rate of 10 per cent. per annum, making 10 per cent. for 15 months ended Sept. 30.

Fraser and Chalmers.—Dividend of 5 per cent. on ordinary shares, making 10 per cent. for year, carrying forward £4,203.

Henry Bull and Co.—Dividend on ordinary shares, making 7 per cent. for the year, carrying forward £10,847.

Isle of Man Steam Packet.—Interim dividend of 2½ per cent.

Land and Mortgage of Egypt.—Interim dividend at the rate of 8 per cent. for six months ended Sept. 30.

Meters.—Interim dividend on ordinary shares at the rate of 5 per cent. per annum.

Partridge, Jones, and Co.—Interim dividend for past half-year at the rate of 10 per cent. per annum.

South Blackpool Jetty.—Dividend of 7 per cent. for past year, placing £250 to reserve.

West India and Panama Telegraph.—Dividend of 8s. per share on account of arrears of dividend on first preference shares.

MINING RETURNS.

Ashanti Goldfields.—Obuassi mine, 1,950 tons for 4,600 oz. Development, 700 tons for 220 oz.

Ashanti Sansu.—1,600 tons for 710 oz.

Balaghat.—2,950 tons for 2,137 oz.; 2,160 tons of tailings for 139 oz.

Barrett Gold.—455 oz. gold; value, £1,600.

Brilliant and St. George.—Crushed 2,306 tons for 1,690 oz.; cyanide, £4,666.

Brilliant.—620 tons crushed for 479 oz.

Brilliant Central.—Crushed 4,815 tons for 4,539 oz.; cyanide, £3,878.

British Exploration of Australasia.—Lalla Rookh Mine, 290 oz. from 73 tons crushed.

Broken Hill Proprietary.—Gold, 1,008 oz.; silver, 388,245 oz.; soft lead, 5,087 tons; antimonial lead, 39 tons.

Burbank's Main Lode (1902).—203 oz. from 490 tons.

Champion Proprietary.—1,300 tons of ore crushed for 747 oz.; 713 tons tailings for 65 oz.

Champion Reef.—14,890 tons produced 15,024 oz.; 20,060 tons tailings produced 2,907 oz.

Chinese Engineering.—Output of coal, 13,000 tons.

Craiggiemore Proprietary.—Crushed 1,200 tons, cyanided 820 tons; total, 536 oz.

Cumberland Niagara.—1,200 tons crushed for 357 oz.; tailing works, 152 oz. from 1,275 tons.

Day Dawn P. C. Gold.—1,320 tons of tailings treated, value £774. Concentrates from last crushing, £585.

Dolcoath.—Crushed 7,755; black tin sold, 129 tons; slimes, 4 tons.

Duke United.—390 fathoms yielded 985 oz.

Dundee (Natal) Coal.—Output, 10,286 tons.

Durban Roodepoort.—7,250 tons for 3,537 oz.; tailings, 5,250 tons for 1,166 oz.; total, 4,703 oz.

Elandslaagte Collieries.—Output, 10,899 tons.

Glencoe (Natal) Collieries.—Output 7,267 tons.

Golden Links.—Mill, 2,070 oz. from 2,650 tons; cyanide, 200 oz.; concentrates, 182 oz.; total, 2,452 oz.

Great Eastern Collieries.—Output, 13,400 tons.

San Ramon Gold (Chihuahua, Mexico).—7 bars containing 96 oz. gold, 6,741 oz. silver.

Surprise Gold.—Crushed, 3,140 tons, gained 716 oz.

Talisman Consolidated.—Tons of ore treated, 4,210.

Transvaal Gold.—Crushed 4,538 tons, yielding 1,359 oz.; cyanide treated 3,070 tons, yielding 1,007 oz.; slimes treated 1,580 tons, yielding 413 oz.; from bye-products, 110 oz. Total, 2,889 oz.

Waterson Gold (Chihuahua, Mexico).—14 bars, containing 317 oz. gold, 13,251 oz. silver.

Westralia and East Extension.—Crushed 2,450 tons; yield of smelted gold, 1,241 oz. Cyaniding, 3,850 tons tailings treated, 442 oz. recovered.

White Feather Main Reefs.—1,600 tons of ore milled; total yield 1,155 oz.

Hannan's Star.—2,075 tons, yielded 1,236 oz.

Hutti (Nizam's).—610 tons for 444 oz.

Inverell Diamond Fields.—106 loads washed, producing 325 carats of diamonds; 18 cwt. of tin produced from 106 loads.

Jumpers Gold.—Crushed 3,300 tons, obtained from mill, 856 oz. from concentrates by cyanide, 40 oz.; from tailings, 556 oz.; total 1,452 oz.

Kalgurli Gold.—4,297 tons for 3,976 oz.

Koffyfontein Mines.—2,200 carats diamonds.

"Lloyd" Copper.—Output 162 tons fine copper.

Menzies Alpha Leases.—Crushed 450 tons for 404 oz. Cyanide, 549 tons of tailings yielded 228 oz.; concentrates, 36 tons, 27 oz.

Mount Yagahong.—Champion Extended 86 tons of ore for 56 oz.; from retreated tailings, 348 oz.

Mysore.—16,050 tons produced 15,289 oz.; 10,742 tons of tailings produced 1,554 oz.

Mysore West and Mysore-Wynaad.—1,164 oz. from 2,005 tons of ore crushed.

Natal Navigation Collieries.—Output 15,034 tons.

Natal Steam Coal.—Output, 3,400 tons.

New Chillagoe.—Chillagoe and Mungana, total 3,720 tons copper ore and 2,109 tons lead ore, producing 319 tons of copper matte and 461 tons of lead bullion, containing 164 tons copper, 461 tons lead, and 34,960 oz. silver.

New Options.—Victory Mine: 300 tons, 45½ oz.; residues, 20 oz.; Crescent cyanide, 200 tons, 22 oz.

New Queen.—250 tons crushed, 306 oz. realised; public crushing, £50; tributers, £48.

Nundydroog.—6,000 tons produced 5,578 oz.; 5,018 tons of tailings produced 512 oz.; total 6,090 oz.

Ooregum.—11,975 tons of stone produced 1,174 oz.; 10,610 tons of tailings produced 922 oz.; total 7,096 oz.

Red Hill (Westralia).—465 oz. from 245 tons crushed.

St. George's Coal.—Output 8,820 tons.

St. John del Rey.—Gold produce, £24,500.

Vogelstruis Estates and Gold.—Crushed 3,555 tons for 1,400 oz.; tailings, 3,060 tons for 339 oz.; total, 1,739 oz.

White Feather Main Reefs.—1,600 tons yielded 962 oz. from mill, 193 oz. from cyanide.

NEXT WEEK'S MEETINGS.

Monday, November 9.

Lady's Pictorial.—172, Strand, 12.3 p.m.

Tuesday, November 10.

Bahia Blanca and North Western Railway.—Winchester House, noon.

Components.—Bournbrook, 2.30 p.m.

Hawaiian Tramway Company.—Cannon Street Hotel, noon.

Henry Bull & Co.—Winchester House, noon.

Montrose Gold Mining.—Winchester House, noon.

Menzies Consolidated Mining.—Winchester House, 12.30 p.m.

Otis Steel.—Winchester House, 2.3 p.m.

Jules Rolez.—Cannon Street Hotel, noon.

Wednesday, November 11.

Coats.—Glasgow, 2 p.m.

Haslam, J.—Bolton, 2.3 p.m.

Thursday, November 12.

Consolidated Goldfields of South Africa.—Cannon Street Hotel, noon.

Dalgety & Co.—96, Bishopsgate street, 12.30 p.m.

Victoria Pietersburg Railway.—Winchester House, 12.30 p.m.

Waitekauri Gold Mining.—Cannon Street Hotel, noon.

Washington Brewery.—Winchester House, noon.

Friday, November 13.

Bahamas (Inagua) Sisal Plantation.—28, Victoria Street, 10.30 a.m

The Newnes Magazines for November fail to reach the high standard touched by the October issues. No efforts to revivify a mummy have ever been successful, and the pulling of the wires in the resurrected skeleton of Sherlock Holmes (*Strand*) is too evident. To the same magazine John Oxenham contributes a dainty story—"A Simple Beguiler," and Hélène Vacaresco's sketch of the Queen Dowager of Italy, "The Making of Stars," by A. Saroth Kumar Ghosh, and "John Bull through Foreign Spectacles" are among the most interesting articles. Short stories form the bulk of the contents of this month's *Sunday Strand*, but amongst other attractive papers is one by Rudolph de Cordova, on "Sir Alfred Lewis Jones, K.C.M.G., under the heading "The New Gospel of Wealth," a gospel we are not much in love with. Miss E. M. Jameson writes a very good children's story—"The Pendletons." The *Wide World* is full of wondrous things, none more so, perhaps, than the first—"Buried Alive in St. Pierre," the story of the only man who was found alive out of the forty thousand inhabitants of the annihilated city in Martinique. A new serial starts in the *Captain*, which promises to be amusing—"Poor Dear Harry," by Guy N. Pocock.

COMPANY MEETINGS.

THE WESTERN TELEGRAPH COMPANY.

The sixtieth ordinary general meeting of the shareholders of the Western Telegraph Co., Limited, was held on Wednesday, November 4, at River Plate House, London, E.C. Sir J. Wolfe Barry, chairman of the company, presiding.

The secretary, Mr. E. Steer Hodson, having read the notice calling the meeting, and the auditors' report.

The Chairman said: Gentlemen,—I do not think that the present report calls for many remarks from me. It is a report of steady satisfactory business, and perhaps the best evidence of that is that few remarks are called for from the chairman on an occasion of this kind, although I will refer to one or two matters. The message revenue for the half-year under review amounted to £213,000, and that for the corresponding half-year ended June 30, 1902, to £196,500, showing the satisfactory increase of £16,500. The larger portion of this increase is attributable to increased trade with the River Plate. The interest we received from deposits, rents, and transfer fees are practically the same as in the corresponding period of last year. Dividends on investments in other telegraph companies which are feeders to our general system show a small decrease of £800. Turning to the expenses, which we compare with the preceding, not the corresponding, half-year, those in London show a small decrease of £41, but no item calls for remark. At the stations there was a net increase of £1,737, of which £556 was due to a larger expenditure in travelling expenses in consequence of more clerks having been sent out, and a larger number having been sent home on leave. Rent, house allowance, and other items were increased by £539, principally due to our having to grant an allowance to our Rio Janeiro staff pending the completion of their new and very greatly improved quarters on the other side of the harbour. Repairs and renewals of furniture were also higher by nearly £500. When we come to the important matter of the repairs of cables and the expenses of our ships, we find that they were comparatively small in the previous half, and those for the June half-year show an increase of £14,589. But of this increase nearly £11,000 is for new cable (over 100 knots), which has been used in repairs and for depreciation written off cable in stock. We have lately bought and sent out a small steamer called the *Cormorant*, which was purchased at the beginning of the year, and this steamer has been very usefully employed since she arrived in South America, and the expense of her maintenance and that of a temporarily chartered steamer for repairs to our Lisbon-Madeira-St. Vincent cables account for the remainder of the increase under abstract C. We have invested on account of reserve funds nearly £50,000 during the half-year. The difference between the cost of the investments we hold on account of reserve and the present market price represents an average depreciation of 5¾ per cent. That the shareholders will readily realise is due to the abnormal depreciation of all securities, even the most gilt-edged, during the past year or two. We have, however, during the past three or four years made considerable profits when a sale of investments has been necessary, and the shareholders will, of course, remember that interest is always carried to the credit of the reserve fund. The broad result of the half-year's working is that after providing £13,500, in round figures, for debenture stock and debenture interest and sinking fund, and £3,200 for income-tax, there remains a balance of £117,500, again in round figures; and to this is added the sum of £5,300 brought forward from December 31 last, making a total of £122,800. A quarterly interim dividend, amounting to £31,000, has been paid, £35,000 has been transferred to the general reserve fund, and £2,000 to the maintenance ships' reserve fund. The directors now recommend the declaration of a final dividend of 3s. per share, making, with the interim dividends, a total dividend of 6 per cent. for the year, and also the payment of a bonus of 2s. per share, all free of income-tax, which, together, will amount to £51,982, leaving a balance of £2,639 to be carried forward. The dividend and bonus will be payable on November 5, I may say now, perhaps, that the revenue to date for the current half-year ending December 31 next, is not quite so satisfactory as that for the corresponding period of 1902. The decrease is not serious, but there is no sign of increase; and the decrease we find is due to the continued falling off in our receipts from inter-South American traffic. We have to compete for that with the Government, and being in competition, we must take the matter as we find it; and although we do the best we can, we find that that description of traffic does not show any sign of increase, but rather a serious decrease. On the other side of the account the expense of repairs to cables is thus far below the average. I have often said at these meetings that our revenue depends on the course of trade in the countries we serve, and also, to a considerable extent, on the amount of repairs to cables, both of which matters are outside the control of the directors of a public company. On the whole, I think I may congratulate the shareholders on what I may call a satisfactory, but uneventful report; and I think, as I have said before, that it is a source of gratification that there are no matters calling for special attention, and nothing that I have to draw the attention of the shareholders particularly to, although I shall be very happy to answer any questions which may be put. I now beg to move the following resolution:—"That the report of the directors and the accounts to June 30, 1903, now submitted, be approved and adopted, and that a dividend be now declared of 3s. per share, making, with the interim dividends already paid, a total dividend of 6 per cent. for the year, and also a bonus of 2s. per share, making in the aggregate a distribution of 7 per cent. in respect of the profits for the year ended June 30, 1903, the said dividend and bonus to be respectively free of income-tax."

Sir J. Denison Pender, K.C.M.G., deputy chairman: I have the pleasure of seconding this resolution.

Mr. J. Houston: Before the resolution is put to the meeting, I would like to ask you one or two questions. In looking over this report, I find that interest on investments for the last half-year amounts to £6,900. I would like to ask you whether any of the investments are in default, whether there are any not paying interest, because, on going over these investments I find that the interest for the half-year should come to £8,680, whereas the company is credited with £6,900, or a difference of £1,173. Perhaps some of the investments are in default. I have not attended more than one or two meetings, though I am one of the largest shareholders, having taken some of my shares at the commencement of the company, 30 years ago. There is another matter I would like to bring before you. When we amalgamated the Western and Brazilian Telegraph Companies we had a very large reserve fund belonging to the Brazilian Company, which has now passed to the Joint Company. I think it would only have been fair to the Brazilian Company that that money should have been divided among its shareholders, at the time of the amalgamation, because at that time the Western Company had no reserve fund at all, and they are now getting the benefit of the reserve fund which the Brazilian shareholders ought to have had. Is that fair, gentlemen?

The Chairman (interposing): I do not know whether the meeting wishes to discuss a matter which is really five years old.

Major Cotton: A matter of history.

The Chairman: All these matters were thoroughly discussed five years ago, and the views of the two companies taken upon them.

Mr. Houston: I wrote at the time and disputed the right of the directors to put the reserve fund into the general fund.

The Chairman: I am in the hands of the meeting.

Mr. Houston: I may be wrong, but I think it is only a matter of right and justice that that money should have been divided; it would have come to £5 per share.

The Chairman: I submit it is quite out of order.

Mr. Houston: It is a matter of right and justice.

A Shareholder: We had our *quid pro quo* for the reserve fund in every possible way.

Mr. Mountcastle: I shall be glad if you can give us a little more information about wireless telegraphy. (Laughter.) I see in the papers that the messages of Mr. Marconi were hindered through the sun's light. I should like to know if that is so, because if it is we shall not be troubled with any serious competition through wireless telegraphy, if it is only at night the messages can go safely.

A Shareholder: Can you tell me whether our lines were in any way affected by the recent magnetic storm; you did not mention that, and it is a matter of public interest?

Mr. Houston: There is another question which I forgot to ask and which may interest the shareholders. Have you any limit, or have you come to any agreement as to the limit of the reserve fund, and when we might expect to get another half per cent., or perhaps one per cent., added to our dividend? I think that would be a subject agreeable to every gentleman in the room.

Mr. Mountcastle: May I ask a question about the interest? Of course a portion of the reserve fund is invested in other companies, but the interest credited is only on the particular investments; should not the reserve fund get some of the dividends which come from the shares in other companies?

The Chairman: If there are no other shareholders who wish to make a remark, I will take the matters that have been alluded to, and I will take the last question first. The reserve fund is not invested in the shares of other companies; we hold shares in other companies, but not *qua* reserve fund; all our reserve fund is in what may be called more liquid investments. If you will turn to the figures on pages 10 and 11, you will see that the whole of our investments are in other enterprises than telegraph companies. I may also answer the gentleman who spoke first, that there has been no default of interest that I am acquainted with, but the question of how much is credited must be a question of the time at which the dividends are paid. Some of the investments were purchased just before the end of the half-year, and did not bear interest, but that was taken into account in the price of the investment. As to there being any limit as to the amount of reserve, I should be very sorry indeed to bind the board in any way on such a point as that. We have always pursued the policy in this company of keeping our dividend as steady as we can, and fortifying the enterprise as a whole by building up the reserve fund. That reserve fund is from time to time looked at by the directors from the point of view of the length of cable we have in operation, and from an actuarial point of view as to what is absolutely necessary as prudent business people to put the reserve into a proper position for an enterprise such as a cable company. I therefore do not hold ont any immediate hope of an increase of dividend, and I hope the shareholders will endorse the policy of the directors—which is now an old one, and which has proved to be of the greatest utility to the stability of the company—of treating the reserve fund in a liberal way. I do not think it in order to discuss the question of the arrangement made between the two companies five years ago, and I do not propose to do it, I will only make one general remark, that all matters which the shareholder alluded to were most thoroughly discussed five years ago, and that the fusion of the two companies took place when both bodies of shareholders were fully convinced that it was fair and right, having in view the position of the two companies with regard to everything, and including the reserve fund. Therefore, I do not think I need go further into it. With regard to wireless telegraphy, I cannot say more than I have said before. We, of course, see

that within certain limits, wireless telegraphy is a useful invention. I do not myself see any more reason to apprehend serious competition with cable companies than I did on the first occasion when I alluded to the subject some two or three years ago. I think matters are just as they were. With regard to the magnetic storm, it was a storm of unusual character, not only in severity, but in the large area over which the effects were felt. The effects were felt in Brazil, and we felt the effects in this country, and on our traffic generally. It is only one of those examples of a particularly severe storm of a nature which we have experienced on other occasions in a less severe way, and to that extent it is of course extremely interesting from a scientific point of view. It has passed away, the business is being conducted as usual, and except that it was a very severe storm, I do not think it calls for any special remark. Apparently, it was felt all over the habitable globe in different degrees of intensity, and it interfered to a greater or lesser extent with telegraphic work. We have been in the habit this year of experiencing storms of all kinds, and this is one of the examples of a storm which can be paralleled in another branch of physics by the extraordinary weather we have been having in regard to rain storms; not that I mean to infer for a moment that the two are interdependent, but that one must be prepared at times for more severe storms in the one direction as in the other. I will now put the resolution to the meeting.

The resolution was carried unanimously.

The Chairman: The next business is that Mr. W. S. Andrews retires by rotation, and I move that he be re-elected a director. Mr. Andrews has served the company a great many years, and I have great pleasure in submitting the resolution.

Mr. John Coppen: I have great pleasure in seconding the resolution.

Sir John Denison-Pender: I have the pleasure of proposing that Sir John Wolfe Barry, K.C.B., who retires by rotation, be, and is hereby re-elected a director of the company.

Sir Albert J. Leppoc Cappel, K.C.I.E.: I have great pleasure in seconding the resolution.

The resolution was carried unanimously.

The Chairman: I beg to thank you, gentlemen, for my re-election. The next motion on the paper is the re-election of the Hon. Arthur G. Brodrick, and I move his re-election.

Mr. John Coppen seconded this, and it was carried unanimously.

Mr. George Ennis moved the re-election of Messrs. Deloitte, Dever, Griffiths, and Co., and Messrs. Gane, Jackson, Jeffreys, Wells, and Co., as auditors, at a remuneration of £100 for each firm.

Mr. Houston: I have much pleasure in seconding the resolution. They are very good names and they have always done the work very well for the company.

The resolution was carried unanimously.

The Chairman: That concludes the business of the meeting.

Major Newton: I have much pleasure in moving a vote of thanks to the chairman and his colleagues for the work they have done for us in the past year. It has been a normal year, but the shareholders know that the directors have been looking after their interests. I should like just to ask one more question, and that is whether this extraordinary magnetic storm has left our cables in as good a condition as before. It would be satisfactory to us to know it.

Major Cotton: I have pleasure in seconding that, and I should like to include our thanks to our worthy manager, and to the secretary and staff on this side and to the staff on the other side for what we must consider the satisfactory state of the company's affairs.

The resolution was carried unanimously.

The Chairman: In returning thanks for this kind expression of the confidence the shareholders feel in the board and the staff of the company, I only wish to answer the question that the hon. shareholder addressed to me by saying that as far as we know the cables are left in just the same condition they were before the storm. I thank you all.

This terminated the proceedings.

SWAZIELAND CORPORATION.

The fifth ordinary general meeting of the Swazieland Corporation, Limited, was held on Monday, November 2, at Winchester House, under the presidency of the Hon. J. Tudhope.

The Secretary (Mr. F. T. Pressland) having read the notice convening the meeting, and the report of the auditors,

The Chairman said: Gentlemen.—When I last had the honour of addressing you from this chair I dwelt at some length and in a somewhat optimistic vein on the prospects which then seemed to be opening up in the future for the corporation. The events of the year just closed have amply justified the forecast in which I then indulged, for though there have been some unforeseen delays in carrying into effect the measures necessary for the good government of Swazieland, several important steps have been taken towards that desirable end. Doubtless owing to the representations of Lord Milner, whose liberal and enlightened policy in the Transvaal has borne substantial fruit, an important measure has been promulgated in the form of an "Order in Council" placing Swazieland under the jurisdiction of the Governor for the time being of the Transvaal, giving him the power of appointing a resident Commissioner and other functionaries for the administration of civil and criminal law throughout the land. This measure settles the moot questions of the incorporation of Swazieland with the Transvaal, and the alternative of its being held as a simple appanage of that Government under the Department of Native Affairs, and points to the desirable result that Swazieland will in future be administered as a separate Crown colony under its own administration, but under the direction of the Governor of the Transvaal, subject only to the veto of the Colonial Secretary in London. The question naturally arises, How will the interests of this company be affected by such a solution of the difficulties which admittedly surround the question? Your directors are of opinion that it is the best solution of the problem, and one which should satisfy all interests and secure substantial justice being done to the claims of this corporation. The visit of Sir Arthur Lawley, the Acting Governor of the Transvaal, is another event which has been fraught with important consequences to Swazieland and to your corporation. It has removed any lingering doubt which may have existed as to the value of the country and the validity of the concessions held by ourselves and others. While not under-rating the difficult and complicated position which the existence of some of these concessions entailed upon the Government, Sir Arthur Lawley readily recognised the legal rights of their holders, and intimated that wherever private interests conflicting with the public weal required them to be surrendered, these interests would be dealt with in an equitable and even generous manner. In the event of this corporation being approached with the view of accepting some modification of several of the existing concessions which may be thus classed, I am sure the shareholders will approve of the resolution of their directors to meet the authorities on a reasonable basis, relying upon these repeated assurances of the Acting Governor. Another recent event to which I would make brief allusion is the appointment of the Right Hon. Alfred Lyttleton, as Colonial Secretary. This gentleman, as Chairman of the concessions committee of the Transvaal, has placed on record his opinion that the concessions in Swazieland, having already been examined into and adjudicated upon, were outside the scope of his inquiry, and we feel assured that in any negotiations into which we may be called upon to enter we shall receive from the right hon. gentleman an impartial and judicial consideration of our claims. To pass now from the review of our political position, let me briefly refer to our agricultural holdings. I alluded in my speech last year to our large holdings of land upon which we hoped to place European emigrants. Your board have engaged the services of a Government land surveyor and staff to survey the extensive properties, amounting to a million and a quarter acres, detailed in the appendix, to plant beacons and make subdivisions into ample holdings for agricultural and pastoral purposes, so as to be prepared to meet the demand which is sure to arise for land in this fertile country. It must be remembered that our land holdings are not limited to one part of the country. Almost throughout its length and breadth we hold areas adapted for every kind of cultivation—from sugar and tea-planting to mealies and Kaffir corn—and for pasture. But the survey now proceeding is a necessary preliminary to any colonisation scheme, and we are taking the survey question up vigorously. The option over the Forbes Reef property, alluded to in my remarks last year, was duly exercised, but owing to the absence of an office for the registration of deeds of sale and transfer, which I may remark is a very great hardship to the country, the corporation has been unable to obtain legal transfer for the property, and the cash consideration (£35,000) has meanwhile been withheld. I have nothing new to add to my remarks last year upon the Wolverand property. It remains in very much the same position. The same remark applies to the Horo property, save that a portion has been let out on tribute on liberal terms. Owing to the absence of native labour and transport difficulties no work has been possible on these properties. The discovery of the existence of valuable earths and minerals has been one of the events of the year; these are occupying the serious attention of your board and may lead to profitable developments. On the other concessions of a general and commercial character, I need only refer shareholders to the appendix to the report, where they are fully detailed. Nothing has occurred during the year under review to alter their position and value. I turn now to an examination of the accounts for the year. The finances of the company are in a very satisfactory condition. You will observe on reference to the balance-sheet that the Forbes Reef property and the remaining interest in the Liquor Concession now appear to the credit of the account, which, with other properties acquired, is covered by the new issue of shares on the opposite side. From the item "expenditure in suspense," we have deducted income from rents, interest, etc., showing a net expenditure of £21,278 12s. 5d., which will be a first charge against future profits. Shareholders will not fail to remark that much of the expenditure shown in the balance-sheet covers the whole period of the war. Our cash in hand stands at the respectable sum of £26,886 6s. 6d., while other liquid assets amount to £24,401 4s. In a few weeks' time the last £25,000 instalment is due from the African and European Agency, and we have, since the accounts were made up, received from them one similar instalment. With the magnitude of the interests to be guarded and encouraged the board feels that a strong financial position is one of the best guarantees we have of the success of the company. With these few remarks I beg to move the adoption of the report and accounts.

Mr. Geo. H. Raw seconded the motion which was carried unanimously.

On the motion of the Chairman, seconded by Mr. E. P. Mathers, Mr. G. H. Raw and Mr. J. Stroyan, M.P., were re-elected directors. The appointment of Mr. C. F. Rowsell to the board was confirmed.

Messrs. Deloitte, Dever, Griffiths, and Co. were reappointed auditors, on the motion of Mr. Allen, seconded by Sir Annesley de Renzy.

A vote of thanks to the chairman and directors closed the proceedings.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended Oct. 3, $14,202; increase, $5,971. Aggregate from January 1, $474,699; increase, $15,646.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended Oct. 3, Rs. 40,851; increase, Rs. 1,493. Aggregate from July 1, Rs. 4,41,637; increase, Rs. 31,681.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended Oct. 3, Rs. 9,246; increase, Rs. 1,598. Aggregate from July 1, Rs. 1,09,646; increase, Rs. 26,680.

Bengal Central Railway.—Traffic receipts for week ending Sept. 19, Rs. 51,532; increase, Rs. 15,960. Aggregate from July 1, Rs. 365,674; increase, Rs. 75,775.

Canadian Northern Railway.—Traffic receipts for week ended October 31, $99,700; increase, $24,100. Total, from July 1, $1,110,500; increase, $428,500.

Lucknow Bareilly Railway.—Traffic receipts for week ended Oct. 3, Rs. 19,973; increase, Rs. 169. Aggregate from July 1, Rs. 2,89,609; increase, Rs. 6,697.

Quebec Central Railway.—Traffic receipts for the 4th week of October, $19,045; decrease, $1,455. Aggregate from January 1 $586,714; increase, $18,099.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended Oct. 3, Rs. 9,470; decrease, Rs. 1,254. Aggregate from July 1, Rs. 1,24,471; decrease, Rs. 616.

Salvador Railway.—Traffic receipts for week ended Oct. 31 $7,873; decrease, $1,627.

White Pass and Yukon Railway.—Traffic receipts for the week ended Oct. 21 amounted to $20,100

English.

Cleator and Workington.—Gross receipts or the week ending Oct. 31, £1,139; decrease, £49. Total receipts from July 1, £19,706; decrease, £221.

Cockermouth and Keswick Railway.—Receipts for week ending Oct. 31, £877; decrease, £86. Aggregate from July 1, £18,740; decrease, £1,063.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending Oct. 31, £446; decrease £10. Aggregate from July 1, £6,981; increase, £359.

Liverpool Overhead Railway.—Traffic receipts for week ending Nov. 1, £1,588; increase, £61. Aggregate from July 1, £30,353; increase, £1,985.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending Oct. 31 £547, decrease £19; aggregate from July 1, £10,063, increase £238.

Belfast Street.—Traffic receipts for week ending Oct. 31, £2,459, decrease £66; aggregate from July 1, £49,565, increase £1,686.

Birmingham and Midland.—Traffic receipts for week ending Oct. 30, £837, decrease £24; aggregate from July 1, £15,128, increase £121.

Birmingham City.—Traffic receipts for week ending Oct. 31, £5,207; increase £9; aggregate from July 1, £94,013, increase £3,090.

Blessington and Poulaphouca.—Traffic receipts for the week ending Nov. 1, £8, decrease £3; aggregate from July 1, £453, decrease £51.

Bristol Tramways and Carriage.—Traffic receipts for week ending Oct. 20, £4,625, increase £173; aggregate from July 1, £93,152, increase £3,550.

Burnley Corporation.—Traffic receipts for week ending Oct. 31 £820, increase for week £141; aggregate from July 1, £15,655, increase £2,654.

Dublin and Blessington.—Traffic receipts for week ending Nov. 1, £104; decrease £14; aggregate from July 1, £2,834, decrease £1,154.

Dublin and Lucan.—Traffic receipts for week ending Nov. 1, £94, decrease £15; aggregate from July 1, £2,473, increase £142.

Dublin United.—Traffic receipts for three days ending Oct. 31, £4,364, decrease £109; aggregate from July 1, £95,550, increase, £7,451.

Edinburgh and District.—Traffic receipts for week ending Oct, 31, £4,425, increase £358; aggregate from January 1, £188,115, increase £19,260.

Edinburgh Street.—Traffic receipts for week ending Oct. 31, £462.

Harrow Road and Paddington.—Traffic receipts for week ending Oct. 30, £256, decrease £3.

Isle of Thanet.—Traffic receipts for week ending Oct. 31, £357, decrease, £28; aggregate from July 1, £20,468, decrease £1,029.

London General Omnibus.—Traffic receipts for week ending Oct. 31, £22,923, decrease £521; aggregate from July 1, £442,235, increase £6,647.

London Road Car.—Traffic receipts for week ending Oct. 31, £7,579, decrease £362; aggregate from July 1, £140,478, decrease £1,492.

Rossendale Valley.—Traffic receipts for week ending Oct. 30, £187, increase £9; aggregate from July 1, £3,306, decrease £2.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending Oct. 5, £7,187, increase £2,343; aggregate from January 1, £237,343, increase £58,627.

Barcelona.—Traffic receipts for week ending Oct. 31, £2,358; decrease £209, aggregate from January 1, £101,859, decrease £3,596.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending Oct. 31, £332, increase £117; aggregate from January 1, £12,941, increase £6,948.

Brazilian Street.—Traffic receipts for the month of July Rs. 35,553; increase Rs. 63. Total receipts from August 1, 1902, Rs. 473,933, decrease Rs. 7,662.

Brisbane.—Traffic receipts for the week ending September 9, £2,487, decrease £123.

British Columbia Electric.—Traffic receipts for the month o September $188,373, increase $33,216. Net earnings from July 1 to September 30, $67,113, increase $17,691.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending Oct. 4, £3,239, decrease £89.

Buenos Ayres Grand National.—Traffic receipts for week ending Oct. 3, $45,141, increase $5,215; aggregate increase from April, 1903, $35,725.

Calais.—Traffic receipts for week ending Oct. 31, £168; decrease £19; aggregate from July 1, £3,722, increase £2.

Calcutta.—Traffic receipts for week ending Oct. 31, Rs. 32,023, increase Rs. 5,494; aggregate from July 1, Rs. 594,555, increase Rs. 112,770.

Carthagena and Herrerias.—Traffic receipts for the month of October, £3,129, decrease £112; aggregate to Sept. 30, £36,550; increase £2,902.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of September $372,252, increase $32,583; aggregate from January 1, $3,020,843; increase $353,749. Net traffic receipts $215,328, increase $6,270; aggregate from January 1, $1,621,955, increase $146,181.

The Investors' Review.

Mr. Tritton's Confession.

We now return to Mr. Tritton's inaugural address, delivered to the Institute of Bankers on November 4, because the views he put forward on many questions vitally affecting the London Money Market, seem worthy of careful observation and analysis. Mr. Tritton, a partner in the well known firm of Barclay and Co., Limited, is a banker of wide experience, and was, doubtless, aware of the delicate nature of the ground he was treading, when venturing to once more open up for discussion the highly important matter of visible gold reserves. Those who have watched closely the working of the Money Market during the last few years, must be fully convinced that the present basis of the huge and complicated credit machinery, upon the smooth running of which the very existence of the nation depends—the gold reserve—is much too small, so inadequate, indeed, that all parties concerned are fully aware that a strain of any magnitude would immediately throw our delicate banking system into disastrous disorder. To admit this truth, however, is only a very short step in the direction of reform, and when we consider that the total of the deposits, current accounts, and note circulations of all banks publishing details of their position in the United Kingdom, is over £904,000,000, it is questionable whether the existence of a gold reserve of twice the present amount would be of much assistance in surmounting a banking crisis, should such occur. This much the President of the Bankers' Institute admits, and he would like to broaden the foundation of banking operations, so that unexpected, and perhaps heavy, withdrawals of gold might be met without recourse to violent measures, such as those to which the market is all too often subjected. Mr. Tritton, naturally, speaks from the point of view of the working banker, who at times finds his business dislocated and thrown out of gear, and his calculations upset by some unlooked for incident that causes a sudden movement in the Bank of England rate of discount. Without committing himself to any stated amount, he takes as the basis of his recommendations an additional reserve of £15,000,000 in gold, and we will briefly sketch the method by which he imagines such sum can be obtained. It may at once be said that no reduction of any of the existing profit earning assets of the London banks is advocated, and upon this we make no comment at the moment.

How, then, is the suggested sum to be accumulated? Mr. Tritton says by the creation of fresh capital, and his thesis had best be given in his own words:—"If each bank in the kingdom increased its paid-up capital 20 per cent. by an issue of 3 per cent. preference gold stock, the fund could be attained. The proceeds should be devoted in each individual case to the acquisition of a corresponding amount of gold, in addition to the present holdings, and this gold should be deposited at the Bank of England, but not merged in the Bank figures, so as to stand week by week intact, and shown under a separate heading in one aggregate, though, of course, the absolute property of each bank in detail. Carefully thought out arrangements, whereby, under a joint committee of the bankers and the Bank of England, whenever occasion arises a percentage of each holding should be transferable to the credit of each bank in the books of the Bank of England, the gold thus forming an addition to their reserve until again withdrawn and added to the Bankers' Gold Fund."

If a body of philanthropists could be gathered together, willing to make some sacrifice for the benefit of the community at large, there might be something to recommend in this suggestion, but as an ordinary business proposition the thing appears to us to stand self condemned. Will Mr. Tritton tell us what specific security he proposes to give for his 3 per cent. gold stock, in order to induce the public to subscribe it? It is granted that there can be no earmarking of the new gold fund to the holders, otherwise it might just as well not be in existence. As we understand it, the borrowed hoard—for it really would be borrowed— is to become part of the general assets of each bank, to be used for any purpose whatsoever should occasion require. Now, let us suppose that a bank, possessing say £2,000,000 extra reserve—a part of the mentioned £15,000,000—finds itself in difficulties. Promptly would disappear its ordinary reserve of notes and gold, its additional reserve of £2,000,000, and anything else it could lay hands on by pledging securities and bills. The holder of the 3 per cent. preference gold stock, therefore, at once falls to the position of a mere preference shareholder, with, perhaps, only the faintest prospect of seeing a penny of his money again, at any rate until all other creditors are paid. Where, then, lies the inducement to take up this new stock? We may be sure that ordinary proprietors, out of whose pockets the interest on the gold capital must come, seeing that it would itself be non-interest earning, would not agree to a further pledging of their uncalled liability in order to secure a preference stock. The whole proposal is thus at once seen to be impossible and unworkable, a something we stand amazed to find suggested by a man calling himself a practical banker.

Continuing to give prominence to Mr. Tritton's ideas, it has to be added that he strongly urges certain modifications in bankers' returns, the weekly statement of the Bank of England, and the monthly one of the Joint Stock banks. Barclay and Co., by the way, favours us with its figures only twice a year. He would like to see the Bank of England again show in the weekly statement the amount of bankers' balances, instead of concealing them amongst other private deposits, and would have the clearing bankers make a weekly return for publication on Thursday morning of the amount of their cash resources—Bank of England balance, notes and coin, and articles in course of collection as on the previous evening. This could be done to the Chief Inspector of the Clearing House under strict

privacy, and he would then publish the aggregate with the Clearing House returns of the week. This looks like reform, until we reflect that it would be a great deal better if each of the Joint Stock banks kept its own reserve, a reserve accumulated from profits, always available in gold, and published a weekly statement of its own, showing not merely all floating resources, but, separately, its till money in coin and notes, and its private reserve. We do not want aggregates. What is here suggested would be much more valuable, much more reassuring, than monthly figures, or even weekly, all in a lump, and therefore admittedly not a true guide to the individual position of banks. These monthly mixtures of cash in hand and at the Bank of England always involve the calling in of loans, and a general scramble for credits, in order to make possible a decent display by the separate banks, which display is a good deal of a deception.

Then, as to additional gold reserves. Those at present existing, and presumedly either in the safes of the banks or at the Bank of England, are too small; that much admits of no question. Therefore they should be increased, and clearly the natural and obvious method is for each bank to keep more of its assets liquid, and to lay by money—gold coin—in its own vaults, so as to be complete master of its destinies. Let the banks reduce dividends a little from the unduly high levels far too fashionable of late years. A simple plan would be to gradually utilise savings from profits until a total at least equal to the present invested reserve funds of each bank was attained, in order to buy and lay up gold. Part of the reserves now in stock might be in this way employed on favourable opportunities, and the sum thus withdrawn replaced by substantial additions to reserve year by year from current profits, until the sum withdrawn had been replaced. It is difficult to agree with Mr. Tritton that neither the investments, money at call, nor bills discounted and advances can be reduced. Moderate reductions in each for the purpose of enlarging the stocks of gold to be kept in each bank's own coffers would be a prudent and wise procedure. On other matters referred to in his discourse, we have no fault to find with Mr. Tritton. It is pleasant to see him giving prominence to the overborrowing of municipalities and railways, and we share to the full his condemnation of the manner in which bankers lost their heads over the Transvaal loan subscription business, as exemplified by the borrowing of about £30,000,000 from the Bank of England to play the trick with. But is not this criticism, the whole of it, tantamount to an admission that our banking business is far from being in a satisfactory state? There has been too much straining after sensational dividends, too great eagerness in accepting high risks, and far too much indifference to consequences everywhere. Could there, indeed, be a more startling confession of banking recklessness in the past than the one implied in the gold reserve proposals of Mr. Tritton? After many years of prosperity, of apparent freedom from bad debts, of high profits and higher dividends, a leading banker in the City of London comes forward and says, "Gentlemen, we have shamefully neglected to provide ourselves with reserves in gold commensurate with our liabilities. Please allow us to borrow the necessary capital in order to make a show of having what we do not own!" And he thinks he could get the capital at 3 per cent.

Ten Months' Foreign Trade.

It is profoundly satisfactory to find that our merchants and manufacturers pursue the even tenour of their way and maintain the friendly exchange of commodities and rivalry of enterprise with their brethren in other countries, heedless of the decadent truculence recently imported into our domestic politics. The trade figures for the past month are excellent. Imports valued at £47,758,188 show an increase of £903,858, or nearly 2 per cent., and exports of British and Irish produce have risen by £726,349, or nearly 3 per cent., to a total of £25,861,180. The reshipments of foreign and colonial merchandise also show a satisfactory increase of £723,117, or 12.7 per cent., the total being £6,381,457. These figures are not only satisfactory by their magnitude, but likewise because they testify to the generally profitable character of the business done. As long as we can continue to exchange with other countries the produce of British labour on a like scale the country will be able to surmount many of its politician bred miseries. Some of the anti-British newspapers that are lending themselves to the disgraceful fiscal agitation now tormenting the country seem to have adopted the American method of estimating the trade position, and loudly lament that the increase in our imports should be larger in amount than that in our exports in the month of October. This is out and out dishonest on their part, for they know better. It is not usual among the sane to consider a trade conducted at a loss profitable to the community, and, moreover, these decadents leave out of account the expansion in our arbitrage trade. But it is useless to waste time in combating opponents of this description. They ought to be treated with indifference and ignored.

So far on in the year it is always best to deal with the figures of the whole portion of it elapsed, but before doing so it may be well to emphasise the fact that totals for the past month on both sides of the trade account continue to some extent to be swollen by higher prices. At the present time we are getting our imported sheep and lambs, bacon, fresh beef, butter and margarine rather cheaper than we did a year ago, but wheat and wheat flour have risen sensibly in price, although barley, oats, and Indian corn are cheaper, the last sensibly so, and flax and linseed seeds

† Not included under following heads

are likewise costing less, but raw cotton is dearer, and flax, although hemp is cheaper. Jute also costs more and leather. Nitrate of soda, too, raw silk, and, of course, raw and refined sugar. We are paying more for our tea, for our manufactured tobacco, our wood and timber, and our wool. It is not altogether satisfatcory, either, to find that prices for exports have not risen with quite the same uniformity, although we are commanding decidedly higher prices for cotton yarn and twist, and moderately higher prices for cotton piece goods, as well as for linen yarn and piece goods, sugar, wool, woollen and worsted yarns and woollen tissues. The worsted trade appears to remain in a comparatively stagnant position, but all such ups and downs are inherent in business of every description. Circumstances alter with each changing season. The fact, for instance, that we in this country suffer from the most wretched harvest for a generation is certain to compel us to pay more for our food alone in the present harvest year than we have done for many years back.

All the more reassuring is it to reflect that our free trade system opens the world to us as a source of supply; and in the ten months of the year whose figures are now available it is interesting to find that we are at present able to depend on Russia, Roumania, the United States, the Argentine Republic and British India—poor, neglected, forgotten India—for apparently any necessary quantity of wheat. India has sent in the current year about five times as much wheat as it did two years ago, and much advertised Canada stands fifth in the list as a contributor to our necessities in this cereal. Its proportion is growing evidently in a quite healthy and satisfactory fashion, but a generation must elapse in all probability before it could be depended upon to take the place of one of the other countries we at present most depend upon, and in any event it is of incalculable importance to us that the good harvest of one country should now be freely available to supplement the shortage in another; for by the free admission of grain from all sources of supply the average price is kept down and the country prevented from suffering the evil consequences of lean years to the extent it certainly would do if some sources of supply were arbitrarily cut off or hampered. The Canadian supply of flour is likewise growing, although still less than one-sixth of that of the United States. In this connection it is further interesting to note that the Argentine Republic is rapidly overtaking the United States as a furnisher of maize to us, and it would have been hard upon the pigs and other consumers of that valuable grain last year if Argentina had not been able then materially to supplement the short crop of the American Union.

Great outcry is made about "dumping" and the horrible depravity of the foreigner, proclaimed by his forced sales of raw or semi-manufactured materials, or even of manufactures produced by him under the forcing system of protective tariffs to a greater extent than the tariff impoverished domestic market can consume. The poor buffeted fellow is held up to obloquy. We, however, evidently profit by this kind of import, for, instead of our exports falling off, they flourish in a manner most cheering. Our total imports of iron and steel in the current year up to the

EXPORTS (Value F.O.B.*).

* The value of the Exports represent the cost and the charges of delivering the goods on board the ship and are known as the "free on board" values.

† Not included under following heads.

end of October are valued at £7,022,000, and amongst the items making up this total we find iron bars, angles, rods and sections—semi-raw materials for the use of our manufactures of finished goods—footing up to £878,368, but our imports of pig iron have dropped back compared with those of a year ago by £135,000, and our imports of nails, screws and rivets are also rather less at only £460,000. The whole thing is a mere bagatelle when placed alongside the total of our exports, which amounted to £25,801,127 for the same class of goods, and that, too, in spite of a decrease of the demand from the United States for such articles as tin plates and pig iron. Last month, however, the American demand for tin plates showed some expansion and, the outcry notwithstanding, the Union remains our best customer for such, and the total value of that one form of iron and steel came to £3,319,000 for the ten months. Still more remarkable is the testimony of machinery. We appear to have imported machinery of every description, including electrical, to the amount of £3,786,362, a decrease on the total of the preceding year, but an increase of £478,000 on the total for 1901. But our exports of machinery in the same ten months amount to £16,534,522, an increase of fully £1,000,000 on the total of the first ten months of 1902 and of more than £1,500,000 on that for 1901, also up to the end of October. We have even got hold of an export trade in electrical machinery, in spite of the fact that English manufacturers were notoriously and for a long time much behind the United States, France, Belgium and Germany in the development of this branch of industry. The same thing will probably happen, now that we are waking up, in regard to electrical machines as has happened with sewing machines. Instead of being dependent upon the foreigner for this indispensable tool we have become exporters. The value of sewing machines imported by us this year to date was £313,074, and the value of our exports £1,649,543. These are isolated examples of the position of our metal trades, and surely they give encouragement to all good citizens to persevere in the old way and to cultivate goodwill, friendly rivalry with other producers, and steady industry in meeting the demands of foreign customers. Our imports in nearly all instances strengthen our exporting power.

What impresses one always in looking through the monthly accounts of our foreign commerce is its marvellous universality. We supply the whole world, not merely with the finished products of our metal industries, but with textiles, with coal, and with many minor commodities, each, perhaps, insignificant in itself when placed side by side with the splendid totals of our great branches of manufacture, but whose aggregate is important. On many occasions we have dealt pretty fully with our textile trade where the most striking example of the world-wide character of our business is month by month most fully exhibited. It is hardly necessary to repeat this lesson now, because Lancashire is fully aware of the far spreading character of its business, and awake to the danger threatening it should the reactionary agitators succeed in misleading the masses with a pretence of imperial solidarity and dictatorial methods of conducting the nation's business. It may, however, be useful to point out how extremely difficult it will be for these decadents with all their clamour and their ignorance and truculence to apply in a practical manner the crude expedients they advocate in order to "consolidate" the empire by tabooing the so called foreigner. Apart from India, the bulk of our exports of cotton piece goods is consumed by foreign countries. France, Holland and Germany, although themselves highly developed manufacturing nations, have taken from us this year more cotton piece goods than Australia and New Zealand together. Holland is a decidedly better customer for these goods than Canada. Germany and France both take more than the British West Indies; and Turkey, Egypt, Persia, Foreign West Africa, the Dutch East Indies, China, Brazil, Argentina, Central America, even the United States are all first-class customers, some of them taking five to ten times as much from us of this one group of commodities alone as any of our possessions apart from British India, which is naturally, despised though the country be, the very best customer we have, by reason of the fact that it contains more than twice the population of all the rest of the empire put together. The same observation holds true of our woollen trade. According to their population Australasia and Canada are fairly good customers for woollen and worsted tissues, but European countries are in the aggregate better, and in worsteds alone France is a more voluminous buyer than any colony we have except Canada. The United States consumption of our worsteds is greater than that of any other customer we have, and even maligned Germany takes a fair proportion of both woollen and worsted manufactures. What are we going to do when we

lose this trade, as the protectionist agitators appear to desire. Will the inhabitants in our self-governing colonies buy twice as much or five or ten times as much as they do now to make up for the decline or loss in other directions? If not, how are our working classes going to live and flourish? How are their wages to be maintained, let alone increased? Is it not the fact that every artificial restriction put upon trade diminishes its volume and reduces its power to remunerate the workers?

We draw considerable consolation from the study of these monthly tables. They demonstrate that the foreign commerce of this country has grown to such magnificent proportions under free trade, and is so deeply rooted in the world, so universal in its character, that a barrier of an almost insurmountable kind stands in the way of any interference with it. And we should have every confidence that it could not be interfered with were it not for the criminal destruction of wealth now being perpetrated by and under the shield of the responsible government of this country. That waste has but to continue, as we must always insist, and it will force protection on the country, whether its enlightened citizens desire the change or not. We have no doubt, either, that our trade will presently begin to be injured by the withdrawal of the nation's resources and savings to be squandered by those who preside over our destinies. That is the black side of the picture.

Economic and Financial Notes and Correspondence.

China-Japan and Russia.

The situation in the Far East has become more complicated this week through Russia's action in sending troops to re-occupy Mukden, the capital of Manchuria. China, naturally, is angry at this breach of faith, for though Russia has never properly evacuated the province in accordance with its repeated promises, its troops were withdrawn from Mukden last month, and this latest move is therefore a gross violation of the compact made with the Chinese Government. Ostensibly the reason for it is that the soldiers are required to keep order in the city, a reason that has served the Czar's ministers on more than one occasion. China, however, is also sending soldiers into the province, and with the feelings between the two Governments far from cordial, St. Petersburg having recently forced Pekin to recall the Taotai Yuan from the Korean frontier, another smouldering brand has been thrown at the political powder magazine of the Far East. Meanwhile the relations between Japan and Russia, instead of being more pacific, are reported to have reached a crucial stage. The recent negotiations, it appears, ended not in the definition of a *modus vivendi* for Korea, but in the delivery by Japan to Russia of a note containing three conditions, on the answers to which the position is said to turn. What these conditions are, or whether they have yet been answered, is not known, but Russia is reported to have cleared out of some of the posts she held in Korea. The Czar, personally, is, as the world knows, dead against war, and his influence will therefore be thrown into the scale of peace. This, combined with the possibility of a fight with Turkey, and the knowledge that the domestic horizon is by no means unclouded may have caused the Russian bureaucrats to moderate their tone towards Japan, since with other business on hand the Island Empire would be a most uncomfortable enemy in the field. But Russia's diplomacy and methods have always been tortuous, and where she gives to-day she steals a hundredfold to-morrow, if the opportunity serves.

Are Things Moving in Macedonia?

The Sultan's answer to the Austro-Russian scheme of Macedonian reforms was not a flat refusal, but an attempt at slippery evasion, which the two Powers have refused to listen to. "What need is there for further reforms, when my officials are busy carrying out those I promised last spring," is practically what Abdul said. Moreover, he declares that these efforts of Hilmi Pasha and his subordinates, assisted by the wise advice of the Austrian and Russian consuls, are meeting with every success, and before the three years for which the Inspector-General has been appointed have expired Macedonia will be the most peaceful province or state in the Balkans. But the Turk's method of restoring peace is the simple one of wiping out all who are opposed to his rule, leaving none but Muslims and corpses behind. The clause relating to the disbanding of the Havehs and the Bashi-Bazouks, the Sultan declares, is also unnecessary, as this step has been carried out, at least as far as the first class of troops is concerned. With regard to the second, it could not be, because they were never so employed in Macedonia. If true, this makes the atrocities worse, since they could only have been perpetrated by the regular troops and the ordinary reserves of the first and second classes. While solemnly assuring the two Powers that the Ilavehs have been demobilised, Abdul Hamid overlooks the fact that their place has been taken by other reserves, whose butchery is equal to that of the men they succeed.

Neither Austria or Russia seem in the mood to be put off by such plausible language now that they have at last begun to move, and they have therefore demanded a categorical answer to their proposals, otherwise they will consider what steps they must take to carry out the reforms suggested in them. All the other Powers, even Germany, are in accord with them, so Abdul Hamid's chance of playing one off against the other looks this time a poor one. Till quite recently he hoped the Kaiser would not side with his neighbours, and tried all he could with presents, promises and flattery to gain Germany's goodwill. But the Kaiser, having accepted the presents, now tells him to be good, and obey the wishes of Austria and Russia, crushing his hopes in this direction are. So it is thought the Sultan will at the last minute accept the demands of the two Powers, in the hope that later on he may get an opportunity of scoring off his mentors.

The United States Shipbuilding Company.

A quite refreshing frankness pervades the report of Receiver James Smith, junr., upon the affairs of this United States bubble company, but, outspoken though it is, the story has a stale flavour to people on this side, for we have been, unfortunately, only too long familiar with the same description of perverted industry. Indeed, the chief significance of this report lies in the help it affords towards an understanding of the position of the United States Steel Corporation, which is merely a more gigantic concoction of the fraudulent company promoter on precisely the same lines. People forgot that the companies absorbed by the United States Steel Trust were all of them inflated corporations of the type of this shipbuilding company before they were taken over. It was inflation upon inflation, and therefore we have never believed that even the preferred stock of the Steel Trust had any substantial assets behind it. Those who possess files of the Investors' Review going back to 1899-1900 should turn up what was then said. They will find, for instance, that the capitalisation of the Carnegie Company, before it was made the main pillar in the Steel Corporation, was not more than £60,000,000, and that was probably at least ten times the intrinsic money value of all the assets. Carnegie got 5 per cent. first mortgage bonds—subject to the underlying mortgages on his railways—for these works, and the preferred and common shares were piled on top for the rocking of the gulls. Precisely the same kind of inflation is revealed, on a smaller scale, by the story of this shipbuilding vamp. Receiver Smith declares, amongst other things, that instead of contracts on hand at the date of the swindle amounting to $36,000,000, as recited in the minutes of the board of the directors, the actual orders came to $15,394,000 less, and that it would have taken three years to earn the profits set forth, instead of eighteen months, as claimed. Further, that the profits, instead of amounting to $5,000,000, as alleged, came only to about $2,000,000, and he goes on to point out that very little of whatever profit was earned came to the Shipbuilding Company. The money disappeared elsewhere, the subsidiaries it had absorbed retaining the greater part of it. The parent

company, he said, received only about enough to pay 5 per cent. on an investment of little more than $6,000,000, whereas it was bonded for $24,500,000. The dummy directors, he declares to be responsible, along with the original schemers, and it is his intention to institute suits for the recovery of the money that should have been paid on shares bestowed upon favoured individuals for nothing. No wonder the promoters were liberal in handing round the paper if it be true, as Receiver Smith says, that the actual net value of the plants, including the Bethlehem Steel Company, was only $12,441,560, in payment for which the shipbuilding Company gave $67,997,000 in stocks and bonds. The whole story is one of loathsome sordidness, and we hope the men responsible for the imposition will not only be made to disgorge, but sent to jail to meditate on questions of public morality. Seclusion might do them good.

Lagunas Syndicate, Limited.

No light is thrown upon the position of this company by the directors' report, but the nitrate combination is still proving far from a blessing to it, as the profits for the twelve months ended June 30, which is the second complete year of its working under the arrangement, show a further heavy decrease of £27,475 to a total of £116,932. Of this amount debenture interest, premium on drawn bonds, and London expenses, etc., absorbed £12,285, and after transferring £3,258 to reserve, against £4,000 a year ago, the net profits came to £101,389, compared with £125,128. With £6,318 brought in, the total available was £107,707, out of which the usual £15,000 has been applied to the redemption of drawn bonds, and a dividend of 8 per cent. is paid against 10 per cent. a year ago and 9 per cent. in 1901, leaving the reduced balance of £4,707 to be carried forward. For years past the auditors have felt it their duty to qualify their certificate as to the correctness of the accounts by a remark regarding the allowance for depreciation, and the old familiar phrase again appears this time. It is, therefore, very evident that in spite of the plain lesson of a steadily dwindling income, which should have opened their eyes, the directors are still content to dwell in the present and allow the future to take care of itself until the time comes when they can no longer conceal the true condition of affairs. It is true that they are paying off debentures and adding a trifle to reserve each year, but the provision thus made is far from adequate, as even after deducting the amount of debentures redeemed, the property stands in the books at £1,058,813, a monstrous total considering its wasting nature, against which the reserve of £15,000 looks contemptible. As far as the present position is concerned, the company is comfortably enough off with £70,341 in cash, £77,255 due from sundry debtors, and £61,939 represented by nitrate sold but not delivered to meet liabilities on bills payable and to sundry creditors of £85,238.

Eastern Extension Australasia and China Telegraph Company.

The effects of the State-aided competition to which this undertaking is so unfairly subjected are beginning to tell on its revenue statement, but the directors are leaving no stone unturned to forward the company's interests, and by further considerable tariff concessions and unceasing efforts to promote the public welfare, make it evident that the company will hold its own for many a day. From the report for the six months ended June 30 we learn that during the sittings of the International Telegraph Conference recently held in London, it was arranged that the tariffs for traffic with Japan, China and Manila should be reduced from 7s. 9d. to 5s. 8d. per word for Japan, 5s. 6d. to 4s. 5d. for China, and 5s. 9d. to 4s. 5d. for Manila, which reductions were brought into force on July 15 last. Further, the Commercial Pacific Company's cable between San Francisco and Honolulu has been extended to Manila, and an arrangement has been come to with that company by which not only are the United States of America directly connected with the Far East, but the Eastern Extension Company has secured another alternative route to Europe. The agreement concluded with the Australian Federal Government for extending to Melbourne and Brisbane the privilege enjoyed by the company in other State capitals of Australia of dealing direct with the telegraphing public, has been formally approved by the Federal House of Representatives, but the Senate has deferred coming to a definite decision upon it, pending the result of a conference to be held between the interested Governments, to consider what effect the agreement may have upon the British Pacific Cable and other questions. It is to be assumed, however, that the privilege will be shortly granted, because we cannot believe that anything will be done to further harass and harm a company which has always so thoroughly and efficiently carried out its obligations to all concerned. The contract with the Dutch Government for supplying and laying cables on its behalf between Borneo and Celebes has been successfully carried out, and a further contract has since been entered into with that Government for supplying and laying some additional short cables in the Java seas. These cables have been manufactured, and are now being transported to their destination. Revenue for the six months under review was £265,099, or £18,757 less than in the corresponding period of 1902, while working expenses, including £29,613 for maintenance, rose £17,279 to £138,517, so that the net balance is reduced to £126,583. Deducting debenture interest, income tax, etc., and the balance still left is £108,856, to which is added £37,180 brought forward, making £146,036. As usual two quarterly dividends of 1¼ per cent. each are declared, and £71,036 is carried forward. During the year the capital has been increased by the further issue of £53,192 debenture stock, and we note that net capital outlay in the same period was £140,259, increasing the total to £3,717,507. The company's general reserve fund now reaches a sum of well over £900,000, and the savings all told amount to no less than £1,234,128, or more than 34 per cent. of the entire capital. Of the total, £903,843 is separately invested in first-class securities, and the remainder is used in the business.

Pretoria Pietersburg Railway.

Knowing how unfairly the home Government has persistently treated those having interests in the Transvaal prior to the late war—the mine owners of course excepted—shareholders of this undertaking must have anticipated the issue of the annual report with some anxiety. As was only to be expected, the authorities are not at all disposed to honestly reimburse the company for the use and occupation of its property, and for expropriation, and only by recourse to litigation can the concern come by its own. During the year to September 30 the directors have been constantly endeavouring to obtain payment from the Government of guaranteed interest, and to arrange satisfactory terms in connection with the company's claims, but the existence of the contractors' arbitration award in respect of which the undertaking naturally claims to be indemnified, has been a serious hindrance to a final settlement. This was an award given in favour of the contractors against the company in July, 1899, for the sum of £125,636, bearing interest at 6 per cent. per annum, and as it was duly confirmed by the High Court of Pretoria on July 27 last, an amount of £157,045 was paid to the contractors on September 16. The directors have exhausted every means at their disposal to induce the Government to assume responsibility for this obligation without appealing to the law, but no success has attended their efforts, and it has been arranged that proceedings shall be instituted before the High Court of Pretoria to decide whether the Government is to bear the whole or any part of the burden of the award. In the meantime the authorities have advanced the sum mentioned without prejudice to the proceedings. As is well known, the Government has already given notice of expropriation which would take effect on February 18, 1904, but it is willing to anticipate the surrender of the property on certain terms. The offer is to repay the share capital of £500,000 in full, less the amount advanced in settlement of the contractors' claim, together with guaranteed interest on share capital at 4 per cent. per annum from January 1, 1899, to November 14, 1903, 7½ per cent. premium on share capital in accord-

ance with the terms of the concession, and 1½ per cent. additional premium on share capital for loss of investment to date of expropriation, February 18, 1904, meaning a total payment of £485,462. The company must go into liquidation forthwith, and the Government is not to be responsible for any guaranteed interest on share capital after November 14, nor for any current liabilities, expenses, etc. In addition to this amount of £485,462 the company has in hand a sum of £11,842, making £497,302 in all. After making provision for certain charges, it is estimated that the liquidators, should the proposals be accepted, would be able to make an immediate and first distribution of £9 per £10 share, the final distribution being dependent upon the results of the already mentioned proceedings to be instituted in the High Court. The Government has assumed liability in regard to the debentures, upon which interest has been regularly paid, and will, when the company goes into liquidation, pay direct to the holders principal and interest up to the date upon which notice is given that the same will be payable. According to the balance-sheet, the amount owing by the Government is £133,966, including a debit of £3,670 incurred during the past year, but against this £45,000 has been advanced to meet current liabilities and expenditure, and £21,688 for payment of cost of Pretoria Junction works.

British Cotton and Wool Dyers' Association.

The directors of this £2,000,000 textile combine favour their shareholders with an interim report, but instead of bringing them joy and a first dividend, it merely emphasises the already known fact that complete reorganisation is the only remedy for the over-capitalisation disease from which the undertaking suffers. Mr. William Martello Gray, who last year replaced Messrs. Jones, Crewdson and Youatt as the company's auditor, let us into one or two secrets when making his report in May, and amongst other things informed all concerned that the amount of goodwill included in the company's assets was the trifle of £992,000. In ordinary circumstances, that is to say, if the prospectus fiction about profits had somehow come true, it might have been sufficient to write off this item at the rate of about £50,000 a year, but as the business is only earning about £20,000 per annum net, it ought to go at once, in a lump, as something quite without value. Unfortunately nothing damps the ardour or optimism of combine directors, and those attached to this one do not think the half-year's results at all bad, "considering the almost unprecedented depression in the textile trades, due to the high and fluctuating prices of the raw material." Good old cotton corner; what would the directors have done without it? But stay, everything will yet be all serene, because the association is in a position to take full advantage of any improvement in trade. That must be because it has plenty of liquid assets, and we remember now that it possessed quite £16,000 in cash and bills at the date of the last balance-sheet, and only owed £258,000 to sundry creditors. Happily good progress has been made towards a satisfactory arrangement of the vendors' loan. Agreements have been signed for the conversion of over 80 per cent. of the amount at present owing into 4½ per cent. second mortgage debenture stock, repayable at the end of ten years or earlier at the option of the association, and definite promises—in writing?—for extension have been received for a considerable portion of the remainder. Result of trading, etc., after deducting £779 for specific depreciation, and £11,982 for repairs and renewals was a profit of £45,387, or much the same as in the corresponding period of 1902. Debenture interest absorbs £12,400, bankers' and vendors' loan interest £4,441, and £12,500 is transferred to depreciation fund, other charges bringing the total outgo to £34,932, so that the net balance is £10,454, and increases the entire credit to £67,304. The £1 ordinary shares are quoted at about 5s., and seem dear at the price.

The New Zealand and Australian Land Company.

The meeting of this company's shareholders is to be held in Edinburgh next Tuesday, and we trust a large body of them will turn up in order to elicit if possible some further information regarding the business. In some respects the company is a strong one, and although the usual wail about drought is indulged in by the board, it seems to have done fairly well last year, so that after meeting all charges and paying 4 per cent. upon the preference stock, enough was left to give the ordinary stockholder 3 per cent. tax free, with still £15,044 left to carry forward, against £25,432 brought in. This is for the year ended March 31 last, a long time ago, although the report only appears now. Owing to doing business and holding land both in Australia and New Zealand, the company has been able to offset its losses on the larger area by the better trade in New Zealand, a trade which, as the directors say, was greatly helped by the requirements both of Australia and South Africa. Neither of these requirements is likely to be of the same magnitude this year as last, and therefore it becomes of importance to see whether the board of the company is taking such care of its assets as will enable it to tide over bad times both in Australia and New Zealand. We cannot say that it appears to us to be doing so. It has no real reserve, and it does not seem to us that enough is being put aside for depreciation under any head. In the past fiscal year £7,537 was spent on capital account, and it is claimed that £15,002 was charged against revenue to meet depreciation and repairs, but £6,826 of this was carried to the sinking fund account, which was thereby swollen to £78,114. Is not this juggling with book-keeping, and where is the reserve fund of £75,000, to which no addition has been made? It is all in the business. Yet the company owes £958,850 on debentures and debenture stock, and may continue to add to that debt until the total comes to £1,250,000.

Further, we do not find any indication in the accounts that the money received for land sold is being utilised to reduce the amount of the debt. The only pleasant entry we see is £25,000 put to suspense account to meet losses from drought, etc., and apparently this is held in money, because cash on hand and in the banks was on March 31 last £52,429, against only £6,417 the year before. That is a notable change for the better, but still we think the company is sailing close to the wind, and that it would be much to the purpose were efforts made to reduce the debt, and to accumulate a substantial and touchable reserve. After all, the balance-sheet aggregates £2,858,626, in spite of all untoward circumstances, and the sale of land in the past year to the amount of about £47,000. This total shows an increase of £19,525 on the figures for the year ended March 31, 1902. Produce on hand and afloat stands in the latest balance-sheet at £142,080, compared with £125,056 at the date of the previous balance-sheet, and in spite of drought and everything else, live stock at £403,389 is down only £9,080 in the twelve months. It does not seem to us that these figures are an accurate presentation of facts as they stand, and the report is vague.

The Agency Land and Finance Company of Australia.

It does not surprise us that the thinly attended shareholders' meeting of this company held in the City on Wednesday was of a stormy description. As far as we can gather from the directors' report and balance-sheet for the year ended June 30 last the concern appears to be simply kept on its legs for the purpose of providing a more or less comfortable living for those who hang by it. Certainly its affairs are in a most uninviting position, and no good whatever has been done by the scheme of rearrangement. It has cost £2,546 up to date, or more than 1 per cent. on the paid up capital, and the chief practical outcome is an increase of £31,647 in the debit of capital account compared with a year ago. In other words that debit is now about £185,000. In this connection it is therefore of importance to ask one or two questions. Is it true that the chairman of directors, Mr. D. Johnstone Smith, is also a representative of the debenture stockholders and a member of the Scotch firm by whom the rearrangement has been carried out? Does he, in other words, receive director's fees as representing shareholders, and earn commissions and costs as member of the firm which acts as administrator for the debenture stockholders? Is he the debenture holders' man in possession? All this is alleged regarding Mr.

Smith, and if the allegations are true, he occupies a singularly anomalous position. Another question we should like to have light upon is—who are the men in debt to the company for calls in arrear? The total amount of these debts is £63,481, and a side note in the balance-sheet informs us that a large portion of this amount is irrecoverable. Is it true that one of the trustees and directors of the company in Melbourne is a large defaulter, and if so how comes it that he retains his position? It seems to us that the board is bound in duty to answer this question also. It is hardly necessary to go through the accounts because they are obviously to an unfathomable extent made up of fictions. Messrs. Deloitte, Dever, Griffiths and Co., the auditors, remark that "the returns from Australia lead us to the view that losses may arise on the realisation of the company's advances, and for such possible losses provision is made in the accounts to the extent of (a) the interest accrued on certain advances, etc., but not taken to profit and loss, and (b) the debit to profit and loss account of £100,000 on account of certain expected losses on advances, but as to the sufficiency thereof we are unable to express an opinion." Well, but we have just said that the debit on capital account is now £185,000, and where is the provision made for that? It is obvious that the shareholders' capital is being consumed with no advantage to anybody, and unless something approaching a miracle happens the assets will disappear, leaving perhaps less than enough to pay off debenture stock amounting to £242,200, exclusive of the £9,400 held by the company and pawned.

There is one slightly favourable change in the balance-sheet—creditors', customers', and other balances secured and unsecured have fallen from £87,823 twelve months ago to £61,895 now. But, on the other hand, debtors have declined from £11,295 to £2,702, and advances on wool in store and afloat from £27,459 to £6,525. It cost last year, including law charges and scheme of arrangement charges and expenses, the latter £934, £16,302 to conduct the business, and there was an excess of expenditure on properties over receipts—ascribed to the drought—amounting to £18,386, so that altogether £34,689 was disbursed in order to increase the balance at debit of profit and loss from £11,736 to £31,674. And in spite of the obvious depreciation of properties their book value went up by fully £3,000 compared with the year before. Is it the case that there is no money in hand now belonging to the trustees for the debenture holders? A year ago £7,736 was so held and the cash, including this sum, came to £14,562. This year cash is down to £8,347, and no mention is made of any money belonging to trustees. It would seem unnecessary to insist further upon the lamentable position of this company's affairs, but Mr. Smith will have to answer the questions put to him.

China's Foreign Trade in 1902.

Notwithstanding that the rate of exchange in 1902 was, on the average, 12 cents lower than in 1901, China's foreign trade during the twelve months showed a satisfactory increase compared with the previous year. The total value of imports and exports was, according to the Imperial Maritime Customs, £69,812,061, or £6,825,126 more than in 1901, the imports showing an increase of close on £4,000,000, and the native produce exported one of nearly £3,000,000. Of this Great Britain and her various dependencies and colonies claimed £43,963,620, or about 62 per cent. of its whole value. But included in this is £28,000,000, the value of merchandise, both Chinese and non-Chinese in origin, passing through Hong Kong which, Victoria being a free port, it is impossible to classify or to divide up among the countries whence it comes, or whither it goes. Therefore, to ascertain more precisely what share of China's foreign trade rightly belongs to us, to India and our Australian colonies, it is necessary to adjust the nominal returns as far as possible by comparing them with the export figures in the Indian and home and colonial returns. In the case of India the Director-General of Statistics states that about 13 per cent. of her total export trade, or roughly £10,000,000, goes to Hong Kong and China, although in the Chinese returns only £4,300,000 is shown as the direct imports from our dependency. But as a matter of fact China imported £11,500,000 of opium and yarn alone from India. The only conclusion to be drawn from this is that out of the imports from Hong Kong at least £7,200,000 came from India. In the same way India reckons her imports from China at about £1,200,000, though in the Chinese returns they are only given at £370,000, and the difference must therefore form part of Hong Kong's £28,000,000. With reference to the United Kingdom's trade, much the same may be said, only here the data are fewer on which to base a correct estimate. Still, it is not unreasonable to suppose that considerably more than half of the produce and manufactures valued at £2,136,917, which we exported to Hong Kong and Macao found their way into China, while a not inconsiderable portion of the wide difference of £1,062,439 between the Chinese returns of direct exports to us and our returns of direct imports from China must fall within the £610,398 which in 1902 were entered in our returns as direct imports from Hong Kong. A similar method of deduction applied to other British colonies will show that they also occupy a more important position than would appear from the figures in the Chinese returns. In support of this assertion take the case of the Australian Commonwealth. In this instance the direct trade is put at £46,420, of which £3,120 are exports and £45,300 imports. If this really represented the volume of trade between the two countries, it would scarcely pay shipowners to run regular lines of steamers between Hong Kong and Australia, and it is therefore safe to assume that no inconsiderable portion of the merchandise entered in the Chinese returns as going to or coming from Hong Kong belongs to Australia and the Straits. Like adjustments must also be made in the nominal returns of other countries in order to ascertain more accurately what their real trade is with China. The result of this process is to reduce the volume of Hong Kong's trade from its nominal value of 40 per cent. to about 4.80 per cent., while that of the United Kingdom and its possessions, excluding Hong Kong, will be advanced from 21.80 per cent to 43 per cent. The two great checks on the development of Chinese commerce are the insufficient means of communication and the unsettled condition of its currency. In time the former will be removed since the building of railroads is steadily progressing, though many long years must pass before they can be of great assistance in developing the resources of the country. Meanwhile it is hoped the treaty between this country and the Chinese Government, signed in September 1902, will help to remove some of the existing hindrances, since it provides facilities for the collection of produce in the interior and also gives complete freedom for the circulation of all kinds of merchandise. How stationary the exports from China are is shown by the fact that during the last forty years their increase is little more than nominal. In the quinquennial period, 1861-65, the exports of tea and silk were worth £120,000,000, market value, or an average of £25,000,000 a year. In 1902, although the principal articles exported had risen in number to 28, their value was only £27,840,000, or little more than when there were only two. But with a better system of inland collection and improved routes of communication a change ought soon to take place, and a period of expansion set in, especially if some satisfactory method of dealing with the currency can be discovered. This, however, is a difficult problem in any country, but in China it is doubly so because the media of exchange are so confusing and various, "the units ranging from sterling drafts on the eastern coast to empty bottles on the south-western hills," to quote the apt description of our commercial attaché at Pekin. To bring all these on to one level is a task which might well terrify the economists of the *Times*, yet it will have to be done. For if the Chinese exports and imports are examined they reveal a well defined division into European and Asiatic, a division marked not only by differences in the articles themselves, but also by the fact that the former go to those countries which use a gold standard and the latter to those which either use or recently used a silver one. Because Japan, the Straits, and the Philippines have all recently become gold standard countries, it is imagined that it would be to China's benefit to follow their lead and adopt gold also. But as a matter of fact if

China made such a revolutionary change in her currency she would find herself face to face with the double problem of establishing not only a ratio between gold and silver, but also between gold and copper. For although nominally a silver currency country she is in reality a copper one, the real basis of her coinage being the copper cash, which in terms of silver has depreciated year by year. The difficulty would hardly be a pressing one, but for the way in which China has been bound in debt to the foreigner. It is commodities she exchanges not currencies, just like all countries, and were there no demand upon her to supply gold to pay debt interest abroad the internal currency confusion would affect the mercantile community little. With debt charges added, however, the subject becomes pressing, and all China's creditors agitate and clamour for a "stable" currency. They will do more harm than good if they try to establish such a currency in the interests of the foreign creditor—as they surely will—and not in those of the wretchedly poor people of China.

Sport in Ceylon.

That letter from "A Suffering Shareholder" condemning the sporting tastes of the Ceylon planters has raised the ire of several local journalists who attack the writer with abuse, for the most part vulgar. One brilliant writer in the *Ceylon Observer* refers to the letter in the following terms:—

> A cantankerous creature writes to the Investors' Review libelling Ceylon planters to a tremendous extent. He signs himself a "suffering shareholder." Most of us can guess his complaint. **Liver! I hope he will continue to uffer at least until he recants** and explains that his reckless statements were the outcome of a billious attack. . . Of course, it is only absolute ignorance which makes him attempt to attribute the bad times recently experienced to anything but overproduction and the other causes ashsigned by experts. Planters are really never off their estates a tithe of the time this rigmarole would have us believe.

Witty, is it not? Language such as this only serves to show how well our correspondent got home. Another journalist, a hill man, admits the truth of the statements made about too much attention being given to footer, cricket, racing, and sport generally, and consequently draws down on himself the wrath of the *Observer*, which calls his audacity in speaking the truth surprising. The correspondent who sent us these cuttings, explained why the *Observer* is so angry at this exposure of the frivolities of a planters' life. Its great ambition is to increase its circulation among the younger men, and for this reason it loads up its column with sporting and athletic news. Therefore, from its point of view, too much attention cannot be given to all forms of amusement, but shareholders who wish to see their property well managed have no particular desire to have the crack tennis player or centre forward in the island for their manager. For their interests will, perhaps, be better served by a man who is not ashamed to work.

Passing Events.

The next time Mr. Balfour has an attack of fiscalitis and makes a speech, it ought to be something in advance of the Sheffield effort. Terrible to relate, a severe fall has occurred in the prices of bleaching powder and other chemicals, and the Castner-Kellner Alkali Company, in which so much of the Premier's fortune is sunk, finds itself unable to declare a dividend for the past half-year. No wonder a Cabinet Council was held on the day the news became known, and clearly there is nothing for it but to shut out the German article from the home market, charge the British consumer ruinous prices, and thus manufacture big profits for the Castner-Kellner Company. It is "British bleach" *in extremis*.

The Hottentots in German South-West Africa have risen, and either crossed into Cape Colony or induced some of their kindred there to join them, for the Cape Police are reported to have driven the rebels back to German territory. At present the news of the whole affair is very scanty, though we are told that Germans have relieved Warmbad, or rather that the Hottentots have evacuated it. But where the latter are, and what they are doing, no one seems to know, but two crack Cape volunteer corps have offered to go and find out, if the Germans do not feel capable of doing so themselves. The most unpleasant feature of the whole business is that it reveals considerable discontent among the natives, which very possibly may spread into our territories, where north of the Orange River we have carefully disarmed the whites, while leaving the blacks the guns we gave them during the war. True, many of these are old and obsolete, but a pot-leg from a muzzle-loader is just as effective, if not more so, than a spherical bullet from a magazine rifle. Besides, if a native rising took place, Dinizulu and his tribes would have to be reckoned with, and we have not yet heard that he has given up the modern rifles which his men collected while engaged by us for "transport" duty.

What a remarkable coincidence it is that Panama should have revolted so opportunely for the States, when Columbia, its parent country, had refused to sanction the Canal Treaty. This, at least, is what the Washington statesmen ask the world to believe, since they deny all share in the promotion of the revolution, while eagerly seizing the opportunity it gives them. Lest Columbia should attempt to recover her lost provinces, and incidentally prevent a few honest Yankee politicians from scooping legitimate boodle out of the Canal, the States have hurriedly recognised the new republic, not only as a *de facto* but as a *de jure* state, and announced that they will prevent the landing of Columbian troops to crush the rebels. It would be funny if the first act of the Panama Republic was to repudiate its debts, or funnier still if Columbia were to do so, and a European Power go debt-collecting in the Anglo-German style. If such things should happen, the States would either have to help the Columbians, under the Monroe doctrine, or else guarantee their debt, and look foolish in both cases, like a big boy who has to lead his little brother home after bullying him. But the most cruel thing of all that could happen would be for the Canal Bill to be thrown out on party grounds, as then those who have schemed and lied to bring about this revolution, would have the satisfaction of knowing they had done it all for nothing.

Russia's scheme to confiscate the property belonging to the Armenian Church and to administer it under State control has roused the natives in Russian Armenia to such a degree that they are on the verge of revolt. Speakers in every town and village urge their countrymen to resist the aims of the Imperial authorities by force of arms if necessary, the priests themselves being the leaders of the movement. At some places armed resistance has already been made, and the police to whom the work of confiscation is entrusted compelled to retire without accomplishing their object. To show how little Russian methods are removed from barbarism, a commissary of the police summoned a meeting of the inhabitants of a village near Ervain for the purpose of telling them the conditions of the new law. Having done this he sought to impress them with an idea of the Imperial power and struck the mayor in the face. But the mayor, far from being impressed, retaliated and proceeded to thrash the commissary, who was with difficulty rescued by his subordinates. As yet no outrages have been reported, though they are certain to come before long, and we shall then have the pleasing spectacle of Russia reproving the Sultan for the Macedonian atrocities—perhaps fighting him on their account—while in its own Armenian provinces the unhappy peasants are being outraged and dragooned into submission. Truly Russia might regard the beam in her own eye before the mote in the Turk's.

Mr. John Coles, of 39, Throgmorton Street, who has been a director of the Clerical, Medical and General Life Assurance Society for more than twenty-five years, was on Wednesday, November 11, unanimously elected chairman of the board.

Lord Harris of Seringapatam presided, on Thursday, at the Gold Fields meeting, and indulged in the customary propheteering. "Twelve months ago I was a pessimist," he in substance declared, "and I was right. Now I am a blooming, blazing optimist, and I mean to be right again." Bravo, great prophet of the punting tribe, never say die—and you, good citizen, never say "I'll buy" when such

tips abound. Ask yourselves, "What may the Gold Fields Company be wanting to sell?"

But the most practical part of Lord Harris's long speech relates to the things the Gold Fields has to sell. From the glowing descriptions he indulged in of the coming wealth to be provided by the Simmer and Jack and the Robinson Deep, half the capitals of which belong to the Gold Fields Company and by the Knight's Deep, five-eighths of whose capital it holds, we draw the inference that option business in these shares will be brisk, and that should prices be well worked up the "off-loading" will be magnificently profitable. Did the Gold Fields Company give anything substantial for these shares? Why ask, the companies are to yield a revenue of £400,000 per annum net.

His bravura Lordship, bold leader of a bold band, was even more emphatically droll over that £30,000,000 contribution to our war costs, coming, coming, and never to arrive. He had "the temerity to remonstrate against the thing last year," he said, and, to be sure, he was again right. Magnates pay? Preposterous idea. "Now what had been obtained?" he went on. "Not a contribution from the mines *per se*, but a contribution from the revenues of the Transvaal by various classes of taxpayers." Really, now, and is that so, and does it mean "£1 per head per month in interest, payable by the able-bodied white population" of the country? Awful, is it not? And we have not received, never will receive, one penny. Protests, remonstrances, derisive excuses, we shall get, but no money. Of course the Transvaal people cannot pay, we know that, but where are the Beit, Barnato and other millions? It has been a pretty hoax. Don't you enjoy it, elevenpenny income tax payer? Wouldn't you lend the money now, just for the credit of the thing? Credit, whose credit?

One or two curious side lights come flickering from Germany on the blessings of protection. It seems that a commercial treaty is under negotiation between that empire and Russia, and there have been speeches made in connection with it, especially a speech by Herr Gothein at a meeting of the Free Trade Commercial Treaty Association in Frankfort-on-the-Main. The speaker regarded a German tariff agreement with the United States as highly improbable, among other reasons in view of the profound hostility of the German agrarians towards America, and the most serious consideration was that America would continue to enjoy the advantage of various preferential duties granted to other States by the treaties concluded between 1891 and 1894 if the new commercial treaties raised the duties as against those other States. The speaker deprecated a tariff war with America because it would be a fatal blow to the great German steamship companies, and went on to cite some rather fantastic figures about the profit earned by English bankers in negotiating foreign loans, and by English ships in carrying so much of the world's commerce. It was rather doleful, the display altogether, as far as we can judge, but the blessings of protection do not seem to be without alloy in Germany.

The Irish "split," as it is called, does not interest us much except from the point of view of a taxpayer. Whether Mr. William O'Brien and Mr. Redmond have been badly used by a section of their followers or not we do not know, and cannot say that we much care; but it will undoubtedly be a satisfaction to us if the quarrels amongst the Nationalists prevent the dishonest Land Purchase Act of last session from becoming operative. It was not an act drawn in the interests of the Irish tenants or people but solely in that of the landlords, and we in this island are in no position to hand £12,000,000 or any other sum to these landlords in order to enable them to march off in triumph with money representing values far in excess of just dues. As we have said before, if the Act were really to bring peace to Ireland and prosperity, the imposition would perhaps have been submitted to here in silence, but if, as appears likely, it is going to raise strife, inter-party quarrels, and the old confusion, then it will be much better that we should keep our money in our pockets, especially as it is highly probable that land purchased on usurious terms will never be paid for.

It is surely about time the people of New Zealand interfered to stop the transmission at their expense of those telegrams containing summaries of the harangues of their Premier. They cannot realise how ridiculous that man contrives to make the little colony. There was one sent through Reuter last week and paid for as usual by the New Zealand Executive—indirectly, therefore, out of borrowed money—which contained an unusual amount of contemptible fustian. "The potentialities of the colony in respect to trade and defence are not yet understood at home," the windbag declared, apropos of the voting of £40,000 per annum towards the cost of the British navy. He "trusted that the time was not far distant when the interest of the first cost of a first-class line of battle ship, together with the cost of its maintenance, would be defrayed by the colony." What perfect bosh this is coming from the representative of a handful of 800,000 people smothered in debt. If they paid their own way honestly these people could not contribute a farthing to our navy, and first-class battle ships are not what we want. A little common honesty would do more than any amount of rusting battle ships to cement the empire.

It is interesting to note that our exports of new shipping to foreign countries continue to show a great diminution on the figures for previous years. Up to October 31 last the total value of such exports in 1903 was only £3,704,740, compared with £5,332,086 in the first ten months of 1902, and £6,983,737 in the same period of 1901. No small part of the decrease arises from the diminished foreign demand for ships of war; therefore it is not to be complained of, but there is also a falling off this year of about £950,000 in the value of trading steamers sold to foreign owners, and that is not so good. What, by the way, is going to become of the two first-class battle ships built in this country for Chili at a time when it seemed likely that a war would break out between that Republic and Argentina? Chili does not want them now and they stand her at about £2,500,000. Who will buy?

What fine times our machinery shops, tool makers, bridge constructors, rail rollers, and engine builders, with the hosts of cutlers and hardware men, tube founders and armour plate roasters will have soon. The terrible J. "Pierp" is going to dump 150,000 tons of steel on our unprotected shores, and as much more as his railways and bankrupt Shipping Trust's vessels can carry, for nothing or as ballast, to enable his tottering Steel Combine to keep up prices against consumers at home. Such patriotism must commend itself to our De Beers "progressives," and when Yankee crude iron and steel come to be "given away with a pound of tea" here, in the good pushing style of the enterprising grocer, we shall be rich for ever. But the Germans and Belgians must not be allowed to buy, or otherwise receive, any of this "dumped" raw material, because they might cut us out of our finished goods markets, build our ships, say. See to it, therefore, that J. "Pierp." does not carry his patriotic, enlightened, humane and up-to-date generosity too far. To be sure the great benevolence towards us exhibited by the Morgan syndicate involves a reduction in wages for the workmen employed by the Steel Corporation. No less than £3,000,000 is said to be the amount going to be knocked off the earnings of the men, and we fear this can only be the beginning of generosity in that direction. But never mind, the dumped steel is just the thing our manufacturers want, and comes just in the nick of time, for, according to the latest advices from Glasgow, stocks of iron are excessively low both there and at Middlesbrough. The available Scotch supply is only 10,000 tons, and that of Middlesbrough only 100,000 tons, and the drain of public stores continues, says the *Financial Times* reporter. A prominent Glasgow merchant has expressed the fear that if the existing demand continues these stocks will be wiped out, and the foundries by force of circumstances compelled to close. No doubt the United States Steel syndicate knows of our extreme poverty of raw material, and is coming to our help at all costs to its labour, in order to keep our shipyards, machine shops, foundries, and finished iron works of every description in good heart and fully employed. No wonder we all love J. "Pierp." He bought up all our scrap iron shipping at

prices only the millionaire unlimited could afford, and now he is about to present our manufacturers with the steel they urgently need. Could he not throw in the coal as well? It makes excellent ballast.

That Johannesburg loan is urgently wanted—a modest £3,000,000 now, and as much more later on as can be borrowed. Lord Milner, the autocrat, wants his £600,000 back, and the town wants public works, drains above all, to prevent revolts of the unemployed. Will you not lend the money cheap, good usurers? "But," says one, "it isn't half a mouthful to a Beit, why bother us?" Nay, Beit is building in Finsbury his particular Tower of Babel, and there is the Ventures Syndicate to find cash for—much cash, if you will only sell your shares to it, so please underwrite the loan, kind Consol market, and be happy. No? Not for 2 per cent. commission? Well, well, some folk are greedy.

It is interesting to observe that in spite of the more or less magnificent surpluses displayed in their annual balance-sheets, various United States railroads appear to be in urgent need of additional capital. Thus, we learn that two eminent New York houses—Messrs. Speyer and Co. and Kuhn, Loeb and Co.—have bought $10,000,000 of 4 and 3½ per cent. Treasury bonds, issued by the Baltimore and Ohio Railroad Company, to reimburse its treasury for expenditure on betterments; that the Pennsylvania Railroad Company has just raised $35,000,000 on loans, the Lake Shore Company wants $50,000,000, and subsidiary lines of the Pennsylvania $6,000,000. And you can get some 5 per cent. two-year bonds of the Great Northern Company a trifle under par.

Quite a little fuss has arisen over the rumour that Mr. J. P. Morgan is to retire from monster company promoting life, forsaking the Steel Trust which is to be turned over to the tender mercies of John D. Rockefeller and his associates, and devote the remainder of his days to the pleasures of counting up the dollars he has got away with. The rumour, started by the New York *World*, has been hotly denied, but it really does not much matter. Mr. Morgan cannot again command the confidence of any sensible person either in Europe or on the American continent, and the trusts he has built up with such ostentatious parade in millions and billions of figures are in ruins. He can do nothing to help them, it seems, and if it be true that he still has a fortune of $200,000,000 he ought to be heartily ashamed of himself. But we do not believe that story any more than those others about the fabulous millions of the Rockefeller troupe. They may all die paupers yet.

"Canadian loyalty at two shillings a quarter, and Australian allegiance at a penny a pound," was the witty description of the preferential tariff policy given by Mr. Winston Churchill in his Birmingham speech. Both he and Lord Hugh Cecil spoke well against the Protection madness, and everyone must admire their pluck in attacking its chief asylum, where free speech and free trade are equally abhorred.

Mr. George Seton, of the Indian Tea Share Exchange, in his usual monthly statement, shows that the market value on November 1 of the forty-five representative Indian and Ceylon Tea Companies, selected by him as a guide, was £7,800,000, or £350,000 more than on October 1, notwithstanding the deduction of dividends aggregating about £50,000. Compared with the figures of September 1, the increase in price was £400,000, and with the lowest quotations of September 1, 1902, £1,750,000, but the present total is still £4,200,000 below the top figures of £12,000,000 on July 1, 1897. The progress towards recovery, however, is undoubtedly good, and, as the trade seems just now in a fairly healthy condition, Mr. Seton is probably right in forecasting a further improvement in prices in the immediate future.

We are glad to give prominence to an emphatic protest made by Mr. W. H. Bishop against the terms just put forward for the settlement of the Buenos Ayres Cedulas business. Nothing could be more iniquitous than this proposed lumping together of the whole series of Provincial Cedulas, and the offer to pay off bonds whose nominal par value is £34,000,000 with a paltry £5,000,000 spread over no less than twenty-five years, meaning something like 3s. in the £ if dates be discounted. If the arrangement is forced through it must ever stand to the discredit of the Central Government, and we advise bondholders to combine in their own interests instead of depending upon effete Councils, which seemingly do little else than betray those they are supposed to protect.

The joy of Argentine Municipal bondholders at the prospect of a settlement of the defaulting Cordoba and Santa Fé loans has unhappily proved of very short duration. The Municipal Loans Committee have had their attention called to the alleged terms of settlement, and announce that they know nothing about them, not only so, but they think it right to inform holders that the proposals as stated are not such as they could recommend for acceptance.

Critical Index to New Investments.

*** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Metropolitan District Railway Company.

Messrs. Glyn, Mills, Currie and Co. offer an issue of £500,000 4 per cent. perpetual debenture stock of this railway for subscription at par, payable in instalments of 5 per cent. on application, 20 per cent. on allotment, and three of 25 per cent. each on March 15, May 13 and June 15. The scrip certificates will bear a coupon for £1 per cent., payable on January 1, after which the instalments will bear interest at the rate of 4 per cent. per annum from the respective dates of payment, but subscribers may pay up in full on January 1 or any of the fixed dates, together with interest at the rate of 4 per cent. per annum from January 1 on so much of the price as remains unpaid, in which case they will be entitled to certificates bearing a full half-year's interest. Part of the proceeds of this issue will be applied for the general purposes of the company, and the balance will from time to time be employed in part satisfaction of the consideration payable to the Underground Electric Railways Company of London, Limited, for work done. The electrification of the line, it is expected, will be finished by the end of next year, and provision is being made for a largely increased service of trains. During the year ended June 30 last the company carried, exclusive of season ticket holders, 43,203,584 passengers, and hopes, when the system is in full working order, to increase this number to at least 100,000,000, while reducing working expenses considerably. If this traffic is carried the directors anticipate that there will be ample revenue to meet all fixed charges and leave a substantial margin for dividends on the preference and ordinary stocks.

Buenos Ayres and Pacific Railway Co., Limited.

An issue of £500,000 5 per cent. debenture stock, forming part of a total of £1,250,000, is offered for subscription through the London Joint Stock Bank, Limited, and Martin's Bank, Limited, at the price of 99 per cent. The whole or any part of this stock is redeemable at par on six months' notice after June 30, 1913, and is secured by a general charge upon the undertaking of the company after the first and second debenture stocks. Owing to the development of the business during the past few years it has been found necessary to increase the engines and goods stock and to further equip and improve the line by renewal with heavier rails, etc. The proceeds of this issue will be applied towards the outlay upon the equipment of lines already constructed, the supply of rolling stock and engines, completing the doubling of the line to Hurlingham,

stone ballasting, etc. In addition to the development of passenger and general traffic the grain traffic tonnage increased from 147,440 tonnes in 1901-2 to 276,074 tonnes in 1902-3, a tonne being equal to 1,000 kilogrammes or 2,204½ lb. avoirdupois, and the company altogether seems to be in a very prosperous state. The profits in the same period rose from £279,801 to £370,595, and the debenture interest, including that on the present issue, requires £235,225.

Sunderland District Electric Tramways, Limited.

This company has been formed for the purpose of acquiring, constructing and working certain tramways with an authorised length of 19¼ route miles in the colliery district lying between the southern terminus of the Sunderland Corporation tramway system and the Parish of Easington. The capital is £270,000 in 100,000 6 per cent. cumulative preference and 170,000 ordinary shares of £1 each, and £160,000 in 5 per cent. first debentures, and 100,000 of each class of share are offered for subscription, together with £75,000 in debentures. It is anticipated that the line will be opened for traffic next year, and Mr. S. B. Cotterel, M.I.C.E., M.I.M.E., engineer and general manager of the Liverpool Overhead Railway Company, estimates that after allowing 60 per cent. for working expenses, depreciation, etc., the net traffic revenue should be £26,000 per annum, which would leave a balance, after meeting prior charges and administration expenses, of £10,000 for sinking fund, reserves and dividends on the ordinary shares. The unsatisfactory method of having one or more syndicates interested in the promotion of the company is followed in this instance, but the Electric Conversion Syndicate, which is the nominal vendor, is apparently satisfied with the profit it makes on its contract for the construction and equipment at a cost of £227,500. For the provisional order of the Board of Trade £36,500 is payable in cash, and this sum is handed over to the Ito Syndicate, Limited, which in turn pays £25,000 to the United Kingdom Tramway Light Railway and Electrical Syndicate, Limited. The Electric Conversion Syndicate stands to make further profits by underwriting 150,000 shares for a commission of £8,000 in cash and £4,500 in cash or shares, and 600 debentures for a commission of 5 per cent. and a brokerage of 1 per cent. There would appear to be a fair opening for the undertaking, and as it is not hampered by a dead weight of capital representing outlay on an old system, it may prosper. The ordinary shares, perhaps, are hardly worth picking up at present, but the preference shares and debentures should be a fair enough security.

West Ham Gas Company.

Parr's Bank, Limited, is authorised to receive tenders for an issue of £85,000 5 per cent. preference stock in the above company which is offered at the minimum of 110 per cent. to provide funds to meet the increasing business, and in particular the cost of plant at the new auxiliary station at East Ham, and of prepayment installations. It is stated that the demand for the latter has been steadily increasing since the adoption of the automatic meter system in the end of last year, and over 5,000 have been installed, while some 3,000 further applications have been received. Net profits for 1901 amounted to £28,215, and for 1902 to £34,382, while for the half-year to Midsummer, 1903, they were £20,091, and as the dividend on the new stock requires no more than £4,250, it should be a good enough investment, the only drawback being that the total is too small for it to have anything like a free market.

In our notice of the "Handbook for Speakers," issued by the Free Trade Union, we made a mistake in its price, which is sixpence, and not threepence, while that of "Through Preference to Protection," the other handbook, issued by the Union, is fourpence, post free.

The effect of all work and no play upon the small boy is well known, and the *World's Work* seems to be suffering from the same complaint. At least we can see nothing bright and shining in this month's number—except the paper. Articles on the Scottish Granite Industry, Life at the Zoo, Cold Storage, The Worm Disease Among Miners, and How Milk Saves Life, are, we doubt not, most carefully prepared and full of valuable information but such a solid display of knowledge is rather like a powder without jam, difficult to take, particularly in large doses.

TRADE AND PRODUCE.

Wheat.—The firmness visible at the end of last week has not been maintained, and the market has been adversely influenced by easier American cables, and liberal shipments of foreign wheat. Business has been dull, spot parcels moving quietly, with values tending in buyers' favour, and futures generally dropping ⅛ or so per day. New wheat is still being delivered in comparatively small quntities, but shows some signs of improvement, and where sound has obtained good prices, 31s. and 32s. being paid for the best, while the average per quarter has gone slightly up. Farmers' deliveries for the week were 41,897 qrs., averaging 26s. 4d. against 41,412 qrs., averaging 26s., the preceding week. The position of affairs from the farmers' point of view has only slightly improved, and the acreage of land put under wheat this autumn promises to be very limited, not only in Britain, but in France, Germany, the Low Countries, and Russia also. Only in Italy, Austria, Hungary, and Roumania have conditions been at all favourable to sowing. American markets have been more or less bearish all the week. Exports have been poor, the visible supply nearly 3,000,000 more than last week, and receipts from the North-West heavy. News that the Russian crop would be 50 per cent. smaller steadied the tone for a while, but bear pressure soon broke it down again. Bradstreet's estimates also helped the downward movement, the quantity in sight east of the Rockies being put at 49,269,000 bushels, against 43,463,000 last week.

Wool.—The depression is becoming more general. A while ago fine wools alone were affected, but now the cheaper sorts are in their turn becoming more difficult to sell, and prices for home and foreign wools are alike falling, though home products are steadier than the foreign varieties. Everywhere reports are heard of mills running short time, a scarcity of new orders, and a gloomy outlook, and unless matters improve very soon the present year promises to be the worst known in the last decade. In piece goods the tweed trade is good for export, and some firms are well employed making cheap varieties for spring account, while proofings are still doing well, but there is no general activity. Yarn export spinners have still several old contracts to run out, but cannot make new ones except at slight concessions.

Linen.—Manufacturers are still looking for the expected improvement of trade, but, except in the yarn market, no great activity is yet visible in any quarter. In yarns the excitement is due more to the outlook of the flax crop than to any increase in orders for linen goods. Continental spinners are rapidly advancing their price lists, and naturally over here values are hardening also, though not to the same extent. Business has increased during the last week or two, but spinners are showing some anxiety about the high prices, knowing the difficulty of obtaining a corresponding advance from manufacturers. Woven goods are dull, yet a little improvement may be noticed here and there. The demand for paddings and low hollands is better, dress goods are satisfactory, and handkerchiefs a shade better. Our exports of finished linens also show an increase. The United States is at last coming into line, and gives signs of fulfilling its earlier promises. Cuban, South American, and Colonial markets are all recovering a litle, and even the Continent is doing more.

Cotton.—Prices for American, both spot and future, again fluctuated considerably during this week, under the influence of conflicting weather reports and the manœuvres of the bull operators in New York. The daily receipts continue to increase, but owing to the lateness of the crop, the total is still some way behind last year. Weft styles of cotton are, Sir Jacob Behrens and Sons state, more easily obtainable than those of twist, the latter keeping on a high basis. Buyers in many cases are beginning to wonder whether they have been doing business at top prices, but, in the opinion of the same firm, they need not disturb themselves as there is nothing in present situation which would warrant the assumption that lower prices will be seen for some time to come. For Egyptian the demand continues good, and quotations were again advanced during the week. Yarn prices are well maintained, and since last week a good general business has been done. Spinners have not in every case been able to obtain their full prices, though where they have shown a disposition to yield a little to buyers, a ready sale has always been effected. From Madras there has been a fair enquiry for certain descriptions of yarns, but the prices offered are at present unworkable. Egyptian yarns are also dearer on the week, and the Bolton spinners, having booked several good orders, are decidedly more difficult to deal with. For cloth also the enquiry has improved, and, though in many cases offers have had to be referred back on account of the rise in cotton and yarns, a fair number have found acceptance. From India the enquiry is good all round, the bulk of it coming from Calcutta, though Bombay is also buying low shirtings, and bleaching cloths fairly freely. With China business has only been done in specialties, as its ideas of the price for staples is very much below those of manufacturers. The minor markets are sending in general enquiries out of which a fair business is being booked in certain quarters, notwithstanding the rise in cotton.

The New York market has been feverishly active all the week, dealings for the most part being confined to futures. Spot, however, advanced in the early part, and rates were well maintained throughout. Future quotations varied with the weather, and with operations of the bull clique, though on the whole the movements for the week show a decided advance on the prices at the close of last. For a time on Thursday a sharp reaction set in, caused by the big receipts and the fears of a strike at the Fall River mills through the reduction of the mill-hands' wages. But once prices began to give way the bears rushed in to cover, and sent them up beyond the previous rates.

The spot tendency at Liverpool yesterday was firmer, American middling being quoted at 6.14d. and M.F. at 6.40d., while rates

for Egyptian were harder at 7⅞d. fair, and 8 11-16d. F.G. fair. Other descriptions were not so freely dealt in, as these two, but the prices for them were also put up several points. American futures closed firm with Nov. at 6.3d. to 6.4d., Nov.-Dec. at 5.97d. to 5.98d., Dec.-Jan. at 5.94d., and Jan.-Feb. at 5.92d. to 5.93d.

Iron and Steel.—During the week p ices for pig-iron warrants on the Glasgow market showed considerable variations, though on the whole, they were well maintained, considering the unfavourable influences they had to contend with. Whether America will or will not start dumping her surplus here is still a question of considerable uncertainty, but even should such a thing take place it ought not to affect the makers much since the consumption continues good. For Cleveland warrants cash p ices ranged from 42s. 8½d. to 43s., and for delivery in one month from 42s. 9d. to 42s. 11½d., the latter being regarded in many quarters as indication that the market expects to see quotations ower before the end of the year. Business in Scotch and Cumberland hematite warrants is almost non-existent, and though the former are quoted at 48s. 9d., and the latter at 53s. 5d., the figures can only be regarded as nominal. In the steel trade, in spite of a general lack of activity, the works manage to keep going, and in this respect are better off than the malleable iron makers, some of whom have been compelled to shorten time owing to the quiet demand. Throughout the north of England the iron trade all round is very much depressed, and the general opinion is that before things get better they will be worse, which makes the outlook for the winter very gloomy. The only departments which show any signs of life are the Cleveland pig-iron, the rail and the iron founding, but shipbuilders, ship-plate makers, and those works generally which supply the shipbuilding yards with material are worse off than they have been for many a long day. At Barrow trade also is quiet, and the question of blowing out more furnaces is being seriously discussed, since the demand for hematite is far below the output. At the present time there are only twenty-nine furnaces in blast, compared with thirty-six a year ago, and yet makers have been compelled to reduce the price of mixed Bessemer numbers to 56s. per ton net f.o.b.

Coal.—Trade appears to be getting worse instead of better. Except where collieries are engaged upon contracts, they are all working more or less short time. The mild weather has affected house coals, steams are not being exported in such large quantities from the Humber ports, as the northern season is drawing to a close, gas and engine fuels are in better request, but, as in other trades, there appears no inclination to do business for the future with any confidence or certainty. It is pleasant to learn that our exports during the past ten months have been heavier than in the corresponding ten of 1902. From Hull, 1,350,809 tons were dispatched, against 1,149,283 tons last year, and the Welsh ports have had a bumper season. Cardiff alone dispatched fourteen million tons, Newport over three millions, and Swansea nearly two.

Copper.—The market kept firm for a day or two, and then heavy bear pressure forced prices down. The news that the Amalgamated Company had reopened their mines caused a further fall, and heavy selling, but some covering operations steadied the tone a little, and last night the market closed quiet, with cash at £56 2s. 6d. and three months at £55 17s. 6d.

Tin.—Fairly steady prices prevailed early in the week, but the fall in the exchange and dull eastern markets sent them down. A little free selling of forward dates was indulged in on Thursday, which still further lowered values, and though a fair amount of activity was shown, very little active business put through. Yesterday's prices showed a fall of 15s. on both cash and three months compared with those last Friday, the former being quoted at £115 7s. 6d. and the latter at £116 10s.

Tea.—Prices were more irregular at the Indian sales this week, buyers acted with more caution, in view of the substantial increase in the new crop, and the quality of some of the teas, Assam, Darjeeling, Dooars, was not quite up to the mark. Of the 42,900 packages offered, however, over 39,000 sold at an average of 7.87d. per package. Ceylon auctions comprised 18,700 packages, bidding for the lowest grades was good, but for medium and better classes, over 8d. per lb., not so keen, and prices easier. The average for the week was 8.21d., against 7.62d. in 1002. Messrs. Gow, Wilson, and Stanton's report of the direct exports from Calcutta and Chittagong to places outside the United Kingdom shows that Russia has made the greatest progress, over a million more than last year, 3,568 800 lb., against 2.170.418. Australia showed a decided set back in 1902, compared with the two preceding years, but this year has recovered ground a little, and the total exports to all outside markets show a fair increase.

Sugar.—The activity in the refined sugar market at the close of last week coincided, Mr. Czarnikow states in his circular, with a better tone in the speculative market due to less sanguine crop reports. The improvement, however, did not last long, and the prices this week closed a little lower than last Thursday, especially for November sugar, of which speculators realised a fair amount at the beginning of the present month. On Thursday evening the beet quotations for the various positions were as follows:—Nov. 8s. 6d., Dec. 8s. 6½d., Jan.-March 8s. od., April-June 8s. 10d., Oct.-Dec., 9s. 1½d. In cane. business during the week was very dull, as there were no auctions of crystallised, though 1,200 bags of St. Lucia Syrups were partly disposed of at full rates. America has reduced her quotation to 2 13-16 cents, which is equal to 9s. 9d. c.i.f., for 96 per cent., or 8s. 7½d. new or 7s. 4½d. old 88 per cent. f.o.b. Hamburg. Refiners, however, are doing nothing, as they are waiting to see the fate of the Cuban Reciprocity Bill, which is now before Congress, though when this will be decided and what it will be nobody can foretell in the present attitude of the parties. Stocks are down again, and now only total 112,000 tons, the landings this week being 9,000 less than the meltings.

PUBLIC INCOME AND EXPENDITURE

The following are the receipts into and issues out of the Exchequer between April 1, 1903, and November 7, 1903:—

Revenue and Other Receipts.

—	Estimate for the year 1903-1904.	Total Receipts into the Exchequer from April 1, 1903, to Nov. 7, 1903.	Total Receipts into the Exchequer from April 1, 1902, to Nov. 8, 1902.
Balances, April 1:	£	£	£
Bank of England	—	5,887,524	8,082,383
Bank of Ireland	—	749,603	486,564
		6,637,127	8,566,947
Revenue.			
Customs	34,640,000	20,330,000	20,506,000
Excise	32,700,000	18,836,000	19,610,000
Estate, &c., Duties	13,300,000	7,656,000	8,516,000
Stamps	8,400,000	4,591,000	4,849,000
Land Tax and House Duty	2,600,000	570,000	590,000
Property and Income Tax	30,500,000	8,520,000	9,693,000
Post Office	15,300,000	8,080,000	8,350,000
Telegraph Service	3,800,000	2,300,000	2,365,000
Crown Lands	445,000	240,000	240,000
Receipts from Suez Canal Shares and Sundry Loans	935,000	580,054	579,002
Miscellaneous	1,650,000	934,102	1,070.593
*Revenue	144,270,000	72,637,156	76,368,595
Total, including balance		79,274,283	84,935,542
Other Receipts.			
Repayment of Advances for Bullion, &c.		220,000	389,058
Under Telegraph Acts, 1892 to 1899		410,000	630,000

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Advanced from 3 per cent. on September 3.)

Norfolk House, Friday Evening.

With the strain upon banking credit in the City so near breaking point in places, it is impossible not to sympathise with the reluctance the Bank of England directors have shown to move up their rate to 5 per cent. All the same, we think they made a mistake yesterday in refraining from taking that step. It might have calmed the market, and given outside credit dealers a chance to resume business, even if it did not divert the foreign order for gold on to other markets, especially on Paris. As it is the directors probably felt themselves sustained by the small decrease of £182,000 in the banking reserve, and disregarded the weakness of the open market, as shown by a decline in other deposits to £38,923,000, disregarded also the reports from New York as to the probability of £5,000,000 in gold being required there from abroad before the end of the year. Accordingly the open market, which had kept aloof from business all the week, was in no better heart after the Bank Court had announced its decision than before. Bill brokers yesterday still continued to quote something over 4 per cent. as their rates on bank bills of all dates, and that meant either the diversion of the business to the Bank of England itself, or the holding back of paper by the merchants until better terms could be obtained. In either event business remained as difficult to transact, and the credit market just as apprehensive of hidden dangers. Yet the continuation of a 4 per cent. Bank rate this morning tempted some bill brokers to work at lower rates than prevailed earlier in the week, and much of the business to-day was done at 4 per cent. for three and four months' bills, or at most 4 1-16 per cent., while six months' bills changed hands at 3 15-16 per cent. One seller tells us he was able to dispose of three and four months' bills to the Continent at the last named rate, but no London discount house admitted any such figure; in fact the leading brokers quoted 4 to 4⅛ per cent. for short bank bills, and some of them tried to hold out for at least 4 1-16 per cent. As the Bank itself, however, did but a moderate discount business, it seems probable that most of the moderate supply of bills were absorbed in the open market, poor though it be.

Short credits have been less urgently called for than might have been expected. The Bank did a heavy business on Wednesday, partly in loans at 4½ per cent., but mainly in discounts at 4 per cent., otherwise the pressure there has been insignificant, and yesterday and to-day small sums due by the market were paid off. This, however, does not mean that the market is in easy circumstances, for it is excessively poor, and if gold continues to stream away next week, as it has done this, the rush of demands upon the Bank for help towards the end of the month must become inconveniently large. The Bank cannot go on for ever creating credit at the call of an impoverished market, and substituting credit manufactured upon securities for which there is at present no market, or very little market, for credit based upon gold. Meanwhile the market has been able to say that it could borrow for seven days at 3½ to 3¾ per cent., even in the worst hours of fear about a 5 per cent. Bank rate, and so the Stock Exchange settlement payments have gone over smoothly, and even the Transvaal loan instalment was met on Tuesday without causing any pronounced flurry. Credit is skilfully played off against credit, and securities are utilised with the utmost gravity and circumspection at unreal or unmarketable prices in order to maintain the appearance of solvency and abundance, so that the surface of affairs continues smooth, but the substance beneath is diminishing all the time. To-day's quotations for short advances were call money 3 to 4 per cent., and seven day money 3½ to 3¾ per cent. Occasionally bankers held out for the higher rates, but a good deal of the business was done at the lower. It is probable, all the same, that the market will have to go to the Bank for help to-morrow in order to be able to pay for the additional Treasury bills.

During the Bank week ended on Wednesday night the net amount of gold withdrawn for export was £616,000, and another £213,0000 went last night, £203,000 of it for New York. Some little rally has occurred in the New York exchange, but at last night's quotations it was still possible to take gold from here, and in all probability further sums in eagles or in sovereigns (the Bank is not selling bars), will be withdrawn for export to New York, and it appears certain that the sum of rather more than £500,000 in virgin gold due in next week will be swept up by foreign buyers. Dealings in the metal took place to-day at 78s. per oz. There seems no likelihood of the diversion of any appreciable part of the New York demands upon Paris. At any rate the French exchange has shown an upward tendency lately, and is now well above the point at which it would pay to take gold from London to Paris. This advance is ascribed to the large investment of French bankers in the new issue of Treasury bills. The total issue came to £3,000,000, of which two-thirds was in twelve months' bills, and these went at an average of only £3 13s. per cent., or 6d. above 3⅝ per cent., whereas our market expected 3¾ per cent. at the very least. The low rate was due to foreign competition, but the £1,000,000 of three months' bills were left at home, and on part of these the Government had to pay as much as £4 3s. per cent., or an average of £4 1s. 5d. This is ominous for any further issues of short bills on Ways and Means account, such as the poor revenue returns and heavy supplementary estimates to come render inevitable.

It was announced this afternoon that 500,000 sovereigns will be shipped to-morrow from Bombay.

SILVER.

A small inquiry for bars on Indian account which came into the market on Saturday last caused prices to harden 3-16d. per oz., but the demand being satisfied they had slipped back by Tuesday to 27d. per oz. for cash and 26 11-16d. per oz. for delivery two months forward. Just at this time when there was practically no support of any kind, a good deal of the metal was thrown out by Singapore and quotations slumped to 26⅜d. and 26d. per oz. respectively. The fall, however, was more rapid than the circumstances warranted, and operators for the fall took occasion to cover their sales, while the low figure also induced a little demand from India. A sharp advance in the Singapore exchange and a recovery in Indian values brought about a further recovery, and the market closed strong at 26⅞d. and 26 9-16d. per oz., making the net changes on the week a gain of 3-16d. per oz. for spot metal and a decline of 1-16d. for future delivery. For the Rs.50,00,000 Council drafts on India offered this week the total applications came to Rs.3,69,60,000, all in bills, and tenders at 1s. 4 1-16d. per rupee received about 30 per cent. The amount to be offered next Wednesday is again increased to Rs.60,00,000.

Stock Market Notes and Comments.

Some day we suppose the Stock Exchange will get back its business, and dealing become healthy again in many, if not all, sections of the market, but there is no sign of this welcome change as yet. Instead the stuffed-up state of markets grows steadily more lamentable, and it is really useless to dwell upon details for we cannot indicate in the least where the investor can go and place his money with some degree of assurance that part of his capital will not disappear. "There are a lot of little messes around," more than one City man has observed to us lately, and we partly agree, differing only in the qualifying word "little." Some heaps of rottenness may be small, but there are others of formidable dimensions whose clearing away must take place before health returns. In the vulgar language of the street, everybody and, one may say, nearly every institution are "bunged up" with paper they cannot sell, and much of it is held at figures impossible of realisation. Hence nothing revives markets. They are so hollow that they did not recover even when the Bank directors abstained from raising their rate of discount, but rather went weaker, and there are such formidable demands for fresh capital from many quarters eager to be gratified in a City powerless to help, that the exhausted and overladen masses of bolstered credit get never a chance to recuperate. Not only are our railway companies all more or less pressed for money and our municipalities hungry for relief, they and their bankers, but the Government will have formidable supplementary estimates to provide for in the last quarter of the year, and the revenue is coming in so poorly that the new Chancellor of the Exchequer will be compelled to borrow and borrow and renew and renew. He borrowed an extra £500,000 this week, and will have to go on doing it with results shocking to contemplate to the nation's credit.

Look how all the drum beating and bellowing of the Gold Fields phalanx failed to stimulate the Kaffir market. That has not even risen to the bait of the "Two Million Syndicate," and looks on with indifference when the interested and paper-gorged prophets prophesy fabulous gains from Chinese labour. Probably, however, quotations in this section will be screw-jacked up a little now, as is the fashion after an account has been completed, and if so wise people will part with shares they can get out of with a minimum of loss and wait. Do, whenever possible, the opposite of what men like Lord Harris and mere ignorant vendors' touts of that description advise, and see what comes of it. At least those who follow this course will not have to bemoan themselves for getting stuck with rubbish and seeing their capital melt away. If readers of this Review had followed in this market alone the advice it has given throughout, never heeding the interested deprecations and outcry of those who had something to sell, how much richer they would have been to-day.

German operators are said to be intervening in the Australasian market and the news is good, for shares there are pretty high, even for the best mines, and Western Australia has always been a country of nasty surprises so far as its mining goes. If the buying appetite remains keen on the Continent we should therefore counsel all who see comfortable profits upon their purchases of this group of shares to sell to the foreigner and take their money. In the ups and downs to come they will have their chances to buy back again. We have had some lively movements in copper shares this week, but it is impossible to understand or follow them. All we can say is the less the public has to do with shares that are obviously completely in the control of manipulators on the other side of the Atlantic the better. But must not the same advice be given all round? Who can touch Yankee Railroads in present circumstances with the ravenous demands of the companies for fresh capital so patent, and the condition of the New York money market so hollow? The time may be at hand when good Yankee Railroad bonds can be purchased, bonds standing well above the lower grade securities, but there is no hurry even to do that, at least until the winter is over.

The Week's Stock Markets.

Without actually breaking down at any particular point stock markets were again full of apprehension during the past week, and those who hoped that the recent slight pause in the downward movement was a prelude to a better state of affairs were once more doomed to disappointment. It seems beyond doubt that so far as investment stocks are concerned, a lower level of values has been permanently established, and conditions prevailing in every quarter of the globe are such as to give the utmost discouragement to even the mildest forms of speculation for the rise. Markets are weighed down with all kinds of unrealities, and unsound positions temporarily bolstered up, and certain it is that one of these fine days the props and stays will become as weak or weaker than the rotten structures supported, and then those who have followed our advice, and kept clear, will have good cause for congratulation. Without being in the smallest way responsible for it, several adverse influences helped to accentuate the depression of the past week, the most prominent being the really alarming state of the Wall Street market, which led to withdrawals of gold from the Bank of England, and the consequent dread that our Bank rate would be raised to 5 per cent. on Thursday. As it turned out, no movement took place, and many asserted that the directors' action was dictated by the fear that a rise would precipitate a crisis on the other side. Far Eastern affairs, too, again took a disturbing turn, for no sooner had Mr. Balfour, at the Turtledom feast on Monday, assured us that there was nothing really disquieting in the situation, than news was cabled that the Japanese Premier had declared the situation to be most critical. Nevertheless, the mid-monthly settlement passed off smoothly enough, so cleverly are the gaps bridged over, and the bankers' charge of 4½ per cent. did not often leave much profit for lenders inside the House.

Consols commenced to fall away as soon as the week's business commenced, and every day witnessed a decline in quotations of more or less severity. Dear money, with the possible rise in Bank rate, and the revival of war alarms were advanced as the chief causes of the weakness, but the selling could be traced to those with difficult positions to negotiate and in need of relief. That the Bank rate fears had little to do with it is proved by the fact that the maintenance of the official minimum at 4 per cent. had not the slightest strengthening effect, quotations on Thursday being near the lowest of the week. They rallied slightly before the end, but still leave off ½ lower, at 87 9-16 to 87 11-16 for money, and 87 11-16 to 87 13-16 for the account. Childers 2½ per cent. dropped as much as 1. Exchequer bonds receded ¼, and Transvaal scrip dropped with Consols, but recovered again, and finished at 2⅞ discount. Khaki stock went to 97¼, or a fall of ¼, and Local Loans, after bravely endeavouring to resist the depression, gave up the effort, and relapsed ½. Of other British Funds, Bank stock fell 4, and India 3½ and 3 per cent. each declined ½. Scarcely any business was attracted to the Home County and Corporation list, and the only movements to record are declines of 1 each in the 3½ per cent. issues of Birmingham, Bradford, and Brighton, and in York City 3 per cent., while London County 3 per cent. gave away ½. Amongst Colonial issues, Cape 3½ and 3 per cent. inscribed dropped 1, and so did Cape Town 4 per cent. debentures. The new loan of the City is quoted about par, and the latest Durban issue at 2 premium. The fresh Johannesburg issue is under way, and may soon make its appearance. The City cannot expect to borrow cheaply.

Argentine bonds are the chief attraction just now in the Foreign Government market, and a fair measure of support was accorded to leading issues throughout the week. Both London and the Continent were buyers, the Waterworks loan and the 4 per cent. of 1900 being in particular request. Dealing in the latter was stimulated by the fact that it will be officially quoted on the Paris Bourse on Monday, and as the 4 per cent. Cordoba bonds already recognised there —an identical security—stand at 80½, the latest introduction will doubtless be well received. At the close an all round improvement of ½ to 1½ is visible, with the Waterworks and 1897, 1899, and 1900 bonds leading. In other directions business between bourses was insignificant, but here and there Brazilian securities improved a fraction. The movements amongst leading Europeans were exceedingly scanty, and we have only to record a fall of ½ in Spanish "sealed," and slight recessions in Turks. Russian Nicolas bonds and Danish 3 per cent. closed 1 better, and Greeks were harder. Central American defaulters were flat, and the loss of her principal asset naturally depressed Colombian bonds, which close 4½ lower. Venezuela Consolidated fell 2. Japanese bonds were not greatly

affected by the war scare, and the small losses were practically recovered before the end. Although contango rates were a little higher than a fortnight ago, there was still no great inducement to lend in this section, and only occasionally was anything obtainable above the 4½ per cent. charged outside. Thus Spanish were continued at 3 per cent., Portuguese at 4 per cent., Italians at 2 per cent., and Turks and Russian "even." South Americans sometimes produced a little profit being done at 3 to 5 per cent., and the rubbish group were usually charged 5½ per cent. The making up list revealed a nearly all round improvement, the leading being taken by the Argentine group which showed gains of ¼ to 2⅝. Brazilians rose ½ to 1¼, and one or two Chilians and Uruguay 5 per cent. put on 1. Japanese were all better to the extent of 1 to 1⅝, and amongst Europeans Russians advanced from 1 to 2, Bulgarians 1, and Austrian Rentes, French 3 per cent., and Hungarians ¾. The principal fall was in Columbians, which dropped 4½, while Costa Rica A and B each receded 1.

Little comfort is to be derived from an examination of the making up prices for Home Railway ordinary stocks, as with very few exceptions the movements recorded were adverse, varying only in degree. South-Western ordinary relapsed 3, dragging the preferred and deferred down 1½ and 2 on the new issue to which we referred last week, South-Eastern ordinary fell 3 and the deferred 1½, Midland preferred was also 1½ lower, and Furness 2 down. On the other hand, however, Brighton "A" recovered 2½ of the heavy loss recorded in the previous account, and the ordinary picked up 1, Metropolitan, which has been persistently "tipped" as good to buy in view of the change to electric traction, put on 3¾, and Districts advanced 1. When carrying over charges came to be arranged it was found that there was a decided shortage of stock, and contangos consequently were light, seldom reaching as much as 6 per cent., except on such things as South-Eastern deferred, and generally ruling between 4½ and 5 per cent. Great Eastern was at one time carried over "even," and it seems likely that the small stream of public support has absorbed what available stock there was in the hands of jobbers. A moderately satisfactory traffic return of the Brighton Company, and the Board of Trade figures for the past month seemed to put a little heart into the market, and the old story of investment buying was again put forward as a reason for adding a fraction or two to quotations. Further gains were recorded after the account had been arranged, owing to the lightness of contangos, but the recovery proved very temporary, and the market had become dull and listless by Wednesday evening, partly in sympathy with all other sections, and partly because the majority of the traffic returns, although better than expected, were not altogether reassuring. Fears of an advance in the Bank rate helped to depress quotations, but even after these fears proved groundless the condition of the market remained one of lethargy, and the final values once more show an almost unbroken line of serious losses. Brighton issues fell ½ to 1, South-Western ordinary and deferred declined 4 and 2, and the preferred 1, North-Western dropped 1½, Lancashire and Yorkshire 1, and Midland deferred and Great Northern deferred, Great Western, and South-Eastern deferred were ½ down. Furness was offered freely without finding many buyers and closed 5 lower. Caledonian ordinary receded 1, and the deferred ½, but North British issues were practically unaltered. In Underground stocks Metropolitan, after being higher, finished unchanged, and District was also steady, but Central London ordinary relapsed 2. The only favourable movement in the list was a recovery of ½ in Hull and Barnsley.

The uneasiness which has prevailed so long in the American Railroad share section has recently been largely increased by the depression in Industrial securities, and especially by the heavy selling of United States steel issues, with the result that operators proved unable to maintain quotations at their high levels. Here and there a fractional improvement was marked on the fortnight, and in the case of Baltimore preferred, Reading first preference, and Wabash preferred the gains reached as much as $1, but by far the larger proportion of movements were downwards. Milwaukee and New York Central lost as much as 1½, Erie common stock fell 1¼, and Denver ordinary, Louisville, and Southern Pacific dropped 1 each. Money was, as usual, easy enough, and rarely cost more than 4 per cent., while in some instances lenders had to be content with even a lower rate. The return of the New York Associated Banks proved almost as bad as had been expected, with a reduction of over £1,800,000 in stocks of specie and legal tender, owing to the drain to the West, and a decrease in deposits of £3,500,000, against a reduction of £2,300,000 in loans and discounts, the net result being a decline in general reserves of £2,250,000, and in surplus reserves of £976,000. These figures were said to have been fully discounted, and in proof of the statement quotations were hoisted a little on Wall Street on Saturday, but by Monday the wasting away process began again, under the influence of realisations in United States steel issues. On Tuesday the flatness here was accentuated by heavy sales of Pennsylvania, accompanied by vague talk of labour troubles and new capital requirements, which, however, proved wide of the mark, as the decline was directly due to "bear" sales by the Rockefeller brokers. Reading stocks were also hammered by the Keene interests, who were said to be throwing out an old line, and later in the week Baltimore issues were made the object of an attack. The market was rendered more susceptible to adverse influences of this nature by the steady withdrawals of currency for Western credit dealers, as although these were partly counterbalanced by reports of gold being engaged for shipment from this side of the Atlantic, they caused grave doubts as to whether the financial situation in the interior was yet free from danger. On this side business was further restricted by fears of a change in the Bank of England rate, and Wall Street has shown so little inclination or power to lift prices for any length of time that the recoveries recorded during the afternoon each day have been wiped out in the unofficial street market, and as further losses were invariably cabled from New York our closing quotations gradually slipped down, until the aggregate losses for the week were substantial. Pennsylvania fell 1¾, Reading ordinary 1¾, and Baltimore ordinary 2. Atchison issues dropped 1 each, Illinois Central declined 2½, New York Central, Milwaukee and Southern preference 2 each, and Norfolk preference 2½. Chesapeake were 1 lower, and a few others receded ½.

Contangos on Grand Trunk stocks were at first rather heavier than usual, at from 5 to 6 per cent., but here

also money was rather plentiful, and the rate dropped back to 3 and 4 per cent. Making up prices reflected the encouragement to operators for the rise given by the succession of good traffic returns, and showed advances ranging from ½ to ¾ in the second and third preference to 1 in the first preference and 5 per cent. debenture stocks. The unsatisfactory monthly traffic statement, however, left its

mark on Canadian Pacific shares, and, notwithstanding the moderate recovery during the fortnight, the quotation showed a loss of 1¾. The price of the last named, however, gradually improved during the early part of the week, and although there was a reaction later, on talk of fresh capital issues, it finished only ¼ down. Grand Trunk stocks also advanced at first, but fell back on the traffic return proving less satisfactory than had been anticipated, only to recover again, and finish with advances of ⅝ in the ordinary, ½ in the second preference and 1¼ in the thirds.

Most of the Argentine Railway securities have met with considerable support, not only here but on the Continent, in consequence of the satisfactory reports of the condition of the country, and most of them showed substantial advances on the fortnight. Rosario ordinary and deferred stocks have been most in favour, and the latter put on 6½ while the former rose 4. The 7 per cent. preference stock of the same company gained 3 and that figure was also added to the prices of Buenos Ayres and Pacific first preference and Bahia Blanca and North-Western preference. Buenos Ayres and Pacific second debenture stock and Buenos Ayres Western debenture stock improved 2½, Cordoba and Rosario second debenture 5, and Entre Rios preference and Cordoba issues were from 2 to 3 higher, but Argentine Great Western ordinary and preferred fell 3½ each, Buenos Ayres Great Southern ordinary and Buenos Ayres Western ordinary lost 2½, and Pacific ordinary dropped 1½. Of other South American lines Antofagasta stock advanced 4, and Midland Uruguay debentures receded 3. Mexican Railway securities, which had fallen away in the early part of the account recovered on "bear" closing, and showed only fractional changes. Notwithstanding the improvements in Argentine Rails there were few indications of anything like a "bull" account being open, and continuation charges were seldom more than 6 per cent., although the range was given as 5½ to 6½. per cent., also without much inquiry for accommodation. On Mexican railways money cost from 5½ to 7 Dealings in Rosario ordinary stock have continued brisk all week, and the price gained 2, taking the deferred up with it. Cordoba and Rosario 6 per cent. debenture stock also advanced 2, and Argentine Great Western preferred and Entre Rios preference both improved 1. Other Argentine issues, however, suffered from profit taking, Buenos Ayres Western ordinary falling 1 and the two preferences 2. Bahia Blanca and North-Western debenture stock also receded 2. Antofagasta ordinary, Midland Uruguay debenture stock and Brazil Great Western permanent debenture stock declined 1, Guayaquil and Quito bonds 2, and Aranco gen. mortgage bonds 3½. Great Western of Brazil permanent debenture stock gained 1 and Southern Brazilian Rio Grande do Sul 2½. Mexican railway stocks rallied a little before contango day, but fell back on the sharp relapse in the price of silver. They pulled up again and closed steady.

Nothing very exhilarating happened in the Miscellaneous section during the week, and beyond a little dealing in a few favourite gambling counters business was virtually at a standstill. Sweetmeat Automatics were very severely handled, and at one time touched 1 1-16, but support was forthcoming at this low level, and the price rallied to 1¼ or a decline of ⅛. The report is expected at any moment, being already overdue, and should prove an interesting production. We shall examine the share list again presently in order to find out the source of all the selling. Aerated Breads kept up fairly well, and "Breadcrumbs," being the fractions of the new shares allotted as bonus were dealt in at 2s. 9d. to 3s. apiece. Of other Catering companies' shares Lyons and Slaters were steady, but Spiers and Pond and Gordon Hotels were weak, the latter attributed to the closing of a deceased account. Eastmans were firm amongst Meat shares, and it is stated that probably the current year's profits will enable all preference arrears to be cleared off. Nelsons were dull, and Coats were offered on the statement at the meeting that there was a possibility of a decline in trade in some of the large markets, and dipped ⅛ to 4 15-16. Iron and Steel things were inclined to fall away with particular flatness in Pease and Partners which dropped ¾. Dorman Longs eased on the reduction in the dividend. Oil shares rallied. Wels-

bach preferred rose 1, and Gas Lights and South Metropolitans kept firm. The evidence given before the Water Arbitrators continues to drive down Waterworks stocks, New River new falling 5, Lambeth (7½ per cent. maximum) 5, East London 5, and Southwark and Vauxhall 3. Grand Junction "D" stock exceptionally improved 3. Breweries continue depressed, and City of London ordinary and Watney Combe preferred each dropped 2. Rates were rather lighter at the carry over on Tuesday and everything was easily arranged.

As supplement to the information in another column, it may be mentioned that the amount of Great Northern (U. S.) Railway two-year bonds offered, and we believe placed, on our market is £1,500,000. The bonds run for two years, bear 5 per cent. interest, and have been sold at 99½, so that they pay the holder 5¼ per cent. Our own North-Western preference stock can be picked up in the market to pay £3 6s., or something like 1 per cent. more than before the war. There was a faintly better tendency in markets to-day, with some little buying in Kaffir shares on the Lord Harris tip to average, and a small rally at one time in Consols, the price for which, however, closed at yesterday's point. Home Railway stocks were also steadier but with no vitality or strength in the market, and, in fact, everywhere stagnation ruled.

MINING NOTES AND NEWS.

On Monday last, whilst the Lord Mayor's circus procession was perambulating through the rain-sodden streets, the unhappy members of the Stock Exchange were engaged in the dreary task of arranging another poor account. No great amount of exertion was needed to cope with the task, for it was a light one, laying no member prostrate. There has been no expansion in the open position, consequently rates were about the same as ruled at the end-October settlement. As regards the South African mining-up list very few movements were shown and there was not one change of any importance. Declines, of course, predominated, but these were all fractional, rarely greater than ⅛, the exceptions being falls of ⅜ in Treasury, and ¼ each in Crown Reef, Ferreira, Jumpers Deep, Knight Central, South African Gold Trust, and Worcester. In the Rhodesian list Ayrshire fell 7-16, and Northern Coppers and Rice Hamilton ¼ each. Practically the solitary gain was ⅛ in De Beers deferred. In contrast with this lamentable exhibition West Australian shares generally took a big step upwards, Ivanhoe to the extent of ½, despite the 5s. dividend deducted, Associated and Oroya Brownhill, ⅜ each, Lake View Consols 3-16, whilst Golden Horseshoes appreciated as much as 1½. Amongst West African the chief movements were rises of a point in Ashanti Goldfields, and 3-16 in United Gold Coast. Egyptians generally receded, but in the miscellaneous list Linares made themselves conspicuous with a gain of ⅞, Etruscans put on 15-32, Le Roi ¼, and Champion Reef 5-16. Tintos fell two points.

As regards rates, East Rand, Rand Mines, Gold Fields, Randfontein and Modderfontein were contangoed on the basis of 4½ to 5½ per cent., the De Beers rate was slightly harder at 4 to 5 per cent., whilst the general charge was 6 to 7 per cent., with Rhodesians a trifle higher. In the Jungle section the figure was 6 to 8 per cent., and on Egyptians 7 to 9 per cent. Westralian rates were again irregular, Golden Horseshoes being continued at a charge of 6 to 8 per cent., Perseverance at 7 to 9 per cent., Great Fingalls at 8 to 10 per cent., the general rate being 7 to 9 per cent.

Tuesday saw the publication of the figures of the Rand output for October, and as these exhibited a substantial improvement on those of the preceding month, the market expressed its satisfaction with them, the only regret being they did not bring in the public nor send prices up with a rush. The output of those mines which have restarted working on the Rand amounted to 275 664 oz., whilst the outside districts produced 8,880 oz., making a total of 284,544 oz., an increase of 8,347 oz. on the September return. The value of the gold is given at £1,208,669, which compares with £1,173,211 in the preceding month, so there was an improvement of £35,458, a nice little sum to go in someone's pockets. With respect to the labour supply, the net gain of "boys" was only 492, the number employed at the end of October being 68 958, or some 28,000 short of the blacks at work in the corresponding month four years ago. But we shall, by and bye, have the yellow men, and then we shall see what we shall see.

Nor has that easy-going Labour Commission issued its report yet and ended our suspense. We are now told it will be some days before the world is informed of its contents. Several press cables assure us that the draft report has actually been approved of, and that the Commissioners are practically unanimous in expressing the opinion that South Africa alone cannot supply the needs of the industry. This, of course, we have heard before; it is not startlingly new. What is new is the statement of the Johannesburg correspondent of the *Standard* that the debate on Chinese legislation will not take place until the middle of January, a piece of news that brought down quotations as though it had been a bombshell explosion.

Roodepoort Central Deep shares have enjoyed a solitary boomlet on the cable announcing the striking of the South Reef at a depth of 1,270 ft., assaying as high as 4 oz. 15 dwts. per ton, over a width of 37 in. This is remarkable richness even for the South Reef, and is too phenomenal, surely, to last.

The Westralian section has again been the liveliest in the mining market, and prices have once more tended upwards. Obviously, however, this is still the result of manipulation, of professional, and "shop" tactics, with the object of attracting the public, and they may, of course, succeed, if the game can be kept up long enough. A goodly measure of colonial support is reported, together with some buying from the Continent, the public in England as yet giving little or no help to this market. Dealers have been attracted from the Kaffir market to the Westralian in the hopes of picking up business, for they are decidedly hard up, these men. Each evening in the Street there has also been a fair assemblage of operators, the animation displayed by these gentlemen being regarded with feelings of envy by their brethren in the neighbouring emporiums. Golden Horseshoes have been the most conspicuous share, though early in the week they were depressed by the death of Mr. H. C. Bucknall, one of the directors of the company, which gave rise to fears that his holding would be thrown on the market. When it was known there was no probability of this, the shares at once recovered, and they have steadily advanced each day. Associated shares have likewise been buoyant, the October return from the mine showing an increase of nearly 800 oz., it being estimated the profit will be about £14,000. Reports speak of promising developments, the belief being strengthened that the Northern-Blocks-Oroya chute of ore will be found to continue in the Associated property. On the other hand, there is a big fall in the Lake View profit for October, but the shares have not been allowed to weaken, support coming from some quarter just when the price looked like falling heavily. Even the erstwhile unfortunate South Kalgurlis have strengthened, a cable from the mine announcing the intersection of a lode 5 ft. wide, assaying 1 oz. The proposal of the directors of the Ivanhoe South Extended to issue 50,000 additional shares has not been liked—we deal with the report in a separate note—and these shares have been dull.

Punters have lately been hoping that the publication of the report of the New Gold Coast Agency would help to stimulate the Jungle section, but instead of these hopes being realised they have been ruthlessly disappointed. We deal with the report at considerable length, likewise with the company's subsidiaries, and readers will understand why the market has been thoroughly dissatisfied with these documents. As the agency is the principal company operating in West Africa, and is closely allied to the Consolidated Gold Fields and the Wassau Company, the disappointing character of the report, cannot be exaggerated. So this section has been dull throughout the week, prices scarcely moving.

In the miscellaneous department Etruscans have been conspicuously weak, whilst among Indian shares Nundydroogs have been somewhat freely offered. Other Indians remain steady. Le Rois have fallen on the announcement that last month's shipment of ore resulted in a loss of $20,500. Several thousand miners have struck work at the Rio Tinto mine, demanding an increase of wages. Simultaneously comes the news that all the Amalgamated Copper companies have resumed work, and there seems to be a connection between this and the fall in copper. The result of these events and developments is a heavy fall in Rio Tintos.

Glynn's Lydenburg.—The report issued this week covers the year to the end of July. Crushing operations were restarted on the first day of the present year, with ten stamps, increased later to twenty stamps. The mill crushed 13,167 tons, for a recovery of 4,397 oz. of fine gold, valued at £18,301. By the cyanide plant 12,832 tons were treated for a yield of 5,427 oz., of a value of £22,503, making a total of £40,804, or £3 2s. per ton. Costs worked out at 19s. 4d. per ton, aggregating £12,756, leaving a profit of £28,048. In addition general revenue brought in £1,904. After deducting head office expenses, the net profit is returned at £25,788, carried to the appropriation account. The latter is also credited with an unappropriated balance of £2,346, and debited with £2,757, representing the balance of expenditure from August 1, 1902, to December 31, 1902, likewise with the ten per cent. tax on profits, which leaves a credit of £24,270 to be carried forward. Financially, the company's position is a fairly sound one, as it possesses £11,262 in cash, and owes £5,216. A further asset is bullion in transit, valued at £7,190.

New Gold Coast Agency.—Readers will recognise this Jungle company as the medium through which the Consolidated Gold Fields of South Africa takes an interest in the so-called gold mining industry of West Africa. The report for the year to June 30 has been issued, a document over which the shareholders are not likely to get excited. From it we learn the supremely important fact—though we were not without our suspicions—that no subsidiary companies have been floated during the twelve months. Why it is the directors have exercised such restraint they do not disclose, probably it was because they had a shrewd notion the public have been in no mood to part. However, something has been done, arms have not been folded idly all the year, for "agreements have been entered into for the sale of the company's interests in certain portions of the concessions under options, viz.:—Between the company, the Gold Coast Pioneer Syndicate, Limited, and the Abosso Deep, Limited, by which the company parts with its option, so far as it relates to 200 claims on the Horton's Abosso Concession, for 30,000 shares in the Fanti Mines, Limited, with a call for two years on a further number of the same shares. An agreement has also been concluded between the company, the Wassau (Gold Coast) Mining Co., Limited, and the Abosso Deep, Limited, by which the company sells its option on 200 claims on the south-western corner of the Huni River Concession for 10,000 shares in the Fanti Mines, Limited, and a call for two years on a further number of like shares. Work during the year appears to have been mainly concentrated on the property of the Cinnamon Bippo Company, on which a considerable amount of driving and sinking has been carried out, but, of course, no gold winning. Some prospecting work has been done elsewhere, and it is reported that "encouraging results have been obtained on portions of the reef, but the knowledge so far available is not sufficient to enable the directors to form a definite opinion as to value." The opinion is expressed by the sage directors that the district of Tarkwa is favourably situated for mining operations, as the port of Sekondi is reached by steamer from England in a fortnight, and the Kumasi railway runs through the goldfields via Tarkwa. "These facilities are, however, largely neutralised at present by the unsatisfactory management of the railway, which leaves much to be desired in the matter of regularity and despatch, and more particularly by the excessive high rates charged by the railway authorities for the transport of mining necessaries." It is feared that the charge on coal is likely to prove a most serious burden in the near future, as the supply of native timber, upon which the mines depend at present for fuel, must soon become exhausted. This subject of railway rates has been seriously discussed by the board, who have forwarded strong protests to the authorities, which they hope will be successful in bringing about a substantial reduction. But this will not of itself pay dividends without a goodly quantity of gold, and the latter will not be possible for many a long day, let circumstances be as favourable as they might. The company is not yet in a position to publish a profit and loss account. According to the balance-sheet interest on loans—the latter amount to £83,000, lent to the market—and transfer fees brought in a revenue of £4,640. Outgoings in West Africa took £5,014, and in London, £3,318, thus showing an excess expenditure of £3,691. The company still has plenty of cash resources. Floating liabilities are only £2,788, but, then, there are contingent liabilities, representing uncalled capital, amounting to £32,210.

Adjah Bippo Deep.—This is a subsidiary of the New Gold Coast Agency and the deputy managers—who are identical with the board of the parent company, Lord Harris being chairman—issue their report for the twelve months to the end of June. The offspring was floated in February, 1902, and before its formation some exploratory work was carried out by means of sinking boreholes on the claims it subsequently acquired, with a view of testing the value and continuity of the Wassau reef in depth. Borehole "Q" was completed in December of last year, and it was then deemed advisable to suspend operations for the time being, as the continuity of the reef at depth had been proved. Values, however, were unsatisfactory, nevertheless it is intended to ascertain the value of the reef by the sinking of deep level shafts, which will be very costly. For some months the deputy managers have been in negotiation with the directors of the Wassau Gold Coast Mining Company in order to devise a joint scheme of working the company's claims, or a portion of them, in connection with the Wassau company's property. The policy of sinking a deep level shaft on joint account, or of re-adjusting the boundaries of the respective companies has likewise been discussed. As regards the former proposal, an understanding has been arrived at, but up to the present no definite scheme of action has been decided upon. "Negotiations, however," shareholders are informed, "will be probably renewed at a later date, and will largely depend upon the results obtained by the Wassau company at greater depth." Out of an authorised capital of £100,000, £32,000 has been issued, and all this and much more will be wanted before these shafts can be sunk. That is the alluring prospect before the shareholders. At the end of June the company had £4,118 in cash, with sundry creditors down for £2,620.

Cinnamon Bippo Company.—This is the other subsidiary of the New Gold Coast Agency, whose fortunes are watched over by the same deputy managers. The latter issue their report and accounts to the end of June, the company having been formed on the same date as the Adjah Bippo. On its concessions likewise boreholes have been sunk, the reef over a distance of 2,766 ft. assaying only 9.13 dwts. for a thickness of 27.15 in. To quote from the report, it is said:—"A reef which is undoubtedly payable under reasonably favourable conditions has been exposed at the adit level over a distance of 1,543 ft., and it has, therefore, been decided to continue development, and to open up the first level at a depth of 150 ft. below the adit level. With this view further sinking is in progress, and from the indications to hand it would appear that the reef is improving in width and value as greater depth is attained." In order, however, to develop the first level, and to thoroughly prove the value of the mine, it will be necessary to incur considerable expenditure, and further funds will be required in excess of the company's original working capital. "Arrangements are, therefore, being made," it is cheering to learn, "whereby the necessary funds will be provided." Perhaps they are coming out of Lord Harris's own pockets—and perhaps they are not. The latter is the more likely, inasmuch as the managers have their doubts of the value of the property. "Owing," say they, "to the difficulty of estimating exact working costs under present conditions, the deputy managers are not prepared to express a definite opinion as to the ultimate value of the property until the first level has been properly opened up, and the shafts connected at a depth of 150 ft. below the adit level. When this work has been accomplished a very considerable tonnage of ore will be available for stoping. Present indications are, therefore, distinctly favourable, and should values be maintained at a greater depth, there is little doubt that the mine will turn out to be a payable venture." Credit is certainly due to the deputy managers for inserting that word "should." Against sundry creditors for £10,040, the company

has only £5,731 in cash, but, then, there is plenty of money in the world, and thousands of people anxious to part with it.

Axim Mines—Doubtless the shareholders in this Jungle company will be deeply grateful to receive the report and accounts, such as they are, for the two years to the end of June last. It is a biggish looking document, consisting of several reports upon the property, but it is questionable whether the information contained in the latter will be very satisfactory. It appears that a reef, called the No. 4 reef, has been proved at places for a distance of over 870 ft., whilst samples have assayed as high as 2 oz. 14 dwts. 21 grs. But samples are not profits, and we would not care to make a forecast of the time when the latter are probable, assuming, of course, that profits will be ultimately earned. On the Appankran property, at 241 ft., the manager estimated the value of the reef at 4 oz. per ton, 6 ft. lower it decreased to 2 oz., and 9 ft. further it fell oway to 6 dwts. An amalgamation has been effected between this and a company called the Liverpool-Ashanti Gold Concessions, Limited, which, of course, is to confer mutual benefits upon each, although for 25,200 fully-paid shares of the Liverpool Company, the Axim is giving only 5,040 shares, which speaks for itself. The company has only £598 cash in hand, with debtors owing £1,655, against liabilities for £1,000, but a large portion of the capital is unissued.

Gibraltar Consolidated Gold Mines.—This company's mines during the past year were worked under the "tribute" system, 3,308 tons of ore being extracted by the tributers for a yield of 5,200 oz., with 1,570 oz. from the concentrates, and 374 oz. from the tailings. From the group of mines called the Caledonian the tributers raised 864½ tons, producing 988 oz. of free gold, and 149 oz. from the concentrates. In addition the company obtained in the course of exploratory work conducted on the wide formation, at the Challenger mine, 1,342½ tons of ore, giving:—Free gold, 449 oz.; concentrates, 109 oz.; making a total output of 8,843 oz. The gold other than that claimed by the tributers, realised £10,668, the royalty accruing to the company on the tributers' portion being £5,132. Adding these amounts to the small income from other sources, the total revenue for the year was £16,262. After deducting the outgo in New South Wales and London, there is left a profit of £5,488. This wipes out the old debit balance and leaves a credit of £1,288 to be carried forward. The report says that no discoveries of important ore bodies have come to light, and, as a consequence, the reserves of ore have diminished. O'Brien's and Perkin's sections are, however, still promising, and it is quite possible that during the current year "they may show considerable improvement." There is little or no fault to find with the balance-sheet.

East Rand Gold, Coal, and Estate Company.—It is difficult to read the report of this company for the year to the end of June without feeling sad, for it records the tragic fact that the surface equipment of the coal mine was totally destroyed during the war, and the directors were faced with the necessity of constructing these works anew. However, it is comforting to learn that the capital of the company has been increased from £160,000 to £200,000. Revenue totalled £1,216, all of which, with the exception of a few shillings from transfer fees, came from interest on deposits, accordingly, after allowing for a debit of £14,542 brought in, a loss of £25,263 is carried to the balance-sheet. Still the company is well off for cash, seeing it possesses £41,766, and it owes nothing to speak of. It looks, however, as if loss will be piled on loss for a long time to come.

Koffyfontein Mines.—During the twelve months to the end of June this small company washed 312,641 loads, the yield of diamonds being 16,738. The revenue from the previous stones is put down at £49,813, interest brought in £1,543, with a few pounds from transfer fees and sundry receipts. After deducting expenditure and depreciation at the rate of 5 per cent., the loss on the year is £10,137. Adding this to the debit of £27,808 brought forward, the aggregate is £37,945. Liabilities are not formidable and are exceeded several times over by liquid resources. As for prospects, the directors hold out the hope that, judging from the returns received since the end of the financial year, the yield will show an improvement when the blue ground now being floored is thoroughly pulverised.

British Broken Hill Proprietary.—According to the working account of this company for the half-year ending June 30 a gross profit of £6,032 was made, after payment of exploratory expenses, and costs incidental to the re-starting of operations. After deducting administration expenses and charging £1,748 for depreciation on plant, machinery and buildings, the net profit is returned at £3,056. This is added to the credit of £2,026, and the whole carried forward. Though the results are good, compared with previous periods, they are not so satisfactory as the directors anticipated, owing to the decline in lead values, the effect of which was only partially counterbalanced by the rise in silver. Altogether 34,072 tons of crude ore were raised, and 34,568 tons concentrated, the cost of stoping being 9s. 10d. per ton, and concentrating 5s. 4d. per ton. The directors have engaged the services of an American engineer, "of great experience in mining and concentration," to make a thorough examination of the mine, and report upon the present method of ore treatment, and the possibility of improving it. Owing to the continued drought at Broken Hill, and the necessity of reserving for the use of the townspeople the depleted supplies of the Broken Hill Water Supply Company, all the Barrier mines had to be closed on June 23, the Water Company having cut off their supplies. By using water obtained from the Acacia Trust and from the mine, augmented by purchases from neighbouring mines not being worked, it was found possible to resume operations on June 30. In September the drought broke up, and heavy rains have since fallen. According to the mine report, satisfactory developments have continued in the lower levels, and the directors state that the latest advices are even more gratifying. As usual, a strong balance-sheet is issued.

Menzies Consolidated Gold Mines.—This Westralian company in the twelve months ending July 31 last crushed 15,613 tons of ore, yielding 5,687 oz. of gold. In the cyanide plant 13,935 tons of tailings and slimes were treated, giving 2,640 oz., in addition to which 1,887 oz. of gold were obtained from concentrates. The proceeds of this totalled £35,563, transfer fees, and sundry receipts giving £19. After deducting expenditure, in which no allowance is made for depreciation, a profit of £1,633 is shown. This is deducted from the debit of £4,282, leaving a balance on the wrong side of £2,649. Liabilities to sundry creditors total £1,618, consisting of £833 undrawn directors' fees for two years, and £752 office rent and fees for a similar period, with a few pounds owing to the auditors, etc. Cash at the end of the financial year amounted to £415, being the solitary available asset the company possessed. Reconstruction is not proposed. On the contrary, the directors appear to be hopeful, for they are "glad," they say, "to direct the attention of the shareholders to what they consider is the improved underground position at the mines, as shown by the increase in the ore reserves," returned at 22,000 tons. The company may be able to make ends meet, but even that is not assured.

Montana Mining Co., Limited.—The shareholders in this company will doubtless read with amazement the proposal of the directors to reduce the capital of the company from £660,000 to £99,000, by dividing the 660,000 £1 shares into 3s. shares, with 2s. paid up in respect of the 657,121 shares on which 19s. have been paid. Very little explanation is given in the half-yearly report to the end of June, the directors briefly remarking that they consider the present a favourable opportunity for effecting this alteration, and for aproximating the issued capital to the actual value of the assets. It is not contemplated to call up the remaining 1s. per share, a liability which will be transferred from the old shares to the new. "Whilst considering," it is added, that this scheme, "is in the best interests of the company, the board have no desire to press the policy upon the shareholders unduly, though they recommend it as the wisest course, and one on which they feel it their duty to take the views of the shareholders." It is true that for some half years now the company has been showing profits, accumulating to £53,438, in the balance-sheet. No provision, however, has been made for depreciation on mine redemption, and now the penalty is to be paid. No dividends have been possible, and none seemed to be in prospect. Moreover, the directors have for a long time past been on the search for another property, but have not yet succeeded in finding one. This past half-year the working resulted in a loss of £9,406, and again no money has been appropriated to writing off. By this means the directors reduced the balance-sheet credit to £44,032, and herein may be seen the excuse for writing down the capital, and assets. Mines, buildings, plant, and machinery are lumped together at the prodigious sum of £581,880; expenditure on the Lucky Girl Group of Mines, is another valuable asset, down at £40,833; there is a suspense account, representing outlay on other properties, of £1,124. Liquid assets consist of bullion bars, £7,014; National War Loan, £21,587; United States 3 per cent. bonds and British Government Exchequer bonds, £5,110; Bank of New Zealand 4 per cent. Guaranteed Stock, £1,010; loans on security, £6,000, and cash, £3,895; against floating liabilities of £8,456. It will thus be seen that an overhauling of the balance-sheet is urgently needed, and that the directors' scheme has not been formulated too early, if the company is not to be crushed by its growing burdens.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Erie Railroad Company.

During the year ended June 30 this road earned a gross revenue of $43,509,139, or $5,099,913 more than in the preceding twelve months, the greater part of the increase coming from freight and coal, which improved $2,431,273, and $2,318,362 respectively. Passengers gave only $382,390 more, and rents and miscellaneous showed decreases. A decline was also shown in the earnings from "other operations," their total being $2,321,274, and with these added, the income from all sources was $45,830,413, or an advance of $4,935,979. The additional traffic was handled at an increased cost of $1,955,816, of which no less than $1,723,184 was under the head of conducting transportation, or traffic expenses, as the item is known here. Maintenance of equipment advanced $347,481, but maintenance of way and structures actually declined, so clearly most of the rise in expenses can be traced to wages. That, however, is inevitable in protectionist countries, where living is so ruinously dear, and railway stockholders in this country would do well to take careful note of this matter. Protection here might mean the disappearance of ordinary dividends for good. Total outlay on the railroad was $27,597,508, and expenses of other operations rose $42,843 to $2,328,250, so the actual net balance is $2,937,319 larger at $15,904,655, and we are glad to observe a fall of 2.99 per cent. to 65.30 per cent. in the ratio of expenses to total earnings. Freight hauled advanced 2,078,223 tons, and 1,870,344 additional tons of coal were carried. The latter was due to a gain of 1,520,144 tons in bituminous coal, because the

mines in the anthracite region remained closed during the months of July, August, September, and until October 23, due to the miners' strike, and 95,427 tons less of anthracite coal were carried. It may be remarked that the tonnage of the company was 45.13 per cent. of the total transportation, which seems a large percentage. Coke improved 445,357 tons, or 31.62 per cent. Number of passengers carried was 19,976,353, an increase of 1,378,803, and most of them apparently used the Pavonia ferry over the Hudson river, for it carried 16,392,082 persons, or 938,120 more than in the previous year. Although the cost of maintenance of way and structures declined $41,302, the property is said to have been fully maintained, and certainly a lot of work was done, a large part of which would almost certainly have gone into capital in this country, and may by and by go for the Erie. Maintenance of equipment showed a fair increase, and we should judge the company to have obtained good value for its money. In addition to the charges against revenue, capital outlay for new equipment was $1,085,326, and $868,949 was disposed of in other directions, making totals of $6,680,828 and $15,183,878 since the date of the last reorganisation in 1895, but of the former amount $2,328,482 was taken from current funds and debited to profit and loss. Income account, moreover, was charged with $808,452 during the past year for improvements, over and above the amounts debited to working expenses. To the net revenue of $15,904,655 must be added $1,430,230, being income from securities owned, making $17,334,885, from which interest and rentals absorb $8,901,618. Dividends on first preferred stock take a further sum of $1,676,234, and after deducting the mentioned expenditure for additions and improvements, a sum of $5,948,581 remains. Out of this there has been transferred to a fund for additions and improvements authorised and unexpended at the close of the year, an amount of $1,569,404, leaving $4,379,176 to be transferred to profit and loss. Outstanding capital stock remains unaltered, but an additional $1,799,000 of general lien bonds were issued during the year, and of the $50,000,000 4 per cent. convertible fifty-year gold bonds lately authorised for general purposes, $1,000,000 has been delivered and paid for, being the first instalment of the $10,000,000 already sold. Indebtedness on equipment trusts has been reduced $1,398,647 to $5,959,224 within the period under review, which is good, but evidently very heavy capital outlay is anticipated and "Little Eries" are not tempting just yet.

Southern Mahratta Railway.

This undertaking further improved its position during the six months ended June 30, and reports a gross revenue of Rs.51,11,142, or Rs.1,13,994 more than in the first half of 1902. At the same time the expenses were reduced Rs.97,829, to Rs.29,52,121, so that the net earnings were more than two lakhs better, at Rs.21,59,021. Passengers showed an all-round improvement, both in numbers and revenue, and there was an advance of 4.92 per cent. in the tonnage of public merchandise. Chief gains occurred in cotton, oils, oil seeds, provisions, spices, sugar, and miscellaneous traffic, while important declines took place in dyes and tans, and grains other than wheat. On the expenditure side the principal saving was in maintenance, but traffic and general and special expenses show a fair reduction, against a modest rise in locomotive and carriage and wagon charges. Ratio of expenditure to gross income was pulled down from 61.03 per cent. to 57.76 per cent. After deducting Rs.2,99,095, payable to owners of the railways not included in the contracts, the balance of net revenue is Rs.18,59,925, which is reduced to Rs.18,55,716 by adjustment of outstandings. One-fourth of this, or Rs.4,63,929, belongs to the company, and Indian income-tax having been met, the sum left realised £30,478. It enables the directors to again declare an additional dividend of 15s. per cent., making, with guaranteed interest, £2 10s. per cent. for the half-year.

Rohilkund and Kumaon Railway.

This company's gross receipts advanced Rs.1,904 to Rs.2,16,415 during the six months ended June 30, compared with the opening half of 1902, but expenses, including a rather larger sum of Rs.977 set aside for provident fund bonus, were greater by Rs.5,888, at Rs.92,142, so that the net balance is down from Rs.1,28,256 to Rs.1,24,273. Ratio of working expenses rose 1.57 per cent. to 42.15 per cent., but no item of outlay calls for special remark. Coaching traffic fell away a little, third-class being down 3,681 in numbers, and Rs.1,712 in receipts, attributable to a falling off in pilgrim traffic, owing to cholera in Kumaon, while "troops and police" were reduced by the absence of Boer prisoners, who swelled the income last year. Altogether coaching revenue fell off Rs.11,559, but goods traffic gave Rs.12,584 more, as a result of lifting 12,000 additional tons. On the Lucknow Bareilly State Railway passengers declined severely, also owing to the prevalence of plague, and so did food grains, rice, sugar, and seeds. On the other hand, wheat, stone, sleepers, and firewood improved, the result being a drop in revenue from goods of Rs.14,819, and from coaching of Rs.23,003. Converted into sterling, the net revenue of the Rohilkund comes to £8,285, to which is added share of surplus profits of the Lucknow Bareilly £2,890, together with balance brought forward, £887, and other smaller sums, making a total of £12,665. From this, income-tax takes £1,052, the Secretary of State is entitled to £1,200, and sundry charges come to £352, leaving £10,060, compared with £10,912, for the corresponding period. The directors again propose to pay a dividend of 3 per cent. and a bonus of 1 per cent., or 4 per cent. in all for the six months, which means no addition to reserve, and a decline in the balance forward to £2,060. One proprietor, however, far from being disturbed because no contribution is made to reserve, wants the directors to distribute a special bonus of 5 per cent. out of the existing fund of £34,928; but these gentlemen are wisely opposed to any such action, and, as, under the articles it is not competent to a general meeting to pass a resolution dividing the reserve, the chairman will decline to submit the one to be brought forward on the ground that it is irregular, and would be null and void even if passed.

Lambeth Waterworks.

It is to be assumed that the Government desires to pay as little as possible for the various Metropolitan water undertakings included in its purchase scheme, while naturally the companies will endeavour to extract as much as they can from an impoverished British public. This necessarily brings the authorities and the representatives of the companies in direct opposition, and we have only to ask under what possible sense of right and justice does the new Colonial Secretary, the Right. Hon. Alfred Lyttelton, K.C., M.P., retain his seat on the board of the Lambeth Waterworks? The directors tell us that they attempted to open up negotiations with the Metropolitan Water Board for the transfer of the company's undertaking by agreement, but without success. They are, therefore, taking steps to substantiate the company's claim before the Court of Arbitration. The passing of the Metropolis Water Act of last year, the preparation of the company's claim, and the arbitration proceedings have entailed and will entail upon the executive of the concern a large amount of responsibility and labour which the board says the proprietors would doubtless like to recognise. It is therefore suggested that a sum not exceeding seven thousand guineas be placed at the directors' disposal for the purpose of suitably acknowledging services outside the scope of ordinary duty. Does the board participate? Including £1,553 brought from former revenue account, the total income for the six months ended September 30 was £174,286, from which maintenance drew away £61,143, and management £9,489, while £6,160 was payable to the Chamberlain of the City of London. Proportion of expenses of intercommunication works took £1,210, and £10,500 is carried to next account to provide for losses. Balance of net revenue, therefore, is £85,784, and after adding £6,760 brought from previous dividend and interest account, £3,055 transferred from contingency fund, and £854 for interest, the available sum is £96,453. Debenture and other interest having been provided, £80,942 is left, and the directors propose the regular dividends of 10 and 7½ per cent., on the stocks of the company, together with ½ per cent. on account of previous deficiencies. During the half-year 2,479 houses and other supplies estimated to yield an annual rental of £5,479 have been connected with the company's works as against 2,277 houses, etc., producing £5,138 in the corresponding half of 1902.

Fraser and Chalmers.

The slow resumption of operations on the Rand restricted the demand for this company's heavy mining machinery, but a very fair business has been done in smaller machinery and supplies and profits for the year to June 30 were again satisfactory. Including £21,649 received as dividends from the Allis Chalmers Company, the revenue from all sources was £70,886 against £68,260 in the preceding twelve months. London management expenses absorbed £14,869, debenture interest £1,939, and law charges £268 while £5,479 was allowed for depreciation. Balance, being net profit, was £48,303, or about £1,000 more, and both ordinary and preference shares again receive dividends of 10 per cent., leaving £4,203 to be added to the undivided balance brought forward, increasing it to £88,191. This sum is practically all invested in the business, and we should like to see part of it put to reserve, and kept in separate securities. Stocks, although reduced, still stand at the large sum of £295,033, but the directors tell us that a very large proportion is constantly being turned over in the ordinary course of trade. During the year it has been necessary to write off the balance of £2,000 for losses incurred during the war, so that altogether the company has lost £5,170 by loyally following the Royal proclamation and refusing to sell supplies to the Boers for cash, the home Government as usual declining to recognise its obligations to reimburse. The directors ask shareholders to raise their fees from £200 to £300 apiece, and the request seems reasonable.

Henry Bull and Co., Limited.

The extreme depression in trade throughout New South Wales and the exceptional and difficult circumstances under which business has been conducted are blamed by the directors for a further serious shrinkage in the profits for the year ended July 31, to £13,122, compared with £20,038 a year ago and £25,844 in 1900-1. With £10,274, or £2,488 more, brought in, the balance available was £4,427 smaller at £23,397, and by the simple expedient of ignoring the reserve fund altogether, the preference dividend is met and the ordinary shares again receive 7 per cent., leaving £10,847 to be carried forward. These results therefore cannot be described as satisfactory, nor is there much comfort to be extracted from the figures of the balance-sheet. The amounts due to bankers and sundry creditors, it is true, have been reduced by £19,257 to £51,019, but against these stocks in hand and in transit are down by £48,170 to £168,849, while sundry debtors owe £22,592 more at £76,582, and cash only amounts to £1,404.

Langdale's Chemical Manure Company.

The directors of this undertaking present their shareholders with the thirty-second annual report, and tell them that it marks a great change in the history of the company. The alteration is of the kind to which we are unfortunately much accustomed, and consisted in this case of a reduction of the capital by £2 per share, leaving it at £109,000 in fully paid £5 shares. Including £1,607 spent during the year to September 30, the works are now valued at £63,541, other principal assets consisting of stocks, £17,042, debtors £22,892, and cash and bills £13,633. Creditors and bills

payable are only £7,403, so that the concern has a good quantity of liquid resources, and the position generally seems much improved. Competition and consequent low prices affected sales, but they were 3,365 tons better than in the previous twelve months, and the profits, after allowing £3,821 for maintenance, interest, directors' fees, etc., came to £4,058. From this a dividend is proposed of 2½ per cent., with £1,000 to reserve, and £333 carried forward.

Western Union Telegraph Company.

During the twelve months ended June 30 this big American company increased its gross revenue by $1,094,591 compared with the preceding year, the total being $29,167,687, against which the expenses were up only $172,449 to $20,953,215, so that the net balance shows an improvement of $922,143 at $8,214,472. Interest on bonds drew away $1,077,700, or $85,119 more, so that after paying the usual dividend of 5 per cent., the surplus is $837,004 larger at $2,268,722, and increases the total to $13,019,725. This, of course, is not an absolutely free balance, it having been used in acquiring stocks and bonds of kindred companies. The business transacted by the undertaking is enormous, the number of messages transmitted being 69,790,866, apart from, say, 10,000,000 sent by lessees of wire, and by various railroad companies. Average receipts per message were 31.4 cents, against an average cost of 25.6 cents. Funding and real estate mortgage bonds to the amount of $3,000,000, were issued during the year, and $3,351,645 was spent on construction, 402 miles of poles and 59,228 miles of wires being added to the system. Contracts covering 3,840 miles of railroad have been closed with various railroad companies.

Colorado Nitrate Company.

The profits of this company slumped in an alarming manner during the twelve months ended June 30, the total being only £8,810, against £23,722 in the preceding year. Balance brought forward, however, was £11,700 more, at £25,709, so that the total available, including £393 for interest and transfer fees, came to £34,912. Under the circumstances the directors maintain the dividend at 7½ per cent., requiring £12,000, and carry forward £22,912. The financial position is good enough, floating debts being only £4,007, against stocks £8,745, bills receivable £4,273, and cash £24,887. Up to date £52,714 has been written off properties valued at £194,053, leaving them at £141,338.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Southern Mahratta.—Dividend of 15s. per cent., in addition to the £1 15s. per cent. due from Government.

Taltal.—Further dividend of 2s. 6d. per share, making 4s. per share, or 4 per cent. for year, carrying forward £3,855.

BREWERIES.

Brampton.—Interim dividend on ordinary shares at the rate of 10 per cent. per annum for half-year ended Sept. 30.

South African.—Interim dividend of 12½ per cent. on fully-paid ordinary shares for half-year ended Sept. 30.

J. Marston, Thompson, and Son.—Interim dividend of 10 per cent. per annum on ordinary shares for half-year ending Sept. 30.

MINES.

Cosmopolitan Proprietary.—Interim dividend of 1s. per share (making the third dividend of 1s. per share this year).

Ooregum Gold of India.—Interim dividend of 9d. per share on both ordinary and preference shares, payable on December 9, making the amount paid for the first eight months of present year 1s. 6d. per share on the ordinary and 2s. 6d. per share on the preference shares.

Quintera.—Interim dividend of 1s. 6d. per share (7½ per cent.), for 1903.

Waihi Gold.—Quarterly dividend of 2s. 6d. per share.

MISCELLANEOUS.

Angela Nitrate.—Five per cent. interim dividend, payable 16th inst.

Balijan Tea.—Interim dividend of 4 per cent. on account of 1903.

British and Benington's Tea Trading.—Dividend at the rate of 5 per cent. per annum on ordinary shares, payable 30th inst.

Ceylon Land and Produce.—Dividend of 7½ per cent. on ordinary shares, making 15 per cent. for year, placing £2,315 to reserve, and carrying forward £1,024.

Colorado Nitrate.—Final dividend of 5 per cent., making 7½ per cent., carrying forward £22,911.

Continental Union Gas.—Dividend of 4 per cent. for half-year on ordinary stock, making 7 per cent. for the year.

Dorman, Long, and Co.—Final dividend of 1½ per cent., making, with interim dividend, 4 per cent. for year.

Francis Newton.—Final dividend at the rate of 10 per cent. per annum on ordinary shares, and a bonus of 5s. per share, carrying forward £3,433.

J. Lyons and Co.—Interim dividend for half-year ended Sept. 30, at the rate of 25 per cent. per annum, payable Dec. 1.

Jacob Thomlinson.—Dividend of 9 per cent. on ordinary shares, carrying forward £615.

John Bland.—Dividend at the rate of 5 per cent. per annum for half-year just ended.

Kenward and Court.—Dividend at the rate of 8 per cent. per annum, making 7 per cent. for year, placing £500 to reserve, and carrying forward £572.

Lagunas Syndicate.—Final dividend of 4s. per share, making 8 per cent. for year, carrying forward 4,707.

Lambeth Waterworks.—Dividends at the rate of 10 and 7½ per cent. per annum, together with bonus in each case of 10s. per cent.

Liverpool Nitrate.—Final dividend of 7½ per cent., together with bonus of 7½ per cent.

Lloyd's Packing Warehouses.—Dividend on ordinary shares for half-year ended Sept. 30 of 4 per cent., making 8 per cent. for year.

London Nitrate.—Final dividend for year ended June 30, on ordinary shares at the rate of 5s. 9d. per share, making (with the 4s. interim), 9s. 9d. per share for the year, adding £10,000 to reserve.

Morecambe Tramways.—Dividend of 3½ per cent., placing £500 to reserve, and carrying forward £338.

New Centaur Cycle.—Dividend of 2½ per cent. on ordinary shares, carrying forward £175.

Raleigh Cycle.—Dividend of 10 per cent. on ordinary shares, placing £6,000 to reserve, and carrying forward £1,966.

Real Estate of South Africa.—Second interim dividend of 2½ per cent., payable 8th proximo.

Santa Catalina Nitrate.—Final dividend of 6 per cent., making 15 per cent. for twelve months, carrying forward £6,858.

Transvaal Coal Trust.—Dividend of 1s. per share.

MINING RETURNS.

Aladdin's Lamp.—990 tons crushed, 203 oz.

Alaska Mexican.—Crushed 19,952 tons, value $26,780; saved 395 tons sulphurets, value $28,459.

Alaska Treadwell.—Crushed 81,359 tons, value $80,141; saved 1,630 tons sulphurets, value $86,203.

Alaska United.—Crushed 14,922 tons, value $21,112; saved 280 tons sulphurets, value $6,678.

Angelo.—Tons crushed, 8,773; ounces, 2,931; tons treated by cyanide, 7,382; ounces, 2,508; total ounces, 5,439.

Associated Gold of W.A.—Milled, 5,292 tons; tailings treated, 2,200 tons; slime re-treated, 3,700 tons; slags, four tons; total, 7,541 oz.

Avino of Mexico.—Treated 1,600 tons, value $322,000; shipped 480 tons, value $11,000.

Bonanza.—Crushed 8,400 tons, 3,056 oz.; from cyanide and slimes, 8,400 tons, 2,869 oz.; total, 5,925 oz.

Burma Ruby.—141,000 loads washed, producing rubies valued at Rs.1,03,00. Royalties, Rs.22,000.

Cape Copper.—Ookiep, 1,707 tons, of 15 per cent., equal to 238 tons; Nababeep, 3,238 tons, of 5 per cent., equal to 150 tons.

Cassel Coal.—Output, 12,104 tons.

Chinese Engineering.—Output of coal ,17,000 tons; sales 17,000 tons; consumption 1,300 tons.

Clitters United.—Treated 2,603 tons; value £2,014.

Coetzeestroom.—134 oz.

Collie Proprietary Coalfields of W.A.—Output and sales, 7,466 tons.

Consolidated Gold Fields of New Zealand.—Progress Mines: Crushed 4,987 tons, value £9,376. Golden Fleece: Crushed 1,200 tons, value £2,145. Wealth of Nations: Crushed 1,070 tons, value £2,041.

Copiapo.—1,000 tons copper ores, averaging 17 per cent.

Crown Deep.—Tons crushed, 22,663; 4,696 oz.; tons of sands and concentrates by cyanide, 15,200; 3,667 oz.; tons of slimes, 5,934; 492 oz.; total 8,856 oz.

Crown Reef.—Yield from mill, 7,193 oz.; from cyanide works, 4,554 oz.; from slimes works, 261 oz.; total, 21,008 oz. from 19,432 tons milled.

Croydon Consols.—Cyanide results, 270 tons for 140 oz. Golden Gate Consols partial clean-up, 370 tons for 933 oz. South Glamire and Monkland, 1,530 tons for 2,431 oz.

De Lamar.—Crushed 3,350 tons, $24,640; surplus, $2,925; miscellaneous, $40; total $27,605.

Driefontein.—Tons crushed, 14,298; ounces, 3,981; tons by cyanide, 12,425; ounces, 3,359; total ounces, 7,290.

Durban Roodepoort.—Tons crushed, 8,200, 2,957 oz.; tons of sands and concentrates by cyanide, 5,700, 819 oz.; tons of slimes, 2,484, 225 oz.; total, 4,002 oz.

East Murchison.—Tons treated, 4,768, ounces, 1,218; tons of tailings treated by cyanide, 2,086, ounces, 322; total ounces, 1,540.

Fraser South Extended.—1,450 tons of quartz milled, 390 oz.; 620 tons of sands cyanided, for 120 oz.

French Rand.—Tons crushed, 7,200, 1,722 oz.; tons tailings treated, 5,200, 1,050 oz.; total, 2,772 oz.

Ferreira Deep.—Tons crushed, 9,381; 4,189 oz.; tons of sands and concentrates by cyanide, 7,000, 1,722 oz.; tons of slimes, 2,627, 282 oz.; total, 6,194 oz.

Geldenhuis Deep.—Tons crushed, 25,040, 6,139 oz.; tons of sands and concentrates by cyanide, 17,780, 3,487 oz.; tons of slimes 6,680, 540 oz.; total, 10,167 oz.

Geldenhuis Estate.—Crushed 11,582 tons, 3,330 oz.; from tailings by cyanide, 1,826 oz.; from slimes, 546 oz.; from by-products, 228 oz.; total, 5,930 oz.

Geldenhuis Main Reef.—Mill, 770 oz.; cyanide, 448 oz.; ore milled, 2,048 tons; tailings treated, 2,515 tons.

Glen Deep.—Tons crushed, 14,000, 2,754 oz.; tons of sands and

concentrates by cyanide, 9,230, 2,247 oz.; tons of slimes 4,095, 322 oz.; total, 5,324 oz.

Globe and Phœnix.—Crushed 5,404 tons, 2,972 oz.; cyanide: tons treated, 3,000, 418 oz.

Glynn's Lydenburg.—Crushed 1,858 tons, 539 oz; cyanide: 1,376 tons, 520 oz.; slimes, 482 tons, 150 oz.; by-products, 77 oz.; total, 1,288 oz.

Golden Blocks (Taitapu).—Crushed 187 tons, obtained 215 oz.

Golden Horseshoe.—Crushed, 11,899 tons, 3,698 oz.; 1,998 tons treated by cyanide, 1,038 oz.; 8,732 tons of slimes, 3,971 oz.; 1,125 tons of sulphide ore, 6,992 oz.; 462 tons of concentrates, containing 1,909 oz.; total tons, 13,024; output, 17,668 oz.

Great Boulder Main Reef.—1,645 tons crushed, 872 oz.

Great Boulder Perseverance.—Gold, 14,297 oz.; silver 1,928 oz.; slags shipped to smelters: gold, 170 oz.; silver 192 oz.

Great Boulder Proprietary.—Tons crushed 9,365; ounces, 13,469; tailings (old) 2,624 tons, 887 oz.; total, 14,356 oz.

Great Fingall.—Tons treated, 8,254; ounces, 9,193; tons of tailings cyanide, 8,100; ounces, 1,255; tons of concentrates, 80; ounces, 563; total ounces, 11,011.

Hainault.—Crushed 2,280 tons for 954 oz.

Ida H. Gold.—1,150 tons crushed, 1,212 oz.

Ivanhoe.—12,600 tons crushed, 4,966 oz.; 6,700 tons of sands treated, 1,522 oz.; 5,230 tons of slimes, 2,364 oz.; 670 tons of concentrates, 1,650 oz.; 350 tons of telluride ore, 572 oz.; total 11,074 oz.

Johannesburg Consolidated Investment.—New Primrose: 6,632 oz.; Ginsberg: 3,621 oz.; Glencairn Main Reef: 3,724 oz.; Rietfontein A: 3,379 oz.; New Unified Main Reef: 3,231 oz.

Jubilee.—Mill, 1,266 oz. from 5,167 tons crushed; cyanide, 432 oz. from 3,356 tons treated.

Jumpers.—Crushed 3,300 tons, obtained from mill 856 oz., from concentrates by cyanide, 40 oz. from tailings by cyanide 556 oz., total 1,452 oz.

Jumpers Deep.—Tons crushed 16,067, 3,826 oz.; tons of sands and concentrates by cyanide, 10,320, 2,185 oz.; tons of slimes, 5,390, 341 oz.; total, 6,394 oz.

Knight's Deep.—Crushed 15,000 tons, 4,178 oz., inclusive of 1,500 oz. from cyanide.

Lace Diamond.—Loads hauled and washed: yellow ground, 10,951, blue ground, 6,686, yielding 2,060 carats.

Lachlan Gold Fields.—Crushed 730 tons; result, £1,750.

Lake View Consols.—8,600 tons treated, 4,071 oz.; 1,127 tons of sand re-treated, 162 oz.; total 4,233 oz.

Lancaster Gold.—Crushed 8,500 tons, 1,894 oz.; cyanide 6,484 tons, 1,233 oz.; total, 3,127 oz.

Lancaster West.—Crushed 6,615 tons, 1,952 oz.; cyanide, 4,631 tons, 651 oz.; total, 2,603 oz.

Lancelot Freehold Tin and Copper.—240 tons Lancelot tin stone crushed and treated for 27 tons, 65 per cent. tin: Bismuth ore, shipped 21 tons.

Langlagte.—Crushed 20,588 tons, 4,724 oz.; concentrates: cyanide, 490 tons; 1,161 oz.; tailings: cyanide, 14,400 tons; 2,484 oz.; total, 8,369 oz.

Langlaagte Deep.—Tons crushed, 15,025, 3,358 oz.; tons of sands and concentrates by cyanide, 11,750, 1,498 oz.; tons of slimes 3,280, 204 oz.; total, 5,081 oz.

Lloyd Copper.—162 tons fine copper.

Malacca Diamond.—112 loads washed producing 131 carats diamonds; 1,650 lb. tin.

Matabele Sheba Gold.—Crushed 1,050 tons, 652 oz.

May Consolidated.—Crushed 10,083 tons, 2,953 oz.; cyanide 6,460 tons, 1,480 oz.; slimes 2,413 tons, 210 oz.; total, 4,643 oz.

Meyer and Charlton.—2,606 oz. from 9,774 tons crushed, 1,411 oz. from cyanide total 4,017 oz.

Montana.—Drumlummon Mine, Montana: Tailings plant treated 13,015 tons of tailings and slimes, producing cyanide precipitates estimated to realise $23,500. Shipping ore, etc., in process of realisation estimated to realise $15,000. Total represented by 1,530 oz. gold and 21,250 oz. silver, $35,800. Lucky Girl Group of Mines, Nevada: 1,500 tons of ore, producing bullion bars and cyanide precipitates, represented by 514 oz. gold and 342 oz. silver, $10,800.

Morning Star.—Crushed 145 tons, £430.

Morven (Rhodesia).—Crushed 1,120 tons, 700 oz.

Mount Boppy.—2,500 tons, 808 oz.; cyanide, 1,773 tons, 826 oz.; slimes, 664 tons, 517 oz.; total, 2,151 oz.

Mount Morgan (Queensland).—Tons chlorinated, 18,531, 8,989 oz.

Mount Zeehan (Tasmania) Silver-Lead.—520 tons silver-lead ore, containing about 312 tons lead and 50,000 oz. silver.

New Goch Gold.—2,361 oz. from 9,444 tons crushed, 897 oz. from cyanide, 801 oz. from concentrates; total 4,059 oz.

New Modderfontein.—Crushed 8,748 tons, yielding 2,966 oz.

New Zealand Crown.—Crushed 3,001 tons, value £7,093.

Nile Valley (New).—£500.

North Kalgurli.—Crushed 1,000 tons, 562 oz.; cyanide process, 100 oz.

Nourse Deep.—Tons crushed 13,300; 3,597 oz.; tons of sands and concentrates by cyanide, 9,778, 1,959 oz.; tons of slimes 3,738, yield, 320 oz.; total, 5,876 oz.

Oroya Brownhill.—Crushed 5,349 tons, 8,695 oz. (including gold in concentrates).

Palmarejo and Mexican Gold Fields.—Crushed 3,800 tons, treated 3,100 tons; producing $22,350 gold, $52,900 silver; profit, $30,250.

Peak Hill.—Battery crushed 5,465 tons, 3,018 oz.

Penhalonga Proprietary.—Milled 5,710 tons, yielded over plates 1,350 oz.; 91 tons of concentrates recovered, value £2 200.

Rezende.—Crushed 2,825 tons; from mill, 682 oz.; from tailings by cyanide, 120 oz.; total, 802 oz.; 6 tons concentrates produced 24 oz.

Robinson Deep Gold.—Crushed 25,360 tons; 9,111 oz.; 3,968 oz. from tailings by cyanide, and 749 oz. from slimes; total, 13,828 oz.

Robinson.—Crushed 18,700 tons, 8,419 oz.; tailings by cyanide, 2,920 oz.; from own concentrates, 803 oz.; from slimes, 681 oz.; from purchased concentrates, 636 oz.; total, 13,449 oz.

Rogers' Golden Gate.—664 tons crushed, yielding 880 oz.

Roodepoort Central Deep.—Crushed 6,037 tons, 2,251 oz.; cyanide 3,934 tons, 836 oz.; total, 3,087 oz.

Roodepoort United Main Reef.—3,039 oz. from 8,200 tons crushed; 1,091 oz. cyanide; total, 4,130 oz.

Rose Deep.—Tons crushed, 20,939; 4,201 oz., tons of sands and concentrates by cyanide, 14,400, 2,473 oz.; tons of slimes, 6,454, 419 oz.; total, 7,095 oz.

Salisbury.—2,110 oz.

Santa Rosa.—Value of metals from company's properties, $10,000; leased properties, $5,000.

Sao Bento Gold Fields.—4,525 tons, 1,011 oz.

Selukwe.—Crushed 5,190 tons, 2,613 oz.; treated by cyanide, 7,050 tons, 1,471 oz.

Sheba.—2,973 oz.

Simmer and Jack Proprietary.—24,230 tons, 6,260 oz.; 2,994 oz. from tailings by cyanide, 365 oz. from slimes; total, 9,619 oz.

Smelting and Refining, Australia.—Shipped dore bullion, containing 1,520 oz. gold and 30,000 oz. silver.

Sons of Gwalia.—Crushed 7,838 tons; ounces, 4,253; tailings, treated by cyanide, 4,650 tons, 1,171 oz.; total, 5,424 oz.

South Randfontein.—Crushed 12,146 tons, 3,946 oz.; concentrates: cyanide, 1,113 tons, 514 oz.; tailings: cyanide, 7,091 tons, 1,351 oz.; slimes, 3,309 tons, 332 oz.; total, 6,143 oz.

Standard Copper, Clifton, Arizona, U.S.A.—Shipments, 345 tons, averaging 25 per cent. copper.

Taitapu Gold.—143 oz. from 454 tons crushed.

Transvaal and Delagoa Bay Colliery.—Output, 33,250 tons.

Twin Lakes Placers.—Cubic yards of gravel washed, 100,000; square yards of bedrock exposed, 10,500; square yards of bedrock cleaned, 11,500.

Treasury.—Crushed 8,450 tons, 3,906 oz.

Tyee Copper.—Smelted: Tyee ore, 2,805 tons; Customs ore, 573 tons; matte produced 376 tons.

Van Ryn.—Crushed 10,040 tons, 3,075 oz.; cyanide 6,400 tons of tailings, 1,313 oz.

Village Main.—7,915 oz.

Vivien Gold.—1,123 tons milled, 518 oz.

Wemmer.—Crushed 7,170 tons, yielding 3,429 oz.; 4,500 tons tailings treated cyanide, 743 oz.; 214 tons concentrates caught, average assay value, 106 dwts.; total, 5,306 oz.

Wanderer (Selukwe).—Crushed 11,146 tons, 2,015 oz.

Westralia Mount Morgans.—Crushed 6,550 tons, 2,479 oz.; cyanide, 4,464 tons, 1,824 oz.; slimes, 2,660 tons, 740 oz.

Witbank Colliery.—Output 30,509 tons.

Wolhuter.—9,360 tons crushed mill and cyanide, 2,645 oz.

Zeehan-Montana.—245 tons silver-lead ore, containing about 160 tons lead and 20,000 oz. silver.

NEXT WEEK'S MEETINGS.

Monday, November 16.

Cleveland Trust.—Middlesbrough, noon.
Fraser and Chalmers.—Winchester House, noon.
Realisation and Debenture Corporation of Scotland.—Edinburgh, 11.45 a.m.
South London Tramways.—Winchester House, noon.
Tadcaster Brewery.—York, noon.

Tuesday, November 17.

Rohilkund and Kumaon Railway.—237, Gresham House, noon.
Scrase's Brewery.—Winchester House, 11.30 a.m.
West Middlesex Waterworks.—19, Marylebone Road, noon.

Wednesday, November 18.

Axim Mines.—Cannon Street Hotel, noon.
Cape Electric Tramways.—1, London Wall Buildings, noon.
Digalla Valley Ceylon Tea Estate.—20, Eastcheap, 3.30 p.m.
Esperanza Nitrate.—Winchester House, 3 p.m.
Eastern Extension Australasia and China Telegraph.—River Plate House, 2.30 p.m.
Lagunas Syndicate.—Winchester House, 1 p.m.
Southern Mahratta Railway.—46, Queen Anne's Gate, noon.
Taltal Railway.—River Plate House, 1 p.m.
West India and Panama Telegraph.—Winchester House, noon.

Thursday, November 19.

Adjah Bippo Deep.—Cannon Street Hotel, 12.15 p.m.
Colorado Nitrate.—Liverpool, 3.30 p.m.
Dartford Brewery.—Winchester House, 2 p.m.
Liverpool Nitrate.—Liverpool, 3 p.m.
Montana Mining.—Winchester House, noon.
New Gold Coast Agency.—Cannon Street Hotel, noon.
South African Superaeration.—Winchester House, noon.
Santa Catalina Nitrate.—Winchester House, 3 p.m.

Friday, November 20.

British Aluminium.—Winchester House, noon.
Gold Coast Proprietary Mines.—Winchester House, noon.
Island Trading Syndicate.—Winchester House. 12.30 p.m.
South African Supply and Cold Storage.—Winchester House, noon.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended Oct. 3, $14,202; increase, $5,971. Aggregate from January 1, $474,699; increase, $15,646.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended Oct. 3, Rs. 40,851; increase, Rs. 1,493. Aggregate from July 1, Rs. 4,41,637; increase, Rs. 31,681.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended Oct. 3, Rs. 9,246; increase, Rs. 1,598. Aggregate from July 1, Rs. 1,09,646; increase, Rs. 26,680.

Bengal Central Railway.—Traffic receipts for week ending Oct. 17, Rs. 40,892; increase, Rs. 12,157. Aggregate from July 1, Rs. 534,819; increase, Rs. 89,201.

Canadian Northern Railway.—Traffic receipts for week ended November 7, $81,200; increase, $25,900. Total, from July 1, $1,191,700; increase, $455,400.

Lucknow Bareilly Railway.—Traffic receipts for week ended Oct. 10, Rs. 15,312; decrease, Rs. 4,377. Aggregate from July 1, Rs. 3,05,221; increase, Rs. 2,620.

Quebec Central Railway.—Traffic receipts for the 1st week of November, $12,045; decrease, $692. Aggregate from January 1 $598,759; increase, $17,407.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended Oct. 10, Rs. 10,437; decrease, Rs. 1,687. Aggregate from July 1, Rs. 1,35,319; decrease, Rs. 1,892.

Salvador Railway.—Traffic receipts for week ended Nov. 7, $ 11,250; increase, $2,000.

White Pass and Yukon Railway.—Traffic receipts for the week ended Oct. 21 amounted to $20,100

English.

Cleator and Workington.—Gross receipts for the week ending Nov. 7, £1,190; increase, £8. Total receipts from July 1, £20,896; decrease, £213.

COMPANY MEETINGS.

BAHIA BLANCA AND NORTH-WESTERN RAILWAY COMPANY.

The fourteenth ordinary general meeting was held on Monday, November 9, at Winchester House. Mr. Phlipps, M.P., presided, and, in moving the adoption of the report, said that he had always stated, in reply to questions, that, if any serious proposal was made for the purchase of the line, the directors would not stand in the way. Since the last meeting an agreement had been made for the sale of their undertaking to the Buenos Ayres Western Railway, only to be afterwards repudiated by the directors of that comapny. Thereupon, it was stated in some of the English newspapers that the repudiation was owing to the action of the Argentine Government, who had refused to ratify the suggested sale. The board of this company were pretty well informed about Argentine matters, and would not have put their signatures to any agreement without first satisfying themselves that they could submit such a case as would ensure the assent of the Government. When he saw the statement in question he at once cabled to Argentina for information, and the reply received was that the Government had never expressed any opinion on the matter at all, that they were very much annoyed at being blamed by the financial press in London, for a thing they had not done, and that they hoped he would represent their attitude correctly. The next reason the board received for the non-conclusion of the agreement was that the line would require £700,000 to be spent upon it. He would, however, remind them that the chairman of the Western Company had said that everything pertaining to the Bahia Blanca line was in good order, and that there were no signs that it had been allowed to run down, as was so often the case with lines in such a poor financial condition as theirs was. The directors of the Western Company knew the condition of the undertaking, and their secretary and manager had been over it on more than one occasion. However, they did not agree to buy it subject to its being in good order. They concluded an agreement subject to two things; first, to the approval of the Argentine Government, which, unquestionably, could have been obtained; and, secondly, to ratification by the shareholders of both companies. It might be asked whether there was any negligence on the part of the board of this company by which the action of the directors of the Western Company was rendered possible? He did not think that there was. The usual course was followed. When contracts were made ad referendum he thought that every business man would agree that there was an implied contract that both parties would recommend the proposals to their respective shareholders. Otherwise, nobody could do business at all on a large scale. Continuing, he pointed out that they had no ordinary stock issued, only preference stock and debentures, and their earnings were very small. A few years ago the railway was being worked at a loss. They had now got past that stage, but they were still earning sufficient merely to pay the debenture interest and a dividend of 1 per cent. by taking something from the reserve fund. With such limited resources as the company possessed, everything possible had been done to develop the undertaking. In his speech at the recent meeting of the Buenos Ayres Great Southern Railway Company, Mr. Frank Parish stated that that company had been asked by estancieros, and pressed by the Government, to build a line into territory closely adjacent to the Bahia Blanca Railway. Mr. Parish expressed his belief that it would be in the interest of the Great Southern Company to build it, and added that, if successful, his company would have to make other lines into the same district. However, he very kindly assured this company that the new lines would not be built in any hostile spirit to themselves, but merely as a matter of business, and in a friendly way. As chairman of the Bahia Blanca Company he cordially reciprocated such friendly sentiments. He and his colleagues had often been asked by estancieros to build lines in very good territory to the east of their present railway, and they had also been constantly pressed by the Government to do so. So far, they had always refrained, but now that they knew they could build lines to the east of their present railway, and enter the Great Southern Company's territory without impairing the amicable relations at present existing between the two boards they would be pleased to do what they could. It was the kind of thing he should endeavour to meet in every friendly way in his power.

In reply to a question, the chairman said that no option to purchase any portion of their undertaking had been given to anybody.

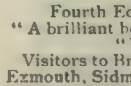
The report was carried unanimously.

KAFFIRS CONSOLIDATED INVESTMENT AND LAND.

The ordinary general meeting was held yesterday at Cannon Street Hotel, London, E.C., Mr. Robert Warner, presiding.

The Secretary, Mr. Bush, read the notice calling the meeting.

The Chairman said: Before I call your attention to the principal points in the report, it is my duty to express my personal thanks to the shareholders who have seen me and written to me, to congratulate me on the very successful report we have to present to you to-day. I was rather afraid we might have received some unsatisfactory letters on account of there being no dividend, but I have not heard a murmur of displeasure, but have been congratulated on my courage in facing the shareholders with that decision. The realised net profit for the twelve months amounts to £10,317, which, with the balance brought forward, makes a total of £14,012 standing to the credit of the profit and loss account. In the profit and loss account you will see that the balance brought forward, less dividend, with interest on loan account and interest, and profit on investment accounts, come altogether to £15,388. In taking this profit into our account I ought to explain to you that our principle has never been to take any paper profits into our account, but only profits actually realised in cash. I think we deserve some credit for this, as it is an unusual thing in the City of London. With regard to the expenses, I can only repeat what I told you last year, that this is about the most economically managed company in London. Our total expenses, including secretary, office rent, clerks', directors' and auditors' fees only amount to £700. Of course we have the income-tax in addition, but that, like the poor, is always with us. In the past year we increased our capital, and of course had to pay Government fees for it; this is shown as special expenditure. We also had a little expense in connection with the granting of the Stock Exchange settlement. These are both things which we could not avoid, and the Stock Exchange quotation is, of course, most desirable, as now the company is included in the official daily list, it gives a hall mark of respectability to the company. I think this is the first South African finance company that has been able to get into the list; at least I am not aware of any other. Turning to the balance-sheet, you will see that our total authorised capital is £200,000, of which £100,000 has not been issued, but is held in reserve to issue from time to time as we think desirable. Creditors you will see are put down as nil. The suspense account is the same as last year, and represents the proceeds of certain shares sold from time to time, shares that cost us nothing, shares which we could, if we desired, bring into profit even to-day, but we are going to allow these items to remain open until the whole of the big block has been realised, and then next year we shall consider whether we will take it into profit or add it to the reserve fund. You will see that the reserve fund has been considerably increased, in consequence of issuing shares at a premium. With regard to the investments you will see that at cost price they amount to £95,220. They consist of shares in various South African companies, and in Rhodesian companies, and includes our holding in the Salisbury Buildings and Estates Company, which we floated some time ago, and also include the 113 sites which we acquired. Loans on security, £39,246, are on very good securities, and the margin of the making up prices fixed by the Stock Exchange Committee on the last settling day in September shows a margin of at least £15,000 or £20,000, so that we are very fully covered. The next item is the interest under contracts with the Westralian Consolidated Investment Company, £4,000. This has been allowed to stand over until the Westralian market improves, and there now appears every indication of a revival. Immediately we close our deal, the £4,000 will be represented by 20,000 Westralian Consolidated Investment shares, out of which we hope to make a very good profit. Calls in arrear have been mostly paid up. Cash in hand, £24,000, may seem a large sum, but we have thought it best to husband our resources. I now move the adoption of the report and accounts.



Mr. A. B. Hills seconded the resolution, and it was carried unanimously.

Formal resolutions were then passed re-electing Mr. Albert B. Hills, a director, and Messrs. Lucey, Hicks, and Walters auditors.

A vote of thanks to the chairman concluded the proceedings.

The Investors' Review.

The Ominous Position of the Treasury.

It is high time our political leaders devoted their energies to this subject. Compared to it in immediate urgency the tariff wrangle is but as a pillow-fight in a school dormitory to a devouring fire. A year and a half has now elapsed since peace came in South Africa, and our Government still blesses us with a war expenditure by which the nation's energies are paralysed. Compared with 1894-5 the estimated demands of the Exchequer upon the taxpayer alone for the current fiscal year are greater by upwards of £43,000,000. This is an increase of nearly 55 per cent. in ten years, and if we go back to 1893-4 the increase is more than £46,000,000, or upwards of 61 per cent. These figures are altogether apart from the money obtained from the larger, well-sweated businesses of the Post Office and Telegraphs, and merely represent the added load of the "imperial" taxpayer, who has also to bear additional imposts for behoof of local authorities and doled landowners and parsons.

Does the nation get anything for this enormous increase in the demands made upon it? There is not the slightest reason to believe that it does. Our present heaven, or otherwise, sent Government had four years in which to prepare for the South African war, to repair, amongst other things, that "deficiency of cordite" on pretext of which the previous Government was turned out. It increased our taxation rapidly during these four years in order to have everything ship-shape. And when the war broke out, were we ready? Nothing was ready. We had neither men nor clothes, neither guns nor ammunition. All was chaos, confusion, pillage beyond description, and when we did hurry out guns that proved antiquated and useless, some of them, as Sir William Butler points out in his evidence before the War Commission, went in the same ships with supplies of ammunition made in Birmingham for the Boers, supplies of whose ordering and existence our man-in-the-street Ministers were as ignorant as of where the money had all gone. They neither knew nor cared. And it is the same to-day. Hundreds of millions of money, wrung out of the taxpayer to his serious impoverishment, are now in course of being poured out on monster battleships, sure to be far more dangerous to each other than to any foe, on phantom army corps without arms—mere chaos—on *gaspillages* innumerable in all directions, and were a big war to burst upon us next week it would certainly be found that we still had nothing ready. Great iron and steel firms are rich and busy, many engine builders fully employed, and above all Woolwich and the national dockyards live riotously and spend imperially, but for all the result to the nation the vanished millions might just as well have been sent up the "King's Pipe" with confiscated tobacco.

And what is the consequence of this boodler's triumph to the country's credit and business interests? Confusion, oppression, gathering discontent and poverty, a money market drugged and helpless through the stupefying influence exercised upon it by the continually augmenting demands for loans, loans with which to gratify the spending fury of the devouring bureaucracy and fighting services. Its propped industrial magnates, the privileged of all sorts, grow richer, it is the paradise of boodle, and for the nation's Treasury approaching paralysis. In spite of the £122,000,000 demanded from the taxpayer this year, compared with £78,455,000 in 1894-5, and £75,424,000 in the year before that, the Exchequer has already this year raised £9,000,000 net of floating debt, mostly in Treasury bills, and it wants another £2,000,000 on Monday, making £11,000,000 in all. And there is more to follow, for have we not the Somali war to provide for, a contribution, probably, to accord to India for the coming war with Tibet, a fleet of observation to maintain in Far Eastern waters, Lugard's empire in West Africa to finance, and a hundred other channels of waste to keep running. Have we not just laid down another "first-class battleship," and is not the interest on our ever mounting debt always growing larger? The credit of the country is already almost down to "a 4 per cent. basis" in the City, and, were a bank or two to fail, such is our position that the Exchequer might have temporarily to shut up also, through powerlessness to renew its "kites," its short dated accommodation bills, of which there will after next week be no less than £7,000,000 in the hands of our credit jobbers. It is inferred that the whole of these, and whatever further millions may be required, will be redeemed out of the thumping income of the March quarter. There is no solid ground for this expectation, for the income tax is down 3d. in the £—though still 11d., compared with 2d. in 1874—and the Customs and Excise revenue drags. What with sluggish receipts and supplementary estimates galore, the probability is that the floating debt now accumulating will not be all redeemed, and as it amounts already to nearly £30,000,000, next week's "New Treasuries" included, a "funding operation" may soon be imperative to save the Exchequer from a catastrophe. At what price will you take the next issue of Consols, ye overladen jobbers, ye banks that already groan over your missed millions underwritten so jauntily far above the current price? And what are *you* going to do about it, great political leaders?

The Question of Bank Reserves.

It is interesting to see that considerable attention has been directed to this subject by Mr. Tritton's address, dealt with in these columns last week. The discussion is languid in print, but pursues its way with some activity in banking circles, and last week Mr. Moxon, a well known and shrewd northern banker, stated his views in a letter to the *Economist* which affords substance for further discussion. Much that he says is to the point, but he fails, in our opinion, to grasp the peculiar situation of English banking in several respects, and misinterprets to some extent the attitude of those people he calls "theorists" on this subject. We theorists, it seems, are wrong in harping upon the necessity for a substantial gold reserve. No bank ever failed because of want of cash, but because it had engaged its assets in bad or unrealisable securities. That is true enough, and we at least have never clamoured for a gold reserve of substantial amount in the interests of insolvent banks, but out of regard for the necessities of banks that are solvent. Plenty of cash may be of no use to a bank that invests the bulk of the deposits committed to its care in more or less rotten securities, and is thereby driven into bankruptcy. When, however, such a bank stops payment it is of the utmost importance to other banks, whose business is solvent and carefully conducted, that they should be able to confront hordes of alarmed depositors with any necessary amount of sovereigns these may in their first terror demand. Our contention all along has been that the irregular, haphazard, go-as-you-please banking system, if the word system can be applied to it, which this country enjoys does nothing whatever to provide for this necessity, and cannot do so under present conditions. Hence our demand that each joint-stock bank should take care of itself and provide its own emergency gold reserve.

Bankers who discuss the question of reserves seem to habitually forget that our present visible banking reserve, wholly in the hands of the Bank of England, consists almost entirely of paper money. It is seldom that the banking department of the Bank of England has as much as £2,500,000 of coin in its tills. The rest is all bank notes, partly based upon Government securities. On the top of debt a double debt is piled. In the opinion of Mr. Moxon the reserve would look very much larger if the separation of the banking from the issue departments provided by the Bank Act of 1844 was abolished and the whole of the assets and liabilities of the Bank of England lumped together. We cannot follow his argument. The real Bank reserve would not be made a penny larger by such a change, and if the aggregate looked greater it would only tend to breed mischief. That, indeed, is one most glaring disadvantage of a huge reserve held by one institution. We have never had a large accumulation of gold in the Bank of England, and consequent big looking note reserve, without an outburst of speculation in the country which the Bank was powerless to check, and whose effects have frequently been productive of disaster. In the language of the card table, the business community, above all the speculators, "play up" to the big reserve, and soon bring about its dissipation. No greater elasticity in banking credit would be brought about by a change in the form of stating the Bank of England accounts, for elasticity—and this is another point the banker who discusses the question habitually forgets—is not now dependent upon the note circulation in any perceptible degree. Ours is a cheque circulation into which the bank note enters as a mere minor factor. Under our habit of making all payments, big and little, by cheque, we have attained to the most perfectly elastic banking currency the world ever saw. Had it been otherwise it would have been quite impossible for any legislative provision for bank note expansion to have embraced the excessive demands made upon the banking resources of the country during the just past three years of war. When the market was suddenly driven by the joint-stock banks to borrow £20,0000,000 or £30,000,000 and put the "money" in circulation for purposes of loan subscription or to enable the accumulated mass of credit commitments accruing at the end of a quarter or the end of a year to be promptly liquidated, is there any conceivable arrangement for enlarging the bank note circulation that could have provided for such unusual pressure? We think not, and the smoothness with which these gigantic credit operations are carried through offers the best proof possible of the marvellous elasticity of our credit system. All the banks had to do in order to get the necessary money or banking credit to be distributable by cheque, was to drive their customers in crowds to the Bank of England to deposit certain accepted lines of securities there, and the Bank forthwith created credit to the amount required, which credit was utilised outside to make the necessary payments. These payments accomplished and the market relieved from the sudden pressure, all that was required to get these excessive temporary credits cancelled at the Bank was to utilise the disengaged borrowed means in paying them off, the borrowers carrying away the pledged securities to be ready for next time.

People sometimes say in the City, "why should the Bank of England reserve now look small when it is below £20,000,000, whereas in former years what the late Mr. Walter Bagehot used to call 'apprehension point' was not reached until the reserve fell to about half that amount?" This question must again be attributed to ignorance or to failure to realise the enormous change which has taken place in English banking since, say 1880, the date when our unlimited banks all converted themselves into limited liability companies under stimulus of the terror excited amongst shareholders by the failure of the City of Glasgow Bank in 1878. In the middle of 1880 there were only five banks with head offices in London whose deposits exceeded £10,000,000. The London and Westminster owed on deposit and current accounts £21,000,000, the London and County £22,121,000, the Union £13,655,000, the National Provincial £16,613,000, and the Joint Stock £12,084,000. Altogether these five banks owed only £85,518,000, and if we add in the small London banks—Alliance, Imperial, Central, etc.—the total liabilities to depositors came to rather less than £103,500,000. Allow another £26,000,000 for the deposit and current account liabilities of the City private banks then in existence—and the amount, although an estimate, is probably ample—and we get a total of £130,000,000. Now on the last week of June of that same year 1880 the reserve in the Bank of England stood at £17,000,000, an unusually large amount for the time, and equal to 13 per cent. of the liabilities of the joint-stock banks to their depositors as here estimated.

Contrast this with the present position, where we have thirteen banks with head offices in London whose aggregate liabilities to their depositors and current account customers amounted on June 30 last to £404,639,000. Among them is one bank with a liability of nearly £56,000,000, two with liabilities of more than £44,000,000, one with a liability of about £51,000,000, and five with liabilities of between £25,000,000 and £36,000,000. On the basis of the liabilities to the public of these banks alone, the reserve of the Bank of England in the last week of June this year, when it was some £5,000,000 larger than it is now, amounted to less than 7 per cent. That is its proportion to the liabilities of the other joint-stock banks to depositors alone, and leaves the Bank of England's own commitments on deposits altogether out of the reckoning. If we go a step further still, and endeavour to realise the contrast for the whole country between the two dates given, the inadequacy of the present Bank of England reserve becomes still more significant. No figures exist for the whole of the banks in England and Wales available for the middle of 1880, because there were then scattered throughout the country a number of private banks which have since been absorbed in joint-stock institutions, as well as a certain sprinkling of small joint-stock banks that either published no balance-sheets at all or only such meagre figures as pleased themselves. The total published deposits, however, of the banks of England and Wales at that date amounted to £242,000,000, and if we add £56,000,000 as representing the kindred liabilities of the secretive banks, we get a round figure of £300,000,000, which is probably not far from the truth. Assuming that figure to be nearly right—too large, perhaps, rather than too small—we arrive at the

fact that on June 30, 1880, the Bank of England reserve amounted to rather more than 5½ per cent. of this liability. But in June, 1903, the total liabilities of the banks of England and Wales, Bank of England included, to depositors alone—and after allowing for the shrinkage due to the decline in the price of public securities, the basis upon which an unsuspectedly large proportion of these deposit liabilities rests—reached £682,000,000, and on this total the reserve of £27,000,000 then held by the Bank of England amounted to less than 4 per cent. Last week on the same total of deposits the reserve was down to a proportion of less than 3¼ per cent. Is anything more required to enable the reader to understand why the "apprehension point" for the Bank of England reserve should now be £20,000,000 as against the £10,000,000 which sufficed twenty-three years ago? The truth is at the present time the banking reserve ought never to be below £30,000,000. It is, at its present figure, quite inadequate to meet any emergency, not only because its amount is too small, measured by the enormous increase in banking liabilities, but because it is, as must be harped upon, a paper reserve. Our cheque system, perfect as it is, must contain an added and unnecessary element of danger, not only to the banks themselves, but to the trading and manufacturing community throughout the country, as long as the reserve upon which it is based is also paper. The fact is we have paper three deep for most of it, Government debt, bank notes based on that debt and cheques on top of all.

It has often been recommended in these columns that the Government should pay off its old debts to the Bank in gold, and cancel, for very shame's sake, musty I.O.U.s, some of which date from the time of William and Mary. That would have paid the Exchequer, and probably the taxpayer likewise, much better in the long run than redemption of Consols at from 10 to 14 per cent. premium. The advice was disregarded and it is as good to-day as when it was first given. There is not, however, the slightest prospect of its being adopted; therefore we insist, and shall continue to insist, that every joint-stock bank is bound by the mere instinct of self preservation to look after its own interests and to accumulate its own reserve of gold. Many of our banks have now become giant institutions the like of which cannot be matched in the world, outside one or two banks in France and Germany. That these great banks should continue to conduct their business on the tacit assumption that no matter what credit storms may arise they can always rely upon their creditors to accept cheques drawn upon them, or failing this, Bank of England notes secured upon the debt of a Government which may itself one of these days come within measurable distance of insolvency, is for them to invite disaster.

But evil may yet come out of good. If our joint-stock banks will now agree amongst themselves to a simultaneous moderate reduction in the dividends to be declared in the beginning of January, and devote the money thus held back to the quiet accumulation of sovereigns in their own vaults, not merely for one six months but if necessary for six or ten years, in order that each bank may sit solid upon a gold basis of its own building, all may yet be well. There is such ample excuse for reducing the dividends in the depreciated prices of public securities from Consols downwards. Every class of security upon which banks are accustomed to lend money has come down in price. Their own customers have suffered severely by this depreciation, and they themselves must have to contemplate heavy writings down, not only on their Consols, but on their English Railway debenture and preference stocks, their Municipal securities, their Colonial loans, on whatever reputedly good stock they hold. They should boldly face this necessity and meet it with thoroughness, writing down their Consols if need be to 80 and taking their Railway debenture and preference stocks into the balance-sheet upon a 3½ and 4 per cent. basis. It would not be possible for the banks to wipe off the whole of the apparent loss thus brought out in one half-year, but they can all put it to a suspense account and wipe it out gradually by keeping down the dividends by 1 or 2 per cent. per annum and buying gold with the money undispersed. It is gold, not notes, the depositors will go for once they are alarmed by the failure of a bank or two, and that we shall have bank failures before the present crisis has worked itself out is as certain as anything can be. But there is no necessity to enlarge upon that point, the argument is complete without it. A banking business conducted heedless of an adequate ballast of cash reserves, is no better than a steam engine without a governor. One day the speed will smash it.

The Record of the Cycle Companies.

Present day directors of the oft-times aptly named but all too often unsuccessful undertakings devoted to the manufacture of bicycles and the now contingent motor car business have not merely to display energy in the construction of rapid means of locomotion. They must also be capable of realising that to them is entrusted the task of clearing away the refuse left by Hooley and others of his kind, and by the exercise of a little financial judgment and ability endeavour to fairly apportion the appalling losses which shareholders are called upon to face as a just punishment for disregarding repeated warnings and pinning their faith to dishonest men. During the past year three companies have been added to the list of those already arrived at the conclusion that discretion was more likely to turn out profitably than heroism, and we are pleased to extend our congratulations to the Premier, Swift, and New Centaur undertakings on the elimination of promoters' swag from their balance sheets and trust that in due course not only will they reap a rich reward, but that others will be induced to follow their enlightened example. The Premier Company indulged in the sharpest piece of writing down, reducing its share capital by no less than £425,000 to £175,000, but goodwill still constitutes fully one-third of the entire assets, and evidently the chopper did not take off too big a slice. The inflation being less staggering, the pruning operations conducted by the Rover and New Centaur companies were much more modest, and the positions have been put tolerably straight by reductions of £75,000 and £50,000 respectively.

With some regret we observe that the symptoms of returning prosperity noticeable a year ago have not developed with the rapidity which all except the short-sighted, in constant dread of being run down had hoped, but the recuperative process has doubtless been much delayed by the exceedingly damp atmosphere in which all things, young and old, weak and strong, have been compelled to exist. In this wettest of wet seasons, sensible folks have made a near-by roof an indispensable condition of their pleasure-seeking, and only the scorching terror has been able to derive satisfaction from whirling along greasy roads, enjoying the possibility always that an untimely end might be met under one of Pound & Co.'s 5-ton 'buses. Our analysis of the cycle position appears somewhat later than usual, but compensation is found in the fact that the record is very complete, no concern of any magnitude being omitted from the subjoined statements.

The first table sets forth the profits, dividends, and amounts carried forward for the years 1903 and 1902, and it will be observed that in ten instances the profits of the past season were below those of the preceding twelve months, while seven companies increased their revenues, and five had the satisfaction of converting debits into credits. In the case of the Birmingham Small Arms Company the decline is due to the inability of the company to carry out much rifle manufacture in the second half of the year, and not to a falling-off in the cycle department, which on the contrary continues to progress, and deservedly, in a satisfactory manner. Another severe decline is that of the Humber Company, and for it the expenses incurred in developing the motor departments are held to be responsible. We trust that the directors' assurance that the money has been well laid out will prove to be justified, because shareholders have already been called upon to make great sacrifices, there is now a year's preference interest in arrear, and the directors have indulged in a financial transaction which, to put it mildly, is singular. For long past the company has claimed a sum of over £32,500 in respect of certain guarantees alleged to be given by Mr. Harvey du Cros in respect of the John

Griffiths Corporation, and during the past year the action for recovery came before the Courts of Law. In the result the Humber Company was awarded £7,000, including costs, and as £945 had been expended under this head only £6,055 was available to offset the mentioned sum of £32,508, leaving a shortage of £26,453. So the directors calmly tack this on to the item of goodwill, increasing it to a figure which the chairman declined to disclose at the annual meeting. We may therefore be sure it is pretty substantial. Maybe no other course was open to them, but this is just the kind of thing to hasten another reconstruction, particularly when in other directions the position is becoming increasingly unsatisfactory. Raglan directors seek to temper the profitless wind to the shorn shareholders by telling them that, in order to increase the capacity of the works, it was found necessary to re-arrange and renew a large portion of the plant. Not only so, but the company has very greatly improved its position in the markets of the world, and to-day commands a larger sale for its productions than at any previous period. The advance has been attained at the expense of the year's profits, but the directors felt that the sacrifice was absolutely necessary, in order to place the position of the concern on a more secure basis for succeeding years, all which sounds very nice, but is little solace for absence of dividends. Poor displays are made by the Swift and Components Companies, because the corresponding periods of operations consisted of nine and seven months only. Others producing poor results either blame the weather and competition or lie low and say nothing, while those in a position to parade improved revenues observe a befitting silence.

* For seven months. † Loss. ‡ Debit. § Subject to depreciation.
‖ On 10/- shares. ¶ On reduced capital. ** For nine months.

We would fain mention, however, that the Rudge-Whitworth Company has reached the pinnacle of fame, and announces to an awe-struck world that it has been honoured with the Royal Warrant of Appointment as Cycle Manufacturers to H.M. the King. Nor can we refrain from calling attention to the truly wonderful recovery of the Premier Company, which, after piling up in three years an aggregate loss of £22,000, comes forth with a profit of nearly £19,300, enabling it to clear off a loss of £7,000, and pay a year's arrears of preference dividend. Tubes performs an equally remarkable feat, but the condition of this Arthur Chamberlain concern is still terrible, and another violent writing down of capital seems inevitable. Coming to the dividend record, the Rudge-Whitworth this time gives its shareholders a bonus of 5 per cent., the Triumph Company enters the list with a 2 per cent. distribution, and the Eadie Manufacturing pays 1 per cent. more despite a decline in profits. The Rover now distributes 10 per cent. against 5 per cent., but that is merely because the capital has been scaled down 50 per cent., and the amount involved is the same. On the other hand, we have a 5 per cent. drop in the Birmingham Small Arms payment, and one nearly as big in that of the New Centaur, which unhappily has not celebrated its reorganisation with something good for the shareholders. The dividend is only 2½ per cent. on the 10s. shares compared with 3½ per cent. on the old £1 shares, so that the fall on the capital as it now stands is 4½ per cent. Next in point of size is the disappearance of last year's 2½ per cent. paid by the Raglan Company, followed by the 2 per cent. drop in the J. B. Brooks dividend, while Brampton Brothers bring up the rear with a return diminished by 1½ per cent. The next column brings to light a few uncomfortable looking debit balances, but it is also satisfactory to note that in some cases losses shown a year ago have now been converted into credits, albeit very slender ones. The Components Company adds all the year's reserve to the carry forward, and so does the Humber, others giving the free balance the benefit of improved revenue instead of increasing dividends.

The next statement largely speaks for itself, but we should like to say a word about reserve funds, because they play an important part in the destinies of even the best placed companies, and when a balance-sheet is chock full of intangible assets it becomes more than ever necessary that substantial amounts should be yearly set aside from current profits and invested, at least in part, outside the business in readily realisable securities. Nowhere is this more strikingly illustrated than with cycle companies where patent rights and goodwill frequently bear a very heavy proportion to issued capital, which moreover consists at times of debentures as well as shares. Here and there fairly substantial savings have been accumulated, and the record for the period now being reviewed gives some cause for satisfaction. The Birmingham Small Arms, Eadie Manufacturing, Rudge-Whitworth, and Swift companies all add £10,000 to their savings, Raleigh and Rover are fairly close up with £6,000 each, J. B. Brooks sets aside £5,000, Triumph, £2,500, Enfield and Joseph Lucas £2,000 and Riley £1,700. The new Hudson Company writes off £2,000 from the goodwill account of the Diamond Cycle Components and Engineering Company. Unfortunately only very occasionally do we find sensible quantities of good class securities held against these reserves, and not infrequently the investments consist of shares in kindred companies of very doubtful value, and requiring provision for their depreciation. Humber, Limited, possesses £27,641 of investments although holding no reserve at all, but the undertaking is indebted to its bankers to the amount of £27,305, and whatever the launch into the motor business may do for the concern in the future, it has, for the moment, severely strained its resources and entailed the piling up of exceedingly heavy stocks. Still a good many companies are looking to the development of this industry for their salvation, and we can but hope they will not be disappointed. Much, however, remains to be done before a perfect machine can be placed in the hands of the public, and one's mind reels at the thought of, say, Cheapside full of motor cars all giving off offensive odours and making as much noise as some of the specimens we have been unlucky enough to encounter and even ride upon.

Economic and Financial Notes and Correspondence.

Raiders in the Guise of Peacemakers.

At last the veil over the mysterious Tibet expedition is being lifted a little and the nation prepared for another possible war. The mission this week has advanced further into Tibet and now holds the Chumbi Valley, which is described as the key to the country. From this point a further move is to be made to Gyantse, about 150 miles from Lhasa, or 90 miles nearer to the capital than Khamba Jong, where Col. Younghusband's force has lain for the last three months. With such important and serious steps in contemplation, it has been thought necessary to give the man who pays some plausible excuse for this invasion of a state hitherto supposed to be friendly, and the reason given is that the Tibetan authorities have refused to come forward and discuss questions of trade. Moreover, this mission is merely the natural sequence to protests the Indian Government has made to that of Tibet regarding the non-observance of certain treaty obligations by the officials of the latter, which protests have also been disregarded. But for a peace mission the force is very well armed with rifles and a Maxim or two, its whole aspect being rather that of a band of raiders like Jameson's notorious crowd than that of a peaceful embassy sent to conciliate another power.

Here, as elsewhere in the Far East, it is Russian intrigues which have caused the whole trouble, or rather it is charged to them by our jingo protection press, because Russia is always a safe card to play in matters Eastern The ruling caste in India are so imbued with the haunting dread of this bugbear, that they have inoculated even the natives with their fears and hate. This at least seems to be the case with Nepaul, for its Prime Minister has addressed a long remonstrance to the Dalai Lama, pointing out how foolish the latter is to have anything to do with Russia, and the great benefits that will spring from an alliance with Britain. Nepaul, the Prime Minister declares, has derived nothing but good from its treaties with us, its revenues have expanded, lost territory has been regained, while its religion and autonomy have been in no way touched. That her children have been taught the art of war and a large number sent to us every year to learn it, depriving the the country of their services as husbandmen and workers is quite forgotten. Yet perhaps there is reason in this oversight, since once having tasted blood and the lust of fighting, these very children are always crying "more." On the western frontier all for the moment is quiet, and neither in Somaliland nor in the Aden hinterland can we use Gurkha troops, therefore only Tibet is left. So the peace mission has been sent in the hope that instead of peace it may lead to war.

When the fight comes, and it will, for the Tibetans are arming, who is to pay the cost? Poor India or this country? Neither can afford it, but to the military the question of cost is of little importance so long as orders and titles can be got out of any enterprise, no matter how mad. Yet now, surely, is the time for the nation to put its foot down and end this greed for meretricious fame on the part of its paid servants. According to old precedents a war outside the natural boundaries of India can only be carried on with the express sanction of Parliament, such as was given in the Afghan War of 1878. But the last thing this present Ministry desires is to meet the two Houses on any such question, so it will wriggle out of the difficulty by declaring the expedition to be one of peace, wait till it gets cut up and then send guns and men to wipe out the stain on the national honour, trusting to the savage instincts of the people to hold them blameless.

The "Generosity" of New Zealand.

One thing we have a sneaking admiration of Seddon for, he is an excellent Sancho Panza to our Brummagem Don Quixote, and can always be reckoned upon to turn that fantastic personage into ridicule. His latest feat in that laudable branch of industry is his preferential tariff proposals which, the usual telegram informs us, have been laid before the New Zealand legislature as a beginning, that portentous body which is busy over-awing the empire and making laws for a population little bigger than that of Glasgow. We are going to enjoy "preferential" treatment, it seems, at the hands of this mighty nation. This preferential treatment, though, is not to consist in a reduction of the duties now levied on British goods, but in an augmentation of those laid upon goods of a similar character coming from other countries. In other words, the New Zealanders are to be asked to increase their payments into the Seddon Treasury, a levy which cannot possibly benefit us, but is certain to hurt them. An additional duty of 100 per cent. is to be laid on cement when it does not come from the United Kingdom, and on thirty-eight other articles extra duties of from 50 to 20 per cent. are to be exacted. This is portentous and infinitely comical, for when we turn to cement in the latest trade accounts of the colony, those for the year 1901, we find that the United Kingdom sent £43,794 worth, New South Wales £65 worth, Belgium £99 worth, and Germany £445 worth. Presumably the terrible import from Germany will be cut off since German cement will now have to pay 4s. per barrel instead of 2s. It is the same with everything else, and we suppose the colony's custom for United States bicycles will be cut off as well as for United States locomotives supplied to the Government railways, or will these latter get in free? German pianos, too, will be handicapped, and the buyers thereof fined. But we must not forget amid our mirth to be just. Tea imported from and the produce of any part of the British Empire is henceforth to be admitted duty free. It now pays 2d. per lb., and tea coming from China, Java, Japan, the Argentine Republic or elsewhere is henceforth alone to pay 20 per cent. *ad valorem*. India will be quite joyful over this concession we may be sure, and still more Ceylon, for the Ceylon tea imported in 1901 was valued at £130,351 out of a total of £219,000 from all parts of the world. From the United Kingdom the import was just £675 worth, and whether that tea was Chinese or Japanese we do not know. And for all these blessings in masquerade, the good, generous, unselfish, himperial Seddon is to ask nothing in return! Really now, nothing? Not even a few more loans?

Mr. Duthie on New Zealand Finance.

This gentleman has returned to Parliament in New Zealand, and is already proving a galling thorn in the side of the Seddon gang of boodlers. In a speech delivered on the Committee of Supply, Mr. Duthie went into the finances of the colony with some thoroughness. A good deal of what he said is already only too painfully familiar to the readers of this Review, but the truth cannot be too often set forth, and therefore it will be interesting to mention here some few prominent facts brought out unchallenged by this capable and honest critic. Amongst other things, he pointed out that the colony is being overrun by the bureaucratic vermin to an alarming extent. In ten years, while the population has increased only 22 per cent., the number of permanent Government employees has risen by 49 per cent. Among these employees, by the way, are a number of the Premier's relatives, as *Truth* mentions this week, rather unkindly, for, after all, has not Mr. Seddon borrowed magnificently, and produced "prosperity" of a sort? Why then cavil that his daughter should get £300 a year, plus travelling expenses, as private secretary to her father, or that said father should get about £3,000 all told, including "perks" of various kinds but, we presume, exclusive of that "national purse" he couldn't, wouldn't, mustn't have, and yet took. And is there anybody who would really blame the Right Hon. "Dick" for placing that renowned hero his son, whose magnificent and uniquely heroic services in South Africa are known to all the world, in the position of "military expert" to the colony at the modest sum of £200 per annum, plus 15s. a day for travelling expenses, or growl that a brother, a son-in-law, and a nephew should respectively enjoy berths worth £450, £300, and £200 a year. This is surely modesty rather than nepotism, and we are really afraid New Zealand M.P.'s and others are beginning to be dissatisfied with the multitude of their

bureaucrats, and the splendour of their Sancho-Panza premier.

Another point brought out by Mr. Duthie, to return to his story, was the fact that in the past two years public works alone have absorbed £4,156,082. Well, thus comes prosperity, thus success to the Assets Board, thus solvency to the poor Bank of New Zealand. To be sure, liberality of this description causes the debt to mount rather quickly. The actual growth of the public debt up to 1892, when the Right Hon. *the* Premier came upon the scene as boss, was only £1,035,961 per annum, and even this ambitious borrower only brought the average up to £1,118,008 per annum for all the succeeding years down to 1901. The smaller of these sums was too much for a colony, so thinly peopled, and whose inhabitants increase so slowly, but the larger has lately proved far too little to meet the demands of the Seddon boodlers, and, accordingly, Mr. Duthie says, for the past two years the average increase per annum in the debt has been £3,212,180, so that the total indebtednes borne by about 820,000 people is now £55,899,019. It is a tidy sum, but an understatement, for we do not think that the debt of the Bank of New Zealand or the Assets Board is included therein, still less the various harbour and municipal debts. Adding these in, we fear the total burden of the colony would be nearer £66,000,000 than £56,000,000, and the borrowing has to go on like fury. A Melbourne note to the *Financial Times* informs us that the New Zealand Treasurer, that renowned conjurer with oats that did not exist, the Hon. Sir Joseph George Ward, is seeking power to borrow £1,000,000 in Australasia "with interest up to 5 per cent." The correspondent adds that this limit is "a mere fancy provision," as Sir Joseph expects to get all the money at 4 per cent. Well, he may in Australia, but he could not get it at that figure in London, nor readily at 4½ per cent.

Mr. Duthie likewise drew attention to the amount of New Zealand Government short debentures falling due next year, and between now and 1910. We dealt with this subject lately, and indicated that difficulties were ahead for such renewal borrowers, difficulties such as Victoria has lately had to endure. That colony's loan of £5,000,000, repayable on January 1 next, has not been all renewed. On the contrary, about one-fifth of it, or say £1,000,000 has had to be taken up by the underwriters, and the remainder has not been placed on terms by any means advantageous to the colony. The probability, therefore, is that any colony coming into this market during the next twelve months will have to pay at least 4½ per cent. for its accommodation, and the rate might very well rise on occasions to 5 per cent. No wonder, then, that the Government of New South Wales is finding difficulty in disposing of its £4,000,000 of 4 per cent. four year debentures at par. Already £2,600,000 has been placed in Sydney and London, but there is no appreciable demand for the balance.

Hope Brothers, Limited.

Last year's improvement in profits proves to have been a mere flash in the pan, due to some fortuitous circumstance not disclosed, and in the twelve months ended August 31 the profits not only fell below those of 1902 but were even less than in 1901. After writing off £696 for leasehold redemption, and £3,068 for depreciation of fixtures, etc., against £653 and £3,139, respectively a year ago, the net profits, notwithstanding the opening of four new branches, were £3,285 down at £50,979, of which directors' fees and managing directors' salaries and commissions took £8,116, and audit fee £400, and £500 was spent on account of special outlay in relation to L.C.C. requirements at Ludgate Hill premises, leaving £41,963, compared with £45,631. The balance brought in, however, was slightly larger at £2,226, and by cutting down the allocations to reserve and special advertising reserve from £7,000 and £1,000 to £4,000 and £215 respectively, the directors again contrive to pay 7 per cent. on the ordinary shares, and to carry forward £2,473. In order to earn this reduced profit, stocks have been increased by £7,564 to the heavy total of £174,543, and although the adverse balance on trading accounts is down to £19,215, against £23,330, there is a further drop of £15,868 to £43,416 in cash. Owing to the extension of the business freehold, copyhold, and leasehold premises, with their fittings, etc., after deducting the allowance for depreciation, and an unnamed sum for the Queen Street, Holborn, premises, are now valued at £174,824, or £10,591 more, but a small beginning has been made towards adjusting the item of goodwill, which stands at £275,073, or £1,572 less.

The following table sets out the profits for the three years of the company's existence as a public limited liability company, and also gives the items of the balance-sheet for the same period. An 8 per cent. dividend on the ordinary shares was practically held out in the prospectus as a bait to subscribe, but the company has so far only managed to pay 1 per cent. less than this, and in order to do even that has been obliged to starve the reserves, which, all told, only come to £24,614, including the £11,798 obtained from the profits from March 1 to August 22, 1900. Stocks are rising, and cash in hand is diminishing at a rapid rate, and the expansion of the business by new branches has not as yet been justified by results.

	1901.	1902.	1903.

Barnato Consols.

This oft-tapped gas bag of finance held its annual meeting at Tuesday, at Johannesburg, and the pre-eminent reef discoverer and conceiver of the Coronation Syndicate, Mr. Carl Hanau, presided, and addressed the meeting in a slightly British accent. According to the cabled summary of the proceedings, the brave boomist was evidently in a cheerful mood, and spoke enthusiastically of what the company had done, despite "the period of inactivity and distress." There was a large credit balance of £215,596, said he, with expansive pride. But of what is it composed? He does not seem to have confessed this, noble patriot, but we know it is not cash. "The directors do not recommend any dividend, as the liabilities have to be met." Of course, and all the money the company can scrape together will have to be doled out to subsidiaries, in the way of calls on shares held, so we anticipate no recommendation of a dividend yet awhile. Never mind, shareholders, you have the consolation of knowing your money is being spent in a great and laudable scheme, to wit, the enrichment of the mine bosses. The balance-sheet assets are valued at £1,565,922, and "the company possesses over a million deep level shares, the value of which, I consider, to be nearer three than two millions, and they will become much more valuable." Yes, but how many of these assets could be sold on the market to-day, and how many years will it take to test their values by development work? "Every interest the company owns could be turned to profitable account were times more propitious. It is a matter of grave concern that vast amounts should be locked up in undertakings which,

under more favourable conditions, would yield high profits." Ah! These propitious times are coming, dear professional share boomist, and so, perhaps, is the millenium. Only wait patiently till a new generation of fools grows up, and then we shall be able to sell these "assets" to advantage, gold or none. Meanwhile, "the labour question is a matter of life and death to the industry. We all fervently hope the legislature will authorise the importation of aliens." Dear, dear, "shortage of native labour" is getting as much used up as "the drought" in Australia, and does duty to excuse mine "eye picking" before the war, low grade ore, slovenly development, everything the bosses need to gloss over, poverty and "no dividends."

A Little Tale of the B. E. T.

In 1900 certain gentlemen formed a syndicate in Manchester to develop the use of motors for heavy haulage, particularly in Lancashire, and, among other things, secured a contract to carry the parcel mails between Manchester and Liverpool. This contract, however, the syndicate was unable to work alone, and therefore it asked the British Electric Traction for assistance. Before this the B. E. T. had turned its eyes towards this form of traction, and Mr. Garcke accordingly went down to Manchester to inquire into the possibilities of the scheme. After several interviews with firms for which the syndicate worked, he decided that there was a big future for motor haulage, and either he or some of his subordinates opened negotiations with the syndicate to acquire the business they had commenced to build up. The outcome of these negotiations was a company called the Motor Haulage Company, ordinary shares in which were allotted to the original syndicate as payment for their business.

So far the story differs in no way from an ordinary promotion, but now comes an episode upon which we should like to hear what the B. E. T. has to say. The contract for the mails naturally formed part of the business transferred to the Motor Haulage Company, and it was, after a few mishaps at the start, got into working order. But no sooner was it moving smoothly and successfully, than another company, called the Pioneer Power Company, appeared on the scene. The objects of this concern were to buy up works and build motors, but it also had power to run them when built, and for this reason it cast envious eyes upon the business carried on by the Motor Haulage Company. Although the B. E. T. has at times, we believe, disclaimed any connection with the Pioneer Power, it is pretty safe to say that it was a brother bantling to the Motor Haulage, since several of the Pioneer Power directors were either on the board of the B. E. T. or connected with it. Yet, in spite of this, its conduct, as will be seen, practically amounted to fratricide. For one of the directors went down to Manchester and sought to buy the shares in the Haulage Company which had been allotted to the members of the original syndicate, since these were the only shares not controlled by the B. E. T. Company. The offer was refused, and the director thereupon said the Pioneer Power Company would freeze out the Motor Haulage Company, as a lesson, we presume, for daring to block the path by which the former hoped to enter Lancashire. This kind of brotherly love was by no means relished by the Motor Haulage independents, and they commenced proceedings in Chancery to restrain the Pioneer Power Company from carrying out its threat. Before the day came on which the application for the injunction was to be heard, the Pioneer board asked for an adjournment for a week, to which the other side consented. During this adjournment, Mr. Garcke appeared on the scene as peacemaker, and suggested terms to the Motor Haulage Company which were accepted. These were that two hundred of the £5 ordinary shares, out of the number allotted to the first syndicate, should be bought for £1,000 cash, and the remainder exchanged later on for shares of equal value in a company to be formed to acquire the business of both the Motor Haulage and the Pioneer Power Companies. Here ends the second chapter.

Peace, or a truce, patched up, the B. E. T. took a long time to form the big merging company. In fact, we believe it is even yet unformed. This delay caused serious inconvenience to one of the original syndicate, who wished to realise some of his shares and use the money for other purposes. He, finding the B. E. T. was taking so long, asked it to buy his shares, as it led him to understand it would do. The B. E. T. said it was quite ready to buy, but for some reason the sale was always put off and put off, until the shareholder lost patience, and advertised for an offer in the *Manchester Guardian*. The advertisement stated that the B. E. T. had agreed to exchange the shares offered for others in a bigger company, but several intending purchasers were choked off buying because when they asked the B. E. T. to confirm this it suggested that the agreement in question might be the subject of litigation, though at that time nothing of the kind had been mentioned by either side. When this little game was found out, the members of the syndicate thought it about time to get something definite out of the B. E. T., and accordingly raised the question of what was going to be done, at the first general meeting of the Motor Haulage Company, held on the 9th inst. The accounts presented to the meeting showed a loss, yet, notwithstanding this, one of the shareholders offered to put more money into the business if the directors would endeavour to establish it on a firm basis. To his proposition the directors gave no definite answer, because they said they were considering a scheme which they would shortly lay before the shareholders. They did lay one, and very shortly too, for next day a notice was posted calling a meeting for last Wednesday, to consider a resolution to wind up the company voluntarily. Naturally, this made the shareholders angry, as they thought the directors might have had the courage to tell them what their scheme was at the first meeting. With the idea of hearing the directors, and incidentally the B. E. T.'s version of this interesting little history, a representative of this Review went to the meeting, but was barred. At the finish, we understand, the non-B.-E. T. shareholders offered to take over all the assets and liabilities of the Motor Haulage Company, and work it themselves, which offer, if the B. E. T. is wise, will be accepted. But it is a droll tale of promoters' zeal, as it stands.

Scottish Australian Investment Co., Limited.

Another chapter is added to the harrowing tale of this company's experience, in the report for the six months ended June 30, but this time the directors allow a gleam of hope to creep in and lighten the gloom. The weather showed signs of a change towards the end of 1902, and the improvement gradually improved, until by the end of June, although there were localities where it was still dry, the situation generally had become much better, with food and water plentiful, and a cessation of stock losses through drought. Yet, with all this, the losses of the year through death were again distressingly heavy, amounting to no less than 148,713 sheep and 18,026 cattle. Sales and rations accounted for 42,496 sheep and 7,620 cattle, and against these increase and purchases added 104,972 sheep and 5,059 cattle, so that the net decreases for the year were 86,237 sheep and 20,587 cattle, bringing the totals down to 275,571 and 22,420. Financially the company finds some consolation in the fact that prices of all kinds of stock continue high and wool maintains a remunerative level of value, and yet further comfort is extracted from the belief that good seasons are likely to prevail now for some time, and provide an opportunity of bringing the estates into a productive condition as rapidly as the lessened numbers of stock will allow. The encouragement of such a belief is absolutely necessary, if shareholders are not to grow thoroughly sick and disheartened with the whole thing, as a further large addition was made to the already heavy debit balance by the operations of the half-year. Only four of the stations owned proved remunerative, as against five a year ago, and these, with interest and rents received, produced a profit of £12,289, or £596 less, while the loss on the others rose from £16,882 to £38,506. A small profit of £249 was made in London, and, after meeting charges in Australia and London, and paying £994 for interest on temporary loan, the net loss came to £27,957. With debenture interest for the six months, the debit balance is brought up to £161,808, while there is a further liability, dependent on future

profits, of £96,000 for interest on the preference stock. A substantial reduction from £789,022 to £678,122 has been made in the item of pastoral property in the balance-sheet, but this notwithstanding, the valuation of the assets is still very much too high, and unless some drastic step is taken to put the company on a really sound footing the recuperation process is likely to be a long and tedious one, even if the prophesied period of good seasons comes to its help.

Ever-Growing De Beers.

In accord with custom Reuter sends a summary of the report the directors of the magnificent De Beers presented to the annual meeting held at Kimberley last Monday. Once more the stolid-going world is told to stand agape at the ever-swelling magnitude of this fortune and Government-favoured enterprise, into whose coffers a constant, growing stream of wealth is pouring. In the last twelve months, for instance, the diamonds unearthed realised the colossal sum of £5,241,172, and the expenditure absorbed but £2,938,873, "our blacks being well treated." Then, after writing off £738,000 for depreciation, the net profit amounted to £2,302,298. Dividends on investments yielded over £23,000, profits of investments £32,000, interest on Consols £29,000, estate revenue £25,000, and other items between £9,000 and £10,000. There were paid out dividends and bonuses aggregating £2,175,000; £200,000 was reserved for investment, £100,000 added to the insurance fund, and £746,000 carried forward. A claim for £54,611 was made by the company against the Imperial Government on account of war losses, and the War Office tendered £30,000 in full settlement, which the company accepted, generously charging no interest. Such War Office benevolence is not surprising, for our barnacles and political troglodytes dare not ignore the demands of De Beers. Other companies that have made similar claims have been treated with contempt; and as for maimed soldiers, widows and orphans, who are existing on charity because they cannot get arrears of pay, why they must continue to exist as best they can, even in the workhouse, for our demi-mondaines have to be jewel propitiated. So let us rejoice that magnanimous De Beers exacted no usury. A detailed statement of the war losses, it is said, showed the company's actual loss to be £272,904, in addition to the fact that it paid no dividend in 1900. But did it not, gambler-wise, hazard these losses for a greater gain? And what is this estimated loss in comparison with the national loss under which the country is still groaning?

"The chairman, in moving the adoption of the report, exhaustively reviewed the position of the company, showing that it was in a flourishing state, not only in regard to the diamond mines, but also in regard to its fruit farms and explosive works and other industries in which the company was interested." No doubt he thrilled his audience with this romantic story, but did he have a word of explanation or excuse to offer about the new explosive monopoly? No, but he was just sweet upon the labour problem, remarking it was not only a question of wages, but of treatment also. In this we agree, and if his sincere object was to point a moral to other mine bosses, who have hitherto not been impressed with this fact, we will even applaud. Yet, we fear it may be taken for mockery, since the Randites will not heed. The De Beers Company, he declared, had never been short of boys, and there was considerably less mortality per thousand than in Johannesburg—a precious truth. Of taxation, the company, we have the good man's word for it, De Beers, like Barkis, is willing to pay its full share, but it objects to be singled out above all others. Who is singling it out? Does any serious-minded man believe the mines will pay any taxation they can dodge or bribe themselves free of? Was not the offer of the mine bosses to contribute ten millions as part of a total thirty a pure farce? They probably guessed they would never be called upon to stump up. Oh, but the chairman denied the truth of the statement that De Beers never interferes with the politics of the country. Sir Lewis Michell must have a very pretty contempt for the intelligence of Englishmen. Oh, no, they never interfere, yet that Premier mine, which was going to be De Beers' one and only rival, respecting which nothing has been heard for some months, is now scorned. The directors have not found it necessary "to enter into negotiations with that mine." Dear, dear! So the impudent, forward youngster has received a timely rebuke from the august diamond merchants, lords of South Africa. The report was adopted, we learn, and the usual charitable donations were voted, including a special grant of £10,000 for higher education in the colony. Has so much as a sovereign been sent to this country for those who have suffered penury and privation that De Beers might profit?

The above was in type when the daily financial newspapers appeared with the report and accounts advertised in their columns. These documents, therefore, must have been in London for some time but such lofty, half-celestials as the De Beers troupe cannot be expected to send the report out in the ordinary way to all and sundry. However, we now learn from the profit and loss account that for the half-year to December 31, 1902, the dividend of 10s. per share on the preference shares took £400,000, and 12s. 6d. per share on the deferred, £600,000. For the second half, to June 30, similar distributions were made, the bonus being 2s. 6d. per share on the 1,000,000 deferred shares, which may come in handy this Christmas season for charity, etc. This reduces the credit carried forward by the sum of £51,922. But it is when we gaze on the wealth-laden balance-sheet that we stand as nearly dumb as may be in worshipful admiration. Has not the debenture debt been duly diminished during the year, by sums, respectively, of £148,900, £3,550 and £19,000, bringing the aggregate indebtedness down to the trifling figure of £4,418,245? And at the same time has not the reserve been distended to £1,289,650, and the insurance fund to £300,000, whilst creditors appear for £210,682, unpaid debentures and obligations for £11,485, and unclaimed dividends, etc., £20,758? But look at the magnificent assets—De Beers and Kimberley mine claims, £3,948,107; Dutoitspan, Bultfontein, Premier (Wesselton) Mines and Estates, £3,401,358; farms and landed property, £175,869; investments in stocks and shares, £621,467; explosive works, £929,660; offices, compounds and stands, £225,422; machinery and plant, £500,000; blue ground, £278,497; debtors, £345,048; £1,178,000 Consols at 92½, valued at £1,089,650; life governors' interest, £200,000; diamonds on hand, £263,432; bills receivable, £515,000; short loans, £187,500 (against £315,000); cash, £148,814 (against £300,653); to say nothing of live stock, timber, fuel, stores, etc., etc., the whole array footing up to £13,087,017, or £278,052 more than the value given them a year ago. The inventors of the "Arabian Nights" never dreamed of such wealth, but hunger stalks abroad in South Africa, for all that, and diamonds fail to multiply like mushrooms in a coal pit.

The Bank of New Zealand.

Appended is a note communicated to the Press by the Bank of New Zealand. It relates primarily to the £2,000,000 of 4 per cent. stock issued and guaranteed some years ago by the Government of the colony in order to prevent the Bank from being wound up. We do not profess to understand it, and must wait for either the text of the Bill or such explanation as the Seddon Ministry may choose to give. What, however, is evident upon the surface is some juggle in order to hide the non-repayment, or conversion, of one-fourth of the amount. The secretary tells us that £1,000,000 is to be renewed, and another £500,000 converted into 5 per cent. preference shares in the Bank, but what becomes of the other £500,000 we cannot guess; nor do we understand the information conveyed with regard to the Assets Realisation Board's debentures. That is a Government institution created to deal with the locks-up of the Bank, principally in land advances, and its accounts have been, we are free to confess, more or less of a mystery to us from the start. That the Board's dealings with the land on its hands have been much facilitated by the stupendous borrowings of the Seddon Government is no doubt true, and in so far as it is true the flourishing exhibit in the Board's balance-sheet is merely the product of deeper commitments of the unhappy colony with the usurers in

the United Kingdom, but we shall have light some day, doubtless lurid light, if past experience may be relied on, and must rest content to wait. One point we are rather curious about: What has become of the £500,000 or so of the last London loan which the Bank of New Zealand had to underwrite and take up? Mr. Duthie, in the speech analysed in another note, stated that nigh half the loan "was admittedly taken up by a financial institution entirely dependent upon this country," that is by the Bank of New Zealand. Is it sitting upon that stock, and does the Government of New Zealand also owe it another £500,000 on debentures substituted for the previous issue of preference shares, cancelled in Ward's "fairy oats" manner? Perhaps some citizen of the colony will give us light on points like these.

The Bank of New Zealand has received the following telegram from their head office, dated November 18, 1903:—Banking Bill, 1903, provides that £1,000,000 only of £2,000,000 Bank of New Zealand guaranteed stock is to be renewed. Government of New Zealand take as preferred shareholders, preference capital and interest at the rate of 5 per cent. in bank to the extent of £500,000 dividend in excess of 5 per cent. to be 10s. for every pound declared to ordinary shareholders—maximum, 10 per cent. Ordinary shares to rank as nominal capital £6 13s. 4d., balance £3 6s. 8d., if called up, will rank as ordinary capital, late liability hanging over ordinary shareholders thus disappearing. Under the Act bank can sell at auction forfeited shares. Assets Realisation Board debentures will be renewed for a further five years, and immediately it is ascertained that there is no deficiency between value properties on hand and amount of debentures outstanding bank shall resume remaining assets, and Assets Realisation Board shall cease to exist. Valuations for the above purpose are to be made before January, 1904, and also not later than December, 1908. Board of directors consider satisfactory.

Ebbw Vale Steel, Iron and Coal.

This undertaking has now been in existence about thirty-five years, and it has long been evident that its capital was out of all proportion to the value and earning capacity of its assets, and that, sooner or later, a drastic writing down was inevitable. When the present board took office they did not deem it prudent to recommend reorganisation, but as a valuation of the works as a going concern reveals a shortage in assets of about £750,000, clearly the time has arrived for a shake up and scaling down. The directors are now of this opinion, and proceed to explain that since the 1876 valuation of the land, buildings, works, plant, etc., at a sum rather in excess of the present capital, a large proportion of the capital, which had been laid out in various undertakings more or less distant from Ebbw Vale, has been absolutely lost, by reason of the dismantling and abandonment of furnaces, ironworks and mines, valued at £920,000, including the Mount Cashel, Ireland, iron mines and the Abercorn Collieries. To adjust all this, it is proposed to reduce the capital from £1,712,935, in £23 shares, to £968,175, in £13 shares, thus getting rid of £10 per share. A meeting to consider the matter will be held on Wednesday next, and shareholders will probably make the sacrifice without a murmur, because it will render possible something better in the dividend record. The average yearly distribution during the past decade has been a mere 2¼ per cent., and even that slender amount would not have been reached but for the boom years of 1899 to 1901.

The Austrian Budget.

The financial affairs of this ramshackle empire seem to be in rather a ticklish position if one may judge by the extraordinary expedients adopted in order to convert a yawning deficit into a surplus. The total revenue for 1904 is estimated at about 1,735 million kronen, and the expenditure at 2,730,000 kronen less. But in order to get the revenue up to the requisite figure, the Government grabs a fund of 9,000,000 kronen accumulated by the rural postmen to provide themselves with pensions. It takes over the responsibility for the pensions, which is all right perhaps, but uses this accumulated fund as current revenue. Another 7,200,000 kronen is deducted from the expenditure as saving effected by the conversion of Austrian Consols, and perhaps that too is justifiable enough, while 7,300,000 kronen more is expected from direct taxes on buildings and from an increase in the income tax. The most interesting thing of all to us is the story of the effect of the abolition of sugar bounties. Their compulsory removal is said to save the state 13,800,000 kronen in next year's budget, while the fall in the price is reckoned upon by the Finance Minister to increase consumption so that the remaining taxes will yield 6,500,000 kronen more. Should this estimate be justified, it is pointed out by the *Times* Vienna correspondent, the Brussels Sugar Convention will have made a present of more than £800,000 per annum to the Austrian exchequer, since Austria, unlike other countries, did not employ the revenue spared by the abolition of the bounties to reduce the tax on sugar. This is "downing the foreigner" with a vengeance, and a highly interesting fact. In France, where the sugar taxes have been reduced, a great benefit has accrued to consumers, for the retail price of this commodity has fallen there to just one-half the figure prevailing before the Convention came into force. What we have gained by this beautiful generosity to the foreigner is not yet evident.

Critical Index to New Investments.

*** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Montreal Water and Power Company.

This company has been in existence since March, 1891, and with an issued capital of $1,620,000 in shares and a bonded debt of £454,136, owns over 84 miles of water mains and 86 miles of service pipes in and about the City of Montreal, together with three pumping stations and a reservoir of seven million gallons capacity. In addition to this bonded debt there is a charge for about £30,000 secured by a mechanics' lien, and in order to pay off this and to provide capital for additional plant and extensions of the system an issue of £70,000 4 per cent. prior lien gold bonds is offered through Messrs. Coates, Son and Co., at the price of 95 per cent. These bonds form part of an authorised total of £500,000, of which £182,166 has already been issued, and are secured by a first charge on the entire system, subject only to an issue of $250,000 (£51,370) charged on that part of the system situated in the City of St. Cunegonde, which cannot be paid off until 1915. The revenue, which for 1893-4 amounted to $62,700, rose in 1897-8 to $92,440, and in the year ended April 30 to $148,775, while the expenses in the last-named period came to $69,133, and it is estimated that the improvements now in progress should enable the company to earn some $40,000 more without increasing the pumping expense. This, however, is mere probability, and as interest charges will require £13,369, the profits on the present basis do not leave any great margin, which is perhaps the reason of the attempt to raise the money on this side rather than locally.

Ticehurst and Robertsbridge Water Company.

Out of a total capital of £18,000 in £5 shares and £6,000 in debentures, £7,200 in shares and £2,000 debentures have been issued, and the company now offers the balance of 2,160 shares for subscription at par. The company will supply the parishes of Ticehurst, Burwash, Etchingham and Salehurst, which have a rateable value of £43,200 and a population of over 7,600, and under its agreement entered into in April, 1903, has to guarantee a minimum of 100,000 gallons daily, the sinking of a well, and the erection of a pumping station and a reservoir of a capacity of 150,000 gallons. A good supply of water has been obtained, a twenty days' pumping test giving an average of 287,100 gallons per day, and the pipes are about to be laid in Ticehurst and Burwash, which will be supplied next year. Arrangements have been made for the supply

of a guaranteed minimum sale of over two and a quarter million gallons a year, which it is estimated will pay for the first year's working expenses at the pumping station, so the little company may do well enough. It is, however, essentially an enterprise for the district only, and even the proposed amalgamation with the local gas company will not make it anything more.

Union Cold Storage Co., Limited.

The original vendors of this company when it was formed in 1897 as the Union Cold Storage and Ice Company of Liverpool, Limited, got £50,000 in cash and £25,000 in shares, and evidently found the business so much to their liking that they proceeded to form other "Union Cold Storage Companies." Now they seem to think it time they made another profit, and accordingly five of their bantlings, including one at Riga, are to be amalgamated with the Liverpool concern under the above title. The capital of the first company was £100,000 in £1 shares, of which 67,500 were issued, with £30,400 in debenture stock, out of a total of £32,500, but the present undertaking is to have a capital of £300,000 in shares and £225,000 in 4½ per cent. first mortgage debenture stock. Of these new shares 162,500 are to be issued to the vendors with £84,400 in cash, and £194,600 debenture stock is offered at par, of which the directors and their friends have applied for £69,600. In addition to this sum of £246,900 paid for the properties taken over, the company has to find £85,200 for the building and equipment of a new warehouse at Blackfriars and a new store at Canada Dock, Liverpool. Including these new buildings Messrs. Bramwell and Harris value the properties as a going concern at £433,494, and Messrs. Knox, Hassal, Dodd and Co. certify that the profits of three of the companies for the three years ended September 30, 1901, before making any allowance for depreciation were £20,519, £26,927, and £30,798 respectively, and for the twelve months ended September 30, 1902, the profits of four of them after sundry adjustments and calculations came to £33,369. No accounts are shown for the past year, although these might surely have been prepared in time, but the directors—two of whom play the double rôle of vendors and directors—indulge in estimates, and announce that they believe the profits will be over £36,000, while another £28,000 is expected by the same gentlemen to be produced by the additional accommodation and the saving in charges. The "Stock Exchange Year Book" gives no details of the working of the Liverpool Company, and as the real position of that undertaking is not disclosed by the methods adopted, the promoters do not deserve the support of the public, and we shall be greatly surprised if they get it.

Answers to Correspondents.

[*A Fee of Five Shillings per query is charged for replies under this heading. Letters, Five Shillings extra per letter.*]

F. D. S.—(1) These shares are still naturally speculative, but the company's position is certainly improving, and the traffics to date show an increase over the corresponding period for last year. The additional mileage opened is very small. The company's year does not end until April next year, but judging from present prospects a dividend should then be paid on the ordinary. They have, of course, risen sharply on the improved prospects.

(2) I understand that this concern has sold its electric department for a very fair sum. Last year's earnings were very good, and although only a small dividend was paid, the Board wiped out one or two items which figured in the balance-sheet as assets, and so improved the company's financial position. So far as I can discover, this year the company has done well, but of course it is a little uncertain how much they will lose in the way of income through the selling of part of their property. A purchase would be fairly speculative, but it would seem to have same chance of improvement, as a rather larger dividend than last year's is expected at the end of the financial year.

Passing Events.

Quiet and orderly crowds welcomed the visit of the King and Queen of Italy to the City on Thursday, and perhaps a certain number amongst the multitude had some vague expectation that closer relations might be established between England and Italy in trade and diplomacy by this friendly return of the Italian visit of our own King. It is certainly a pleasant function, this welcoming of royalties, and as sentiment plays so large a part in human affairs we trust good will come of it. Assuredly nothing but friendly feeling exists in this country towards Italy, and there is no reason at all why the two peoples should not improve their business connections with each other and grow in the perfection of their mutual confidence and understanding. But again, we venture to hope that no empire annexing projects lie behind these communings of kings. Are we paying Italy for her help against the Mullah? How much has that job cost so far? Will a £3,000,000 supplementary estimate cover it?

"Who is the common enemy?" asked Sir Henry Campbell-Bannerman, in his speech at Frome. A voice in the crowd answered "Joey," and the meeting cheered. All through the speech the audience appreciated and applauded Sir Henry's hits and allusions, in a manner which showed it was keenly alive to the false, hollow sham of the Neo-Protectionist madness. And there are many others like it.

That shrewd man, of a merry and excellent wit, Mr. Spencer L. Hughes, makes some pretty play in Thursday's *Morning Leader* with a speech Mr. Chamberlain delivered in Birmingham on November 12, 1885. In this speech the then great Radical related how his firm of screw manufacturers "made screws by the aid of an American invention—a most beautiful machine, which was imported from America," and how by this help it was able to lick creation, give more employment to Birmingham workmen, and at the same time to extract an annuity from United States screw makers as consideration for not selling its screws in that market. Altogether the tale is lovely, the jeering at benighted fair traders here, and the tariff blighted foreigner, and all. We have always retained a keen recollection of that speech, for it was powerfully contributory to the conviction even then held by us that "our Joe" was pretty much of a humbug. But Mr. Hughes's copy of the speech does not seem to mention the amount of the annuity drawn from the States. Unless memory cheats, it was £10,000 per annum—paid to Nettlefold and Chamberlain to induce them to withhold employment from their own workmen. No wonder the firm was then all in love with "free trade for England."

General Egerton, who commands in Somaliland, has issued a proclamation to the natives, calling upon the well-disposed to assist in wiping out the Mullah. As an inducement he holds out the promise of a division of the captured capital according to local custom, the Government, the Army, and the friendly natives each taking equal shares. But does not the first part of the cookery recipe for hare soup apply?

Turkey has not yet given that complete acceptance to the Austro-Russian scheme of reforms which the two Powers have firmly but politely demanded. Knowing the Sultan and his Ministers of old, Austria and Russia are, therefore, growing more and more suspicious, and have gently intimated that it is about time these lengthy deliberations should come to an end, one way or the other.

The States may perhaps wish they had not been so ready to assist Panama to revolt, as they undoubtedly did. For their interference in Central American politics has sown the seed of suspicion and hatred among all the Latin Republics, both in Central and South America, seeds which may later produce a harvest quite unlooked for by the States. Mexico in particular views this latest move of its northern neighbour with a jealous eye, dreading lest it find itself between two fires, should the States one day decide to openly occupy the Isthmus. To guard against any evil in this direction, Mexico may therefore seek to form an alliance of the Latin Republics against the States, and, if successful, might give the land of the almighty

dollar and trusts about as nasty a jar as she has yet received, even without going to extremes.

A correspondent of the *Manchester Guardian* in Tokio has forwarded to that paper an account of a most valuable interview of an hour's duration accorded to him by the Japanese Premier, Count Katsura. The Count, who held a general's command in the Chino-Japanese war, said he was a man of peace, and that the policy of Japan is peace, the nation wants it, the people want it, and all that Japan has done in the direction of making war is to prepare to defend her interests to the utmost if attacked. Japan does not aim at driving Russia out of Manchuria, that is an international question, not one specially Japanese. The vital question to Japan is Corea, and Count Katsura, reticent and prudent of speech though he was, made it perfectly clear that were Russia to attempt to lay hands on Corea war would ensue at once. Probably Russia will take warning.

Rather a good budget show is made by the Chilian Minister of Finance who expects next fiscal year to close without a deficit and the one now drawing to an end to wind up with a surplus of ten million pesos. This fine result is obtained in spite of a payment of eighteen million pesos for ironclads and other extraordinary expenditure and of twenty million pesos remitted, presumably in discharge of a debt interest, to the Rothschilds. The entire expenditure for 1904 is estimated at 129 million pesos, of which 91 million pesos is ordinary expenditure. Is it true that Chili has sold those two new ironclads of hers to Japan? If so budget surpluses ought to be magnificent for several years to come. Apart from this, however, we trust the figures imply growing prosperity in the Republic.

Some interesting facts were dug out by the *Daily News* from the annual report of the Democratic Campaign Club of Massachusetts, and one or two of them are worth giving here as bearing upon our dangerous and factitious tariff agitation. Among the allegations in the pamphlet is one to the effect that the working man pays out $88 per annum and gets nothing in return, owing to the tariff. It is also alleged that the trusts charge as high prices for goods as the tariff will permit, but sell the same goods in foreign countries for much lower prices. And a budget is made up indicating what the tariff means to the working man on every item of his expenditure. Assuming that he lays out $920 per annum, the United States taxes take $13.05 of this and the trusts $88.25. In other words, assuming the total expenditure of factory workers in Massachusetts to be $243,156,000 per annum, no less than $28,773,590 of this goes to pay the tariff bill, but the State treasury receives no more than $3,449,115 of that globular total. The rest is bagged by the monopolists, and means a dead loss of 10 per cent. on their wages to all workers. That is how protection looks to the American working man.

It is announced that the $50,000,000 of Lake Shore 4 per cent. bonds issued the other day have been taken up by the Morgan syndicate at 96, less 1 per cent. commission. In other words the Railway Company, one of the strongest financially in the States, is netting 95 per cent. only of the nominal amount issued. That surely betrays unusual straits, and yet the bonds should be a good investment. Probably a large proportion of the issue will find lodgment in this country and in Germany, but how these railroads are borrowing, to be sure.

Conflicting statements reach this side with regard to the new move of the Carnegie Steel Trust monster, entered upon with a view to dump its products, unsaleable at home, on European—principally upon English—markets. One story is that the controllers of the trust are moving the railway companies to reduce their rates by 50 per cent. on iron and steel destined for export, and another says that an actual reduction of 20 per cent. on the railway charges has already been made. Perhaps that 20 per cent. is not enough, and before all is done we may see the railways, which are in the hands of much the same gang, carrying the metal to the sea shore for nothing, and giving a bonus to help the Steel Trust dividend for the privilege of doing the work.

Quite the latest news about the steel dumping arrangement is to the effect that the railroad and iron and steel manufacturing bosses have arranged amongst themselves for a reduction of 33⅓ per cent. in the railway rates on steel billets, bars, and 150 other manufactured articles. Domestic consumers will still have to pay the full rates. What rebate will be given on steel rails for export has not yet been settled, but has been remitted to a special committee to meet in the second week in December. We suppose the United States people like this kind of thing. They enjoy protection so much.

In his able and interesting report on the business outlook in South Africa, Mr. Birchenough ventures upon the statement that African imports this year will exceed those of India. Probably this is true enough, but how are these imports going to be paid for if they continue on anything like this inflated scale? It is all very well for a creditor country to import more than it exports, but countries like Cape Colony, the Transvaal, and Natal, which are manacled by debts beyond all others, cannot go on importing to amounts enormously in excess of their exports without somebody suffering.

Just as we expected, the discontented Cedula bondholders were unable to beat the Council of Foreign Bondholders. There is no backbone in these malcontents and never was. A few faithful men stand out when some iniquity is about to be perpetrated, but they never get support from the general run of victims whose one aim is to save something out of the wreck, no matter how little. Mr. W. H. Bishop, always to the fore against sneak thieves, stated some pertinent facts at the meeting of Buenos Ayres cedula bondholders held on Wednesday, but nobody absorbed them or grasped their meaning. Amongst other things he said that $36,000,000 had been invested in buildings in Buenos Ayres, and the arrangement now concluded by the Council means a robbery of capital amounting to between 70 and 80 per cent. of the amount of the cedula debt, partly created to erect these buildings. It is an iniquitous arrangement, shameful alike for the inhabitants of Buenos Ayres province and for those who negotiated it. We have said that before, and are sick of saying it.

A terrible misfortune has overtaken the late directors of the St. James's Restaurant, Limited. When in January last the property and goodwill of the company were sold to a certain P. and R. syndicate for £75,801, it was agreed that a further sum of £1,000 should be paid to the board for loss of office, making £76,801 in all. Such amount was duly forthcoming, and the directors had "blown" £833 of their thousand when they were paralysed by an opinion of Counsel that the payment was ultra vires. So the board issues a pathetic appeal to the shareholders to let them have the cash, at the same time intimating that anyone who objects will get such proportion of the £1,000 as his holding bears to the ordinary share capital. Being unable to define the limits of proprietors' generosity, we can offer no advice on the subject, but we are not surprised that certain shareholders point out that the total ordinary dividend paid by the company since its inception is 2½ per cent., and express the opinion that all monies should go to the luckless individuals who made such an unfortunate investment.

It is hardly to be supposed that anyone could be foolish enough to deposit money with pawnbroker Cochrane's "Royal British Bank," but in case one or two individuals have thus given evidence that they should be put under restraint, we make known the fact that the head office of this extraordinary institution, at Tower Royal, Cannon Street, will be kept open daily until 6 p.m. for the convenience of those wishing to withdraw their deposits. Likewise is it gratifying to learn that the usual fortnight's notice required from a certain class of depositors will also be waived, in order that no one need be kept waiting for his money, and after Mr. Justice Darling's observations in a recent law suit to the effect that the business was not honest, the whole thing was very unsatisfactory, and that certain shares had been disposed of by fraud, there should be no hesitation in taking advantage of the offer. At the cost

of a little trouble it ought to be possible to set aside any purchases of shares as well.

A rather interesting item of news became public on Thursday. It was to the effect that Professor W. A. S. Hewins had resigned his appointment as director of the London School of Economics, in order, at Mr. Chamberlain's request, to undertake certain work, no one yet knows what, in connection with that singular organisation the Tariff Reform League. By the way, we are rather interested in the question of payment for all these services rendered. Does the ex-Colonial Secretary intend to foot the bill himself, or will public funds be requisitioned, on the plea that it was all for the salvation of the Empire, should he succeed with his raging tearing propoganda in misleading the public into a ruinous fiscal revolution. We are getting on if private M.P.'s are to be allowed to stump the country with fantastic schemes, and then dip into taxpayers' pockets to pay the cost of disseminating their heresies.

The story goes that an American syndicate is taking the affairs of defaulting Honduras in hand, and we should not wonder were it true, for these Yankees are at present capable of syndicating moonshine. But that good will come to Honduras bondholders out of the efforts of any syndicate is more than doubtful, unless the combine is powerful enough to impel the great imperial Theodore Roosevelt to send an ultimatum to the Honduras President, and follow it up by an annexation of the mahogany forests, mineral and other hidden wealth the country contains. What is Honduras going to get from a syndicate whose first care is the interests of the defaulting bondholders? It is quite happy, has paid nothing for a generation on its foreign debts, and does not recognise these debts as in any way a moral obligation. Candidly, we sympathise with that view, and would regard it as an iniquity to saddle the people with obligations created by a liberal display of chicane. No doubt if some straightforward scheme could be arranged for the development of the Republic's resources, and the bondholders invited to share in its benefits, there might be something ultimately for them, but they would have to subscribe fresh money first. Is that the secret behind the deal?

"I am jealous of the hour when we shall begin to shovel the dirt." Thus spoke Mr. Shaw, Secretary of the Treasury, when describing the glories of the Panama Canal that-is-to-be, to the New York Chamber of Commerce. But while he thinks only of dirt, pure and simple, there are many honest politicians who echo the thought while dreaming of boodle, another kind of dirt.

As an alternative to the Port of London Bill of the Government, which is threatened with much opposition, the directors of the London and India Docks Company are giving notice of their intention to bring in a Bill dealing with the Port question on the lines of the scheme communicated by them to the members of the Mansion House Committee last year. The Company's Bill will provide for the continuance of the existing administration of the Port, subject, however, to certain control by the Board of Trade which will ensure the deepening of the river and the provision of dock accommodation as required. Like the Bill of the Government, the Bill proposes that all goods entering from foreign ports shall contribute to the upkeep of the port, but it is more favourable to traders inasmuch as it proposes to exempt transhipments, coastwise goods, and exports, and to make considerable concessions in the present dues payable by shipowners. The risk of any possible injury to trade from excessive rates is safeguarded by a provision for the limitation of the dividends of the companies. The Docks' Company claim under their scheme that no ratepayer's or taxpayer's money would be needed, that the competition of a rate-aided body with the private wharfingers would be avoided, and that there would be no necessity to raise the enormous capital required for the purchase of the docks—a financial operation which if even practicable at the present time could only be carried out on onerous terms to the purchasers and with much disturbance of the money market. The directors of the London and India Docks Company have also given notice of a Bill to apply the Railways Acts to the dock railways in order that through rates, exclusive of cartage may be quoted to the public. At present the railway rates charged for conveyance from the docks include charges for collection, varying from 3s. 9d. to 6s. 8d. a ton, which are paid by the trader taking his goods from the docks and press hardly on him. The docks' company have hitherto been unsuccessful in endeavouring to obtain rates from which collection charges are eliminated, because their railways have been held to be in the nature of private sidings.

TRADE AND PRODUCE.

Wheat.—The tone of the market continued weak for a day or two, but improved later under the influence of good American advices. Yet business remains about as dull as ever. Spot parcels have occasionally been held for more money, and futures have been decidedly firmer generally from ¼ to ⅜ dearer on the day, but buyers have not responded to the improvement, and have acted with great caution. English wheat at Mark Lane has been offered sparingly, good prices being given for sound grain, and foreign, slightly easier for a while, has hardened again. Farmers' deliveries for the week were 43,045 qrs., at an average price of 26s. 6d., against 41,897 qrs. last week, averaging 26s. 4d. American markets have been fairly steady, fluctuating only within narrow limits, and with a bullish tendency on the whole. Bradstreet estimates the quantities in sight east of the Rockies at 52,882,000 bushels, against 49,269,000 in the previous week, and 69,630,000 bushels in the same week last year.

Wool.—Except that the colder weather has given a slight impetus to manufactured goods, there is little to say about woollen this week. Trade continues depressed, transactions in the raw material being by no means satisfactory, and though the dearness of stocks in the country has so far kept prices up to a high level, a steady bear influence is at last beginning to have some effect, and Colonial wools show a distinct drop. In home-grown wools there is little change, but business is checked by the dearness of the wools.

Linen.—The market seems to have now reconciled itself to a jog-trot sort of business and ceased to expect any great activity for some months to come. Yarns have not changed much since last week, prices have advanced a little, chiefly in tows, but business with Continental buyers is more or less at a standstill for the moment, checked by the advanced lists sent over. Manufactured good of various sorts keep up a fairly steady trade with very little rise in prices as yet, but the high values in yarns and flax must necessarily lead to higher rates for piece goods before long. Nor is there much change to note in the cross-channel and export business. The outside markets are improving, prices a little higher, and with better prospects than have been seen for some time. The United States showing a substantial increase of late.

Cotton.—The receipts from America this week were on a record scale, and the total is now only about 40,000 bales below last season. But notwithstanding this, prices kept on a very high level, though they fluctuated daily with the manœuvres of the American gamblers. For this reason Sir Jacob Behrens and Sons point out the trade generally has not been able to make much headway. The Egyptian demand was also steady, and prices have again been advanced this week. Yarns varied in sympathy with the quotations for raw, and this unstable condition of the market sadly hampered business. Few spinners care to make quotations for the future, and so far as the present demand is concerned, the offers put forward, particularly by the East, were again on an absolutely unworkable basis. In the cloth market the recent improvement continued, and in spite of the eccentricities in the price of raw material a fair business was booked this week, principally in light goods, and bleaching cloths. All the Indian outlets were active, but China has relapsed into its apathetic state, buyers there apparently being satisfied with their recent deals.

In the early part of the week future quotations in America, on the whole, fell slowly, though occasionally the bull interests succeeded in rallying them. The principal causes of the decline were unsettled weather in the cotton belt, and the increase in the receipts, though the disappointing condition of Liverpool and liquidations, also contributed their share. But with a cold wave over the cotton belt, and the absence of the expected strike at Fall River, prices began to advance, and for a time rose rapidly. Sales to realise subsequently unsteadied the market, but its general tendency still remained decidedly bull.

Last night Liverpool closed steady, the spot quotations for American being 6.02d. middling, and 6.28d. M. F., while Egyptian was quieter and slightly down, brown fair being 7⅝d. and F. G. fair 8¾d. Futures were also firm, 5.91d. being quoted for November.; 5.86d. Nov.-Dec., and 5.83d. Dec.-Jan.

Coal.—The continued depression in most of the coal using industries naturally has an adverse effect upon all steam, iron making and manufacturing coal generally, but on the whole matters seem to have improved a little, and the outlook seems more promising. The present cold weather has had a good effect upon house coal, but as yet no great buying orders have been placed owing to the large stocks on merchants' hands still to be disposed of. Shipments continue good, quantities of gas and steam coals being sent from the northern ports, and the Welsh collieries continue as busy as ever.

Copper.—Quotations this week have fluctuated considerably, though only within small limits. There was nothing except the reduction in the price of electrolytic by the Amalgamated to unsteady the market, and the effect of this move soon passed off, yet at the same time the market remained unsettled. No real selling pressure was apparent, but neither was there any evidence of a strong demand by consumers, and the tone of the market at the close of the week was decidedly dull, cash being quoted at £54 7s. 6d., and three months at £55 2s. 6d.

Tin.—Stronger Eastern advices induced the market here to put prices up in the beginning of the week, the rise in silver also having a favourable effect on quotations. But no sooner were they up to a certain point, than a large number of selling orders appeared, which at times wiped out the whole of the day's advance. Still the tone generally was firm, and last night cash was quoted at £117, and three months at £118 2s. 6d.

Iron and Steel.—Throughout the country the pig-iron trade appears to be passing through a period of depression, as the same

cry of stagnant trade comes from Scotland, the East Coast, and Barrow. It is, however, the hematite pig-iron makers who are suffering most, as the foundries turning out Cleveland iron are still busy with orders, and the market could do with a still bigger supply. The manufactured iron and steel trades are dull, and what work there is on hand consists chiefly of old orders which are being finished off. Among shipbuilders those on the Clyde are a little happier, since one or two contracts have been placed with them, but in the North of England and Barrow orders are still few and far between.

TEA.—A decided weakness has been visible in the market this week. Supplies in the Indian market were evidently in excess of demand, and consequently a certain quantity had to be withdrawn, and prices could not be maintained at the late high levels. Common sorts dropped from 1/16d. to 1/4d. per lb., and some of the better grades as much as 1/2d., the average of the week falling to 7.59d., against 7.87d. last week. Ceylon showed the same tendency, and all teas went in favour of buyers. Broken Pekoes were the weakest, falling sometimes from 1/2d. to 1d. per lb., and showing a deterioration in quality. The average for the week was 7.96d., against 8.21d. last auctions. According to Messrs. W. J. and H. Thompson's circular, there is no change in the outlook to justify this weakness, except, perhaps, a smaller demand in the country, and that buyers have made the most of the 17 to 18 millions increase in the Indian crop. A probable reduction in the rate next spring may stimulate consumption a little, and in the meantime quantities brought to auction will be more restricted.

SUGAR.—The tone of the market was quiet all the week, and the variations in prices small. Larger arrivals of raw from Hamburg and resales of November, Mr. Czarnikow states, caused this delivery to fall to 8s. 5¾d., but forward months kept fairly steady at about 8s. 5¾d. Jan.-March, 8s. 10d. May, and 9s. 0¼d. August. Speculation is still little in evidence, and with the statistical position so unsatisfactory, there is no inducement to operate for a rise, though the price of actual sugar is well below cost of consumption, owing partly to the large existing stocks. In cane the dealings have again been insignificant, though what business has been done was carried through at previous rates. In the States the markets are dull, and likely to continue in the same condition so long as the fate of the Reciprocity Bill hangs in the balance. Stocks have been still further reduced, and are now down to 103,000 tons, the landings at the three ports being only 16,600 tons, compared with 26,000 tons melted.

RHODESIAN MINING RETURNS.

There has been confusion in the figures of the Rhodesian output for October. At first they were given as only 14,281 oz., subsequently they were amended to 17,918 oz. The early figures naturally created consternation in the market, for we have to go back to February, 1902, to find worse. However, they show a decrease of 823 oz. on September, and the return is the poorest since February of the present year. And no wonder! For stamps are being hung up everywhere, the latest mines to adopt this policy being the Globe and Phœnix and the Geelong, and it would not be surprising to find others following their example.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Advanced from 3 per cent. on September 3.)

Norfolk House, Friday Evening.

All week the Money Market has been limp with a tendency in both loan and discount rates to recede. Early in the week bankers got 3¾ per cent. for expiring seven day loans renewed, but had to take 3½ per cent. for new money, and by yesterday seven day money of all sorts had fallen to 3¼ per cent. Call loans likewise came down from between 3½ and 4 per cent. to barely 3 per cent. Naturally discount rates followed, and although some houses have manfully struggled to keep the quotation for three months' remitted paper or paper of shorter usance at 4 per cent. as a minimum, business has been done under that figure in all dates of such bills throughout the week, and consequently scarcely any of the current supplies have gone to the Bank. By the middle of the week some houses claimed to have been able to place bills of all dates at 3⅞ per cent., and even leading houses were quoting that rate for six months' paper, while three months' bills were freely taken at 3 15-16 per cent. Yesterday afternoon the quotation for bills of all dates to arrive next week was given at 3¾ per cent.

Why has this sudden change come over the market? Is it any richer than it was when everybody was straining to hear the news that the Bank rate had gone to 5 per cent.? Not a bit of it. The market is poorer both absolutely and relatively. That is to say the nation, through the Bank of England, has again continued to lose hard cash, and although this has been fully disguised by a reflux of coin from the internal circulation and by notes sent back to the Bank, the market has been stripped of credits during the Bank week to the extent of £1,378,000, so that the total of the other deposits is now down to £37,545,000, an amount which portends large applications to the Bank at the end of this month, and a tremendous pressure there at the end of the year. Why, then, has the market altered its mood? Simply because the New York exchange has recovered sufficiently to render it unprofitable for bankers there to withdraw gold from the Bank of England. It has not, however, gone up sufficiently to prevent them from taking all the bar gold that comes into the open market at a price well above the sovereign price, and we have not done yet with the Egyptian demand for sovereigns. In fact, as the end of the year approaches we are certain to see further amounts of our gold coin drawn away, and we cannot afford to lose another sovereign.

The event at the beginning of the week will be the tender for £2,000,000 additional Treasury accommodation bills, or "kites," bringing the total floating debt created in this fiscal year up to £11,000,000. As the bills have only three months to run it is probable that the market will compel the Exchequer, that is to say the taxpayer, to pay about 4 per cent. for the money. Part of the money when the bills are paid for must be used to pay off advances obtained from the Bank of England, for the Treasury is always excessively hard up. That money will not come back to the market. Although credits remained cheap enough to-day, banks getting at best only 3¼ per cent. on seven day advances, discounts were firmer at 3 15-16 per cent. as a minimum, and even bills to arrive commanded 3⅞ per cent. Another export of gold to Egypt to-morrow was the pretext for this firmness, but in reality the market is working rates up so as to compel the Treasury to pay a good price for the money it is to contract to borrow on Monday. Call loans were quoted at 3 per cent. and the India Council, which did lend and got 4 per cent. early in the week, only secured 3¾ per cent. for some renewals for three weeks. Owing to the further advance in the New York exchange it was reported in the bullion market this afternoon that American orders for gold had been again cancelled. Only about £150,000 in bars will arrive next week.

SILVER.

The market for bars has been a very quiet one all week, with a small, steady demand from the Indian Government, which was sufficient to absorb all the silver that was offered. After an initial advance to 27⅛d. per oz., the quotation for immediate delivery stood still until Thursday, when a little inquiry on bazaar account lifted it another ⅛d., making a gain of ⅜d. compared with last Friday. Metal for future delivery was not so much in request, and the price fluctuated more freely, although within narrow limits. It went up sympathetically to 26 13-16d. per oz., but sagged back a fraction or two, then jumped to 26⅞d. per oz., and finally finished 1-16d. below that, with a rise of 5-16d. on the week. Tenders for the Rs.60,00,000 India Council drafts on Wednesday amounted to Rs.4,18,10,000, all in bills, and applications at 1s. 4 1-32d. per rupee received about 16 per cent. Another Rs.60,00,000 will be offered next week.

BANK OF ENGLAND.

Stock Market Notes and Comments.

It is very interesting to notice the swift changes which come over markets. Less than a week ago everything was as gloomy as could be, and volatile minds in the City were sometimes disposed to think that a sudden end of all things would be better than the prolongation of existing misery. As we write everything is sweetly roseate. "We are going to get through the year with a 4 per cent. Bank rate, the Yankees have stopped lugging away our gold, finding it much more profitable to sell the emergency bond issues of their railroads here, and so create credits with which to sustain their own stock markets. In the Kaffir Circus, that Ventures Syndicate has started a "boom," and powerful aid has been duly arranged for in the shape of sensational telegrams about that rich strike on the Robinson Central Deep." The market is, therefore, striving to forget its misery, and to start a fresh gamble. Will the public also forget all the past, the many "rich strikes" of earlier days, by which it has been mocked and cheated out of its money, the monster capitalisation, and again join in the play? It is quite possible, but a little time must elapse, and the market should not be in too great a hurry to load up, especially as it has already a good deal of dead stuff on hand, each man having his little rubbish heap of most interesting shares, which he would but could not sell.

Has anything really altered then? Oh! no, the superficial heave up in the price of Consols and in Kaffir shares —a heave already subsiding—has done nothing to alter essential facts, or to enable the holders of unplaced stock, from Consols and Colonial Government issues downwards, to unload. Underwriters are still sitting on their mountains and hillocks of unsaleable stocks, tightly enough, no doubt, but just as helplessly as ever, and under the surface credit is just as hollow and strained. But we love fictions, and are often led far by them, so that it would not do to count upon the restraining influence of commonsense or the lessons of experience. Should the master players succeed in maintaining a semblance of improving markets, in stimulating an outside interest which is as yet far from existing, they might draw the public in once more, and realise a few additional millions to add to their already legendary "piles." But the prudent man will stand off and sell when the market is at its highest.

Do not misunderstand. All is right enough with genuine mining industry in South Africa, and its recovery from the destructive effects of the war has really been remarkably rapid, especially when we remember how the mine bosses, in their eagerness to show reduced working expenses, tried to force the blacks into the mines at slave wages. Gold, doubtless, exists in plenty, and will be got out in time. The supply of native labour will increase also, time given, but no progress of this kind will ever get over the irreparable injury done to the whole industry by the unbridled and short-sighted greed of these bosses. It is overcapitalisation, monstrous, boundless, insatiable, that lies at the bottom of the whole trouble. Because they have multiplied mining companies at grossly dishonest capitalisations, the mine bosses are driven to every kind of subterfuge in order to beguile the public and hide their crime. That, briefly, is the simple truth, and therefore we always say;—let the water out of the mining capitals before you invest. Furthermore, when the pumps are applied to the market to renew inflation, we say sell what you have got and wait. Let these company promoters load up and find the capital, the millions of capital, hard cash, still required to open up the ground, and by the time they have done this there may be many mining investments about well worth picking up. To buy on "rich strikes" is to repeat your early follies.

We need not go into other parts of the market this week. It is not yet time to buy Home Railway stocks, although prices have in many cases gone too low for anybody to realise, nor has the day arrived when gambling can be indulged in on the Yankee market.

The Week's Stock Markets.

At the commencement of the week Stock Markets gave no indication that they were about to treat us to one of those spasmodic revivals occasionally witnessed amidst even the worst slumps, Monday being no different from many weary days recently passed through. Outside business, as usual, was practically at a standstill, and as the Yankee demand for gold was increasingly acute, causing gloomy talk of dear money throughout the closing weeks of the year, prices were generally inclined to give way. By Tuesday evening, however, there were faint signs of returning animation, owing, it was said, to a slight hardening of the New York Exchange, which for some reason was supposed to have scared "bears" almost to death. Buying was attributed to the Continent, and, under the lead of Consols some really comfortable looking rallies were evident at the close of business. The ball having thus been set rolling, the professionals spared no effort to keep it on the move, and the Stock Exchange was soon in the midst of a sparkling little boom all on its own. Unfortunately for those cheery optimists who were at once ready to predict that we were in for a grand winter display of blazing markets, outsiders showed not the slightest symptoms of losing their heads, and we may be sure that unless the public does come forward with some hard cash, of which it possesses very little, the latest boomlet will prove as evanescent as many that have gone before. Sensible folk have only to ask themselves whether a few days of mounting prices can do anything to remove the multitude of causes responsible for the steady fall in quotations lately witnessed, and answer the question by keeping clear.

A little variety is good for everyone, and, just by way of a change, "bulls" of Consols have had all the field to themselves this week. Nothing happened just at first, but on the New York Exchange coming a trifle firmer, indicating a possible slackening in the calls on our gold supply, "bears" became a little fidgetty, and, almost before it could be realised, the quotation was lifted more than 10s. This unwonted success spurred the "bulls" on to fresh efforts, and prices went blazing away, until no less than 89, or only 11 under par, was reached for our premier security. The movement was attributed to the operations of Yankee "bears," who lately sold on the hope that exports of gold from this side would become important, and thus force quotations down still further. At this level, however, operators seemed a little staggered at their own achievements, and perhaps wondered why Consols were worth 30s. more on Thursday than they had been on Monday. So they pressed them back a fraction to 88 5/8, the gain on the week being just £1. A pretty big business has been done in "call" options, and this did much to help the forward movement. Transvaal scrip raced after Consols, and although of slightly inferior class, lived the pace very well, and closes with a gain of 11-16 on the week, at 2 3-16 discount, after being 2 1/8 discount. Childers 2 1/2 per cent. advanced 1 1/4, and War Loan stock and Local Loans finished 1/2 better. India sterling issues were steadily absorbed throughout, and final quotations reveal gains of 1/2 to 1. The prevailing mood did not spread to Home County and Corporation stocks, and most of the movements were adverse. Hull 3 per cent. fell as much as 2 1/2, foreshadowing, perhaps, an early new issue, and Bristol threes again went back 1. No doubt the high rate offered by the latter corporation for loans—4 per cent. for a certain term of years, with liberty to convert into 3 per cent. at 92 1/2 per cent.—is having an adverse influence on all municipal stocks. Edinburgh 3 per cent. also dropped 1, and Brighton 3 1/2 per cent. 1/2, but Glasgow 3 1/2 per cent. put on 1, and London County 3 per cent. advanced 1/2. Colonial issues are still out of favour, buyers being discouraged by the coming attempts of New South Wales and New Zealand to float loans within the colonies. Ceylon 4 1/2 per cent. put on 1, but Victoria and New South Wales 3 1/2 per cent. dropped as much, and Natal 3 per cent. recovered an early loss of 1/2. The underwriters of the various Victorian issues lately made to convert expiring bonds, will have to take about one-fifth of the total amount offered, not a bad result considering the times and the circumstances.

The Foreign bond market displayed rather consistent strength, but was quite devoid of important incident. Argentine bonds continued in favour, and despite a small reaction on profit taking, finish with small gains here and there. These issues now look high enough. Brazilian securities also met with modest support and Chilians went up on the budget statement. Some attention was paid to Central American defaulting rubbish, Honduras bonds being pushed up on talk of certain financing proposals of an American syndicate. Colombians advanced 3, and the story now is that the United States will make a monetary grant of £2,000,000 to the Bogota Government on account of the Canal rather than risk a row. Salvador and Venezuela "securities" shared the improvement. European stocks were exceedingly quiet, but the Paris bourse was firm, and movements were usually upward. They included a rise of 1 in Russian 4 per cent. on the growing belief that the complications in the near East must lessen the danger of a rupture with Japan. Spanish were exceptionally dull and easier. Japanese bonds were favourably affected by the more pacific outlook, and the new 5 per cent. gained 1. Chinese bonds stood still throughout the week.

Home Railway ordinary stocks were depressed by a variety of causes, amongst others being the revival of the reports that several of the companies will be forced by their necessities to issue fresh capital almost immediately, and gloomy forecasts of reduced dividends in January next engendered by the poor traffic returns and the unpromising outlook for the winter trade. Last week's traffic returns were also expected to be bad and prices consequently dwindled during the early part of the week. The majority of the companies, however, made a better showing than was expected, and when Consols rebounded on the cessation of the American demand for gold, this market followed suit with sharp recoveries, and although the strength was not maintained long the list closed with a few substantial improvements. Brighton deferred advanced as much as 2, together with South-Western deferred, and Great Northern deferred put on 1 1/4. South-Eastern deferred finished with a gain of 1/2 at 47 1/2 after touching 48 1/2. One of the companies mentioned as likely to need more money—the Lancashire and Yorkshire—closed unaltered, and another—the Caledonian—showed a loss of 1 in the ordinary and preferred, but in its case there

was an additional adverse influence at work in the condition of trade on the Clyde. North British issues were also affected by the latter report, but the preferred was ½ better at the close. North-Eastern and North-Western lost ½ and so did Midland preferred. Amongst Underground stocks Metropolitan improved 2 and City and South London declined 1.

Selling orders from Wall Street caused Yankee Railroad shares to open flat on Monday, and the return of the New York Associated Banks, although less unfavourable than had been expected, was practically ignored. Covering purchases, however, set in later in the day, and have continued in greater or less degree throughout the week. Attention was chiefly devoted to Atchison, Baltimore and Union Pacific issues, and in the joyous delights of a "bear squeeze" prices were forced up in a substantial fashion. Atchison ordinary rose 2¾, Baltimore ordinary 3¼, and Union Pacific ordinary and preferred 2¾ and 1 respectively, although early in the week the last named had been driven down heavily. Louisville put on 2½, New York Central 3, Southern common and preferred 1¾ and 3, and Wabash preferred and income debentures 3½ and 3. Chesapeake and Milwaukee rose 2, Illinois Central 1½, Norfolk common 2½, and Southern Pacific 3¼. Pennsylvania gained 2, Denver common advanced 1½ and the preferred 2½, and Erie ordinary and first preference put on 1¼, and Reading ordinary were 1 higher, but the first and second preference lost 1. The Continent is believed to have taken up a very large proportion of the £1,500,000 of two year 5 per cent. bonds issued by the Great Northern (U. S. A.) Company, which were privately offered for subscription at 99½, and the price has risen to par. Following on this was a report that Messrs. J. P. Morgan and Co. had taken under contract the £10,000,000 debenture bonds of the Lake Shore and Michigan Southern Company and had placed a large block of them abroad.

Canadian Pacific Railway shares as usual followed the fortunes of their American brethren, and after various fluctuations closed with an advance of 2 on the week. Grand Trunk stocks were bought in anticipation of a favourable traffic return, and as the figures proved satisfactory the improvements were held until near the end. Just at the close there was a slight reaction, but the final figures show gains of ⅞ in the ordinary, 1½ in the first preference, 1 in the seconds, and 1¼ in the thirds.

In the Foreign Railway section Argentine stocks continue to receive a considerable amount of attention, and Rosario issues especially have been well supported. Most business was recorded in the ordinary, but the price only improved 1½, while the deferred stock rose as much as 5. The preference stock put on 1, Buenos Ayres Western gained 3, and Buenos Ayres and Pacific ordinary 4. Cordoba and Rosario issues advanced from 1 to 3, Cordoba Central preference was 2 up, and the 6 per cent. debentures 3 higher, and the first and income debentures 1 and 1½ better. Bahia Blanca and North-Western preferred rose

2, East Argentine 2, Argentine North-Eastern ordinary debenture stock 1½, and Argentine Great Western ordinary 1. Other South American lines were less sought after, while Central Uruguay of Monte Video ordinary improved 3. Arauco mortgage bonds fell 1½ and 3. Mexican Railway stocks moved in a languid fashion, now up, now down a fraction, but ended 1 better for the first preference, and ¼ up for the ordinary.

The Miscellaneous Market could not make up its mind at first to join in the boomlet going on elsewhere, but decided to take a hand towards the close of the week, and lifted favourite counters with some uniformity. P. and O. deferred provided the most sensational movement, the maintenance of the dividend and bonus at 13 per cent. for the past year coming as a pleasant surprise to the market, after the rather gloomy tone of the interim report published in June last. A rapid advance in quotations followed the announcement, the deferred stock recording the big gain of 25½, making the price 225. Other changes seem quite insignificant beside this one, but one or two substantial advances took place in Waterworks, West Middlesex rising 10, Southwark and Vauxhall 2, and East London 9. Welsbach were bid up on the expectation that the appeal against the reorganisation scheme will soon be heard, and that it will meet with the same fate as the Allsopp opposition. Gas Light preference rose 2 on an investment demand, but the ordinary was unaltered. South Metropolitans rose 1. Oil shares continue strong, particularly Russian ordinary, which are now up to 1⅜, or a rise of ¼ on the week. Cotton shares displayed early weakness, particularly Coats ordinary, which were sold by investors, but a recovery set in before the last. Most Iron and Steel things were harder, and it is said that the boom-inspired South Durham Company may pay its preference dividend. Amongst Meat securities, Nelsons fluctuated within narrow limits, and leave off 1-16 up. Spiers and Pond recovered sharply to 7, and Lyons, Aerated Breads, and Harrods were steady. Gordon Hotels continue dull, and most of the changes in the Brewery division were adverse. Dock stocks were heavy, Millwall 4½ per cent. preference falling 5, and London Docks preferred and deferred each 1.

Markets closed dull, the "bears" having finished their buying back, and no public coming forward. Kaffirs, however, opened higher, on the news that the reports of the Transvaal Native Labour Commission will be issued on Monday. There are two and the minority report, while admitting the inadequacy of the supply of native black labour, suggests a solution of the difficulty in the employment of unskilled white labour. Nothing can be done until the so-called legislature decides, and it does not take the matter up until the end of the month. Prices did not give way much anywhere, but markets are sick and overweighted, and none the more elastic because so many "bears" have closed.

MINING NOTES AND NEWS.

Again we have very little to say about the mining market, for nobody, not even the most desperate speculator, is in a mood to do anything, though "bears" are getting a bit scared. We are all still anxiously awaiting the publication of the report of the Labour Commission, which is cursedly long in making its appearance, and in the meantime we hardly know how to pass away the dragging hours. Eyes are fixed from time to time on the price list, but quotations are exasperatingly lifeless, scarcely a movement amongst the solid lot. The heaviness of the surrounding environment has been less oppressive this past day or two, for symptoms have made their appearance pointing to no immediate rise in the Bank rate, whilst Consols have roused up a little. But though fears and forebodings have thus, in some slight measure, been dispelled, we cannot say we are truly cheerful in spite of De Beers' prosperity, and a subtly-phrased speech from the redoubtable Carl Hanau. Not even the further cable from the Robinson Central Deep, containing fresh particulars of the recent wonderful strike, has stirred our blood, for the public are still indifferent to all such incitements and temptations. In the early part of the week Rhodesian shares fell heavily on the publication of the figures for October, the tremendous shrinkage in the output leaving the market dumb with amazement. However, the return proved to be incorrect, and amended figures were subsequently cabled over, and though prices have picked up since, the market has not thoroughly recovered from the early blow. Simmer and Jack Wests

have been prominent on the strike of the reef, and Northern Coppers are said to have been bought freely by the Continent.

West Australians have been quite subdued, for all the energy displayed in recent weeks has not met with the slightest success in bringing in the public, unless to sell to the manipulators. As professional support has necessarily fallen off—for "shop" resources are not inexhaustible—prices have drooped, though the decline has not been serious. Every effort has apparently been made to avert any such event, and it will be interesting to watch for how long such efforts can be effective.

A stranger has appeared in the Egyptian market in the shape of the paper of a concern called the Sudan Exploration, Limited. The shares have been introduced at £2, that is, at a premium of 300 per cent., their nominal value being 10s. No information about the company has been given to the public, except through the medium of an article, with the vaguest of particulars, in Thursday's *Financial News*, and if the public have any sense they will not touch the stuff until more definite and precise particulars are forthcoming. If insiders think the shares so valuable, let them keep them, but the offering of them at such fancy prices is evidence that they would be only too glad to get rid of them. Are the promoters afraid of publishing further particulars? It looks like it. Otherwise the Egyptian market has been without interest.

West Africans and miscellaneous shares have been inactive, but on the news that the Rio Tinto strike was ended, Tintos and other copper shares immediately recovered from their early weakness.

Nourse Deep.—This Wernher-Beit company managed to get sufficient labour to enable it to run 70 stamps out of its 100 stamps during the twelve months to the end of July, the total ore crushed being 120,742 tons. This gave a yield from all sources of 49,377 oz., at the rate of slightly over 8 dwts. per ton, an increase of 2 dwts. over the previous year, and realising £207,085. Deducting cost and making no provision for depreciation, the credit of £38,504 is carried to the appropriation account. The unappropriated balance of £26,662 is brought in, and after debiting this account with £14,855 called up on South Nourse shares, £7,372 spent on capital account, £2,209 for Transvaal Government taxes and smaller sums, £40,029 is carried forward. Floating liabilities total £16,605, with contingent liabilities of £91,116, the former, though not the latter, being well covered by available resources. The company's holding of South Nourse shares numbers 102,332. Ore reserves at the end of the financial year were estimated at 494,310 tons, of which 149,057 tons were in the main reef, 30,236 tons in the main reef leader, and 315,017 tons in the south reef. Naturally there is the usual complaint in the report of the scarcity of native labour, which has necessitated drawing upon the ore on the surface dumps. "It has not been possible, working under these conditions, to obtain a grade of ore in keeping with the past records of the mine," which is truly sad.

Langlaagte Deep.—This is another Wernher-Beit speciality, the report and accounts of which are issued to the end of July. As many as 80, out of the 120 stamps, were run during the year, "the cause of which," it is explained, "has been the continued scarcity of native labour, which, in order to carry on and maintain even this scale of operations, made it necessary to confine the underground work to the most accessible places, and to break about 97 per cent. of the ore mined with machine drills; it was also deemed advisable, under the circumstances, to suspend all sorting operations after October, 1902. These methods of conducting the work have resulted in the largest possible ore output, but at the expense of the grade, and in consequence it has not been possible to obtain the average profit results that the past records of the company show." The total ore crushed was 144,099 tons, and the production 51,471 oz., at the rate of 7 dwts. per ton, which is a slight decrease on the yield of the previous year. This realised £215,908. Working expenses, which include nothing for depreciation, totalled £171,931, leaving a profit of £43,977 on mine operations. After deducting £18,004 for interest, the credit balance is reduced to £25,974, carried to the appropriation account. The latter is then credited with the sum of £509,504, which is the "capital expenditure in excess of working capital provided, as per balance-sheet, July 31, 1903, retransferred," but it is debited with the old balance of £612,630, with £2,972 for Government taxes and £484 as the balance of supplementary expenditure and revenue account for the period from the closing down of the mine to the recommencement of milling in January, 1902. Accordingly, a reduced debit of £80,608 is carried to the balance-sheet. To its parent company, the Rand Mines, Limited, no less than £251,850 is owing for advances, with £9,789 to sundry creditors, and £7,011 to the bank, the liquid resources being practically nil, with the exception of a gold consignment account of £12,314. However, the pockets of the shareholders are full, and though there has been a recent issue of 100,000 reserve shares at £4 each, bringing in £400,000, the directors have been given permission to increase the capital by another 50,000 shares. They are patiently awaiting a "favourable opportunity."

Montrose Gold Mining and Exploration Company.—The report and accounts of this South African concern are issued to the end of April last, and during the period of twelve months they cover the directors managed to reduce the debit balance from £32,488, to £30,380, so presumably a kind of progress has been made. Gross revenue totalled £4,489, of which £2,489 came from interest and transfer fees, £37 from rents, and £1,963 from the sale of "investments," and from options. These investments are evidently South Randfontein Deep shares, the report mentioning the fact that a further number of these have been sold "at a substantial profit." Expenditure absorbed £1,154, and exchange and interest, £17, leaving a profit of £2,108. "The work of repatriation, the allocation of some millions of money by the British Government to the development of the Colony, say the directors, with undisguised glee, "and the initiation of a stable Government have added materially to the value of the landed and other interests in the Transvaal. In this increased value the company participates, but the directors, following their policy of past years, have not written up their assets to their real value. They remain at their previous valuation." What commendable restraint! The company's interests in the Central Montrose Estate and Gold Mining Company have disappeared from the accounts, the loan to that concern, together with the arrears of interest having been paid off, and the shares transferred. Since the last report the name of the Transvaal Diamond Mines, Limited, has been changed to the Montrose Diamond Mining Co., Limited, and the capital increased from £50,000 to £70,000, in order that work might be restarted and the property thoroughly explored. It is announced that the directors have been approached several times with a view to purchase the unissued capital of the Montrose Company, but up to the present have not thought it advisable to accept any of these offers. The shareholders may naturally be curious enough to know why such offers have been made, but the directors say no more. The company has disposed of its interest in the Montrose farm to the Central Montrose Company "to advantage." Out of an authorised capital of £150,000, £91,625 has been issued, and at present there is displayed a plenitude of riches in the shape of cash, or its equivalent.

Rhodesia Gold Fields.—The accounts of this company cover the year 1902, thus they make a tardy appearance, the directors offering no excuse for the delay. The report itself is so brief that it could be composed comfortably in a quarter of an hour, so there has been no unusual demand upon their energies here. They merely say there was no revival in business in Rhodesia during 1902, and that the general stagnation continues, "but with the expected settlement of labour difficulties, there should be an immediate improvement." Precisely to what date the word "immediate" applies is left to conjecture. Nevertheless, the directors have made such and such a profit, say they. Let us take a look at that profit. Gross revenue totalled £41,382, consisting of £16,351 as agency fees, £7,655 representing dividends, interest, transfer fees, etc., and £17,376 profit on the realisation of securities. What the latter were is not disclosed, but they are evidently a portion of the "investments" valued in the balance-sheet at £600,353. At the end of December their market price was £453,261; in other words they had depreciated to the extent of £147,092, which exceeds the reserve of £125,150, and the net profit of £12,776 shown in the profit and loss account, this profit being "subject to any loss arising from depreciated value of securities." For the heavy loss shown, however, no provision has been made; the investments are valued at cost; the reserve stands intact—it is evidently dispersed amongst this and the other assets—and, what is more, the directors are paying the usual interim dividend on the preference shares to June, 1903. The auditors naturally take exception to this, pointing out there is no fund "out of which a dividend could strictly be paid." Of this opinion the directors take due note, but waive it aside as of no importance, because they regard the depreciation "as of a temporary nature," and have "in view what they believe to be the best interests of both classes of shareholders." The value of that belief can be measured, not only by sound financial principles, but by the fact that since the date of the accounts, the depression in the Rhodesian market has deepened, and seems to be deepening, for stamps are still being hung up, and the output is gradually falling off. Therefore these same "investments" must have depreciated more heavily this current year, and were the loss boldly faced, there would be a wonderful transformation in the balance-sheet. Cash totalled £2,450; £35,043 was out on loan, other debtors owed £29,292. against creditors for loans, £44,067; creditors on open account, £58,523, and bank overdraft, £2,952, to say nothing of contingent liabilities amounting to £86,191. In other words, the liquid assets outside the investments, after deducting the £6,000 for dividend, are insufficient to cover the floating liabilities by £43,857. What about the contingent liabilities? And what is the use of having auditors if their opinions are to be ignored in this fashion?

Charterland Goldfields.—In their report to the end of June, the directors bewail the depression that has plunged the Rhodesia market in misery during the twelve months, a state of things from which this company has suffered, more especially as it has recently abandoned development work for what is called financial operations. "The conditions prevailing in South Africa and the state of the market at home have prevented the possibility of floating successfully any new company, and the board has, therefore, been obliged to relinquish, for the present, the formation of a mining company to acquire and work the Old Nick property. It has also not been possible to advance any further with the Boston property, but the option on it has been renewed, and the board hopes to be able to deal with it, should a good opportunity present itself. For the same reasons it was not considered expedient to undertake any new development work upon the remaining claims which the company possesses in Rhodesia. Inspection certificates on all the claims (amounting to 1,420 in number) have been taken out, and the proper maintenance of beacons has received attention." The principal credit item in the profit and loss account is the following, notable for brevity, though not for lucidity:—"Profit on sales of shares, less depreciation written off; dividends and interest on deposit and loans, £20,165." From several other sources the directors scooped in £1,602, the gross income, with the trifle from transfer fees, being £21,861. Deducting outgo and depreciation on fixed assets, a profit of £8,659 is left. As a debit of £48,618 was brought in, it is reduced to £39,959. However, the company can display quite a fine exhibit of liquid resources.

British Lomagunda Development Company.—A cheerless report is issued by the directors of this company for the twelve months to the end of August. Not only was no work done on any of the properties during that period—the reasons for which are not given

—but several claims have had to be abandoned. In consequence of the expiry, on June 30, of the terms of free inspection granted on the company's claims, the directors had the various blocks examined by Mr. H. E. Jones, A.R.S.M., M.I.M.M., consulting engineer to the Rhodesia Exploration and Development Company, with a view to the abandonment of those claims the prospects of which did not warrant the expense of further protection. As a result of Mr. Jones' report, and on his recommendation, the board has abandoned some 45 claims, leaving the company's schedule of properties standing at 160 claims n the Lomagunda and Mazoe districts, one stand in Salisbury, and one farm near this town. Dividends on Consols yielded £489. Expenses have not been heavy, but as £4,361 has been written off Consols, the profit and loss account shows a loss of £4,783, which has to be added to the old debit of £3,453. Cash is merely £19, just enough to put in a small watch pocket, and current liabilities total £1,728. £19,600 of Consols are valued at £17,640. The report of the directors is very brief, giving the shareholders but a faint idea of prospects. They are to make what they can of the fact that the directors have been approached with reference to the sale of the farm and stand, but declined to entertain the terms suggested. "If, as is probable," they add, "the proposed Mazoe Railway passes through the farm its value will be materially increased, whilst the growing importance of Salisbury should give an added value to the stand." Meanwhile the debit balance promises to grow.

Rezende.—During the twelve months ending June 30 this Rhodesian company sold 17,938 oz. of bullion for £50,782 net, and 142 tons of concentrates for £3,585 net, other receipts, including stock of ore, producing £2,138, which has given a profit of £10,701, the directors allowing about 5 per cent. for depreciation, and 5s. per ton for redemption of development. After allowing for administrative outgo, travelling expenses, interest, etc., the net profit is £8,310, but, it is stated, this is subject to the further remuneration of the directors, a sum equal to 5 per cent. of the amount from time to time distributed as dividend. An old credit of £9,359 increases the aggregate to £17,669. Against liabilities totalling £28,258, the company possesses only £79 in cash, with debtors down for £272, and bullion in hand valued at £16,654, so dividends look some distance off.

Ivanhoe South Extended Gold Mining Estates Company.—This last week or so the shares of this company have attracted attention by reason of an important rich strike at a depth of nearly 2,000 ft. As the report and accounts are brought no nearer to date than June 30, there is naturally no mention of this strike, which seems, however, to have a connection with the following paragraph in the report of the general manager:—"From work done at the 800 ft. level, and the results of the boreholes, I am of opinion that a third borehole should be put down from the same starting point as the others, to touch the east boundary at a vertical depth of 2,000 ft., about 200 ft. south of the north boundary. By this means we should be able to prove the continuance of the lode met with in the other bores, also the westerly underlay. The prospect of getting the Ivanhoe middle lode at a depth is feasible, and should it be realised, the value of our property will be considerably increased. At present the leases can be looked upon as occupying a very good and promising position, and are well worth prospecting thoroughly at depth." It is possible thot what has been struck is the Ivanhoe middle lode, and, if so, the importance of it will be great. The only income during the year comprised £1,781 from interest on loans, £202 from the sale of salt water, and £112 from transfer fees. After deducting expenditure, depreciation, etc., the debit is increased from £7,155 to £16,123, so that a strike of some kind is sadly needed to liberate the company from its burdens. Floating liabilities are nothing to speak of, cash totals £271, but loans amount to £36,500. At the close of Monday's meeting an extraordinary general meeting is to be held for the purpose of increasing the capital to £200,000 by the creation of 50,000 additional shares.

Ivanhoe Junction Gold Mining Company.—This company sontinues to pile up its debits, for during the six months to the end of July 1 the adverse balance was increased from £24,513 to £27,043. It is a West Australian no-liability concern, and the report states that the fifteenth call of 6d. was made payable in March last, and the sum derived therefrom, with the small income from the sale of water, has been sufficient to pay the costs of development and management for six months. Judging by the poverty-stricken condition of the balance-sheet, such calls are likely to continue indefinitely.

Scottish Australian Mining Company.—This company's sales of coals during the six months to the end of June amounted to 151,221 tons, realising, including miscellaneous receipts, the sum of £65,898. The net profit, after allowing for all outgoings, is £4,904, including £502 brought in. A dividend at the rate of 3 per cent. per annum is paid, requiring £3,750. leaving £1,154 to be carried forward, the directors allocating nothing to reserve this half-year. The financial position continues strong.

Kelly's Queen Block Gold Mining Company.—In the past half year this company crushed 156 tons for a yield of 126 oz. 12 dwts., the gold realising £446, and the residues £26. A sum of £469 was received in royalty from the tributers. Financially the company is in a very weak position, and prospects of a resumption of dividends are remote.

Mount Zeehan (Tasmania) Silver Lead Mines.—A good report is issued by this company for the year ending June 30, sales of ore realising £60,548, receipts from tributers bringing in £1,585, dividends on Zeehan-Montana shares, £2,810, with £238 from interest on deposits and transfer fees. Depreciation at the rate of 10 per cent. has been allowed for on plant and machinery, but nothing has been written off buildings, tramways, and other wasting assets. The net profit is returned at £24 697. which is £5,620 in excess of the previous year's. After deducting the 20 per cent. preferential dividend, there is £16,415 available, and being equally divided between the ordinary and preference shares allows of a distribution of 3s. 8d. per preference share, and 1s. per ordinary share, 50 per cent. of which on each class is to be paid after the annual meeting, and the balance in the middle of January next. Prospects on the whole are spoken of as promising.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Delhi Umballa Kalka Railway.

This undertaking continues to progress in a very satisfactory manner, the total receipts for the twelve months ended June 30 being Rs.1,49,230 higher at Rs.19,57,877, compared with the preceding year, itself a prosperous period. The advance is mainly due to the large traffic caused by the Coronation Durbar held at Delhi in January last, the importance of which will be gathered from the fact that the receipts for the corresponding period were largely swollen by the heavy pilgrim traffic to and from Thaneswar on the occasion of the Solar eclipse in November, 1901. Goods traffic handled was 280,262 tons, or 66,421 tons more than in 1901-2, notwithstanding that the quantity carried that year was the largest tonnage passed over the line up to that time. Principal gains were in general merchandise, and military stores and coal also continues to do well. Working expenses are fixed at the rate of 48 per cent. of the total income, and after meeting these, and general charges in London and India, the net balance is £66,470. From this debenture interest absorbs £12,000 and various small adjustments having been made, the sum for disposal is £52,070. The directors have already paid an interim dividend of 2½ per cent., and now propose a further payment at the same rate, making 5 per cent.. in all, or ½ per cent. more, with a big advance from £25,238 to £37,309 on the balance carried forward. Compared with two years ago, the improvement in the dividend is 15s. per cent., and the company now pays 5 per cent. for the first time. According to the report of the Kalka-Simla Extension, the amount of capital expenditure to June 30, including interest during construction, was £801,089. Work has been pushed on vigorously, but there still remain to be done some additional breast walls in cuttings, which the recent monsoon has shown to be necessary, the deepening of part of the Barogh tunnel, rail laying from mile 60 into Simla terminus, providing gangways to galleries, certain road bridges and crossings, and sundry other works. The board had looked for the opening of the line throughout at the beginning of October, but an outbreak of cholera and some damage caused by the monsoon occasioned delay. Again the estimated probable cost of the line has been revised, and is now stated at Rs.1,51,73,334, exclusive of the extension to the Tonga terminus in Simla, against last year's estimate of Rs.1,15,00,000, and the original figure of Rs.87,00,000, all which is cheerful news for the unhappy Indian tax-payer. Naturally more money is wanted, and in order to secure the advances made by the Secretary of State, proprietors will be asked to increase the borrowing powers of £500,000, sanctioned at the last meeting, to £650,000.

Bengal Dooars Railway Company.

This company's interim report for the six months ended June 30 sets forth a very satisfactory condition of affairs. Gross earnings went up Rs.6,635 to Rs.1,14,167, compared with the corresponding half of last year, while the big sum of Rs.11,428 was saved in expenses, the percentage to total income being the extraordinarily low one of 34.93 per cent., a decline of 12.79 per cent. And this despite the fact that extra expenditure was included for the renewal of sleepers. The improvement in coaching was Rs.2,029, chiefly due to the development of third-class passenger traffic consequent upon the opening of the extensions. Goods advanced Rs.4,573, mainly general merchandise, coal and food grains being up, and metals and salt down. After deducting Indian income-tax, the net balance was Rs.72,352, and realised £4,823, to which is added £10,768 brought forward, making a total of £15,591. Adjustments of interest, etc., absorbs a small sum of £184, and as the directors restrict the dividend to the usual 1½ per cent., the balance forward is £13,157, compared with £8,582. The last section of the extensions was opened for traffic just before the end of the half-year, but had to be closed again almost immediately, owing to floods having breached the line. The repairs are now being carried out, and traffic will, it is hoped, be resumed shortly. Traffics on the main line and extensions show important increases to date as compared with the same period of 1902, chiefly owing to the heavy traffic in tea.

Anglo-Egyptian Bank.

This bank continues to prosper, and in the twelve months ended August 31 increased its gross profits about £5,000 to a total of £135,687, compared with the preceding year. Expenses, however, went up about £3,200 to £42,513, so that the gain to net revenue was reduced to £1,839 at £93,174. Balance brought forward, £15,000, was the same, so the dividend will again be 10 per cent., reserve fund receives a further £50,000, making it £350,000, and after adding the rather smaller sum of £1,174 to the staff provident fund, the balance carried forward goes up £2,000 to £17,000. A further sharp increase to £2,462,814 is to be seen in the deposit current and other accounts, bills payable have risen

no less than £742,177 to £2,353,291, and liabilities on bills negotiated are only a little lower at £788,205, so clearly the bank's business is increasing. The chief movement on the credit side is in advances and current accounts, which have gone up £773,549 to £3,645,088, indicating, let us hope, a booming Egyptian trade. Bills receivable are £429,046 higher at £1,270,188, investments are slightly lower at £243,770, and cash has improved about £20,000 to £420,233. Altogether an excellent display.

Dorman, Long, and Co.

This undertaking has not yet derived much benefit from the important interests lately acquired, but dividends have to be provided on the capital issued for the purpose of making these purchases, and the dividend record for the past year is therefore somewhat unsatisfactory. The concern now holds all the ordinary shares of Bell Brothers, but evidently a good deal of difficulty has been encountered in establishing that company's Clarence Steel Works, and they probably did not contribute much to last year's revenue. Then 79,878 shares in the North Eastern Steel Company were acquired at a cost of £259,603, and as the accounts of that undertaking are not closed until December 31, no return from this holding is included in the Dorman Long profits. To make matters still worse the reconstruction of the Britannia steel furnaces and mills has been more costly, and has taken a much longer time to complete than anticipated. This, together with unforeseen difficulties in getting the new machinery into working order, has materially affected profits, these Britannia works, usually the biggest revenue earners, having been entirely unproductive. Net income consequently has only advanced £10,500 to £57,476, compared with the preceding year, while the amount brought forward was no less than £24,500 lower, so that the disposable sum shows a reduction of about £13,000 at £59,897. Therefore, after paying debenture interest and directors' fees, the dividend is reduced 2 per cent. to 4 per cent.—the final payment being 1½ per cent. and the interim 2½ per cent.—with a further drop in the carry forward to £1,812. The current year, however, ought to turn out better because all difficulties have at last been overcome, the Clarence works are actively employed at satisfactory prices, and from now on the North Eastern Steel Company will contribute revenue. The reserve fund of £75,000 existing at the date of last year's accounts has disappeared, £65,861 having been spent on the Britannia works remodelling, £6,594 written off expenses of new share issue, and the balance applied to clear away the cost of opening out the South African agency. Trading accounts are against the company to the amount of £32,614, but finished iron and steel is valued at £136,470, work in progress comes to £62,728, and cash and bills reach £63,804.

Woolwich Equitable Building Society.

Steady progress characterises the operations of this society, and the year ended September 30 was in no way inferior to its predecessors. The total amount invested in mortgages is now £870,510, and of this £609,662 is in sums not exceeding £500, while the properties taken over by the company more than a year ago, only number eight for £2,365, and those where the company had been in possession less than twelve months consist of three for £1,052. Other assets consist of £7,000 in Consols, taken into the accounts at £6,510, or £93 per cent., and £4,875 in £2,500 each of Great Western and Great Northern debenture stocks, and there is also £7,391 held in cash. In addition to this, however, the company has adopted a scheme which we believe to be unique in undertakings of this kind. The directors fully recognised the dangers of any run by depositors in a time of panic, and were also fully alive to the difficulty of providing an adequate reserve to meet any such emergency if the society is to earn a reasonable return on the money invested. An effort was made to induce a bank to enter into an agreement to provide £100,000 if and when required for the purpose of paying out depositors only, the amount to take the place of depositors' funds secured as a first charge upon the general assets, with the proviso for repayment by monthly instalments when the pressure ceased. This plan, however, came to nothing, and it was then suggested that the bankers might be willing to consider it if the sum was guaranteed by the Law Guarantee and Trust Company, but eventually an arrangement was come to with a leading insurance company to assure the sum considered necessary without any other guarantee. The scheme has much to commend it, and might well be followed by other undertakings carrying on a similar business. Coming to the record of the transactions for the twelve months we find increases of £28,000 in the investment share capital, and £14,000 in the preference shares, while cash receipts came to £450,544. Of these funds £195,245 was advanced on 673 separate mortgages, and the net result of the operations, after providing for depreciation and contingencies, was a profit of £35,988, out of which £305 was allotted to borrowers, and £5,414 added to reserve. Then the investment shares "A" maturing during the current year receive a profit of £27 each, the "B" shares one of £5 10s., and a bonus of 1½ per cent. per annum is paid on each of the "C" shares, attaining the age of five years or upwards, leaving £22,330 to be carried forward.

Daimler Motor Company.

Twelve months ago this company seemed to have a lot to do before its shareholders could be brought within sight of a dividend, but we are pleased to say that a good deal of the work was accomplished in the year to September 30. During that time the manufacturing profit was £27,641, and after adding revenue for hire, rents, interest, etc., together with £1,150 received on debenture stock forfeited, the entire income was £31,260. General charges are set out very fully, and after meeting these, setting aside £4,300 for depreciation, and writing £320 off experimental expenditure, the net profit is £15,362. Debenture interests absorbs £2,319 of this, and the directors now propose to reduce debenture issue expenses by £5,000, and carry forward the balance, in addition to the £219 brought in. The previous year's operations ended up with a debit of £19,751, owing to losses incurred in reorganising the business, so that the progress made is substantial. Its satisfactory character is emphasised by the fact that a serious fire occurred at the works in April, and that the passing of the new Motor Car Act caused a falling off in orders. Proceeds from sales were nearly double those of 1902, and the output from the works broke the record. A few more debentures were issued during the period under review, and the total now outstanding is £49,650. Floating debts amount to £29,911, and as debtors reach only £14,033, and cash is poor at £3,434, the concern looks a little impoverished, a rather large proportion of its resources being in stocks, which are big at £69,476. Depreciation allowance seems fair, but additions to properties were usually heavier, so that most items on the credit side are higher than a year ago. Licences, patent rights, and goodwill remain at £40,000, and at last year's meeting the chairman told us that the question of reserves would not be forgotten. By the way, the Prince of Wales was so pleased with the car the company supplied him that he has recently granted the concern a Warrant of Appointment.

London Nitrate.

In accordance with the special resolution passed in December last, both preference and ordinary shareholders have had part of their capital returned during the past year, and the shares are now £3 15s. paid, instead of £5 as formerly. The reserve fund, standing in the last balance-sheet at £43,422, is now £13,423, a sum of £40,000 having been written off properties, and £10,000 added from the profits of the twelve months to June 30. Property is now valued at £113,000, against which there is a sinking fund of £20,000, and a fire insurance fund of £3,000, and the position of the concern is rather a good one. Floating liabilities are £34,210, against which there are stocks £22,092, sundry debtors £22,568, good investments at realisable values, £22,585, loan against securities £1,500, and cash £738. Similarly, however, to other nitrate companies, the profits fell away rather severely, total revenue being only £25,690, compared with £34,590, but as only £10,000, against £19,865 is placed to reserve, the directors are able to give the preference holders 8s. 3d. per share, and the ordinary 9s. 9d., compared with 8s. to each for 1901-2.

Santa Catalina Nitrate Co., Limited.

Gross profit for the twelve months ended June 30 showed a decrease of £823, at £26,464, but as London office expenses, debenture redemption, and interest, and depreciation of plant and machinery, etc., was reduced by £748 to £9,574, the net profit was only £75 down, at £16,890. With a considerably larger balance of £1,820 brought in, the total available was actually £1,091 up, at £18,710, yet the directors, for some unexplained reason have thought proper to reduce the dividend for the year from 20 to 15 per cent., and to carry forward the large balance of £6,858. Good progress has been made in the reduction of the property account by redemption of debentures and other methods, and notwithstanding an outlay of £1,192 on additions and alterations to plant and machinery, the present value is £5,859 down, at £92,201. Trading balances are decidedly against the company, £14,792 being due to sundry creditors, against £252 owing to it, and bills receivable and cash are both smaller than they were a year ago, at £2,406, and £1,207 respectively, but stocks of calcide, iodine, and nitrate, including £8,428 for nitrate sold, but not shipped on June 30, are decidedly larger, so that the position seems satisfactory enough and the necessity for carrying forward such a large proportion of the profits remains a mystery for the present.

South British Fire and Marine Insurance Company of New Liverpool Nitrate.

Unlike most other nitrate undertakings, this company makes an excellent display for the year ended June 30 last. Revenue from all sources was £50,102, manufacturing profit being £49,106, and after allowing £2,795 for renewal of machinery and plant, and £862 for depreciation on investments, the net balance was £46,445. For the preceding twelve months it was £29,693, and as the balance brought in was £8,194 up, at £21,665, we get a disposable balance £25,000 larger, at £68,110. From this have been paid a dividend and bonus aggregating 10 per cent. for the second half of 1902, and 7½ per cent. on account of the period under review, together with a transfer of £3,000 to reserve, and £2,882 to depreciation account. The directors now propose to pay a further 7½ dividend, and a bonus of an equal amount, making 22½ per cent. in all, with £5,000 each to reserve and depreciation fund. Reserve now amounts to £25,000, and as the properties have been written down to £63,133, the position is exceedingly strong. Bills payable and sundry creditors come to £31,135, against bills receivable, and debtors £4,543, but stocks amount to £46,981, investments to £18,346, and cash to £53,703. It is good to be interested in a company like this.

Amelia Nitrate.

Profits of this company slipped back a little during the twelve months ended June 30, compared with the preceding year, the total being £49,053, against £56,386. Unhappily expenditure increased in all directions, so that the net revenue shows a decline of £8,470, to £42,054. On the present occasion, however, there is no debit balance to be wiped out, and as debenture interest requires £1,837 less, the actual free revenue is only £2,311 smaller at £30,911. As before the directors propose to apply this sum to the purchase and subsequent cancelment of the company's debentures. The company's floating debts reach the rather large sum of £82,590, against debtors £31,038, and cash £5,780, but

there are unsold stocks amounting to £34,158. Debentures redeemed during the year were £33,400, reducing the value of properties to £327,415, including a small outlay during the year, and we note that the company holds £29,343 of its own debentures, bought in the open market. The prospect of an increased demand for nitrate in the coming year leads the directors to hope that there will not be any necessity to make a large reduction in the present quotas, owing to the production being increased by the new oficinas about to commence work. Nitrate continues firm in price, and there is reason to expect that prices equivalent to those ruling during the past year will be maintained.

Esperanza Nitrate.

This company reports a profit of £8,051 for the twelve months ended June 30, which is poor, considering that £7,125 was earned in the preceding six months. London expenses, however, were modest at £499, and after providing these, together with £1,600 for debenture interest, £1,133 for depreciation, and other small charges, the net balance is £3,981. Out of this the directors' fees, to be voted at the general meeting, have to be provided, the balance being placed to reserve. During the period under review considerable additions have been made to the plant, which, together with further alterations under contemplation, it is anticipated will have the effect of materially cheapening the cost. Meantime, however, carrying out the improvements has interfered in a measure with the production of nitrate. The company owes the very heavy sum of £35,486 to sundry creditors, against which sundry debtors come to £5,689 only, and cash is terribly poor, at £249. Stocks, however, amount to £19,844, and general stores, etc., stand at £10,699. A sum of £2,040 spent on repairs to machinery, etc., and at present carried as an asset, should be written off as soon as possible.

Robert Younger and Co.

All the ordinary shares of this Edinburgh brewery company are held by the vendors, and preference holders are not favoured with a statement of accounts. A short report, however, is issued, and from this it appears that after paying directors' fees, and making provision for depreciation, and doubtful debts, the net profit for the year to September 30 was £19,402. Adding £1,860 brought forward, the total available is £21,262, from which preference dividend and interim ordinary payment absorb £9,000. The directors now propose to pay a further dividend of 5 per cent. and a bonus of the same amount on the ordinary shares, making 15 per cent. in all, with £2,500 to reserve, and a slight reduction in the carry forward to £1,762. The capital of the company is £180,000.

Realisation and Debenture Corporation of Scotland, Limited.

A moderate shrinkage of £277 to £57,521 was shown in the gross revenue for the twelve months ended August 31, and this was further increased to £416 in the net profits of £28,886 arrived at after paying debenture interest, administration charges, etc. The dividend on the preference stock having been met, a further 2 per cent., or £1,133, was transferred to preference stock reserve fund, and dividends of 8 per cent. on the ordinary shares and 2s. per share on the founders' shares, were declared, leaving £16,423 to the added to the general reserve. Blind faith is still required of the shareholders, no information whatever being vouchsafed as to the nature of the investments, although these are valued in the balance-sheet at £831,498, or £46,746 more, and in order to secure this increase the company has used up its available funds to an extent which forces it to rely upon an overdraft at its bankers for current needs. The undertaking is probably sound enough, but we should have more belief in it if it followed the example of other trust companies, and published a full list of the securities held.

Debenture Securities Investment Co., Limited.

For the six months ended September 30 the income from all sources, including £25 brought forward, amounted to £13,668, or £155 more than for the corresponding period of last year, but expenditure was rather higher, and after writing another £150 off preliminary expenses, reducing this item to £450, the net balance was £34 down at £11,804. Out of this the usual interim dividends are paid at the rate of 4 per cent. per annum on the preference stock, and 6 per cent. per annum on the ordinary stock, and £321 is added to reserve together with £129 profit on stocks and shares sold, leaving £42 to be carried forward. The securities held have experienced a further shrinkage in value during the half-year, and the depreciation now amounts to about 5 per cent. on their book values of £529,929, but against this the reserve now stands at £63,800. By its articles of association the company is prohibited from investing more than 2½ per cent. of the subscribed capital in any one security, and although this does not prevent its holding several issues of the same company, the restriction serves a good purpose, and causes the holdings to be spread over a large and varied assortment of securities.

Ceylon Land and Produce Co., Limited.

Although the crop of tea for the year ended June 30 fell short of the estimate by 50,441 lb., it was still 51,722 lb. above that of the previous season, at 1,038,584 lb., and with increases of 60,768 lb. and 122,457 lb. respectively in the quantities made from purchased leaf and on account of others, the total outturn came to 1,589,809 lb. compared with 1,440,150 lb. a year ago. At the same time the average price realised showed a further improvement at 5.88d. per lb. against 5.46d., and 5.28d. in the two preceding seasons, and notwithstanding that £1,936, or £277 more, was spent on manuring, the net profits came to £9,412, and with £287 brought in, gave an available total of £9,699, compared with £7,380. With increased prosperity, however, the directors have learned a little wisdom, and after meeting preference dividend, etc., pay the same dividend of 15 per cent. on the ordinary shares, and make a much needed addition of £2,315 to reserve, leaving £1,025 to be carried forward, subject, as usual, to directors' remuneration, etc. Steps appear to have been taken also for bringing the finances of the company into a sounder condition, as the amount due on deposits is down by £2,218 to £6,041, and bills payable are smaller at £14,587, the total libilities showing a reduction of £9,568 to £42,498. On the other hand, produce held on June 30 was valued at £7,821 only, compared with £11,906, sundry debtors and coast advances were down £718 to £5,469, and cash amounted to £1,457, so that taking all the coast advances as good debts, which is hardly likely to be the case, the free assets amount to no more than £14,744, or about sufficient to meet the sum owing on bills payable.

Blackpool Pier Company.

A year ago the directors found plenty of excuses for the falling off in revenue, but the past twelve months to October 31 having proved a little more remunerative, they do not trouble to give the shareholders any particulars, and merely confine themselves to setting out the figures. The season, however, must have been even more unfavourable than the preceding one, and it would be interesting, therefore, to know the causes of the improvement shown. Net income came to £922 more, and as the balance brought in was £79 up, the amount available showed an increase of £1,001, at £9,965. Interest on mortgages, bank overdraft, etc., took rather less at £984, leaving a balance of £8,981 for disposal, and after meeting preference dividend, the ordinary shares again receive a dividend and bonus of 12 per cent., the sum transferred to improvement and contingent fund is increased to £1,250, and £1,199 is carried forward. Money is still being laid out freely on the property, a further £17,330 having been spent on the new entrance during the year, and although £5,500 of this was refunded by the Blackpool Corporation, the capital outlay now amounts to £109,938, against which the reserve funds stand at £18,000, all in the business. Thanks to the issue of £17,500 in preference shares, the overdraft at the bankers has been wiped off, but cash in hand is only £1,069, and as there are no free assets, while the dividend and bonus just declared require £6,000, the company will be forced to resort to further borrowing immediately.

Bahamas (Inagua) Sisal Plantation.

This undertaking is still in a terrible plight, but the directors believe in a policy of never-say-die, and seem quite pleased because the 1902 debit on operations was only £1,800, and the total adverse balance, after allowing £1,975 for debenture interest, and £259 for depreciation, was no more than £2,737. For the preceding year it was £4,537, and the board is of opinion that the improvement is due to the policy of concentration decided upon last year, and which will ultimately put the operations of the company upon a sound footing. All interested must devoutly hope so, because already the uncomfortable looking loss of £16,073 has been piled up, and in May, 1901, so bad had the position become that debenture holders agreed to the suspension of their interest and sinking fund for a more or less indefinite time. Power was given to raise £5,000, of which £3,500 has been obtained, and efforts are now being made to get the balance. This loan both as to principal and interest ranks ahead of the debentures, and must be redeemed before anything can accrue to the last-named, so that at best the outlook is decidedly doleful. The directors do not tell us why they found it necessary to terminate the engagement of the late manager, but they think the new man will produce more fibre with benefit to revenue, provided prices hold. Apart from the debenture debt of £39,500, the company owes £13,257 on mortgages, loans, and to sundry creditors, while the liquid assets would almost require a microscope for their discovery. Other assets include such choice morsels as capital expenditure on estate abandoned, £5,365, and preliminary and reduction of capital expenses, £598, so that altogether the concern seems decayed enough to call for burial.

Trust and Loan of Canada.

Another good report is issued by this company, total income being £41,264 for the half-year to September 30, and after meeting bond interest and all charges, the net balance is £16,086, or £1,651 more than in the corresponding period of last year. Of this £3,168, being a moiety of the profits over 6 per cent. dividend, is placed to reserve, and the directors now propose a dividend at the rate of 6 per cent. per annum, together with ½ per cent. bonus, leaving £18,591 to be carried forward, against £17,048 brought in. The reserve fund has been charged with £5,554 for loss on securities realised in Canada, and with £126 for depreciation in value of securities held in England, but owing to additions from revenue and interest earned, the fund is only £72 less than on March 31, and stands at the excellent figure of £175,911. It is invested in securities of the best class. Investments in Canada amount to $5,797,588, and it is satisfactory to note that only $83,200 consists of properties held under foreclosure. Floating liabilities are trifling, sundry debtors in Canada come to $212,878,

---

Mr. H. M. Healy (for some time Chief of the Town Fire Department) and Mr. James Mather (for some time London Agency Manager) have been appointed Assistant Secretaries to the Hand-in-Hand Insurance Society.

The Union of London and Smiths Bank, Limited, announce that a branch of the bank will be opened at No. 26, St. George's Street, Canterbury, as soon as the necessary alterations are completed, and that Mr. H. Fitzwalter Plumptre, of Goodnestone, Dover, has been appointed local director.

SOUTH AFRICAN MINE RETURNS.

The Rand output continues to increase steadily and perceptibly, in spite of the whining in regard to the shortage of native labour. For October the total output of those mines which have restarted working on the Rand was 275,664 oz., whilst the outside districts yielded 8,880 oz., making a total of 284,544 oz., the value of which was £1,208,669. This compares with 276,197 oz., of a value of £276,197, for September, thus showing an increase over the latter month of 8,347 oz., and £35,458 in money. This makes a total for the ten months of the current year of 2,397,871 oz., of a value of £10,185,566, compared with 4,065,180 oz. and £15,782,640 for 1899, or considerably more than 50 per cent. of the return in the year the war broke out. The number of stamps working in the past month was 4,443, compared with 6,250 in October, 1899. Of natives, the net gain was 492. Individual returns show an all-round improvement, the figures of the following being decidedly excellent:—French Rand, Ferreira, Geldenhuis Estate, Ferreira Deep, Crown Deep, Langlaagte Deep, Glen Deep, Jumpers, and Glynn's Lydenburg. There is again a falling off in the Bonanza output, and although the Nourse Deep returned a few ounces more, nevertheless there is a drop of £700 in the profit. In contrast with this, the Robinson exhibits a larger profit, despite a decrease in the production.

Mine.	August.			September.			October.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Barsi Light.—Final dividend at the rate of 2 per cent., making, with interim dividend, a return of 4 per cent. for year to June 30, carrying forward £387.

Bengal Central.—Dividend of 15s. per cent. in addition to guaranteed interest, making distribution for current half-year £2 10s. per cent.

Bengal Dooars.—Interim dividend of 1½ per cent., carrying forward £13,157.

Cordoba and Rosario.—Interest at the rate of 2 per cent. in cash out of revenue on the six per cent. debenture stock, and balance of 3 per cent., due to June 30 last, in four per cent. income debenture stock at par.

Delhi Umballa Kalka.—Final dividend of 2½ per cent., making 5 per cent. for year, carrying forward £37,309.

BANKS.

Anglo-Egyptian.—Dividend of 10 per cent., placing £50,000 to reserve, carrying forward £17,000.

Commercial of Scotland.—Second half-year's dividend at the rate of 20 per cent. per annum.

MINES.

Alaska Treadwell.—Bonus dividend of 37½ cents per share, payable at the rate of 1s. 6d. per share.

Great Boulder Proprietary.—Interim dividend of 9d. per share for current year.

Queen Cross Reef.—Dividend (No. 35) of 2s. per share, payable Dec. 7.

No. 2 South Great Eastern.—Dividend No. 64, of 1s., and a bonus of 6d., payable 20th inst.

South Oriental and Glanmire Gold.—Dividend of 3d. per share, payable 25th inst.

Victoria and Queen.—Dividend (No. 14) of 3d. per share, payable Dec. 1.

Wemmer Gold.—Dividend (No. 24) of 50 per cent.

MISCELLANEOUS.

Alldays and Onions Pneumatic Engineering.—Dividend at the rate of 5 per cent. per annum on ordinary shares, making 5 per cent. for year.

Anglo-Chilian Nitrate and Railway.—Interim dividends of 7s. per preference and 7s. per ordinary share.

Apollinaris and Johannis.—Interim dividend for the six months ended September 30 at the rate of 5 per cent. per annum on the ordinary shares.

Chargola Tea.—Interim dividend on account of season ending November 30, 1903, on the ordinary shares at the rate of 5 per cent. per annum.

Chelsea Palace.—Interim dividend at the rate of 4 per cent. for six months ended 13th ult.

City Brewery (Lichfield).—Dividend on ordinary shares is brought up to 7½ per cent., placing £5,000 to reserve.

Fine Cotton Spinners' and Doublers'.—Usual interim dividend on ordinary shares at the rate of 6 per cent. per annum, payable Dec. 1.

Free Wall Paper.—Dividend of 2s. per share on ordinary shares.

Freehold and Leasehold Investment Co., Limited.—Bonus of £1 per cent. on ordinary shares, making, with interim dividends, a total distribution for the year of £6 per cent., placing £2,000 to reserve, and carrying forward £4,057.

Grand Junction Waterworks.—Dividends for the half-year ended September 30 at the rate of 10 per cent. per annum on the "A" and "B" shares, 7½ per cent. per annum on the "C" shares, and 7 per cent. per annum on the "D" shares, carrying forward £21,792.

Guardian Assurance.—Interim dividend of 2s. 6d. per share.

Hope Brothers.—Dividend at the rate of 8 per cent. per annum for half-year ended August 31, making, with interim dividend, 7 per cent. for the year.

Ilford.—Dividend at the rate of 12 per cent. per annum on ordinary shares for half-year ended October 31 last, making 10 per cent. for past year.

International Financial.—Dividend of 2½ per cent., making 5 per cent. for year, carrying forward £11,662.

Land and House Property.—Dividend of 4½ per cent. on ordinary shares, carrying forward £1,486.

New Pegamoid.—Dividend at the rate of 8 per cent. per annum for year ended Sept. 30, 1903.

Northern Assurance.—Interim dividend of £1 per share (10 per cent.) on account of 1903.

Peninsular and Oriental Steam Navigation.—Dividend of 6½

per cent. on deferred stock for past six months and a bonus of 3 per cent., making 13 per cent. for year.

Richards.—Dividend of 1s. 3d. per share, being at the rate of 8½ per cent. on ordinary shares, for year ended Sept. 30 last.

Richard Hornsby and Sons.—Dividend for year ended Sept. 30 at the rate of 8s. per share on ordinary shares, making 5 per cent. for year, placing £5,000 to reserve, and carrying forward £1,443.

St. George's Coal and Estate.—Interim dividend of 1s. per share, payable Dec. 22.

Sephinjuri Bheel Tea.—Interim dividend of 10 per cent.

Shotts Iron.—Dividend of 6s. on ordinary shares, carrying forward £2,059.

Slaters.—Final dividend on ordinary shares at the rate of 22 per cent. per annum, making 16 per cent. for year ended Sept. 26.

Star Paper Mill.—Dividend of 5s. per share on ordinary shares, carrying forward £9,122.

Trust and Loan of Canada.—Dividend at the rate of 6 per cent. per annum, carrying forward £18,591.

Union Steam Ship of New Zealand.—Dividend of 8s. per share for six months to Sept. 30.

MINING RETURNS.

Brilliant Block Gold.—Value of bullion from cyanide, £500.

Brilliant Extended.—Crushed 2,494 tons, 809 oz.; concentrates and sands, 570 oz.

Briseis Tin.—Black tin cleaned up, 36 tons, 17 cwt.

British Broken Hill Proprietary.—4,621 tons produced 871 tons concentrates, containing 496 tons lead and 24,388 oz. silver.

Camp Bird.—Crushed 6,229 tons, 8,379 oz.; 366 tons of concentrates.

Caylloma Silver.—26,000 oz. fine silver export ores; 12,500 oz. fine silver bullion.

Cecil Syndicate.—In liquidation. Partial clean-up 360 tons for 408 oz.

Chinese Engineering.—Output, 15,000 tons; sales, 14,000; consumption, 1,225 tons.

City and Suburban.—Ounces, 8,858; tons crushed, 18,300.

Cobar Gold.—Value of bullion, £9,471.

Cumberland Niagara Gold.—Output for September reported as 441 oz. should have been 482 oz., and it seems likely that the output for October was 519 oz., and not 489 oz. as reported. The error arises by the gold recovered from concentrates not having been included in cables.

Durban-Roodepoort.—Milled 7,250 tons, 3,537 oz.; tailings, 3,250 tons, 1,166 oz.; total, 4,703 oz.

El Oro.—Crushed 8,735 tons, producing $111,758; old cyanide plant, $6,931; total, $118,689.

Ferreira.—Crushed 15,187 tons, 6,631 oz.; concentrates and sand, 8,860 tons, 2,225 oz.; slime, 4,322 tons, 639 oz.; total, 9,495 oz.

Gibraltar Consolidated.—Crushed 190 tons, 268 oz.; 11 tons of concentrates, 83 oz.; from tailings, 23 oz.; total, 374 oz. New Mines: Crushed 19 tons, 36 oz.; two tons of concentrates, 4 oz.; total, 40 oz.

Henry Nourse.—9,571 tons, 3,340 oz.; 6,658 cyanide tons, 2,023 oz.; 2,913 slimes tons, 298 oz.; 5,661 total.

Inverness Railway and Coal.—21,150 tons.

Jourdie Hills Gold.—545 tons milled, 356 oz.; treatment of tailings: 306 tons cyanided, yielded 74 oz.; totals, 430 oz.

Komata Reefs.—Crushed 1,250 tons, bullion £3,425.

Mount Lyell.—28,655 tons treated, being 22,589 tons from Mount Lyell Mine and 6,066 tons from North Mount Lyell Mine. In addition 781 tons of purchased ore and metal-bearing fluxes, and converters produced 564 tons of blister copper containing copper, 557 tons; silver, 60,942 oz.; gold, 1,578 oz.

Mungana (Chillagoe).—1,946 tons containing 81 tons of copper, 12,074 oz. silver, and 328 tons of lead shipped to Chillagoe Company's smelting works.

Nigel.—Ounces, 2,545; tons crushed, 3,213.

New Heriot.—Ounces, 3,410; tons crushed, 8,250.

New Ravenswood.—Crushed 1,220 tons, value £3,600; 295 tons of concentrates, £1,500.

New Queen.—255 tons, 307 oz.; received from public crushing, £275.

Nile Valley (New).—Gold won, £3,000, from specimens.

No. 2 South Great Eastern.—Crushed 3,375 tons for 4,187 oz.

Ouro Preto of Brazil.—6,207 tons, 2,259 oz.

Palmarejo and Mexican.—"Zapote" Works: Crushed 3,800 tons, treated 3,100 tons; producing $22,350 gold, $52,900 silver.

Queensland Copper.—236 tons matte, containing 130 tons copper from 858 tons ore. Shipment, 93 tons matte.

Raub Gold, Malay Peninsula.—750 oz. from 3,000 tons crushed.

St. John del Rey.—Gold produce, £7,700; yield per ton, .65 of an ounce troy.

Smelting and Refining of Australia.—Dore bullion shipped containing 564 oz. gold and 17,250 oz. silver.

South Oriental and Glanmire Gold.—Crushed 357 tons, 1,137 oz.

South Kalgurli.—720 oz., result of partial clean-up of tailings, 3,000 tons treated; test crushing at Boulder No. 1 battery, 210 tons for 266 oz.

Tyne Valley Colliery.—Output, 7,467 tons.

Waihi.—19,231 tons crushed, yielding inclusive of concentrates, £50,642.

Witwatersrand Deep.—Tons crushed, 7,672; 2,257 oz.; tons of sands and concentrates by cyanide, 5,695; 944 oz.; total, 3,201 oz.

Wareleigh (Rhodesia) Development.—Guinea Fowl Mine: 467 oz. from 639 tons crushed.

Ymir.—Crushed 5,500 tons of ore, producing 937 oz.; 305 tons of concentrates shipped, value $7,750; cyanide plant treated 2,650 tons of tailings, value $1,950; sundry revenue $437, total $20,387.

COMPANY MEETINGS.

EASTERN EXTENSION AUSTRALASIA AND CHINA TELEGRAPH CO., LIMITED.

The sixtieth half-yearly general meeting of this company was held on Wednesday, at River Plate House, Finsbury Circus, London, E.C., Sir John Wolfe Barry, K.C.B. (chairman of the company), presiding.

The General Manager (Mr. F. E. Hesse) read the notice calling the meeting and the minutes of the previous meeting, which were confirmed and signed. He afterwards read the auditors' report. **At the suggestion of the chairman, the directors' report and accounts were taken as read.**

The Chairman said: Gentlemen, it is now my duty to offer a few remarks upon the report which is in your hands, and I may begin at once by saying that the gross revenue for the half-year has amounted to £265,099, as against 283,856 for the corresponding period of 1902, showing a decrease of £18,757. The actual falling off in receipts from the Australasian traffic alone amounted to considerably more than this decrease, or to, roundly, £31,000; but, fortunately, many of the local traffics show substantial increases, and the loss on exchange incurred last year was not experienced during the past half-year, owing to the satisfactory rise in the value of silver and the introduction of our new system of revising the rates of collection in silver countries every three months. When we come to working expenses, we find that they have amounted to £138,516, against £121,237 for the corresponding period of 1902, showing an increase of £17,279. The expenses attending the maintenance of cables account for over £2,000 of this increase, and the stations opened last year in the north of China account for a further £1,400, but the bulk of the increase—like the decrease in revenue—is due to the keen, and, what I think I may without qualification call, the unfair competition which we are experiencing at the hands of the British Government, the Canadian Government and the Australasian Governments for the Australasian traffic. In order to meet this competition by being in a position to fulfil every telgraphic need of Australasia, and in order to obtain a more central position in Australia, this company, in conjunction with the Eastern Company, laid a few years ago, as the shareholders know, at heavy cost, the Cape-Australian cable, which not only gives us direct telegraphic connection with the cities of Perth and Adelaide, but, as part of the consideration for our expenditure, obtained for us direct dealings with the public in those and other State capitals of Australia, together with the use of Government wires between Adelaide, Sydney and Melbourne for the transmission of the traffic by our own employees. Although the privilege of dealing with the public is readily granted to private telegraph companies —both foreign and British—in Great Britain, Canada and many other countries, the Governments of Canada, New Zealand and Queensland have strongly objected to our enjoying it in Australia, and have protested against the Federal Government's decision to extend the company's privilege to the cities of Melbourne and Brisbane. As a result of these protests our new agreement with the Federal Government, though ratified by the House of Representatives without a division, still awaits the decision of the Senate, which is delayed until after a conference has been held of the partners in the Pacific cable enterprise. This conference is expected to take place either in London or Australia very shortly. Meanwhile the competition between our cable and the Government cable is being conducted as actively and keenly as possible on both sides, and although we have had to complain, as I have said, of unfair treatment by the British as well as by some of the Colonial Governments, we have, so far, been successful in retaining quite as large a proportion of the traffic as we expected to do under the circumstances. Only yesterday a statement appeared in the London newspapers representing the working of the Pacific cable to be much quicker than that of the Eastern group of cables, messages having taken only twenty-five minutes viâ the Pacific, against three hours by our route. By selecting the most favourable conditions for the Pacific route and the most unfavourable conditions for ours, it is, of course, very easy to show this striking result; but had Adelaide and Perth been selected as the Australian termini instead of Christchurch and Brisbane, as was evidently the case, the result would probably have been extremely different. Many of our messages are transmitted to our cable termini at Perth and Adelaide from London in a few minutes. The message announcing the result of the first race for the American Cup took only four minutes between London and Adelaide by our route against three hours by the Pacific route. (Applause.) A later Cup telegram took only two minutes to reach Adelaide by our route. But I am bound to say that all these comparisons are more or less misleading, and the only fair comparison of any real value is to take the average time of the whole traffic by each route spread over a given period. (Hear, hear.) The best test is the attitude of the telegraphing public, who would not continue to give us the bulk of their traffic unless our route were perfectly satisfactory—(hear, hear)—especially in face of the sentimental and other appeals made to them by some of the Governments interested in the Pacific cable. This competition, of course, involves considerable expenditure, and accounts for the increase to which I have already referred in our working expenses for the past half-year. Whilst seriously injuring our interests, the Pacific cable has not benefited the British or Australasian public, or even its promoters. The rates charged by the Pacific route between Australia and Great Britain are no lower than those agreed to be charged by the Eastern Companies in connection with the new cable viâ the Cape. It is true the Pacific cable transmits traffic between Australasia and

America at a lower rate than formerly, as the route for that traffic is very much shorter than viâ Europe. As a consequence of this the chief—indeed, one may almost say the only—benefit from the Pacific Cable accrues to the United States, as the traffic with Canada is very small. According to a recently published official return, there will be a deficit on the working of the Pacific line for the current year of nearly £100,000, which will have to be borne by the taxpayers of this country, among whom you, gentlemen, are numbered, and by the taxpayers of Canada, Australia and New Zealand. This goes to prove what I have often stated before—that the Australasian traffic is insufficient to support all the existing cables, and that the Pacific cable was never needed for any traffic requirements; indeed, the cable connections with Australasia are far in excess of any traffic likely to be developed for some years to come. I have already said that you are losing as taxpayers of this country, but those of the public who are shareholders in our companies are losing also in dividend, or are likely to lose in dividend, so that we lose on both sides—both as taxpayers and as shareholders—and it does seem to me a most unfortunate thing that a commercial company like ours should be exposed to a Government competition conducted with public money and to the great detriment and discouragement of private enterprise. (Hear, hear.) The more one thinks of these matters the more one sees that all great developments have always been due to private enterprise, and if Governments are to embark upon a policy of systematically discouraging private enterprise, they will not only be doing no good to the taxpayers but they will be doing serious harm to the country at large. It cannot be a sound policy, and never will be. (Hear, hear.) A short time ago we were unfortunate enough to have our Cocos-Perth cable interrupted, and although the break was only a few miles from Fremantle and our repairing ship was very quickly on the spot, it took over a fortnight to restore the communication, owing to bad weather prevailing at the time. The traffic, however, I am glad to say, was not seriously affected, because we were able to transmit it by our other cables; but I need not say it would be a very different matter if the Pacific cable were interrupted, because with their single line they would have no resources to fall back upon except those provided by our enterprise. Happily the severe drought from which Australia so long suffered has now passed away, but it will naturally take a considerable time before the country fully recovers from the ill-effects of such a terrible visitation. This, and the competition, make the possibility of any further reduction of tariff under our standard revenue arrangement a very remote contingency. You will quite understand, therefore, that you at the present time suffer from two causes in Australia—first the Government competition, and secondly the fact that the country has been suffering year after year from these terrible droughts, which have seriously reduced the volume of business because it has seriously interfered with the prosperity of the country at large. We are, therefore, suffering this half-year from two causes, one of which, I am afraid, will remain—namely, the Government competition—while the other we have every reason to hope will pass away, and that our traffics may be expected to increase. (Hear, hear.) After meeting the increased expenditure to which I have just referred, and adding the credit balance of £37,180 brought forward from the previous half-yearly account, the net profits for the half-year amounted to £146,036. The usual interim dividends at the rate of 5 per cent. per annum have been paid for the half-year, absorbing £75,000, and the balance remaining of £71,036 is carried forward to the next account. The cables which the company contracted to supply and lay for the Dutch Government between Borneo and the Celebes were successfully completed during the half-year, and a further contract has since been made with that Government for supplying and laying some additional short cables in Netherlands-Indian waters. These cables have been manufactured, and are now being conveyed to their destination by the steamship *Scotia*, which has been chartered for the purpose; and shareholders will, I am sure, be glad to know that we have received letters of satisfaction from the Dutch Government for the way in which these contracts have been carried out. (Applause.) The necessity of the United States having direct telegraphic communication with their new Philippine colonies will have prepared the shareholders for the establishment of an American cable between the United States and the Far East. As you are aware, the first section—namely, between San Francisco and Honolulu—was laid and opened for traffic last year, and in July last it was extended from Honolulu to Manilla. The American cable was thus brought into direct connection with our system in the Philippines, and we are now exchanging traffic at Manilla with the Commercial Pacific Company, and through them with the Commercial Cable Company of New York, under an arrangement come to with those companies after prolonged negotiations. Thus, not only is the United States given direct telegraphic communication with Hong Kong, China, and other parts of the Far East over our cables and over those of the Great Northern Telegraph Company, but we have been able to secure, on our side, another alternative route to Europe for our traffic to and from the Far East, and, consequently, by this means to extend the network of international cables, making it almost impossible during political complications for telegraphic communication to be entirely suspended. This arrangement, though good for all parties, and especially for the public, has involved some financial sacrifice on the part of the Eastern Extension and Associated Companies, besides involving a reduction of the tariffs for China, Japan, and Manilla traffic, as detailed in the printed report. These reductions, and the direct American connection with the Far East ought, however, to lead to a substantial development of the traffic in time to come. The only other matter to which I wish to draw attention is with regard to the International Telegraph Conference. The decision arrived at during the sittings of that Conference, recently held in London, not to make the "Official Vocabulary" compulsory ought to put an end, once and for all, to the constant disputes between the telegraphing public and the cable companies as to the admissibility, or otherwise, of doubtful code words. Under the new arrangement such words, which may be real or artificial, must be composed of syllables capable of pronunciation according to the eight authorised languages, and the words must not exceed 10 letters according to the Morse alphabet. Combinations not fulfilling these conditions will be considered as letter ciphers, and will be charged accordingly—namely, at the rate of five letters per word. I do not know that there are any other matters to bring before the notice of the shareholders, but I shall be happy to answer, to the best of my ability, any remarks which may be made from the body of the hall. I will therefore conclude by proposing: "That the report and accounts of the directors, now submitted, be received and adopted."

The Marquess of Tweeddale, K.T.: I beg to second that motion.

Mr. Mountcastle asked if there was likely to be any further reduction in their tariffs.

The Chairman: So far as we can see, no further reduction is likely. We think, and indeed feel sure, that we have met almost every requirement of the public in the matter of reductions; and the general body of shareholders will, I daresay, recollect that in the report of the Departmental Committee appointed by the British Government to go into the question of telegraphic communication in the most exhaustive way—and I think almost every department of Government was officially represented—it was stated that the telegraphic rates charged by our Eastern Companies were all of the most reasonable kind, except, I believe, in two or three unimportant matters which it is scarcely worth my troubling you with. At any rate, they do not affect our company. It should also be borne in mind that the same committee stated deliberately as the result of their investigations and deliberations that the telegraphic enterprises of this company deserve the powerful support of the Government. I think that this view, coming from such an important committee will be borne in mind in the future, particularly having regard to the fact that the Pacific Cable has been established and worked under the conditions to which I have alluded.

The resolution was carried unanimously.

Mr. John Newton: Before we separate, I should like to move a vote of thanks to the Chairman and directors, who have, evidently, at the present time, considerable labours to perform in order to protect our property, and I trust they will be as vigorous as they possibly can be in combating the methods by which the Government are treating cable enterprise. Of course, it is only the same old story as to how the authorities have always treated private enterprises—as, for instance, the electricity supply undertakings. Electric lighting in this country has long been behind what it is in others, and that is largely because of the neglect of Government patronage or support. (Hear, hear.) The fact of their having dumped the Pacific cable on what are practically our preserves shows how little consideration they have for private enterprise, and that they are more or less regardless of the damage they may do to our property. The only comfort we have is, and that is somewhat mitigated by the fact of our being taxpayers as well as shareholders, that this cable is costing them a lot. (Applause.) I see by this morning's paper that there is estimated to be a loss of £150,000 for the two years' working. I can only say it serves them right. This company, from the time I have been connected with it, now approaching 30 years, has made one continuous series of reductions in its tariff. I do not remember any increase. When anything like prosperity or a tendency to increase the dividend was apparent something has come along to rob us of the accruing benefit. I think that you, gentlemen, are entitled to the confidence and support of the shareholders, and I trust you will be successful in your efforts to protect our interests in the future and to resist all attempts to damage our property. I have great pleasure in moving a vote of thanks to you and your colleagues for your services.

Mr. Mountcastle: I beg to second that.

The proposition was unanimously agreed to.

The Chairman: Mr. Newton, on behalf of myself and the board of directors, I thank you most heartily for this expression of confidence. I am bound to say that we have had an arduous time lately with these various causes of anxiety to which I have alluded in my remarks, but nothing gives us so much pleasure as to know that we have the unanimous support of the shareholders, and that encourages us to do our best to secure and safeguard your interests. I again thank you.

The proceedings then terminated.

J. AND P. COATS, LIMITED.

The thirteenth annual ordinary general meeting of the shareholders was held on Wednesday, November 11, in the Merchants' Hall, Glasgow. There was a large attendance. Mr. Archibald Coats, chairman, presided, and the other directors present were:—Sir Thomas Glen-Coats, Bart.; Sir James King, Bart.; Sir William Arrol, M.P.; Mr. Stewart Clark, Mr. Kenneth M. Clark, Mr. Peter Coats, Mr. George Coats, Mr. Peter Mackenzie Coats, Mr. William Hodge Coats, Mr. P. Herbert Coats, Mr. Ernest S. Coats, Mr. T. J. Hirst, and Mr. O. E. Philippi.

The Chairman asked the secretary to read the notice calling the meeting.

The Secretary (Mr. W. P. Stewart) read the notice calling the meeting.

The Chairman said that, according to custom, he supposed they would take the report and the accounts as read. (Applause.) The auditors' certificate would now be read.

Mr. David W. Kidston read the certificate by the auditors.

The Chairman: Before moving the adoption of the report and accounts which are before you, I have only a few remarks to

make. The results of the past year have been most satisfactory. They enable us to pay a dividend of 20 per cent. on the ordinary shares, to carry a very large amount to reserve, to make further provision against depreciation of investments, and to increase the pension fund by £50,000. These are the appropriations which the directors have, after careful consideration, decided to recommend as best calculated to further the interests of the company.

A "Monotonous" Dividend.

I have on a former occasion pointed out that almost every year since the formation of the company we have been blamed for not recommending larger dividends. One financial paper goes so far as to say that there is in the Coats dividend a regularity which is beginning to be rather monotonous, and even distressing to shareholders who have been hoping for something better than 20 per cent. A distribution of 20 per cent. may become monotonous—(a laugh)—but you will agree with me in thinking that it is not likely to cause serious distress, and there is, unfortunately, no lack of companies whose balance-sheets and dividends provide sufficient variety to satisfy anyone in search of it. Speaking for this board, I may say that we have no desire to see our company amongst their number, and I entertain no doubt whatever that the great majority of our shareholders appreciate a good steady return, paid with regularity at fixed periods. (Applause.) Such a return cannot, however, be relied upon unless ample provision be made in prosperous years. It is purely accidental that our profits have in the recent past shown such remarkable steadiness—the fluctuations during the past three years being little more than 3 per cent. Whilst it generally happens that with decreased returns from some markets there are larger profits in others, it is most unusual that increase and decrease so nearly balance, and it would be a great mistake to assume that our profits will continue to be exempt from considerable fluctuations. The present outlook is, on the whole, not unfavourable, but indications are not wanting of a falling-off in several of our large markets. Quite apart from this, however, there are other contingencies than the ordinary fluctuations in the volume of trade to provide against, and the shareholders will consult their own interest if they leave it to the directors to assess these to the best of their ability. It stands to reason that the board has no desire to accumulate funds needlessly, and is solely influenced by considerations as to the best means of assuring the continued prosperity of the company. It should also be borne in mind that, as the business has not been standing still, more money has been required to carry it on, and that every fresh development requires additional working capital. The company would not be in its present flourishing condition, and our profits through all these years would have been very much smaller, if care had not been taken to keep in hand ample funds for extension and for broadening the basis of the undertaking, whilst strengthening its financial position year by year, and as the shareholders have reaped the full benefit of a policy to which our success must be largely attributed, it would surely be unreasonable to blame the directors for adhering to it. It does not follow that we may not feel justified in proposing a larger distribution should the business continue to be as prosperous as it has been in recent years, but it would be unwise to anticipate or confidently expect us to do so, as we shall be entirely guided by the conditions and requirements of the business, and not by what is called "market expectations."

Principle of Depreciation.

You will have observed from the report of the auditors, that we are considering the question of adopting, if advisable, a different principle of allowing for depreciation of our plant. Heretofore it has been usual to divide the latter into three categories—(1) land and buildings, (2) engines and gearing, (3) boilers, machinery, etc. —and to fix an average rate for each category. During the first eight years we wrote off yearly 2½ per cent. on land and buildings, 4 per cent. on engines and gearing, and 7½ per cent. on boilers, machinery, etc., these rates being calculated upon the value of such property at the date of the formation of the company, in so far as it was in existence at that time, and upon the original cost of that acquired subsequently. Having thus written down the value of the major portion by 20 per cent., 32 per cent., and 60 per cent. respectively, we, in 1898, reduced the percentages to 2½ per cent., 3 per cent., and 5 per cent., and in 1901 made a further reduction of the last-named rate from 5 per cent. to 4 per cent. As far as we are able to judge, these reduced rates have been quite sufficient, if not ample. Any uncertainty that might be felt could only arise owing to the great variety of the machinery employed. Most of it, if kept in proper repair, will for a long number of years be as efficient as new machinery, whilst the life of other machines is very much shorter. It has been suggested that instead of the customary, I may say almost universal, practice of fixing average rates of depreciation, it would be better to have varying percentages for all the different kinds of machines. Whether this would give us a more reliable basis is open to doubt, as it is exceedingly difficult to estimate the length of time for which a particular machine may be profitably employed. However, the matter will be carefully looked into, as we are naturally desirous to have the accounts as accurate as possible. I have stated to you before that, whilst adequate provision must be made for wear and tear, we hold it is undesirable to write off more than the circumstances of the case warrant, and that to do so would, in our opinion, be as objectionable as any other arbitrary method of dealing with the accounts. I need hardly say that the same principles by which we have been guided in regard to depreciation at Fergusl'e have been observed by the subsidiary companies. I now beg to move:—"That the report and accounts for the year ended June 30, 1903, as submitted to this meeting, be and are hereby adopted, and that the payment of the dividends stated therein, and the appropriations to various reserve funds, are hereby confirmed."

Sir Thomas Glen-Coats seconded.

The Chairman: Does this meet with your approval? (Applause.)

Re-Election of Directors.

Mr. T. J. Hirst proposed:—"That Sir Thomas Glen-Coats, Baronet; Sir William Arrol, M.P.,; and Messrs. Peter Coats, P. M. Coats, W. H. Coats, and E. S. Coats, who retire at this time, be re-elected directors of the company."

Mr. Stewart Clark seconded.

Mr. Robert Rule moved:—"That Messrs. Turquand, Youngs, and Co., and Mr. David W. Kidston be reappointed auditors of the company for the current year, and that it be remitted to the directors to fix their remuneration."

Mr. John Millar seconded.

All the resolutions were unanimously adopted.

The Chairman said that this was all the business. They were much obliged to the shareholders for attending in such large numbers, and they trusted things would continue to go on as satisfactorily as in the past.

Sir James King, Bart., moved a vote of thanks to the Chairman for presiding.

The Chairman, in a word, acknowledged, and the meeting separated.

NEXT WEEK'S MEETINGS.

Monday, November 23.

Buluwayo Market and Offices.—Winchester House, noon.
Crewe's Rhodesia Development.—Winchester House, 11 a.m.
Charterland Gold Fields.—Cannon Street Hotel, 12.30 p.m.
Horden Collieries.—Darlington, 3 p.m.
Linotype and Machinery.—188, Fleet Street, noon.
Mexican Southern Railway.—53, New Broad Street, 12.30 p.m.
New Centaur Cycle.—Coventry, 3 p.m.
Rhodesia Matabeleland Development.—Winchester House, 11.30 a.m.

Tuesday, November 24.

Anglo-Egyptian Bank.—27, Clement's Lane, 3 p.m.
London Nitrate.—Liverpool, 3 p.m.
Monowai Gold Mines.—Glasgow, 3 p.m.
Royal Bank of Scotland.—Edinburgh, 2 p.m.
Scrase's Brewery.—Winchester House, 11.30 a.m.
V. V. Gwanda Syndicate.—Winchester House, noon.

Wednesday, November 25.

Algeciras (Gibraltar Railway).—4, Coleman Street, 1 p.m.
Delhi, Umballa, Kalka Railway.—Winchester House, 12.15 p.m.
Hepworth and Son.—Leeds, noon.
Imperial Russian Cotton and Jute.—Institute of Chartered Accountants, noon.
Kinta Tin Mines.—65, London Wall, 12.30 p.m.
Land and House Property Corporation.—Winchester House, 2.30 p.m.
Premier Sunrise (New Zealand) Gold Mining.—Winchester House, 12.30 p.m.

Thursday, November 26.

Buenos Ayres and Valparaiso Transandine Railway.—River Plate House, 1 p.m.
British Transvaal Mines.—Winchester House, 12.30 p.m.
Cleveland Salt.—15, Philpot Lane, 12.30 p.m.
Daimler Motor.—Cannon Street Hotel, 3 p.m.
Hope Brothers.—Cannon Street Hotel, 11 a.m.
Lewis and Burrows.—Winchester House, noon.
Revue (Manicaland) Gold Mining Co.—Salisbury House, noon.
Savill Publishing Co.—Cannon Street Hotel, 2.15 p.m.
Shotts Iron.—Edinburgh.
Trust and Loan of Canada.—7, Great Winchester Street, 2 p.m.

Friday, November 27.

British and Benington's Tea Trading Corporation.—118, Southwark Street, 2.30 p.m.
Clerical, Medical and General Life Assurance.—15, St. James's Square, noon.
Grand Hotel, Eastbourne.—2, East India Avenue, 12.30 p.m.
International Financial Corporation.—Cannon Street Hotel, 2 p.m.
Lyceum Theatre.—Winchester House, noon.
Rezende.—Cannon Street Hotel, noon.
Scottish Australian Investment.—Winchester House, noon.

Agua Santa Nitrate and Railway Company.

This company was not so successful during the six months ended June 30 as in former days, the production of nitrate being only 814,300 quintals, and the sales 830,900 quintals, compared with 1,008,425 and 938,869 quintals respectively in the corresponding period of the previous year. The railway also showed a further reduction in traffic from 4,188,146 quintals to 3,530,465 quintals, with the result that the profits fell from $1,294,966, or £90,163, to $1,080,139, or £81,010. Deducting expenses in Valparaiso, the net profits came to £65,007, compared with £73,128, and after transferring £28,250, as usual, to the redemption funds for the three oficinas owned, and paying the regular quarterly dividends of 3 per cent., the balance to be added to dividend reserve fund was reduced to £757. Including the present addition, the provision for depreciation amounts to the substantial sum of £311,277, making, with the reserve fund of £60,000, over 47 per cent. of the capital outlay, and that is excellent.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended Oct. 9, $13,408; increase, $3,022. Aggregate from January 1, $488,107; increase, $18,669.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended Oct. 17, Rs. 41,898; increase, Rs. 8,974. Aggregate from July 1, Rs. 5,25,704; increase, Rs. 39,918.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended Oct. 17, Rs. 11,698; increase, Rs. 4,375. Aggregate from July 1, Rs. 1,32,889; increase, Rs. 35,116.

Bengal Central Railway.—Traffic receipts for week ending Oct. 24, Rs. 41,874; increase, Rs. 18,999. Aggregate from July 1, Rs. 580,453; increase, Rs. 111,900.

Canadian Northern Railway.—Traffic receipts for week ended November 14, $82,800; increase, $25,900. Total, from July 1, $1,274,500; increase, $481,300.

Lucknow Bareilly Railway.—Traffic receipts for week ended Oct. 17, Rs. 20,635; decrease, Rs. 5,063. Aggregate from July 1, Rs. 3,22,227; decrease, Rs. 6,072.

Quebec Central Railway.—Traffic receipts for the 2nd week of November, $10,931; decrease, $1,948. Aggregate from January 1, $609,690; increase, $15,459.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended Oct. 17, Rs. 14,210; increase, Rs. 299. Aggregate from July 1, Rs. 1,54,446; increase, Rs. 3,324.

Salvador Railway.—Traffic receipts for week ended Nov. 14, $14,000; increase, $5,500.

White Pass and Yukon Railway.—Traffic receipts for the week ended Oct. 31 amounted to $23,051.

English.

Cleator and Workington.—Gross receipts for the week ending Nov. 14, £1,160; decrease, £29. Total receipts from July 1, £22,056; decrease, £242.

Cockermouth and Keswick Railway.—Receipts for week ending Nov. 14, £890; increase, £38. Aggregate from July 1, £20,417; decrease, £1,043.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending Nov. 14, £448; increase £25. Aggregate from July 1, £7,823; increase, £361.

Liverpool Overhead Railway.—Traffic receipts for week ending Nov. 15, £1,636; increase, £84. Aggregate from July 1, £33,594; increase, £2,209.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending Nov. 14, £552, increase £28; aggregate from July 1, £10,625, increase £266.

Belfast Street.—Traffic receipts for week ending Nov. 14, £2,446, decrease £4; aggregate from July 1, £54,554, increase £1,692.

Birmingham and Midland.—Traffic receipts for week ending Nov. 13, £829, decrease £10; aggregate from July 1, £16,762, increase £62.

Birmingham City.—Traffic receipts for week ending Nov. 14, £5,221; increase £119; aggregate from July 1, £104,301, increase £3,224.

Blessington and Poulaphouca.—Traffic receipts for the week ending Nov. 15, £10, increase £2; aggregate from July 1, £472, decrease £47.

Bristol Tramways and Carriage.—Traffic receipts for week ending Nov. 13, £4,720, increase £419; aggregate from July 1, £102,393 increase £3,909.

Burnley Corporation.—Traffic receipts for week ending Nov. 14, £791, increase for week £103; aggregate from July 1, £17,223, increase £2,847.

Dublin and Blessington.—Traffic receipts for week ending Nov. 15, £115; increase £6; aggregate from July 1, £3,049, decrease £142.

Dublin and Lucan.—Traffic receipts for week ending Nov. 15, £101, increase £10; aggregate from July 1, £2,679, increase £165.

Dublin United.—Traffic receipts for three days ending Nov. 14, £4,502, increase £200; aggregate from July 1, £104,653, increase, £7,723.

Edinburgh and District.—Traffic receipts for week ending Nov. 14, £4,311, increase £221; aggregate from January 1, £196,726, increase £19,817.

Edinburgh Street.—Traffic receipts for week ending Nov. 14, £440.

Harrow Road and Paddington.—Traffic receipts for week ending Nov. 13, £251, decrease £8.

Isle of Thanet.—Traffic receipts for week ending Nov. 14, £283, decrease, £46; aggregate from July 1, £21,107, decrease £1,071.

London General Omnibus.—Traffic receipts for week ending Nov. 14, £22,883, increase £182; aggregate from July 1, £488,894, increase £7,863.

London Road Car.—Traffic receipts for week ending Nov. 14, £7,606, decrease £154; aggregate from July 1, £156,018, decrease £1,581.

Rossendale Valley.—Traffic receipts for week ending Nov. 13, £164, decrease £23; aggregate from July 1, £3,653, decrease £19.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending Oct. 19, £6,796, increase £1,984; aggregate from January 1, £251,359, increase £63,098.

Barcelona.—Traffic receipts for week ending Nov. 14, £2,232; decrease £7, aggregate from January 1, £106,583, decrease £3,520.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending Nov. 14, £336, increase £136; aggregate from January 1, £13,606, increase £7,207.

Brazilian Street.—Traffic receipts for the month of August, Rs. 36,892; increase Rs. 2,241. Total receipts from August 1, 1903, Rs. 36,892, increase Rs. 2,241.

Brisbane.—Traffic receipts for the week ending September 30, £2,291, increase £99.

British Columbia Electric.—Traffic receipts for the month of September $188,373, increase $33,216. Net earnings from July 1 to September 30, $67,113, increase $17,691.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending Oct. 18, £3,077, increase £207.

The Investors' Review.

A Rhodesian Try-On.

Flies are easier caught with honey than vinegar, as they say in France. For some such reason, we suppose it is, that those who have been engaged for so long in endeavouring to effect the importation of Chinese into the Transvaal, have for the moment diverted attention to the alleged pressing need of securing Asiatic labour for Rhodesia, in the hope that by changing their methods, the "vinegar" that has characterised the controversy on the Rand may be eliminated. It is all part of the settled policy of the magnates, no doubt, but it is hoped that by creating an agitation in favour of admitting the Yellow Man into Rhodesia the line of least resistance will be found, and a powerful stimulus given to the Transvaal movement. For the Chartered Company is pre-eminently a fashionable one, with trading dukes and commercial earls and pretty women among its shareholders. The task of manipulating the wires will, therefore, be confined to London, and local troubles will thereby be avoided. As a preliminary effort to cross the "t's" and dot the "i's" of the Labour Commission's report, the strategy of the business is rather astute. Mr. Secretary Lyttelton can hardly give permission for the Celestials to enter Rhodesia, whilst withholding authority for their importation into the Transvaal. In any event, he will be obliged to state the reasons for his decision, and as the smaller and weaker case will be heard first, the bigger and more formidable claimant will be able to shape his course accordingly. It must occur to most people, however, that Rhodesia is under the rule of the High Commissioner, and that the direct application for an audience of the Colonial Secretary is rather singular. As a rule, deputations such as that which the Chartered Company is now arranging are reminded of the procedure of official routine, and referred in cold terms to "the proper authority." The fact that the Colonial Secretary acquiesced in the approach to himself, requested an immediate statement of the "Labour" case as regards Rhodesia, and promised an early reply, which is interpreted by the deputation to mean that sanction will be given for the immigration of Chinese, is an indication that there is a great deal more in the game than meets the eye. If the result should prove as is anticipated, the Transvaal magnates can justly complain of having been put to a lot of unnecessary trouble, but they will have gained their point.

Lest it should be said that we are disposed to read into this "deputation" transaction more than it will bear, we invite attention to the speech made by Mr. Henry Partridge, one of the leading Rhodesian financiers, at the meeting of the Rhodesia Goldfields Corporation, held on Monday. That gentleman plainly states in reference to the subject:—"I have reason to believe that the request contained in those resolutions will be complied with, and that the labour so urgently required will be forthcoming, etc." In some subsequent remarks, he emphasised very strongly the fact that negotiations had been going on with the Government with the view of procuring assent to the importation of Chinese, and added:—"He could not say more, but they had very good reason to believe that this would be done." Here we have the caution of the man "in the know," combined with a hint broad enough for a blind person to see. Speaking at another meeting, held on the same day, Lord Gifford, who probably is as well acquainted as anyone with the backstairs intrigues of the Chartered Company (of which he has been a director from the very start), said:—"Strong efforts are now being made to obtain imported labour, and to organise a labour bureau." The optimism of another peer with commercial instincts, Lord Harris, need hardly be recalled. He was equally insistent that imported labour was coming, and was inclined, like so many of these South African magnates, to be offensive to the home public, because it had not come before. The evidence is overwhelming, however, that a new move is on the boards, that several people are acquainted with its character, and that the Colonial Secretary's demand for information is only a blind.

Now, let us examine critically this so-called need for Chinese or other Asiatic labour in Rhodesia. We have long been painfully familiar with the story that the country was swarming with indolent and insolent niggers, who did very little work and gave a great deal of trouble. Hut taxes and other expedients to force them into the mines have been tried, and, indeed, the principle of compulsory labour has always been one of the Rhodesian ideals, with which the whole strength of the British Government was called upon to cope but a few years back. It would not be a wonder if native labour were remarkable for its absence in Rhodesia, but, as a matter of fact, is it scarce, or rather is it unobtainable where the conditions of work are decent? We shall proceed to convict the Chartered Company out of its own Reports, and by the mouths of its own officials. On page 19 of the Administrator's Reports for 1900-1902 we read:—"It will be observed that the steady advance of the native population in material prosperity, which has been pointed out in former reports, is even more marked during the past two years than in any previous period." Where, may we ask, can material prosperity come from in a country such as Rhodesia except by labour? Labour is an excellent thing in its way, but labour that is not paid for, or is not remunerated as it ought to be, is not more likely to be forthcoming from black men than from white. Mr. Jones, the secretary, stated after his visit to the country last year, that there was an abundance of coloured labour. Mr. Henry Partridge himself, in the early part of this year, assured his shareholders in the Gwanda group of companies that, except for a few drill-sharpeners, they had plenty of "boys." The Chief Native Commissioner for

Matabeleland says (p. 162):—"The estimated number of able-bodied men for the year ending March, 1902, is 30,139. Of this number 15,539 have worked continuously for a period of three months. It might be argued from these figures that the natives are living in a state of idleness, but such a conclusion would be incorrect, as during the greater part of the year they are occupied in tilling and planting their lands." That is certainly better than working for bankrupt mining companies with heavy overdrafts at their bankers.

Again, it is not surprising to learn that the natives prefer to go in search of work for themselves, and appear to be distinctly averse to being collected and sent where they do not wish to go, and it frequently happens that they desert on the first opportunity. Why not? If the native is capable of making a bargain for his own labour, he is surely entitled to object to being recruited in a gang, and offered sixpence a day, or some other ridiculous sum—thirty shillings per month is considered grand wages for natives—by colonial sweaters, whose only idea of an honest day's work for themselves is to swagger about with a whip and new leggings. Moreover, as the native likes to pick his master (the brute will be asking for references next, or certificates of character and solvency from former employees), it shows that he knows which company can or does pay for its labour, and which is in Queer Street. Ah! black man, your carbon hides a deal of worldly cunning, and your smiling teeth a large fund of commonsense. If only the unfortunate shareholder who happens for his sins to be your master, could take equal care of himself and his money, there might be something after all in gold mining in Rhodesia.

As the nigger refuses to give credit for his labour, the Celestial Pilgrm from Fco Chien is to take his place. At first sight this might seem a bad exchange, but, on reflection, we shall begin to understand. John Chinaman is to be indentured for three years, or as much longer as he can be induced to sign for—the longer the better. His wages will be cheaper (or at least that is the impression the magnates have now), and they will be allowed to accumulate for the three years, or the period of his engagement. That is an excellent arrangement for the companies, and will enable them to tide over present difficulties. In three years there will be ample time for getting in fresh capital, or for getting out of the way, whichever is the more convenient or profitable course. It is a deep game, but tried upon the Heathen Chinee it may result in some prehistoric form of explosion—he was not born yesterday. But we hope that Mr. Lyttelton will repent in time, or the mining industry, alike in Rhodesia as in the Transvaal, will probably find itself repeating the process once described by Mr. Dooley in regard to shareholders as being "let in on th' ground flure and then dropt into th' cellar."

The Customs Revenue.

The Commissioners of His Majesty's Customs do not fatigue themselves by compiling such an elaborate state paper upon the results of their labours as the Commissioners of the Inland Revenue. What they say year after year, however, is interesting, and to the point. A fair resume of the leading characteristics of their department is furnished by their report lately issued for the year ended March 31 last. It is the forty-seventh report in consecutive series, and is not only worth preserving, but worthy of perusal. At the outset we learn that the Customs Revenue for the period under review brought in 2.1 per cent. less than was anticipated in the budget estimate, but nearly 11 per cent. more than in the year immediately preceding. The actual gross income was £35,499,723, and had it not been for examples of that ardent patriotism which cheats the revenue with much gusto when rumours of changes in taxation excite cupidity, the Commissioners think that the gros income would probably have reached £36,000,000. It was thought in April, 1892, that the duties on tea and sugar might be reduced, and accordingly merchants postponed their clearances of these articles so as to get the advantage of the lower taxation. They did this to an extent which is estimated to have cost the revenue £350,000 in the past year, £250,000 of it in sugar duties and £100,000 in tea duties. This year will no doubt gain the benefit of that effort at robbing the public purse, especially as no change was made in either of these two imposts, but the moral is suggestive and not altogether pleasant. The Commissioners further estimate that the revenue for 1902-3 was deprived of about £1,500,000, in the form of duty, that went to swell the proceeds of taxation in the preceding year. On that occasion merchants thought duties were going to be raised, and hastened to withdraw articles from bond in anticipation, so that the profit of the extra duty might fill their pockets and not go to swell Exchequer balances. Such is patriotism when put to the test of filthy lucre.

The export duty on coal yielded net £1,991,797 last year. That is the amount of the handicap placed upon this industry. We have always said that coal ought to provide a substantial amount for the Exchequer every year, but the way to get that amount is to tax mining royalties, not to put the barrier up against the export of the fuel. This £2,000,000, in round figures, was £680,061 more than the receipts in the previous year, and is really a tax upon the labour of the working miners in the long run. Shippers also suffer, but as time goes on their profits may become adjusted to the new conditions, and the cost of the tax in great measure falls back upon the worker. Changes are being introduced in the methods of exporting coal, owing to the tax, and amongst the most noticeable of these is the great increase in the shipments of bunker coal, which rose to a total of no less than 1,626,026 tons in the past year. This means that ships now load up at home with sufficient coal to last the whole voyage out and in, instead of, as formerly, allowing coal cargo steamers to convey the necessary fuel to coaling stations abroad. The cargo carrying capacity in other directions must be reduced by this new system, and it therefore offers an instance of the evil fruits and disturbing consequences of arbitrary taxes in directions quite away from any anticipated change.

Passing over the minor articles of commerce, such as cocoa, coffee, chicory, dried fruits, and such like imported, let us note the effect of the corn duties, now temporarily abolished. Their net yield in the past financial year was £2,346,796, and of that wheat and flour contributed 58.6 per cent. The sum was a very sensible addition to the cost of bread to the people. We, the consumers, paid that tax, although bread was not much dearer than before it was imposed. Protectionists of all shades lay stress upon the fact that bread was not much advanced in price, and try to persuade themselves and other people that the foreign producer really bore the tax. The majority of those who argue thus know that they are maintaining a falsehood, but multitudes are taken in by the sophistry, being unable to grasp the cardinal fact that the foreign merchant would not sell his wheat at all, his grain of any kind, to us except at a profit. The tax does not, or has not yet, destroyed foreign competition for our custom, but it is easily conceivable that trade conditions might arise under which many corn growing countries would find it no longer profitable to send their grain here. The tax would just have turned the scale against them, and the consequence of this diversion of competitors would before long have been felt in an increase in prices, to which increase the tax would have come as a senible and hurtful addition. The buyer always pays all charges, no matter whether they are Customs duties, enhanced freights, or the exactions of forestallers and regretters. Happily, for the present our bread has been made free, but it will be smitten by sharper imposts than ever should the motley faction crowding along at the heels of the irresponsible, shallow-minded and unprincipled Colonial Secretary get their way. We may note in passing that the duty on tea still amounts to from 76 to 78 per cent. of the market price of that indispensable article of consumption, although said market price rose by an average of about 1½d. in the London market between July, 1901, and February, 1903. It is a sufficiently heavy proportion, although far surpassed by the enormous tax upon tobacco. Against this latter burden, however, no valid objection can be raised, because tobacco is not an article of necessity. Sugar was another commodity which last year did well by the tax spenders, better probably than it will do under the sway of the foreign conclave of monopolists and bounty

consumers. The total net yield of the duty, or rather group of duties for they are far-reaching, in the year closed on March 31 last, was £4,487,707, a decrease of £1,920,521, or 30 per cent. on the figures of the preceding year. This decline, however, does not imply that the taxes are unprolific, but merely offers a striking example of that patriotism already mentioned. The very large reduction, say the Commissioners, is due chiefly to postponement of clearances in anticipation of changes of duty. These tricks cost the revenue of the past year about £1,500,000 in sugar duties alone, and the Commissioners go on to estimate that the profitable normal yield of the taxes on their present basis will be £5,900,000, we presume net. Whether or not they have taken into account the effect of the Brussels Convention, and of our extraordinary subservience to Continental sugar producers, in making this estimate, is not stated, but here again we have an instance of punishment of the consumer. If something like £6,000,000 a year is taken out of the pockets of the people for the benefit of the ravening and ravenous Exchequer, it means dearer sugar to the people, and, as poverty spreads, reduced consumption. Reduced consumption in its turn forces a spendthrift Government to devise fresh means of taxation, and so the mischief spreads and deepens.

There is one point on which a comment might be made. Amongst the tables appended to the brief report of the Commissioners is one exhibiting the quantities of the principal articles delivered free of duty from the Customs bonded warehouses for the use of the fighting navy and the mercantile marine, together with the amounts that would have accrued to the revenue had the duty been charged thereon. The figures are for the calendar years, and in 1892 it seems that the quantities of cocoa, spirits, tobacco, tea, sugar, and wine in this way delivered free of duty would have returned, if the taxes had been charged, £5,724,764 to the Exchequer. Now the merchant navy gets the benefit of this exemption from Customs duties on stores, as well as His Majesty's vessels of war, and what we should like to have is a separation of these two classes, so that the amount of bounty in this way bestowed upon the British merchant marine might be known. Did it receive £4,000,000 out of the £5,725,000 withheld from the Exchequer, or £5,000,000? It should be possible for the Customs Department to separate the two classes so that the facts might be revealed. That the navy should be allowed to draw its stores out of bond duty free is perfectly right, because were the duties imposed the Treasury would simply be paying money out with one hand and taking it back with the other, but it is otherwise with the mercantile marine. It may be entitled to this benefit, we rather think it is, but we ought to know what it amounts to, so as to arrive at a true conception of the extent to which this most important and valuable branch of our carrying trade is really subsidised out of the public purse.

Nitrate Companies' Results.

Beneficial as the provisions of the nitrate combination have proved to the industry in general, it cannot be said that they have been equally helpful to the individual companies interested. Prices during the past year have been well maintained by restriction of the output as well as by a strong and increasing demand, but the constant addition of new companies to the ring resulted in a reduction of the quota to be supplied by each, and a consequent reduction in the margin of profit. At the same time, working expenses tended to increase, especially in the case of the smaller concerns, and the effect of these two combinations has been to cause considerable variations in the results obtained, as shown by the accompanying table. One or two of the larger undertakings have managed, in spite of the reduction in their proportion of the output, to show substantial increases in their profits, and have raised their dividends accordingly, but the rest of the list have been less fortunate.

The Liverpool figures are the most striking in this respect, as net profits rose from £29,693 to £46,445, and the company not only paid 22½ per cent., against 17½ per cent., but carried forward £42,978, or £21,313 more, after adding another £5,882 to reserves. In another way the London was equally successful, as although profits fell off by no less than £9,315, the reduction in the capital by the return of 25s. per share in January last enabled the directors to carry £10,000 to reserve, and still increase the rate of distribution from 8 to 13 per cent. The Santiago also paid a dividend of 2 per cent. more, notwithstanding a decrease of £6,903 in profits, but in order to do so had to cut down the allocation to reserve from £20,000 to £7,500. A heavy drop in the Colorado profits, from £22,690 to £9,203, was reported, without explanation by the directors, nor was the chairman more communicative at the meeting, but with the help of the large balance brought in, the dividend was maintained at 7½ per cent., although the wisdom of such a policy seems doubtful in face of the impression regarding the inadequacy of the provision for depreciation conveyed by the auditors' remarks. In the case of the Santa Catalina profits were about equal in the two years, but the board adopted a cautious attitude, and reduced the dividend from 20 to 15 per cent., and carried forward £5,000 more, with the object, in the first place, of enabling the company to carry on work without having to depend on borrowed money, and in the second of accelerating, if possible, the repayment of the debentures with a view to making a return of share capital later.

Santiago	66,953	60,050	18	20	329	359
San Pablo	7,193	1,451	4	nil.	2,459	3,910

* Including bonus of 2½ per cent. in 1902 and 7½ per cent. in 1903.

With regard to the rest of the companies in our table the story is less satisfactory. The Amelia is still devoting every penny it can scrape together to paying off its debentures, which constitute a heavy charge on its revenue, and there seems little prospect of its being able to find even the arrears of dividend on the preference shares for a considerable time to come. The Esperanza continues to struggle painfully along, and, as it cannot earn enough to be worth dividing, carries any balance it may have after paying directors' fees to reserve, but the poor San Pablo is in the worst straits of all, and the chairman had a pitiful tale to tell at the meeting. An optimistic manager calculated that nitrate could be produced at a cost of $1.23 per quintal, representing at the exchange then current, about 5s., which, it was estimated, would leave an ample margin of profit. Unfortunately, the actual results in no way coincided with this theory, and the cost rose to $2.92, or over 7s. 2d. per quintal, while the selling price averaged no more than 6s. 6½d., and the company had to rely for its profits mainly on the rise in exchange and the sales of iodine. Under these circumstances it is hardly surprising to find the profits falling from £7,193 to £1,451, and the dividend from 4 per cent. to nil.

In spite of the variegated appearance presented by these results, the outlook is almost universally regarded as promising. More companies, it is true, are coming into the combination each year, but, on the other hand, the demand for nitrate is very strong, and stocks both here and on the Continent are now only about half as large as they were a year ago, while the visible supply, including quantities in transit, is also substantially lower. Those forming the ring are therefore confident that, notwithstanding the larger number over which the production has to be divided, it may be possible to avoid any serious reduction in the quota allowed to each by increasing the fixed maximum output. In making these forecasts, however, no notice appears to have been taken of the probable effects of the Sugar Convention on the area planted with beet, although growers of this root are extensive users of

nitrate. Germany, for instance, is credited with the desire to restrict its production to home market needs, and if this be true the demand for fertilisers in that country would slacken off considerably. The disorganisation caused would no doubt be of a temporary character, as the world's requirements are too large for such a policy to be followed for any length of time, but until matters settled down the market for nitrate would be rather uncertain. Except for this small cloud, however, the outlook seems clear enough for many of the companies, and so satisfied are the members of the combine that already there is talk of a renewal of the arrangement when it terminates in 1906.

Economic and Financial Notes and Correspondence

Queensland Finance.

We have not for a long time read a more satisfactory essay from Australia than Mr. Kidson's supplementary budget statement, made in the Queensland Legislative Assembly on October 13 last. The very form in which it is presented to readers here is eloquent of economy. Instead of a great folio document, with or without illustrations, Mr. Kidson's speech is modestly printed in double column on four pages of the usual colonial "Hansard" size, and its substance is quite as satisfactory as the form. No attempt is made to disguise the fact that Queensland finance is in a critical position. The Treasurer is quite frank upon this point, and insists in a practical way upon economy. The Government of which he is a member is going to try to do as much as possible without borrowing, so as to at first reduce and, it is to be hoped, finally wipe out the deficit. Said deficit for the current fiscal year, ended June 30, 1904, Mr. Kidson puts at £192,476, and we trust his anticipation may not be belied in a sense still more untoward. But the colony is unquestionably hard pressed, and must be so when, as the Treasurer says, the interest on its debt last year amounted to 42.79 per cent. of the total revenue. In the current year the proportion of interest chargeable to the first three months was actually 51 per cent. of the total revenue paid in. Therefore the proceeds of the last loan, and of all balances of loan money available or in hand, are to be carefully husbanded, and spent only upon the most needful and productive works. Even these, however, may soon have to be stopped, for, as has always been insisted in these columns, the borrowing colonies will only arrive at some measure of their real capacity to carry the burdens they have so lightly and recklessly assumed when they can no longer depend upon money raised by loans in this country. Stop raising and spending all such money, and the pinch becomes acute everywhere, involving economies not merely on the part of the governments, but on the part of all classes among the people. For one thing, the Governments will have to reduce their bureaucracies, and for another the people will have to pinch and scrape if they really mean honestly to avoid default.

Incidentally, Mr. Kidson threw a good deal of light upon the haphazard manner in which money has been flung about in Queensland during the years of profligate borrowing. Dealing with the Trust accounts, he points out that the debit balance against them on June 30 last was about £147,000, and attributes it mainly to large advances to agricultural lands purchase account, harbour dues account, diseases in stock fund, and the new seed grain trust account. The agricultural lands purchase account, he says, is working out in a satisfactory manner, but it is far otherwise with the harbours. Last year the expenditure on these exceeded receipts by £25,000, receipts being only £44,000, and the total debit balance of this account, at that date £80,578, was increased by September 30 to £84,065. Since 1893 the total amount expended on harbour works has been £434,000 in excess of the amount received from harbour dues, and of a special endowment out of loans to the amount of £118,493. Moreover, this excess expenditure does not include loans advanced to the harbour boards of Bundaberg, Rockhampton, Mackay, and Townsville. There are other accounts in an even more unsatisfactory position notably the loans to sugar works and to local bodies, on which the amounts overdue are respectively £94,199 and £87,642. Some of these bodies seem to set the central Government at defiance, and make no attempt to repay either the principal or interest, and Mr. Kidson mentions a place called Normanton, where the revenue was last year only £539, while the expenditure came to £7,397, involving an actual overdraft upon the central treasury on September 30 last of £11,734. At that spot further outlay is to be stopped, and it was surely time. These are just instances of the merry fashion in which money too easily come by has been scattered broadcast. And always the "loan fund" of the central Treasury has stood the racket.

Bank Reserves.

One of the ablest of our city merchants raises some interesting points,, and makes valuable suggestions, in the following note. But could a gold reserve represented by paper usable in a bank's ordinary business be a real reserve, and not another case of "eating your cake and having it," a habit pre-eminently British?

I read with interest your last Saturday's article on Mr. Tritton's gold reserve proposal. With your criticism of that particular scheme I agree, but I think also that much credit is due to Mr. Tritton for raising the question from within the banking circle. The necessity of a bigger gold reserve becomes clearer every day. The banks of the country have £900,000,000 of deposits, and in case of a panic in the credit market, or still worse a currency run on the banks, our position grows weaker year by year. The danger is added to by the change in banking. Owing to the immense deposits, bankers' money can no longer be used to the old profitable extent in London; where the business of banking is carried on more on the safe old lines than is the case in the country. The London bankers, no longer making enough on the old lines, cast about, and found more profit was to be had in the country. Hence the recent amalgamations, and the spread of the system of branches. Country banks give a larger profit, because they take a greater risk, and a risk not on the old banking lines at all. Their business lies in making advances to customers, it may be manufacturers, or it may be shopkeepers—against guarantees or leases and the like. This is all very well in prosperous times, but how would it work in bad times? Such advances cannot be suddenly pulled in, and in any case, even if time were allowed, the pulling in would mean widespread ruin and stoppage of business. In fact, the banks, even in London (through their branches) are going into ordinary business, just as they did before the smash in Australia. In our own trade, when a man started business he went to a wholesale house for the credit he wanted—*i.e.*, he went to practical people, who could judge of the chances of success, and so on. Now he goes to the banker. While the latter was a principal who knew all the local circumstances it was all very well, but when it comes (as it will come in time) that this business is managed by a manager, possibly from a distance, and in no case with the wide and long experience of an established country banker, the danger of such a system is greatly increased. As to the gold reserve, my notion is something as follows: (1) a law to be passed that (say) 20 per cent. of the average deposits in every year shall be kept in actual sovereigns in the vaults (say) of the clearing house; (2) the purchase of the gold, say £18,000,000, to be spread over five years, so as not to dislocate the money market; (3) the gold reserve not to be kept at the Bank of England; (4) the clearing house to issue warrants against gold in units of £10,000 or £100,000; (5) such warrants not to be negotiable or mortgageable, but simply to entitle the depositor, and him only, to so much gold; (6) these warrants to be placed among the assets of the banks and used in the ordinary way of their business; (7) in times of greater pressure either from a credit or a currency panic, the gold reserve to be drawn on, on a resolution of such and such a majority of the clearing house, and with the assent of the governor of the Bank, the chairman of the Stock Exchange, and perhaps some others. The banks would still have to keep their ordinary day to day cash balance, but such a scheme as

I outline would not, I think, interfere with their profits; because they would lend credit on their gold warrants, as they now do on their ordinary assets.

More About Cedulas.

The meeting of Cedula Bondholders recently called on behalf of the Cedula Defence Association, presented some characteristics by which it was distinguished from some similar meetings. Mr. Cobbold, who must have spent time and money in a cause where he purposed improvement of the position of Cedula holders made a temperate statement on a business matter. He occupied little time and was followed by Mr. Maclaren with a masterly summary of the legal position. The proposal was to form a Cedula Defence Association, and to take measures to obtain the effectivity of the Buenos Ayres Government guarantee. Figures were quoted which have been at different times published, which, analysed, show that of $370,000,000 Cedulas guaranteed by the Buenos Ayres Provincial Government, $200,000,000 have been redeemed (by having been paid in to release mortgaged property), and $170,000,000 left outstanding. Of the Cedulas issued in Buenos Ayres and dealt in there, eight-ninths have been redeemed; while of those sold to London not half of the P. issue have been redeemed, and of the I. issue about one-fourth.

It was stated that the Buenos Ayres Government guarantee would become operative in 1905, and by asking that the Cedulas should be handed over to them against a certificate of that same Government, the object of obtaining the liberation of the Government from their guarantee was to be attained. A few only of the many publications giving evidence of the great prosperity of Buenos Ayres were referred to. There were few interruptions—some are inevitable at public meetings—Mr. Ballin made a careful and measured address. He laid stress on the danger of two committees, although Mr. Cobbold had expressly said he wished the Council of Foreign Bondholders to act in concert with the Defence Association proposed, and he assured the meeting that his committee had after many years of assiduous work, at last arrived at this (Mr. Bemberg's) scheme. He told the meeting that they did not know what the scheme was, as they had not seen it, and urged that they should wait till January next when the Council of Foreign Bondholders would call a meeting, when, with the scheme before them, they could say "yea or nay" to it. Furthermore, he indicated that Mr. Cobbold's action had stimulated his own, and that quite recently he had taken steps which would, he hoped, result in good. His appeal was mainly on the grounds of danger and damage. Mr. Cobbold in vain referred to his own efforts to ensure the co-operation of the Council, and his wish that they would join in the active measures he proposed. Mr. Ballin deeply impressed by fear, impressively warned the meeting.

Mr. Bemberg last year followed Mr. Perugia, who had published a letter full of fears for the future—of Cedula holders—Mr. Bemberg added a few threats. If his proposals were not carried out at once (last year) before the Government left office, the incoming Government would probably do less, or nothing. The Government did go out of office and Mr. Bemberg is, we are told, commissioned by the present Government to work out his scheme. His threats, the fears he raised, added to those produced by Mr. Perugia's epistle, seem to have infected the Council, infected Mr. Ballin, and infected what there was of majority, at the meeting. A considerable number seemed to be in a comatose state. They did not speak or move. They breathed, nevertheless, and were able ultimately to get out of the depressing atmosphere of a place where courage scarcely seemed known, where fear and alarm were the murderous weapons by which men, otherwise sensible enough, were constrained to say "yes" to proposals leaving themselves prospectively the poorer and Buenos Ayreans the richer by some millions, obtained on the promise of a Buenos Ayres Provincial Government Guarantee, to which no effect has been given; but, which, after a series of what are called frauds, by Argentine officials, injured Cedula holders relinquished. By so doing they prove how easy default is and how incapable they are of protecting themselves. The customary alertness and presence of mind in people who are "wide awake" proved strangely absent. Mr. Ballin's *wise* admonition was made that as Cedula holders had not seen the scheme and did not know what it contained, they should wait till January next. Communicated to them, then, for the first time, they have to say yea or nay to its provisions. Was Mr. Ballin joking? Or did he suggest that the intelligence of people to whom the newly communicated scheme was so clear that *they* would divine its purport and bearings by inspiration, though it had occupied *his* own acute apprehension, and that of the Council during several years? Is it to the credit of the capital city of the Argentine Republic, to the credit of the richest province of the nation that the province and the capital city should profit by the paralysis of fear infecting the Council, Mr. Ballin and the Cedula Bondholders?

Will not the present generation, and probably its next successor, have reason to think that every State in Argentina may probably enough follow the example of the "Richest Province"? May not, on the next pinch, the Argentine Republic itself find it convenient to reduce its debt or some part of its debt, by repudiation or default? And, notably, if the same rule governs National Cedulas by which those of the Province of Buenos Ayres are governed, may not the serum of infection, of fear, be applied to the English patient with equal success? If the guarantee of Buenos Ayres be valueless, Argentine credit in Europe may be gravely prejudiced by the selfish default of the richest province of the Republic.

Railways and Electricity.

An unusually able and interesting article upon railway electrification was published in Tuesday's *Times*. Much of it went over ground already beaten track to readers of this Review, such as the increase in working expenses and the continual additions to capital. Another question, also of the highest importance, often touched upon by us, is the antiquated and obstructive manner in which our monopoly railway companies conduct their business, often to the injury of the home trade, and nearly always to that of agriculture. We have not the slightest doubt that the railway companies would be more prosperous to-day, because the country itself would be so, if they had adopted enlightened and progressive methods of dealing with their traffic, not only in regard to charges, but to methods of handling, grouping, classifying, and so on. This part of the subject, however, was outside the scope of the *Times* article, which in the main dealt with the growth of the new electric traction, and a consequent expansion of tramways which is already leading to effective and dangerous competition with the railway companies in suburban passenger traffic. The article made a considerable impression upon the Stock Exchange, and will contribute materially to increase the already considerable disgust of holders of ordinary railway stocks at their prospects. And the worst of it is that it is difficult to see how the railways can cope with this new form of competition. Even were they to convert their lines to electric traction, they would be in little, if any, better a position than they now occupy to compete with the tramway lines running into suburbs and tapping their traffic in all directions. Their helplessness is in the nature of a retribution. No class of joint-stock undertakings in this country has so systematically eaten its cake, and continued to act as if the cake were still intact, as our railway companies. They have never gathered up any substantial reserves, have systematically dipped into capital for every addition to their appliances or accommodation, no matter how trivial.

And now? They are now helpless when confronted with revolutionary changes in locomotion, and still they all want more capital. It is just as impossible for them to stop borrowing and raising fresh share capital as it is for our municipalities. Fresh demands are continually made upon them, and met from capital, involving not only additions to their interest and preference dividend charges, but to their working expenses. None of them have any means in hand, the very trust moneys they are custodians of are used up in their business. Because this is so, it will be impossible for any of our railway companies to convert their lines to electricity except at a cost perfectly ruinous to the ordinary stockholder. This

position has been long foreseen by careful observers, and some of its fruits are already evident enough in the existing position of the common stocks. These have all ceased to be even second-class investments, and become the playthings of the speculator. Had our railway controllers from the first behaved with thrift and forethought, husbanding their resources, effecting improvements as much as possible out of earnings in prosperous times, and never falling back upon capital except for some well considered and valuable extension, their position to-day would have been impregnable. As it is, two generations of stockholders have literally devoured much of the capital put into the lines by taking it back in dividends that should never have been paid. It is a gloomy outlook, but not yet, perhaps, too late for thrift to begin, and prudence. The North-Eastern Company is tentatively adopting electricity on some of its local lines, and the richer companies, by paring down dividends and frankly devoting money kept back to effect changes and improvements, might work their way back to an unassailable position. If they refuse to take this course, if their shareholders still demand the distribution of the last farthing of apparent net earnings, they must continue to go from bad to worse.

Ilford, Limited.

This company's affairs have been in the throes of a violent revolution during the greater part of the past twelve months, and it must be said that the outcome of the disturbance was of a curiously inconsistent character. All concerned are well aware of the circumstances leading to the upheaval, and we have no intention of wearying readers with a lengthy recapitulation, but in view of the fact that there seems every probability of another raging tearing dispute, a brief history may not be out of place. On the worn-to-death and perfectly sickening plea that Yankee competition would soon annihilate the company, certain directors of Ilford, Limited, proposed to hand it over, lock, stock, and barrel to the Eastman Kodak Company of New Jersey, on ridiculously inadequate terms. Fierce opposition to any such plan was at once forthcoming from the other members of the board, and after both sides had inundated the unfortunate shareholders with more literature than could be comfortably perused in six months, the question at issue was submitted to an impartial committee for dissection and consideration. The upshot was the rejection of the Eastman overtures but, curiously enough, those who had opposed the sale were politely requested to resign or accept inferior positions, while the capitulate-to-the-Yankees brigade retained their seats on the board or were elected to it. There were, however, two vacancies to be filled up, and the directorate as newly constituted gave the most explicit assurance that the shareholders should choose the new men. But to the general surprise the directors themselves have calmly proceeded to bring in two fresh men, the excuse being the difficulty of conducting the business with a reduced board.

This distinct breach of faith has drawn forth a circular from the shareholders' committee who reported against the Eastman deal, and proprietors should give it very careful consideration before entrusting their proxies to Messrs. Harman and Knobel, the gentlemen who so warmly backed up the fusion proposition, since rejected, and who now practically control the destinies of Ilford, Limited. The committee emphatically protest against the election of the new directors without consulting the shareholders, and while agreeing that one of them, Mr. James Kemp-Welch, should be retained, they cannot find any justification for the appointment of Mr. R. D. Lewis, of Bilston, Staffordshire. Nor can we, and fail to see how a man living so great a distance from London can devote the constant attention and frequent attendance so necessary to a business such as this. Another matter of very considerable importance relates to the articles of association. The shareholders' committee recommend certain alterations in these, and the directors having carefully considered the matter, propose sundry changes, details of which accompany the report. Most of the amendments are of a commonplace character, but the directors did not submit them, as promised, to the shareholders' committee until too late for any objection to be raised, and it now appears that one of the alterations completely changes the existing voting power of the company. According to the committee's circular, it gives Messrs. A. H. Harman and E. B. Knobel, the largest shareholders in the company, greater control, and there certainly seems no reason why they should have it. At least none is forthcoming. Naturally the committee asks for proxies to, as they put it, "support the election (without prejudice as to whether they are nominated by one side or the other) of those men who can best serve the interests of Ilford, Limited." It is a great pity that this further dispute has arisen, as constant rowing must make its influence felt on the fortunes of the company, and those shareholders in a position to do so should attend the meeting to be held on Friday next, and not entrust their proxies to either side.

As might have been expected, the past year's working suffered severely from the unprecedented bad weather of the past summer, and the drop in profits would probably have been much worse but for satisfactory progress in the colonies and foreign countries—accomplished in spite of the foreigners' protectionist habits and the absence of preferential tariffs. As will be seen from the subjoined statement, the trading profit fell a further £5,000, and the increase in other revenue was more than wiped out by the advance in the outgo classed under the head of general charges. Included in these was the cost of the furious agitation, £829. Under the circumstances ordinary shareholders must forego the bonus of 2½ per cent. received for the past two years, while £1,000 less at £7,000 is written off goodwill, processes, etc., and £2,000 less at £7,000 placed to reserve.

	Years Ended October 31.		
	1901.	1902.	1903.
	£	£	£
Trading profit ...	71,991	67,989	62,802
Other revenue ...	2,403	2,754	3,919
Total	74,394	70,743	66,721
General charges and directors' fees ...	20,669	19,235	21,171
Net profit ...	53,725	51,508	45,550
Brought forward...	2,665	4,407	2,917
Amount available	56,390	55,915	48,467
Preference dividend	11,400	11,400	11,400
Ordinary dividend	*(12½ p.c.) 23,750	*(12½ p.c.) 23,750	(10 p.c.) 19,000
Employees' bonus	821	844	813
Written off goodwill, etc.	8,000	8,000	7,000
Placed to reserve	8,000	9,000	7,000
Carried forward ...	4,419	2,921	3,254

* Including 2½ per cent. bonus.

As usual the company issues a strong-looking balance-sheet. After the present reduction goodwill, processes, etc., will amount to £235,000, still a very large amount, but the reserve now reaches £48,000, and so long as the directors go on writing down the one and building up the other there will be no cause for complaint. Investments, £93,840, are still above their market value, and provision should be gradually made for part of the loss as it cannot all be recovered. Trading accounts are much less favourable, sundry creditors being up £3,164 to £14,875, and debtors more than £6,000 lower at £18,501, but cash has risen £5,760 to 31,855. About £20,000 net has been spent on land, buildings, plant, etc., making the total £64,557, or over £27,000 more than it was only two years ago.

The Amalgamated Press.

It may not be necessary now to point out that this is the name of the gigantic publishing business built up by Harmsworth Brothers, proprietors of the *Daily Mail*, *Answers*, *Evening News*, and other journals of fiction, but in these days of ha'penny ignorance it is just as well to make sure. We hasten to explain, however, that the various newspapers controlled by the Messrs. Harmsworth are separate undertakings, in no way connected, except possibly as debtors, with the Amalgamated Press, its publications, as the directors emphasise in the report, being all weekly or monthly. And surely it is quite delightful to learn that the sale of *Answers* "in even a normal week" reaches

950,000 copies, and that all the other journals devoted to the cultivation of romance are doing well. No wonder the *Daily Mail* beats all records. In considering the current year, though, we must not forget the keen competition to be faced in the shape of Mr. Chamberlain's unrivalled fiscal fables just published in book form. Is not competition of this kind in the nature of "dumping"? Bah, cheer up! A glance at the profit and loss account almost takes away the breath, the shock is so dazzling. Revenue from every source was no less than £764,966 in the year to October 31, nearly all forthcoming in pence and halfpence, and after meeting charges for paper and printing, editorial salaries, and littery—we beg pardon, literary—expenses, advertising, etc., and writing off £25,000 for depreciation, the net balance is £266,223. This is slightly less than in the previous twelve months, but the directors point out that the profit of that wonderful publication "With the Flag to Pretoria" was only £2,300 against £27,500 the previous year, so that the revenue from the regular papers was really about £21,400 better. In addition to this profit the company recovered £782 from Cycle Press, Limited, and £7,447 was brought forward, making a total of £267,005. Naturally, then, the dividend is maintained at 27½ per cent., and the bonus at 12½ per cent., together 40 per cent., with a further £25,000 to reserve, making it a round £150,000. That is an excellent figure, and on turning to the balance-sheet we find the company bursting with wealth, so rich, indeed, that it could easily afford to run a *Daily Mirror* for ever, and to write down its investments to something approaching market figures. Consols valued at over par seem quite a blot on such wonderful looking accounts, and it may be some time before North-Western Railway debenture stock again climbs past 105. W. B. Horner and Sons' ordinary shares may be worth £1 each, and 3,359 shares in Otto, Limited, are perhaps not extravagantly valued at £12,633, but the other things—the Consols and Railway debenture stock which insist on depreciating, ought to be reduced a little. Altogether the investments are valued at £285,474, and there is no less than £212,408 in cash, so there will be no difficulty in providing £17,000 required for three new machines "to cope wtih the increased sales of the various publications." Depreciation allowance is quite extravagantly full, and everywhere there is evidence of abounding prosperity. No cheap foreign paper used of course.

Wall Paper Manufacturers.

Some very extravagant valuations must have been placed on the various businesses comprised in this undertaking when they were strung together for the purpose of forming the combine. Certified profits, according to the prospectus, were less than £200,000 per annum, and yet the capital all told is over £4,000,000. The public, however, was only invited to subscribe part of the debenture stock and preference shares, aggregating rather less than £2,000,000, the balance of the capital divided into equal amounts of ordinary and deferred shares being taken by the vendors. As will be seen from the subjoined statement profits have taken the very unusual course of steadily progressing, and it is quite cheering in these days to find the vendor directors sacrificing their own interests and, instead of dividing every available penny, putting aside modest sums to offset the great lump of goodwill which we know must be included in the assets. Our table shows profits since the inception of the trust, the advance in revenue in three years being over £50,000, and the directors this time see fit to place an additional £10,000 at £40,000 to reserve, besides increasing the carry forward by much more than £30,000. From the start the dividend on the ordinary shares has been 8 per cent. per annum, but 10 per cent must be paid on these shares before the deferred portion of the capital can stand in, and we hope the directors will not be ambitious to reach this level until the reserve fund bears a very substantial proportion to the intangible assets. At present the fund stands at just £100,000, against capital expenditure on land, buildings, plant, machinery and goodwill of £3,205,542, after deducting the depreciation of £30,000 per annum, an allowance that does not seem too generous. In other directions the financial position seems satisfactory enough. The company's floating debts are quite trifling at £54,959, while free assets reach no less than £800,000, consisting of investments £127,520, debtors £279,993, bills receivable £142,158, and cash £250,439. Stock-in-trade has been slightly reduced, but still stands at £480,779, and altogether the securities in the hands of the public look well enough protected.

*Includes £20,000 special depreciation in respect of closed branches.

Royal Bank of Scotland.

The first thing to be mentioned in reviewing the operations of this leading Scotch bank for the twelve months ended October 10 last, is the fact that the directors devote £46,024 of the year's profits to writing down the holding of Consols to 85⅞. The price is a little curious, but that does not matter, so long as the situation is faced with such commendable promptitude, and we are now anxious to learn to what extent the big English banks will follow the example here set. Profits of the past year were again in excess of the preceding period, the net revenue, all bad and doubtful debts provided for, being £5,500 more at £250,624. A midsummer dividend at the rate of 9 per cent per annum has been already paid, and at Christmas a similar payment will be made, together with a bonus of 1 per cent., the distributions being precisely the same as for 1902. We almost think it would have been wiser to keep the bonus in hand now, if for no other reason than that trouble is not far off for some of this bank's neighbours. Bank premises are reduced by £4,600, or £400 less, and the balance of profits has been utilised in reducing Consols, as mentioned, the rest, or reserve, remaining at £900,724. That is less than half the issued capital, but the position seems comfortable enough. Rather a large sum, £2,714,601, is out at call and short notice in relation to the cash in hand and at Bank of England, etc., £1,482,345, particularly with notes in circulation of over £1,000,000, but there is no fault to find with the handling of the assets. Bills discounted, for example, although somewhat lower, reach the satisfactory figure of £4,054,368, while British Government securities stand at £1,538,476, and other securities at £1,176,555. Advances and loans are both higher, at £4,998,224 and £1,858,242 respectively, and we find the deposits about £46,000 lower at £13,993,263, but when we consider how prices of securities have shrunk, this is really a very trifling decline. Bank buildings and other property, a good deal of it yielding rent, comes to £606,439, or rather less than a year ago.

Geneva Tramways.

This concern was registered in December, 1901, for the purpose of acquiring shares of the Compagnie Genevoise des Tramways Electriques, a company owning and working a complete system of tramways about 136 kilometres in extent in and about the city and canton of Geneva. Not much seems to be known about the affair on this side, but Messrs. L. Hirsch and Co. were apparently closely connected with the disposal of the property, which in accordance with the contracts has been handed to the London Trust Company. On reference to the balance-sheet we find that the purchase of the shares of the Compagnie

Genevoise cost the English company £1,700,000, and either the undertaking is grossly over-capitalised, or it has been deplorably mismanaged. During the two years ended December 31, 1902, the gross receipts were 3,732,711 fcs., and the expenditure no less than 3,336,844 fcs., so that the net profit was a wretched sum of 395,877 fcs., or £15,834 in sterling, of which about £10,000 was earned in 1901 and the balance in 1902. This slender sum was at once swept away by appropriations to the amortisation, renewal, and reserve funds, which are compulsory under the laws of the Swiss Republic, and the concern was at once involved in all sorts of financial difficulties. In the belief that the suspension of profit earning by the Swiss company was occasioned by temporary causes only, the directors obtained from Messrs. L. Hirsch and Co. loans amounting to £38,250, with which to meet debenture interest falling due on July 1, 1902, and January 1, 1903. It soon became apparent, however, that expedients of this kind were of little use, and as the Swiss Company would probably require more money, the directors were compelled to propose to the debenture holders a re-arrangement of the company's finances. They were called together on June 25 last and agreed to postpone interest payments for three years from January 1, 1903, and also to the issue of £20,000 5 per cent. short term prior lien debentures and £39,692 5 per cent. third debentures in satisfaction of the advances of Messrs. Hirsch. Up to September 30 last the English company had succeeded in building up a debit balance of £74,934, chiefly for debenture interest, and the directors look for salvation in the appointment of a new manager, a gentleman, in the opinion of the board, well qualified to fill the position assigned to him. As usual when things go wrong a good deal of directorial shuffling has taken place, and of the original board Messrs. H. Bousquet, H. A. Bulters, and A. M. Grenfell have resigned, and Earl Grey, Mr. C. A. Grenfell and Mr. G. Colladon, who were subsequently elected, have likewise taken their departure. We do not know to what extent the English investor is interested, but we hope not largely.

Stretton's Derby Brewery.

The directors of this undertaking seem very keen on extending its field of operations, and for the second year in succession indulged in a rather important acquisition. The latest purchase consisted of the whole of the ordinary share capital of Alton and Co., and it is good to hear that since it was carried out the trading of the concern has more than justified expectations. Naturally more capital was required, and the board issued 3,000 "B" preference and 2,000 ordinary shares at premiums of £2 and £3 10s. respectively, and we find on reference to the accounts that the cost of Alton's shares was £63,316. The report tells us that their acquisition was negotiated and entirely brought about by the exertions of Mr. Tennant, the managing director, and the board wishes to remunerate him for these special services with the nice comfortable little sum of £5,000. The generosity of some folk with other people's money is really startling. Thanks to this purchase and that of the Midland Brewery shares in the previous year, profits have grown considerably and came to £54,965 in the twelve months to September 30. Rather larger sums were allowed for plant depreciation and repairs, and after providing the usual charges and adding in £5,322 for dividends on investments, etc., the net balance is £46,825. So debenture interest and preference dividend having been met, the ordinary shares again receive 10 per cent., the reserve gets £10,000, making it £55,000, and £5,987 is carried forward against £3,881 brought in. This time the premiums on new shares issued, £12,759, are not added to reserve, being separately entered in the accounts, and we suppose Mr. Tennant's £5,000 will come off this sum before anything is done with it. It may be mentioned that one half the dividend received on Alton's shares is written off their cost, but we are not told the amount. Net additions to Stretton's properties in the year were £6,371, making £526,375, and beyond leasehold redemption, nothing is written off for wastage. This is not good policy, particularly when we consider that the mortgage indebtedness considerably exceeds the share capital. Trading accounts are favourable, but cash is very poor.

Wenlock Brewery Co., Limited.

What has gone wrong with this company? During the past three years there has been a steady shrinkage in the profits, and we look in vain to the directors' report for an explanation, as these gentlemen merely express their pleasure at being able to recommend the usual dividend of 10 per cent. on the ordinary shares. As will be seen from the following comparative statement, the gross trading profits for the twelve months ended October 31 fell to £71,706 compared with £73,503 a year ago, and £75,519 in 1901, and although rents, interest, etc., yielded £918 more at £29,870, the total revenue came to £101,576 only, against £102,455 and £108,466. At the same time administration expenses, law costs, bad debts written off, etc., which are all lumped together, rose by £5,683 to £38,271, and the allowance for depreciation was increased from £7,655 to £7,874, so that the self sacrifice on the part of the directors or trustees, or both, in surrendering £100 of their fees was not of much assistance, and the net income worked out at £37,565, or decreases of £6,731 and £8,134 respectively on the two preceding years. Including £4,352 brought forward, the amount available came to £41,917, against £46,852 and £50,055, but by reducing the sum written off properties and loans to £10,000, compared with £15,000 so allocated last year and £20,000 added to reserve in 1901, the ordinary shareholders again receive their 10 per cent. dividend, and £4,417 is carried forward. In other respects, too, the position of the company is less favourable, as the indebtedness to sundry creditors has risen by £4,529 to £12,913, and book debts, rents owing, etc., are £953 down at £15,254, cash is £1,803 smaller at £21,522, and stocks are £1,803 up at £11,623.

Trust.—

I. Nos. 4, 9, 11, 2, 6, 10, 5, 8.

II. Nos. 7, 3, 1.

Do not forget in purchasing the lowest security of all you suffer first from shrinkage of revenue.

That was a horrible ordeal to which Mr. Kenneth Grahame, the Secretary of the Bank of England, was subjected on Tuesday. A madman seeking the Governor, apparently with intent to kill, found the Secretary, and fired several shots at him. Happily, Mr. Grahame was not hit. The would-be assassin was secured without even wounding anybody. Madmen often fail thus, just because they are mad, but none the less is Mr. Grahame to be congratulated upon his escape.

Critical Index to New Investments.

**** To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Ammonal Explosives, Limited.

The proposition put forward by the promoters of this concern is not an inviting one, even if the compound is all that its inventors claim. "Ammonal," it seems, is a German invention, which, it is asserted, is superior to all other explosives known, and this company acquires the English and sundry colonial patents, with the option of purchasing, at any time within six months, the French, Portuguese, Spanish, Italian and Belgian patents. For this assortment of patents and options the vendors ask £35,000 in shares and £11,000 in cash, and another 12,500 shares and £1,500 cash are payable to the promoters for preliminary expenses and underwriting commissions. The total capital is £100,000 in £1 shares, and of these 15,000 are reserved for the purchase of factories, in connection with which the company has still another option to play with, leaving 37,500 shares to be offered for subscription. Naturally, the directors have every confidence in the success of the undertaking, and perhaps they have good grounds for their belief, but they are averse to publishing any detailed estimates of profits, and the public was invited to come in blindfold, and was not given much time for consideration, as the prospectus was only issued last Saturday and the lists closed on Monday.

Lochner's Navigation Coal and Coke Co., Limited.

Two enterprising gentlemen, Messrs. J. T. A. Lochner and L. J. Braude, having acquired a colliery in South Wales a few months ago, are now desirous of passing in on to this company in exchange for £15,000 5 per cent. first mortgage debenture stock and £15,000 fully paid shares. The total share capital is only £50,000 in £1 shares, of which 35,000 are offered for subscription at par, and the bait held out to attract applications is a statement that special contracts will be made with shareholders to supply them with coal at 1s. per ton over cost price. At present the output is, roughly, 1,000 tons per week, but this is said to be capable of being increased to 2,500 tons, and on the latter figure a profit of £6,500 is shown, of which debenture interest and redemption will require £1,750, and another £250 will go in other expenses, including premiums on the guarantee stipulated for by the vendors. That last little item is quite sufficient to let the cat out of the bag, as if the vendors do not consider the colliery itself sufficient security for their debenture stock, the prospect for the shares seems discouraging.

Wilson's Brewery, Limited.

This company started in a comparatively modest way in September, 1894, with a share capital of £200,000 in £10 shares, to acquire the business carried on at the Newton Heath Brewery, Manchester, but since then has gradually absorbed other businesses, with the result that the capital has steadily grown. In February, 1896, 20,000 5 per cent. cumulative preference shares were created and offered to the public during that and the following year, and later an issue of £1,000,000 4 per cent. irredeemable first mortgage debenture stock was made. Then in July last the share capital was further increased to £1,000,000 by the creation of 30,000 preference and 30,000 ordinary shares, and the whole amount was converted into £1 shares. The company recently acquired the business of Kay and Whittaker, Limited, Manchester, and in order to provide the purchase money and pay off temporary loans, etc., subscriptions are invited for an issue of 110,000 ordinary shares, at a premium of 10s. per share, and 150,000 preference shares at par, the latter carrying a full six months' dividend payable on January 1. At the date of the last balance-sheet the assets were valued at £1,897,030, and by the latest additions this total is increased to £2,274,000, exclusive of goodwill. Profits are given for the seven years ended February, 1903, and show that after increasing from £57,171 in 1897 to £63,488 in 1900, the war tax of 1s. per standard barrel caused a falling off to £62,763 in 1901, £59,950 in 1902, and £60,505 in 1903, and on these figures an average of £61,077 is worked out. The profits of Kay and Whittaker, Limited, are not set out in detail, but the accountants certify that they have averaged £4,975 per annum for the period from March 1, 1900, to September 30, 1903. On this basis there would be a balance of £48,552 available for ordinary dividend, reserve fund and directors' remuneration, after meeting all fixed charges, without taking into account any returns from the new capital. The company has certainly done very well in the past, and, although it is a big jump from £400,000 to £1,000,000, the directors evidently consider that the prospects of increased business justify it.

Passing Events.

London has been well favoured with Free Trade speeches this week, the Duke of Devonshire having made one at the Queen's Hall, and Lord Rosebery another at the Surrey Theatre. Apart from a little wobble on the question of retaliation, which he thought might in a moderate form satisfy the combative instincts of the people, the Duke was all for Free Trade, the freer the better. Lord Goschen, who also spoke, backed up his leader well, and their combined influence should do much to rally those wavering Unionists who are inclined to stray down the thorny and tortuous paths of tariffs. Lord Rosebery added nothing to what he has said in his previous speeches, but gave a humourous survey of the absurd position taken up by so-called tariff reformers, mocking their views and ridiculing their "facts." The oratory was not of the highest order, but it appealed to his audience, and, if enthusiasm counts for anything, South London is far from believing in Joseph and his promised millenium of dear food, lower wages, and less work.

Many valuable essays have been published recently on the tinplate industry, about the position of which, Mr. Chamberlain recited some of his customary mob-exciting romances, but none has interested us more than Sir J. Jenkins's in last Saturday's *Westminster Gazette*. It is a complete exposure of the shameless falsehood with which the ex-Colonial Secretary's harangues are habitually loaded, and, amongst other things, brings out the striking fact that when Congress, led by the late Mr. McKinley, put an import duty upon British tin plates in order to establish a tin plate industry in the United States, the interests of industries employing something like two millions of people were adversely affected in order to give direct employment to no more than sixteen thousand people. One result to the United States of this kind of selfish folly was that millions of bushels of vegetables and fruits were allowed to rot because it did not pay to can them, and the newly established tin plate industry was spoken of as "a leech sucking the blood of creatures larger and more valuable than itself." Nor was this all. By endeavouring to create an industry for which there was no necessity or natural room within the Union, the trade its citizens had formerly done with other countries in tinned goods passed away. English firms took advantage of the block created to export jams, jellies, marmalade, etc., to the United States themselves, and so bad did the position become that in 1894 the tin tariff had to be reduced. By that time the mischief was done. Our tin plate manufacturers suffered temporarily, but in the end gained all round, because a large home trade developed, and because other countries became important customers. Free trade, in other words, saved us. That essay should be reprinted.

Turkey has given in and accepted the Austro-Russian scheme of reforms, though it tried hard, to the last, to get the terms modified in such a way as leave a possible

loop-hole. But it was no good and in the end the proposals had to be swallowed entire much to the Porte's disgust. Still, there is a wide gap between drawing up reforms and putting them in force, and to do the latter will prove a stiff job for the two powers that have undertaken it. Therefore, it is quite possible the spring may find matters but little better than they are now.

Our troops have re-occupied Galadi, and so commenced the latest figure in the Somaliland war-dance. The grand finale, however, will not take place until late next month, when a general movement will be made with the object of either bringing the Mullah to bay or driving him into the hands of the Abyssinians. In order to place a garrison in Galadi our men had to make a forced march of a hundred miles across the desert from Bohotle. On their way back the column fell in with a band of dervishes who had been out raiding, and were returning home with their spoil, the greater portion of which passed into our possession after a fight. Glorious!

Had Dr. Albert Shaw, the editor of the American *Review of Reviews*, lived in the days of the Puritan Fathers he might have earned considerable notoriety as magician, merely on the strength of his remarkable forecast of the States' interference in Panama. The recognition of the new republic by its big neighbour, the threats applied to Colombia, and the sundry other political indecencies perpetrated by the Washington Government are described with astounding precision in the current number of the *Review*. Yet the article must have been written some time before the deeds were actually done. Marvellous prescience, is it not? But, like a conjuring trick, it is very simple when you know the way. Dr. Shaw is a close personal friend of President Roosevelt, and this may shed some light upon his wonderful skill in foreshadowing coming events. The President himself and Secretary Hay must also be gifted with second sight, otherwise they would not have kept a naval force hanging around Central American waters, all ready to proceed to Panama at the smallest sign of trouble. This, coupled with their indecent haste to recognise the new republic as an independent state, will give the world a very poor opinion of Yankee political morality.

In his valuable address as President of the Statistical Society, Major P. G. Craigie gave some interesting facts with reference to the dependence of this country upon foreign food, and his paper, of which we have only seen a summary, should be interesting to read in detail. We are disposed to agree with his view, stated more than once, that it might be some relief to the strain upon the old country caused by the great increase in the population to be provided with food, were the people dispersed over the unoccupied soil of other parts of the empire to grow that food for themselves. A moderate dispersal would be health-producing all round, but how can it be brought about when all our colonies in temperate zones shut the door systematically in the face of the immigrant.

Under the Brummagem fiscal policy, poor India will get nothing, but then from the day we first blessed her with our rule she has only received the kicks and never the ha'pence. Mr. Romesh C. Dutt showed this in a speech delivered at the South Place Institute, Finsbury, on Wednesday, and gave an outline of the way Great Britain has always thwarted and choked Indian native industries. Free Trade and Protection, alike, have been used for this end, and often the burdens imposed upon the natives have resulted in no benefit to anyone else. The ignorance displayed by the majority of our statesmen, living and dead, on Indian affairs is amazing, and it is an ignorance for which some day we shall pay dearly, unless we cease to regard our Eastern Empire as a training school for soldiers, and cover for titles and decorations.

A correspondent, writing in the *Manchester Guardian*, gives an unpleasant picture of the present distress in Rhodesia, amply confirming the accounts recently published from other sources. As in the Transvaal, the country is seething with discontent, says he, and conferences are frequently taking place between the administrators of the Chartered Company and local committees and other bodies interested in obtaining relief from the intolerable exactions of this tyrannous company. "The position of the workmen, the restricted powers of the Legislature, and excessive taxation are some of the other local grievances which threaten to fan the smouldering embers of discontent into fierce flames of revolt, if relief is not speedily forthcoming." Nor is this the most important symptom of distress. There is another, affecting more directly the financial position of the company and its prospects, and that is the vast number of lapsed mining claims that have accumulated for years past, and now well-nigh threaten to overwhelm it. The officials are at their wits' end to know what to do, and no wonder if, as this correspondent says, the number of these lapsed claims is 50,000. Chartered shareholders should take note.

Germany is going ahead with its navy building and its imperial deficits. According to the imperial budget just issued, it seems that the naval estimates for 1904 figure out at £11,260,000, an increase of £415,000 upon the figures for the year now expiring, and it is calculated that during the period 1900-04 nearly £42,000,000 will have been sunk in this direction. If the empire does not want to fight its neighbours, what good is it going to get by spending this money, some of which will have to be borrowed? In fact a loan of £1,600,000 is provided for in the new budget, and it is borrow on all hands in this magnificent empire.

Amusing telegrams almost daily arrive from that other great empire in the southern ocean, New Zealand, and an amended version is now given of the latest borrowing enterprise of Seddon and Co. A week back we were told that £1,000,000 was to be raised in Australia for the help of the Treasury at "not more than 4 per cent." Did Australian bankers refuse to take that sum? Perhaps, for now we are told that only £500,000 in 4 per cent. debentures at par, to be repaid not earlier than five or later than twenty years hence, is being put up for tender in New Zealand and Australia. "For tender" is good.

Roumania, we are glad to see, is flourishing as a state, thanks to the careful management of the present ministry and M. Sturdza, its Finance Minister. By a policy of strict retrenchment, the catastrophe threatened in 1901 has been averted, and surpluses have taken the place of deficits. When the present Finance Minister took office, expenditure was upwards of £9,500,000, he has reduced it to less than £8,750,000, and, thanks also to the increase in revenue, the budgets of the past two years show a total surplus of £2,120,000. This is so excellent that we sincerely hope a war with Turkey will not intervene to sweep away the results of so much good and patriotic work.

According to the financial message presented to the Uruguay Congress, the revenue of that debt-bound state for the year ended June 30 last was $16,315,330, or a net increase of $155,330, but the expenditure none the less left a deficit of $238,559. The year, however, was troubled by a rising, and the "rebels" had to be bought off, which is always a costly business. An extraordinary loan of $1,000,000 was authorised by the Chambers, and it has not all been spent, which surely bears testimony to some effort at economy.

The licking the M.C.C. team has given the New South Wales eleven has, we hear, caused considerable chagrin in Sydney. Really the Colonial Secretary will have to interfere, as the unity of the Empire must not be damaged in this fashion. A cricketer himself, he will be able to suggest an easy way of surmounting the difficulty. For if the Colonials are sore at one of the States being beaten, what will their feelings be should Mr. Warner win the rubber of the test matches. Such a blow to their *amour propre* might make them revolt or repudiate, just to get even with us. Pray arrange for a British defeat good Mr. Lyttelton.

The receiver appointed in connection with the Yorkshire Wool Combers' collapse has evidently come to the conclusion that no honest attempt is likely to be made to resuscitate the concern, as it has transpired that he is open to treat for the sale of the various works included in the company's assets. From this it may be inferred that the

formal process of winding up has commenced. According to the Bradford correspondent of the *Financial Times* there has been no notification of another meeting of the debenture holders, and it is doubtful if the report of the debenture trustees will be published as was expected when they were appointed.

For the last quarter of its financial year the Standard Oil Trust has declared a dividend of $12 per share, which is an increase of $2 on that paid in the corresponding quarter of 1902. The whole amount distributed for the year is $44,000,000, of which John D. Rockefeller takes $15,000,000. So until the Standard Oil Trust explodes, like some of its low-flash products, he need not fear starvation, unless he has lost more in copper and railroads than he rakes in from oil.

A good deal of jeering is being indulged in by certain newspapers over the misfortune that has overtaken the Bristol Corporation. It has been obliged to raise £500,000 in 4 per cent. bonds with five years' currency, and was compelled to give the subscribers the option to convert these bonds into Bristol Corporation 3 per cent. stock at 92½ whenever they please. The terms seem to us quite as favourable as any municipality in this country can at the present time expect, and a good deal better than some will find themselves able to borrow at. The misfortune lies in Bristol's commitment to an enormous expenditure, which will probably aggregate £3,000,000 before all is over, on docks principally, and on electric lighting and other undertakings, at a period when our other misfortunes and the waste of our capital rendered the raising of this money most difficult. Bristol, in short, is now paying its share of the indirect war costs, and must take the consequences. It had either to stop these works midway, and lose the money already spent, or go on and pay the higher price. That is its misfortune, not something to be jeered at.

What has happened in the London office of the National Bank of Scotland? We have been waiting patiently to see some formal announcement of the changes and some explanation of the reasons therefor.

Experience has taught the directors of the terrible Andre Mendel bonnet shop wreck, Louise and Co., that they have a very tame body of shareholders to deal with, and in a little scheme which the board has on hand they take advantake of this knowledge to treat their employers with a contempt difficult to parallel. Their management has been such that they should long ago have been given the order to depart. Instead, they come forward and ask proprietors to blindly agree to amalgamation with a "well known continental millinery house." Not even the name of the business, or where it was situated, was mentioned in the circular, but a representative of the *Financial Times* succeeded in extracting some details from the chairman of the company, one Edgar Cohen. The firm, it seems, is known as the Maison Lewis, of 16, Rue Royale, Paris, with a branch at Monte Carlo, and show rooms in London, and one can only marvel that it should wish to ally itself with a concern so financially dowdy as Louise and Co. Mr. Cohen refused to divulge the terms of purchase, and shareholders must wait for these until a meeting called for Tuesday next, when they will be asked to sanction an increase in the ordinary share capital by 20,000 £1 shares.

There has been a pause in the bank absorption business during the past month or so, but now the Capital and Counties Bank takes up the running by acquiring the county connection of Messrs. Foster and Co., of Cambridge, with offices at Bishop's Stortford, Ely, Littleport, Newmarket, Royston, St. Ives, and Saffron Walden. The last published balance-sheet of Messrs. Foster showed that the liabilities on current and deposit accounts were £1,941,778, and advances to customers £959,293. Mr. Geo. Edward Foster will join the Capital and Counties' board.

Not many people are familiar with the London Debenture Trust because it was formed only a couple of months ago with a capital of £500, a sum which rendered the issue of a prospectus quite unnecessary. But the directors wish the public to share with them in the many good things that they have up their sleeves, and therefore offer 5,000 5 per cent. debenture bonds of £10 each. This makes the debenture capital 10,000 per cent. more than the share issue, but never mind, the holders participate in 10 per cent. of the net profits after 10 per cent. has been placed to reserve, although they are not told to what extent. Of course there are plenty of assets, to say nothing of options and negotiations, and it requires a strong effort on our part to deny ourselves the opportunity of becoming interested in the Empire Corporation—"Consistent Birmingham" offshoot?—in which this concern holds a large block of shares. Then there is a substantial interest in the Diamond Sign Company, whatever that is, option rights over five diamond farms—think of the wealth—more rights over the Electric Carriage Call, an important invention to reduce the cost of setting up type, and a tin property in Tasmania. We do not know what advantage the Electric Carriage Call possesses over the old-fashioned whistle, but fancy the directors will have to perform on that little wind instrument in getting their £50,000.

Two important shippings, Lunds and Thompsons, the famous Aberdeen Thompsons, have, it is said, broken away from the Australian shipping ring, and intend to load their steamers independently. It looks a praiseworthy step, but what will the shippers do? They are bound hand and foot to the conference by the rebate system. The ring can fine them 10 per cent. on the freights charged for at least six months back, if they dare to break away. United they could beat the ring, but can they be trusted?

Colombia has cut up rough and announced its intention of landing troops in Panama, if it pleases, notwithstanding anything Roosevelt and his government may say to the contrary. What action the States will take if the Colombians proceed to extremes is doubtful, for there is a strong feeling current that their threats were little more than bluff. Besides with the Presidential election drawing near and Roosevelt hungry for a fresh term of office, he may think twice of launching the nation into a war which will be neither honourable nor profitable.

When talking through his hat about the wicked bounty-fed sugar now excluded from our markets, why did Mr. Chamberlain forget to mention the hundred thousand tons of bounty-fed iron dumped here by Canada? No doubt he forgot—his memory is so convenient—but next time he might tell us what will happen to it under his great and glorious preferential tariff.

Notes on Books.

Evaluation de la fortune privée en France, d'après les éléments fiscaux. Rapport par Yves Guyot. (Paris: Guillaumin et Cie.)—This is a most interesting essay, whose statistics are carefully put together and full of fascination from many points of view. The lesson of the various summaries dealing with the wealth of the French people in lands and houses, in movable property, in stocks and shares is summed up at the end, where we get an analysis of the dissemination of wealth in France. Taking deceased estates as the guide we learn that in 1902, 363,612 successions were declared representing gross assets to the value of about £208,500,000. After deducting the liabilities the net value of these successions came to about £191,000,000. This vast sum was split up in the following manner: little heritages of £400 and under represented 85 per cent. of the total number of estates dealt with, and if estates of £2,000 and under are classed together then these embrace deceased estates equivalent in number to 96 per cent. of the entire number of heritages dealt with. In other words, only 4 per cent. of the 363,612 successions represented estates of more than £2,000 net value. That fact alone shows the remarkable distribution of wealth amongst the population of France, but another fact is equally eloquent of the tendency of wealth to accumulate in few hands for the 4 per cent. of the total heritages represented by estates above £2,000

amounted to 35 per cent. of the entire mass of property passing. Twenty-seven estates, for instance, of the value of more than £200,000 each represented a capital value of upwards of £100,000,000, whereas 213,378 estates of the value of £400 and under aggregated little more than £96,500,000. An examination of the share lists of railway companies and the placements of their obligations tells the same story as, for instance, in the case of registered shares of the Paris-Lyons-Mediterranean Railway. Out of 29,522 of such share certificates, 4,856 represented a single share held, and 15,812 were certificates for from two to ten shares. These examples are mentioned merely to indicate what a valuable and suggestive compilation this is, how thrifty the French people are, and yet, in the mass, how poor.

Pamphlets mostly in favour of, and sometimes against, free trade continue to drop in upon us in numbers beyond our capacity to read, but those we do look into, dealing with free trade in an honest and straightforward manner, are generally well worth reading, and we may mention specially this week two serious booklets and an amusing one. Professor Shield Nicholson of Edinburgh has reprinted his public lecture delivered at the University on the tariff question with special reference to wages and employment. It is published by Messrs. Adam and Charles Black and can be had for sixpence. Like all that Professor Nicholson writes it is suggestive, clearly put, and logical. He comes to the conclusion that the vast increase in the volume of imports since 1860 has not been accompanied by a corresponding displacement of labour into the ranks of the unemployed. An examination of the pauper returns warrants him in coming to this conclusion. Cheap imports do not hurt domestic labour but tend to increase the demand for it just as cheapness, the product of improved methods of production, always does. Another vigorous and strongly phrased pamphlet is Mr. John Burns's "Labour and Free Trade," published by Kent and Matthews, of 180, Wandsworth Road, S.W., at 1d. It is full of straight speech and apt phrasing, as well as of facts of a striking character. For instance, he says Mr. Balfour ought to have remembered that it is not at all infrequent for any one of our northern rivers to turn out more shipping than the total European output, and for the two yards of Belfast to equal in one year the commercial tonnage made by all Germany, and to do this cheaper, better and quicker by its highly organised trade union labour at higher wages and shorter hours than Germany enjoys. The more facts of this kind are hammered into the minds of the working classes the less danger is there that the people will be misled. Mr. Burns describes the Prime Minister and the former Colonial Secretary as the "Davenport Brothers of fiscal legerdemain," and speaks of the tariff-mongers as "figure forgers," with quite a number of similar phrases of a kind that stick and go home to the minds to which they are principally addressed. Of an amusing type is the "Political Advertiser," issued by Mr. Fisher Unwin at the price of 1s. net. It is modelled on the famous "Wisdom While you Wait" skit, and contains many happy strokes, not the least funny being some most ingeniously framed mock advertisements. It should serve to lighten the dreariness of the discussion which has been so unwarrantably thrust upon the country. We have chuckled over that illustrated mock advertisement occupying pages 8 and 9, where amongst other things we are told that "you may become a new man by simply eating former convictions." On another theme, but one of deep and shame-fraught interest to the people of this country, is Mr. David Mason's little pamphlet, price 3d., also issued by Mr. Unwin, on "Macedonia and Great Britain's Responsibility;" it quotes the text of the Berlin Treaty and drives the moral home.

Devon and Cornwall Banking Company.

This bank's quarterly balance-sheet shows that on October 17 last the liabilities to the public on deposit, current and other accounts were £4,227,750, the chief assets consisting of high-class securities £1,861,503, cash in hand and at call £340,960, advances and loans £2,360,745, and bills of exchange £134,329. The holding of Consols is valued at 90.

TRADE AND PRODUCE.

Wheat.—The market has kept steady and prices for both spot and futures advanced during the week, but very little business has been done. Foreign wheat has sold about 6d. per quarter dearer than last week, and English wheat has kept much the same, farmers' deliveries of 50,771 qrs. averaging 26s. 9d. per qr., against the average of 26s. 6d. the week before, good samples obtaining from 30s. to 32s. per quarter. American markets have fluctuated a good deal within narrow limits, and have been fairly active, with a more or less bullish undertone. Bradstreet's estimates give the quantities in sight east of the Rockies at 56,113,000 bushels against 52,882,000 in the previous week, and 72,968,000 bushels in the same week last year.

Wool.—Little improvement can as yet be seen in the trade, and the markets are mostly more depressed than ever, and business more and more difficult to transact. Interest for the moment is centred in the London sales of Colonial wool, which opened on Tuesday. At present it is too soon to know what the final level of prices will be, but they are expected to fall, and already show great irregularity, particularly in merinos. English wools of the cheaper sort remain in favour, though spinners are not anxious to do business in them till they see the results of the sales. Occasionally a small concession to meet merchants is made, but as a rule prices are kept firm.

Linen.—The position is by no means so satisfactory as it was and an unsettled feeling is gaining ground in the markets owing to the advance in flax. Continental dealers keep their prices up to such a high level that trade with them remains at a standstill, and though home spinners and merchants have not followed suit at the same rate, a decided rise has been made in yarns, and business is very difficult to do. Merchants buy very reluctantly, and only sufficient for present use, as they declare that their profits disappear altogether under the present state of affairs. Employment is getting so scarce in some districts that short time is threatened. Cross-channel trade has been a little better again lately, and exports keep up to a fair average. The United States still continue disappointing, a little more is doing in Colonial trade, and South America and the Continent tends to improve.

Cotton.—Notwithstanding that the receipts of American cotton are more in advance of those of the past four seasons, and continue on a large scale, spinners find but little relief in the shape of lower prices. The latest estimate of the season's crop reckons it to be between 11,100,000, and 11,300,000 bales, the majority of the market prophets being inclined to put it at the latter figure. Mr. Henry Neill, however, declines as yet to commit himself to a definite statement, but from his firm's circular, Sir Jacob Behrens and Sons draw the inference, that the maximum of this year's movement has yet to come, though usually at this time it has passed. On the week futures have been steadier, but for Egyptian cotton the demand has only been moderate. Yarns have varied but little, and the tendency of spinners is to hold firm at the rates asked. The Eastern markets continue to offer at unworkable limits, and practically all the business done with them this week has been in several odd lots booked for Calcutta and Madras. Cloth is quiet, but steady, and makers having now improved their position, are not disposed to operate except at an advance. Buyers resent this attitude, and business at present is checked, though there are still a fair number of inquiries, the majority of which come from Bombay and Calcutta. Rangoon has bought freely, and continues to inquire, while the Straits also are offering business, as buyers there show considerable anxiety about getting their supplies.

New York on the whole was quiet this week, though always inclined to put futures up when the chance arose. Sensational dealing, however, was checked by frequent sales to realise, and larger port and interior receipts, while the favourable weather reports were also against the bulls. Towards the latter end of the week the tone strengthened, as the news from Liverpool proved better than was expected, and there was also a considerable demand to cover contracts.

Spot closed quiet at Liverpool last night. American, however, was 3 points higher on the day, with middling at 6.20d. and M. F. at 6.46d. Egyptian was a sixteenth lower, both for fair and F. G. fair, the former being quoted at 7⅝d,. and the latter at 8 11-16d. Futures remained steady, with November at 6.8d., Nov.-Dec. 6.1d. to 6.2d., and Dec.-Jan. 5.97d.

Coal.—Little change appears in the aspect of the trade. In some district a slight improvement is seen, in others the depression is as bad as ever. House coals are moving off better on the whole, gas contracts are fairly numerous and good, but iron making and general manufacturing fuel, and with one or two exceptions steams, are dull and show a falling off in demand. One or two contracts for abroad have been placed in the north of England for next year, and at prices which show that the value of fuel is not likely to be less, and in Wales purchases of steams on Russian account and Admiralty orders keep the tone firm.

Copper.—Though business was quiet nearly all the week, the tone of the market was firm, and prices up to Thursday showed practically no change from those of last Friday. This strength is due to the strong statistical position here, the limited supply in sight having caused the bears to fear a squeeze in spite of the fact that the American producers put down the quotation for electrolytic a week ago. Last night, however, prices fell off a little, £54 17s. 6d. being the cash quotation, and £54 12s. 6d. three months.

Tin.—In the early part of the week Eastern advices were lower and for a time the market here followed suit. The fall in quotations, however, did not last long, as the East soon recovered, while

the result of the Banka sales also proved favourable. Business was never at any time on a large scale, though there was always a fair demand in evidence, which kept prices firm and steady. At Banka the average price obtained was 70¾ guilders, or about equal to £118 10s. Yesterday prices went down to £119 for cash, and £120 10s. three months, the tone of the market being weaker.

Iron and Steel.—The pig-iron market at Glasgow was dull this week, and prices showed an easier tendency. For Cleveland warrants the quotations were 42s. 10d. to 42s. 9d. cash, 42s. 9½d. to 42s. 9d. delivery in six to sixteen days, and 42s. 9d. in a month, while for Scotch and Cumberland hematite 48s. 6d. and 52s. 4½d. respectively were asked, though the figures can only be described as nominal. The general outlook in the Scotch iron trade is not so favourable as it might be, fresh orders being scarce since consumers persist in only buying small quantities of raw material. This hesitation to commit themselves on the part of buyers is due largely to the possibility of American competition both in the home and foreign markets, though on the other hand the financial position of the States is against the iron makers there indulging in speculative business. Some of the finished iron trades are fairly well employed, but business on the whole is far from brisk, and the keen competition for the few orders in the market tends to depress prices. The steel trade, however, is in a worse plight since the orders in this department are scarcer even than in the iron trade. Some shipbuilding contracts are reported to have been placed on the Clyde, yet it will take many more to fill up the very apparent gaps on the building slips. In the north of England the conditions are much the same as in Scotland, and prices this week have been still further reduced in certain branches. For Cleveland pig-iron, however, quotations are steadier, and have only fluctuated within narrow limits during the week, as supplies of nearly every grade are short. Steel rails are fairly brisk, and the inquiry not only on export, but also on home account, has increased, the chief contract for the latter which is in the market being one by the Great Northern Railway for 10,000 tons of steel rails, and 200 tons of fish-plates, delivery to be made in the early part of the year. The present quotation of £5 per ton for heavy rails is therefore considered to be as low as prices are likely to get. Shipbuilding material, on the other hand, has been again reduced, and steel plates are now quoted at £5 10s. per ton, iron plates at £6 5s., and steel boiler plates at £6 17s. 6d. But even these prices will not induce builders to buy, since until freights improve there is not much chance of owners giving orders for new ships. At Barrow the hematite trade is more depressed than ever, and there are now only 25 furnaces in blast, compared with 35 a year ago. After stopping for a week the steel makers have resumed work, and claim to have orders in hand which will keep them busy up to Christmas. But the outlook generally is far from promising, and it is not likely that any large volume of work will be done until the spring.

Tea.—The auctions this week have been dull and depressed, and prices generally have had an easier tendency. 27,987 packages of Indian were offered and averaged 7.64d. per package, which was slightly better than last week's average of 7.59d., fine teas remaining fairly steady. Ceylon offerings were not of so good a quality as of late, and all teas dropped in price, especially those over 7d. per lb. 18,910 packages were put up to auction and averaged 7.75d. per package against 7.96d. last week, and 8.11d. in 1902. Java was weaker also in sympathy with the other markets, and in China very little was done during the week.

Sugar.—During the week the market has been quiet and easier, prices all round showing a decline of about 1½d. Near sugars have suffered more, comparatively, than distant positions, as a large quantity of sugar had to be sent to Hamburg to meet contracts. November has been sold as low as 8s. 8¾d. and December 8s. 4½d., while May at 8s. 8¾d., August at 8s. 11d., and Oct.-Dec. at 9s. 1d. always found buyers. The demand for refined sugar, though rather better, is, Mr. Czarnikow states, still unsatisfactory, and the improved trade which the market confidently expected has not yet put in an appearance. Cane sugar was in very scanty supply, and the business done was confined to parcels of refining sugars in the outputs, and to new arrivals of crystallised in London, the rates for which are practically unchanged. In the States the market has developed a slightly better tone, and Demerara and Java have been sold at prices about equal to 8s. 3d. for bounty free 88 per cent. beet f.o.b. Hamburg. The Senate, it is expected, will give its decision on the Cuban Reciprocity Bill about December 10, so that it may come into force on the 26th. During the week the landings and meltings balanced each other at 26,000 tons, leaving stocks unchanged at 103,000 tons.

Grand Hotel, Eastbourne.

This company did business to the amount of £62,621 during the twelve months ended September 30, and received £635 from other sources, making £63,256 in all. It was earned at a cost of £23,128 for provisions, wines, spirits, etc., and £17,499 for general expenses leaving £22,629 as net profit. After meeting debenture interest, rates and taxes, directors' fees, etc., and adding in a few pounds for interest and transfer fees, the amount available for division is £16,005. A 3 per cent. interim dividend has been already paid, and it is now proposed to pay a further 3 per cent., together with a bonus of 4 per cent., making 10 per cent. in all, and to carry forward £5,090. Nothing is placed to reserve, but that fund stands at £30,000, besides which there is a rest account of £16,445. We should like to see part of these savings separately invested, as the concern is somewhat pinched for "liquid" assets, notwithstanding that it has a stock of wines, etc., amounting to £6,298.

PUBLIC INCOME AND EXPENDITURE

The following are the receipts into and issues out of the Exchequer between April 1, 1903, and November 21, 1903:—

Revenue and Other Receipts.

—	Estimate for the year 1903-1904.	Total Receipts into the Exchequer from April 1, 1903, to Nov. 21, 1903.	Total Receipts into the Exchequer from April 1, 1902, to Nov. 22, 1902.
Balances, April 1:	£	£	£
Bank of England	—	5,887,524	8,080,383
Bank of Ireland	—	749,603	486,564
		6,637,127	8,566,947
Revenue.			
Customs	34,640,000	21,798,000	22,042,000
Excise	32,700,000	20,579,000	21,132,000
Estate, &c., Duties	13,300,000	8,144,000	9,048,000

Treasury, November 24, 1903.

The Investors' Review.

The Week's Money Market.

BANK RATE 4 PER CENT. (Advanced from 3 per cent. on September 3.)

Norfolk House, Friday Evening.

Another quiet week has passed in the Money Market, with a considerable rush towards the end of it for short credits, but no sensational changes or demands of any kind. All talk of an immediate advance in the Bank rate has disappeared, and, if it be true that the Bank is borrowing some of the Indian gold here to keep up appearances, it is probable enough that a higher Bank rate may be kept off for some weeks. The fact, however, must not be overlooked that £1,000,000 in gold is said to have been bought for New York by the first National Bank of that city, a Rockefeller bank, and that the supply of African gold at hand is not estimated in the best informed quarters at much more than £500,000. The balance of the million may therefore be taken from the Bank of England, and although further Egyptian requirements are understood to be moderate, sums in gold are certain to be taken away for other quarters. The Bank, in short, remains quite helpless to strengthen its reserve by purchasing gold, for the market price of bars has again risen to 77s. 11½d., and while that is so the unlooked for might precipitate an advance in its rate. To-night a leading authority informs us that he estimates the further withdrawals of gold for Egypt at £500,000, or thereby, between now and the end of the year.

In the beginning of the week borrowers of day or seven day loans got their money frequently at 3½ per cent., and they have rarely paid more than 3¾ per cent. for seven day loans borrowed from the joint-stock banks, although call money has often risen to 4 per cent., and yesterday, which was Stock Exchange pay day, was frequently 4½ per cent. The Bank has done a good deal of the business, especially yesterday, and it charged 4½ per cent. for seven day loans. It continued to help the market to-day, but only by discounting short bills at 4 per cent. This morning the demand outside was so keen that borrowers paid 3¾ to 4 per cent. to the joint-stock banks for seven day loans, but the fresh discounting at the Bank, and perhaps some releasing of money lately borrowed by it to tighten up the market, caused ease in the afternoon, and loans over night were plentiful enough. The India Council was also helping the market by renewing loans for three weeks at 4 per cent. Earlier in the week it was calling loans in. Consol account money is likely to cost 4½ per cent.

Discounts were not very firm in the beginning of the week, except for remitted bills due within this year, on which the rate never fell below 4 per cent. Most houses quoted 4⅛ per cent. for these, and the result was that most of the paper went to the Bank of England, which took it at 4 per cent., but it would not buy bills running into the new year. For those, however, the rate was generally at least 1-16 under 4 per cent., and long dated paper has been taken at lower figures, 3¾ per cent in some instances, and often 3⅞ per cent. This points to an expectation that the beginning of the year will see money cheaper than it is now. We do not find ground for this expectation, in view of the strain which will be put upon the public and the Money Market next quarter to meet the oppressive demands of the tax gatherer. Income tax, although lower in poundage, is going to be harder to pay next quarter than it has yet been, and the money market is bound to be continually short of credits. Discount business was poor to-day, there being very few bills offering, and rates were maintained more by the feeling of apprehension about the future which still dominates men's minds more than they are willing to confess. Rates were generally as quoted above.

As we anticipated, the Treasury had to pay pretty smartly for the £2,000,000 of fresh money raised on three months Treasury bills in the beginning of the week. About 16 per cent. of the amount was sold at £99 0s. 2d., and the average price paid was equal to a discount of £3 18s. 5d. per cent. On the £1,000,000 of six months' bills, however, the rate was considerably easier, at an average of £3 13s. 6d., tenders at a price equivalent to a discount of £3 14s. 2d., receiving about 71 per cent. of the amount of their obligations. There are more of these bills to follow.

SILVER.

With the India Government the principal, and except for a little trade demand, the only buyer of bars, prices have been more susceptible than usual to the fluctuations in the East. Quotations came over lower from India in the beginning of the week, and values on this market were further depressed by sales from Singapore, and by the temporary suspension of the Government orders, dropping to 26¾d. per oz. for cash and 26 5-16d. per oz. for delivery two months forward. A recovery to 26⅞d. and 26 7-16d. per oz., respectively, was brought about almost immediately, but the market was never very firm at these figures, and to-day they relapsed again to 26½d. and 26 3-16d. per oz., owing to a decline in India, and fears that the Indian Government orders for the metal had ceased. At the lower levels, however, "bears" covered to a sufficient extent to steady the market. For the Rs.60,00,000 of India Council drafts offered on Wednesday last, applications reached a total of Rs.3,80,50,000, all in bills, and tenders at 1s. 4 1-32d. per rupee received about 15 per cent. Next week the amount to be offered is again Rs.60,00,000.

Tenders will be received at the Bank of England on Monday next for India bills to the amount of £500,000 in part replacement of £1,000,000 falling due on Friday, December 4. The bills will have a currency of twelve months.

Stock Market Notes and Comments.

Another account has been surmounted without sign of distress, and markets have once more assumed a cheerful aspect. People now hope that there will be no advance in the Bank rate this year, and in various directions there is an inclination to play so as to attract the public. Consols have been going up on the less gloomy monetary prospects, and in view of bank balance-sheet exigencies it is by no means improbable, should nothing untoward happen to the credit market, that we may find the price worked up to and beyond 90. But the real position is in no sense better. Government necessities remain as wealth-devouring as ever. Municipalities, colonies, railway companies, industrial concerns of all descriptions want more accommodation from the credit handler. If, however, these multitudinous demands can be kept back for a little, it is possible enough that the present upward movement in markets may continue. There is no certainty of it, just a chance.

In one direction we are disposed to think that those who see good profits on their purchases might begin to take them, and that is in the Argentine Railway market. There has been a strong upward movement there in progress for months, and to a considerable extent it has been warranted by the facts, but several of the stocks are now at quite full prices, and the wise will secure some of the gains they show before anything untoward happens. Argentina is progressing in many ways, and will, we think, continue to progress, but the capital demands of these railways are also bound to increase, and, now and then, we shall have sets back from bad harvests, locusts, or low prices. It is just as well, therefore, to be ahead of events.

We thought it was coming. The bosses had to seize their "last chance," or go under, and this last chance they evidently think has come with the report of the Transvaal Labour Commission, and the more or less immediate prospect of Chinese immigration to work the mines. It was heralded by the wonderful "strike" of the Robinson Central Deep, noticed last week, a strike, as the *Financial News*, in an article full of unconscious humour points out, quite unusually rich for that goldfield. So the boom was started in the middle of this week, and went merrily onward during almost the whole of three days, with prices mounting after a fashion that faintly recalls the old times when we all more or less went mad about South Africa and its gold. As yet the public imagination has not again caught fire. People are too disgusted, and have already too many losses to nurse, but human nature will not belie itself, and if the master players, the *meneurs*, as the French would put it, of the market can only keep the ball spinning for a few days or weeks longer, the crowd will be sure to rush in, and prices may advance in the good old style, all the more rapidly, perhaps, because there is really no reason why they should go up a penny. Readers of this Review, we trust, will keep their heads cool and look calmly at the position, ready not to buy but to sell whatever they may have been sitting upon during the years of darkness, when prices go high enough. It is not your profit the bosses are concerned with, but their own.

After all, even this Robinson Central Deep is not such a desperately taking proposition, to use the mining slang. The total capital of the company is nominally £500,000, of which £400,000 has been issued, £300,000 of it to the vendors in payment for the small property handed over. That, altogether, only amounts to 45½ claims, the *Financial News* obligingly tells us, and at the market price of £4 per share the present issued capital means £35,000 per claim, of which £26,400 per claim is bagged by the vendors. Add the unissued 100,000 shares at the same figure, and we get £2,000,000, on which a 10 per cent. dividend would require £200,000 net. It may be that the company will produce this, or more, for a little time—no one in the least can guess—but it cannot do so for long, because its "life" must be short, and meanwhile it is urgently in need of money. Its creators have already had to advance £170,000 to it, merely because they took such a lump of the capital to begin with as to leave the mine in a starving condition for working capital. On the existing capital the vendors' share represents 75 per cent. of all future earnings, and on the entire capital 60 per cent. There is nothing in this, it may be observed, fair to the investor. He is taken advantage of at the start, and preparations are carefully made to bleed the mine to death for the benefit of the promoters. Why should any sensible man risk a farthing in an enterprise thus handicapped? Let him at least wait until something more than assays of bore-hole rubbish prove that the mine is up to sample.

The Week's Stock Markets.

The play in the Kaffir Circus absorbed nearly all Stock Exchange attention during the past week, and business in other sections was at a very low ebb. The arrangement of the fortnightly account gave dealers some little occupation, and as this proceeded with encouraging smoothness a fairly cheerful mood prevailed. Naturally there was no sustained upward movement such as that witnessed in the South African market, because the outlook for such things as Home Railway ordinary stocks and American Railroad shares makes all thinking people pause before committing themselves to operations for the rise, but prices on the whole were moderately well maintained with the Argentine Railway market making a rather successful effort to emulate the boomlet going on in Kaffir shares. Money for the settlement usually cost 4½ per cent., a charge which

caused some complaint, inside money dealers averring that it was often impossible to make any profit on the rate exacted by bankers, but with the outside market once more completely controlled by the Bank, lenders were naturally disinclined to concede anything from this figure.

After expending so much energy during the previous week in frightening "bears," the "bulls" of Consols were not disposed to allow the hard-earned gains to slip from their grasp, and by dint of much effort almost wiped out the slight relapse that followed the "boom." Prices might have gone still further ahead, but unluckily more Japanese war stories got afloat, and questions fell back, only to fractionally recover again and leave off ¼ higher at 88 13-16 to 88 15-16 for both money and the account. This commences to-morrow, and "bulls" are fortunate in having a sharp difference in their favour, because monthly loans will not be obtained much under 4½ per cent. Transvaal scrip fluctuated between 1⅞ and 2 3-16 discount, leaving of at the top or 5-16 up, but Khaki stock was unaltered. Of other British Funds Childers 2½ per cent. and Exchequer bonds advanced ¼, Bank of Ireland stock was put up 6½, and Bank of England stock lost an early improvement of 1. Home County and Corporation stocks continue heavy, and nearly all the movements are adverse. Edinburgh 3 per cent. gave way as much as 3, Leicester 3½ per cent. lost 2½, Reading 3½ per cent. dropped 2, and West Bromwich, Manchester, Liverpool and Wolverhampton 3 per cent. all lost 1. Croydon 3 per cent. declined ½, while Bristol 3½ per cent. exceptionally recovered 1. No less than nine municipalities are now endeavouring to borrow money privately for varying periods. No wonder the market is weak. There was said to be "good buying" of Colonial stocks, but no one was able to trace it, although Cape, New South Wales and Trinidad 3 per cent., Queensland and Cape 3½ per cent. and Quebec 4 per cent. 1934 did finish 1 better. Victoria 3½ per cent. managed to put on ½, but on the other hand New South Wales and South Australia 3½ per cent. each lost 1.

Business between bourses in Foreign Government securities was much restricted by the interruption to telegraphic communication caused by Monday's storm, but Paris was cheerful and prices were often inclined to mount a little. Some profit taking brought about a slight dip at the start, but this accomplished, quotations gradually improved and German 3 per cent., Portuguese, Spanish "sealed" bonds, Italians and Hungarians were either steady or a fraction better. Argentine stocks continue to be bought, although with less persistence, and a good deal of attention was given to the Port of Buenos Ayres, Northern Central Railway and 3½ per cent. loans, which gained 1 to 1½. Other issues also showed improvement and Brazilians, Mexicans and Uruguays followed the lead. Japanese stocks were rather uncertain owing to the war scare, and closed ½ to 1 easier, but Chinese were steady with the Railway loan 2 up. At the settlement on Tuesday rates were light as usual, Spanish being continued at 2 to 4 per cent. Italians "even," Portuguese at 4½ per cent., and leading South Americans at the last-named rate. No sensational movements occurred during the fortnight, most European stocks being fractionally higher, while Argentines were up ¼ to 1¾, Chilians 1 to 2, and Brazilian Western of Minas ⅞. Honduras advanced 1⅜ and nothing fell appreciably.

Prices for Home Railway ordinary stocks moved up in the beginning of the week on "bear" repurchases before the carry over, and continued to improve slowly throughout. The Lancashire and Yorkshire announcement of a new issue of £1,848,000 4 per cent. preference stock which was posted up in the House on Tuesday had very little influence on the market generally, as it had been anticipated, and the only effect was to knock the price down ½, half of which was recovered on Thursday. This stock is offered *pro rata* to existing stockholders at 10 per cent. premium and the amount is not payable until next year, half being due on January 5 and the remainder on July 1. It is estimated that the allotments give £10 of the new creation for every £100 ordinary stock held, and the market, after starting it at a premium of ½, carried the quotation up another ½. Particulars of the renewed attempt by the South-Eastern Company to place the balance of the new stock offered last year were common knowledge in the House as early as Monday, but the particulars were only sent out officially on Wednesday. It will be remembered that a year ago the company offered to its shareholders £1,000,000 of ordinary stock, masquerading as preference, convertible in February 1908, but that only £100,000 was taken up, and it is the other £900,000 which is now issued at par as a 4 per cent. preference stock, with the perpetual option to convert into ordinary stock at par in the first half of any year. The publication of these de-

tails did not affect the ordinary stocks of the company in the slightest, and the early advances caused by "bear" covering on the first intimation were maintained to the end, the ordinary closing 3, the preferred 2, and the deferred 1½ higher. North-Western, however, suffered in consequence of a belief that it will be the next applicant for funds, its capital account at the date of the last accounts being overdrawn by £2,500,000, and as it was also depressed by the poor traffic return the final price showed a loss of 2 on the week. Brighton ordinary and deferred advanced 2 and 1, Great Eastern rose ½, Great Central deferred ¾, and Great Northern deferred ¼. Scotch stocks met with some support, Caledonian ordinary improving 1 and the deferred ¾, and North British ordinary putting on ½, but the chief interest in this section really lay in underground lines. District was sent bounding up 2½ and Metropolitan 1½ on buying in anticipation of the electrification of the lines, while Central London deferred receded 3 from the same cause, as it was feared it will be injured by the rivalry of the other two under their new conditions. Privileged stocks were, of course, more directly affected by the new issues, and a number were marked down more or less severely.

Contangos were if anything slightly heavier than at the last settlement, and in a few instances were decidedly stiff, rising to 8 and even 10 per cent. on South-Eastern deferred and 6 to 7 per cent. on North-Eastern and Midland deferred. The hopes of public support with which the account began were very speedily shattered, and throughout the whole fortnight business has been dragging and listless. Fears of coming new issues were freely bandied about, and helped to increase the disinclination to deal. These have so far been justified by the announcements of the Lancashire and Yorkshire and the South-Eastern Companies, particulars of which are given above, and although they were favourably enough received, the belief that other companies must follow is still acting as a drag and effectually preventing any real revival of business. Movements of £1 or more during the fortnight about balanced, improvements of 2 each in Brighton ordinary and deferred and Metropolitan, 1¾ and 1 in South-Eastern deferred and ordinary, 1¼ and 1½ in Great Northern deferred and "A" stocks, 1¼ in Great Central preferred and 1 in Taff Vale being offset by losses of 5½ in Furness, 3 in South-Western ordinary, 2½ in North-Western, 1½ and 1 in South-Western preferred and deferred, 2 and 1 in Central London ordinary and deferred, and 1 in Great Western, Lancashire and Yorkshire and Caledonian ordinary.

New York does not appear to have yet reached the end of her monetary troubles, and loan rates there have on occasion touched as much as 9 per cent. This, and the less satisfactory Bank's return, caused a considerable amount of realisation, principally of Steel Company's and other industrial securities, but the first named being well supported, both directly and through markets on this side, did not suffer so much as might have been expected. The selling of Railway stocks was masked as much as possible by ostentatious buying of Southern Pacific and Louisville, but it was clearly manipulation throughout. A slight advance was recorded here on Monday morning, but, trifling though it was, it attracted sellers in Wall Street, and the resulting offers of stock speedily wiped out the improvement. Tuesday and Wednesday told very much the same story, except that on the latter day Wall Street felt the shadow of the forthcoming Thanksgiving Day holiday, and remained in a sluggish, almost stagnant, condition. Hopes are entertained of an early release from the monetary stringency, as currency is reported to be coming back from the interior, and some relief is also expected from the Panama Canal deal. Louisville and Southern Pacific rose 2, as a result of the tactics adopted, Southern issues gained 1¼ and 2, Union Pacific common ¾, and Chesapeake ½, but other movements were small, and mostly adverse. Changes during the account were for the most part favourable, Southern Pacific being conspicuous with an improvement of 4¾. Louisville put on 3, Union Pacific common were 2¼ higher, Wabash preferred and income debentures 2½, Denver common and Southern preference 1½, and Baltimore ordinary and Union Pacific preferred 1 up. Pennsylvania, however, lost 3, as the result of persistent bear attacks. Norfolk preference fell 2, Reading ordinary and second preference 1¾ and 2, and Illinois Central 1½. Money in this market was not much more usable, and, as a general thing, cost from 4 to 4½ per cent., and occasionally 5 per cent.

Grand Trunk stocks met with a fair amount of provincial support during the early part of the week, but fell back a little on the traffic return. They, however, quickly recovered on anticipations of a good monthly

statement, and finished with improvements of ¼ for the first and second preference. Canadian Pacific shares were also affected by poor traffic figures, which came rather as a surprise, and being largely under Wall Street influences closed without recovery, showing a loss of ¾. Making up prices showed no change in these shares, but Grand Trunk stocks were substantially higher, the ordinary being 1½ up and the first preference 1¾, the seconds 1¼, and the thirds 2⅝ better. Carrying over rates on the last named were not excessive at 4½ to 5½ per cent.

Argentine Railway stocks are still very attractive to the speculator, and his zeal was intensified by another batch of excellent traffic returns. Rosario and Pacific ordinary issues still hold the leading place in his affections, and as the result of a large volums of business Pacific rose 4, carrying the second preference up 3, and Rosario ordinary and deferred gained 2 and 4. Argentine Great Western, although less active, improved 4, Argentine North-Eastern debenture stocks 4½, Cordoba and Rosario preference and first debenture stocks advanced 2, and the 6 per cent. debenture stock 7, and Buenos Ayres Great Southern ordinary and preference, Bahia Blanca, and North-Western issues, Cordoba Central preference, and Entre Rios stocks were from 1 to 3 higher. Villa Maria preference shares were marked up 4, and the second debenture stock 5. Other South American lines were for the most part left alone, and the only movements worth recording were advances of 3 and 6 respectively in Antofagasta ordinary and deferred stocks. Carrying over rates ruled round about 6 per cent., but the demand for accommodation was small. As the result of the gamble, making up prices show gains of 8 in Pacific ordinary and 2½ and 6 in Buenos Ayres and Rosario ordinary and deferred. Entre Rios issues also put on 2½ and 6½, Cordoba Central first preference and income bonds advanced 3½, Cordoba and Rosario second debentures 4½, and Argentine North-Eastern debentures and East Argentine rose 2. Buenos Ayres and Pacific first preference, however, was 2 lower. Central Uruguay of Monte Video advanced 2½, and San Paulo ordinary fell 5½ during the fortnight.

Here and there a little more activity was displayed in the Miscellaneous Market, but the great bulk of securities still failed to attract attention, and incidents of importance were few. A sensational drop of 30 occurred in New River stock on the arbitrators' decision that the company

could not pay unlimited dividends, as asserted. The effect of this decision is said to reduce the company's claim by over £5,000,000. Later on two other matters were decided against the company, the court concluding that the Water Board was bound to take over only thirteen out of fifty-four of the surplus land properties, and that no claim could be entertained in respect of the seats held on the board by holders of Adventurers' shares. Appeals will be made to the House of Lords. Amongst other Waterworks stocks, Kent fell 5, Grand Junction "C" 1½, Southern and Vauxhall preference 5½, New River "C" and "D" debentures 2 each, West Middlesex 3 per cent. debentures 2, Lambeth debentures 1½, and South and Vauxhall "B" debentures 1. London and India Docks deferred was moderately purchased, and rose 3, while Shipping things were steady without particular movement. Oil securities continue firm, and several leading shares added fractions. Nothing much happened in the Textile division, but a few shares were bought, and prices when they moved were inclined to advance. There was rather more excitement in James Nelson shares, and at one time they touched 1⅛, only to slip off again to 1 1-16. River Plate Meats were hoisted to 1½, but tumbled back rapidly, and close about half-a-crown better. Other Meat and Catering issues held their prices, but Sweetmeats were dull on another traffic decrease. As usual when matters are in a bad state, there is considerable delay in the issue of the annual report. Hudson's Bays improved 1½, and Gaslights came into request, putting on 2. South Metropolitans moved up to 120½, a rise of 1. Breweries were very idle, and no important alteration took place. The market was pleased with the Peruvian Corporation results for the past year, ¾ per cent. on the preference stock with £70,000 to reserve being considered eminently satisfactory. United States Steel were lifted a little at first, but soon fell back on a revival of rumours that the common stock dividend will be passed, and the preferred dividend reduced. Rates were much as usual at the settlement on Tuesday, and matters were easily adjusted.

It is really too shocking that bosses have been trying to-day to unload upon the market, and Kaffirs have accordingly been dull. This will never do. Unless these people are prepared to keep the balloon rising there will be no public, and the whole thing will fizzle out. The Stock Exchange is not going to allow itself to be caught if it can possibly do otherwise. Can it be that these great bosses are really hard up and unable to keep the play going hot and strong for more than a day or two? We shall see. Consols were again good to-day, and other markets steady, with a considerable investment business going on, partly in what some people call "cheap" Colonials.

MINING NOTES AND NEWS.

This cheerful looking week began with the carry-over, and as on the preceding Saturday, prices had been pushed up with considerable gusto, and the word "boom" was whispered throughout the market, members addressed themselves to the opening task of the week with more cheerfulness and hope than they have displayed for many a month past. Thanks to the timely summary report of the Transvaal Labour Commission, readily seized upon as a splendid excuse for hoisting quotations, the making up list had a respectable appearance, and did not strike the dismay in the hearts of the punters preceding lists have done. For there was quite a pleasing array of rises, Montrose Diamonds leading off with a gain of 3⅜, for what reason it would puzzle an ordinary man to say. A long way behind this strange-looking movement came Robinson Central Deeps, the mine that has lately distinguished itself by exhibiting a rich reef, so rich, in fact, as to be phenomenal on the Rand, and, at the same time, to create doubts whether the richness will endure crushing. These shares moved up to the extent of 1 1-16, whilst Gold Fields—thanks to Lord Harris's speech—put on £1, Northern Coppers as much, Simmer and Jack West 15-16, Knight's 13-16, and East Rand Mining Estates, Geldenhuis Deep, H. E. Proprietary, Henry Nourse, Rand Mines, Rose Deep and Wemmer ¾, Apex rose ⅝, East Rand Proprietary, Glen Deep, Modderfontein, and South African Gold Trust each 9-16, Crown Reef, Crown Deep, Jupiter, Robinson, Robinson Deep, Welgedacht and Geduld ½, and City and Suburban, De Beers deferred, New Goch, Knight Central, Village Main Reef, Steyn Estate and one or two others, ⅜, with lesser gains in the remainder of the Kaffir list, losses being few. The Westralian group, in spite of the loud-advertised activity in this market, exhibited scarcely any movement of importance, except an advance of 9-16 in Kalgurlis. Amongst West Africans Ashanti Goldfields put on as much as 1½, and there were gains of ½ in Ankobra, and smaller ones in several others. Elsewhere there were no movements of any importance, with the exception of a rise of £1 in Tintos.

There was little or no change in rates in the majority of the sections, save that they were a little stiffer on the principal Kaffir counters. Such things as East Rand, Modderfontein and Rand Mines were lent on at 5 to 6 per cent., whilst Barnato Consols and Johnny's Consolidated were taken in at 6 to 7 per cent. On Gold Fields and South African Gold Trusts the charge was 4⅝ to 5⅝ per cent. The general contango was 6 to 7 per cent., but the De Beers rate was 4⅝ to 5⅝ per cent., a trifle higher than last time. On West Africans and Egyptians the general rate was 6 to 8 per cent., and 7 to 9 per cent. on West Australians.

At last the Labour Commission has issued its report, and we are all rejoicing. For has it not put an end to the suspense that was fast making us look aged before our fortunes were made? The Commissioners have given it as their conviction that South Africa alone cannot supply the labour needs of that vast country, accordingly it must get labour from somewhere, or—perish. A shortage of 241,000 labourers, the industries principally suffering from the deficiency being the mining and the agricultural, must be cured. New railways also demand labourers, only 3,000 being now at work, whereas 40,000 are required. No remedies are suggested, that being beyond the province of the Commission, but they are sufficiently implied. We are letting out no secrets when we say search will be made in China for the men wanted. The "Legislative Council" will advise that effort as ordered. There is nothing for it but Chinese. That now assured, what remains to be seen is whether Chinese will end our woes. But, we don't care, provided the rumour of their coming gives us and the bosses the chance to do a little dumping.

Accordingly the Kaffir market has been unusually buoyant, prices being hoisted upwards with remarkable alacrity, accompanied all day long with a shouting and a yelling of the good old sort. After official hours, too, crowds of excited men have congregated in Throgmorton Street, compelling the police at times to divert vehicular traffic. "Bears" have been scared, and their covering has greatly helped the professionals' efforts to lift quotations, but, as yet, there is little or no evidence of public buying. Some are selling.

The absence of outsiders has been responsible for the irregularity of movements, for prices have not been on the ascent day by day. They have moved up only to slip back, but remain on a higher level than last week's. That meeting of the Transvaal Legislative Council, which was to have been held at the end of the present month, has now been postponed to December 7, and the opinion is gaining ground that an Ordinance will not be passed, permitting the importation of Chinese, until February next. Rumours have stated that contracts have already been filled with the Chinese, but these have been denied in several quarters, so it is impossible to say where truth lies in the conflicting reports flying about. We rather think though that batches of them are ready and not far off.

Prices are not allowed to slip back in the Westralian section, despite the continued absence of the public, and the professionals who are supporting this market have not relaxed their energies nor given up hope. Quotations creep up by small fractions daily, which helps to give an appearance of animation to this department, and the most is made of any favourable development in a mine, or any discovery that happens to come along. The share that has been most conspicuous this past week has been Kalgurli, the biggish rise in which is the result almost entirely of manipulation. Nevertheless, the company is doing well. It is favoured with a comparatively small capital, and reports give evidence of an improvement in mine prospects. One of the excuses assigned for the advance was the expectation of an increase in the quarterly dividend, but the usual 2s. 6d. per share has been declared this week. The annual report of the company will be due shortly. Associated is another share that has displayed exceptional strength, the Continent said to be buying them somewhat freely. A higher distribution in January next by the Great Fingall company is also talked of, and on this the shares have improved. An interim dividend of 2s. 6d. per share has been declared by the directors of the Oroya-Brownhill.

West African shares have been mostly steady. The late Sir John Blundell Maple was a very large holder of Ashanti Goldfields, and it was feared his interests would come on the market. It is declared, however, that he has left instructions not to sell his Ashantis below 50, that is to say, not until the millennium comes. However, most Jungle things have advanced and leave off higher on the week.

Miscellaneous assortments have attracted little attention, and there is no movement to record of the least interest.

Johannesburg Consolidated Investment.—Mr. Carl Hanau presided at the meeting of this other Barnato money-absorbing institution on Tuesday, and his speech was very much on the lines of his harangue at the Barnato Consolidated gathering. He was enthusiastically received, we hear, and he gave "glowing descriptions" of the company's wealth. The net profits for the past year are returned at £278,316, a dividend of ten per cent. was declared and Mr. Hanau "congratulated the shareholders on the splendid position of the company." A credit of £394,480 is carried forward, enough, said he, to pay another 15 per cent. But the directors are too wise to distribute it, being well aware it would seriously cripple their cash resources, for the money would evidently have to be borrowed. The reserve remains at £1,000,000, so we take it that nothing has been added to this fund; whilst the

total indebtedness stands at £946,000; cash and loans amount to £1,074,000, and stocks and shares, £3,000,000. Although the total assets are valued at £5,310,000, Mr. Hanau was kind enough to confess his own conviction that they are worth over ten millions. The estimated value of the company's suburban properties is £1,100,000, and as for the gold mines, well, they are truly wonderful, or, will be, when Chinese labour can be got to develop them. "Adequate cheap labour is essential. Without it the progress of the country will be retarded. The evidence before the Labour Commission was conclusive. Native labour in South Africa is insufficient. He had formerly objected to Chinese, but he found that he had been wrong, and he did not lack courage to admit it. The importation of aliens was indispensable. He had entire confidence in Lord Milner, and Sir Arthur Lawley." Such were some of the pearls of wisdom that, in an accent slightly British, fell shower-like from the orator's lips, and, who will, may treasure them.

V. V. Gwanda Syndicate.—The gross revenue for the twelve months to the end of August was only £2,701. Management expenses in Africa absorbed £927, and London expenditure £1,372, the directors allowing £206 for loss and depreciation on investments, consequently a net profit of £196 is exhibited. The latter is then deducted from the cost of mining properties, but it was exceeded by the sum spent on capital account during the year. Liabilities are not heavy. Colonial stock and shares in various mining companies are valued at £86,416, the former being taken at the market price at the end of August, and the latter at cost. The sum of £50,384 is lent out, and cash foots up to £4,146. In the report it is stated that the market value of the shares was £14,714 in excess of the book figure. This company now owns ten properties, comprising 245 claims, these standing in the books at a total cost of £68,659. In the latter are included the price originally paid for them, the cost of development and upkeep to August 31, together with the shares handed to the British South Africa Company in commutation of the latter's interest. It is reported that the operations of the Imani Gold Mining Company, in which the V. V. has a large interest, "are proceeding satisfactorily." Crushing commenced on March 1 of the present year, and has continued with only occasional interruptions, due to a scarcity of water. Latterly there has been a shortage in the supply of native labour, suitable for underground work, which has necessitated the confinement of stoping operations to the large low grade reef in the northern section of the mine. It looks as if amalgamation is in prospect, as the directors anticipate expending large sums in developing the company's properties. They accordingly think "the co-operation of other companies should be obtained," and they seem to regard the prospects of Rhodesia as wonderfully bright.

Crewe's Rhodesia Development.—No news of a particularly joyous kind is contained in the report of this company for the twelve months ending June 30. All the work that has been done has been nothing more tangibly profitable than inspection by the engineers of the Rhodesia Exploration and Development Company, of the different properties in the Buluwayo, Selukwe, and Gwelo districts, with the view of determining their value for development work, not gold-winning, as yet. These have been divided into three classes:—(1) Warranting development at once; (2) worth holding for future development; (3) claims showing no promise, upon which it is not proposed to incur any further expense. Development work on a limited scale has been carried out on the Moonstone, Grand Prix, and Sebastapool properties in the Gwelo districts, but the results obtained have not been of a sufficiently encouraging nature to warrant further expense at the moment. Attention is now being directed to properties situated in the Gwanda district, where work has been commenced on what are called the Bonanza claims. From which shareholders will conclude that dividends, should the company ever be fortunate enough to earn them, are a long way off, seeing that all these properties have yet to be tested by development work, work that will require considerable time and money. A loss of £271 was made on the year, increasing the debit balance to £3,602. At present the company has a goodly quantity of cash, a considerable portion being lent to the market.

Rhodesia Matabeleland Development Company.—Precisely what we have said respecting Crewe's Rhodesia applies to the present position and prospects of this other Rhodesia concern, it being under similar management. During the past year the same engineers have been inspecting its properties in the Sebakwe, Gwelo, and Mavain districts, and have divided these in the like distinct classes. No money is to be spent on the unpromising claims, and these are to be abandoned. As regards active development, the company's engineers have confined their attention to claims in the Gwelo district. Prospecting shafts have been sunk on the Edna, Vulcan, Shangani and Bristol claims, and "while the results obtained on the first three blocks were not altogether discouraging," say the directors, in a delightfully lucid phrase, "yet the Bristol claims opened up so well that it was decided to concentrate all work on these blocks for the present." Meanwhile the company is deriving an income from its money-lending business, interest on loans bringing in £1,788 this past year. Accordingly a small profit of £412 is shown, which is deducted from the ancient debit, reducing the latter to £5,475. Little is owing by the company, and it has plenty of the ready at present.

Scottish Mashonaland Gold Mining Company.—In the report of this company for the past year it is dolefully stated that in consequence of the expiry at June 30 last of the term of free inspection granted on the company's properties, extensive prospecting operations were, on the recommendation of the consulting engineer, carried out on some 320 claims, with a view to the abandonment of those, the prospects of which did no twarrant the expense of further protection. As a result of these operations, the board has given notice since the date of the report, of its intention to abandon 140 claims. However, as six new blocks of 10 claims each, have been pegged, the company still holds 602 claims. Some development work appears to have been carried out on the Eldorado and M'Topoto properties. Paper was realised which brought in a profit of £1,696, whilst £436 came from interest on loans and deposits, the net profit being £569. This is added to the credit of £6,265, and the aggregate carried forward. The company is not in too comfortable a condition financially, and it is prudent not to divide any of the profit.

Duke United Mines.—The half-year to August 22 has, say the directors, been a very critical one in the history of the mine. "At the close of last half-year the ratio between production and development was a large one, but this has been reduced by the disconcerting fall in values of the wash along the east level, and the unevenness of the bottom. Because of this, a conservative policy has been forced upon us, pending the development of the lead in other parts. The development work in the mine has been kept at the furthest limits ,and we expect to get a large part of this half-year's expenditure in increased profits, when it is safe to slow down in that work." The six months' revenue amounted to £5,682, and a balance of £13,314 was brought in. After deducting outgoings, ten per cent. written off development, royalty, £5,000 paid in dividends, etc., and a credit of £14,273 is carried to the balance-sheet, where the exhibit is a moderately good one.

British Columbia (Rossland and Slocan) Syndicate.—A long-delayed report is issued by the directors of this company, for it takes us as far back as December 31, 1902. Apparently the only revenue that came in during the year was £112 from rent of real estate, interest, transfer fees, and profit on exchange. After deducting administrative expenditure, there is a loss of £3,574. The profit and loss account is debited with a dividend in Snowshoe scrip, valued at £16,748, and credited with £19,424, the balance brought in, likewise with £1,000 transferred from reserve account, so the directors manage to display the tiny credit of £63. The reserve fund of £79,000 is stated to be composed of Snowshoe shares. Could the directors get that money for them? As the company had but £877 in cash at the end of last year, it would be interesting to know how much they have at present. It is reported that the Snowshoe mine, owned by the Snowshoe Gold and Copper Mines, Limited, in which the Syndicate is the largest shareholder, has been further extensively developed during the year, about 20,000 tons of ore having been shipped to the local smelters. Additional machinery has been installed, and shipments upon an increased scale have since been steadily maintained. The directors are on the look out for other interests, "capable of development in such a manner as to yield substantial profit." We hope they will succeed in their search.

Nile Valley (New) Company.—Mr. A. P. Mack, the managing director of this Egyptian company, has just returned from Egypt, and his report on the position and prospects has been issued this week. Mr. Mack states that everything is being done at Um Garaiart to push ahead and finish all surface work, and to prepare for rapid development as soon as the new machinery can be got to work. It was from the 110 level in the No. 1 shaft that the rich ore was extracted in the beginning of the year, and while the managing director was at the mine further shots were put in, which gave the phenomenal assay of 750 oz. to the ton, reported by cable at the time. Mr. Mack says it is impossible for him to say how far this chute continues, but since his return Mr. Wells has cabled that he has extracted £5,500 worth of specimen stone from the above point, indicating that he now has sufficient machinery ready to lower the water far enough to allow a stoping. The proposed scheme of development, as soon as the water is got under control, is to sink shafts Nos. 1 and 2 to the level corresponding to 150 ft. in the former, where levels will be driven north and south, with the object of rapidly determining the question of the continuance in depth of the rich chute in No. 1 and whether other payable chutes occur at this depth. The vein in the 110 ft. cross-cut from the No. 5 shaft is expected to be struck within a fortnight. There is likewise issued a technical report from Messrs. Lake and Currie, the consulting engineers, according to whom the prospects of the mine depend on:—(1) The depth to which the present rich chutes will continue; and (2) the discovery of other rich chutes or ore bodies. On the first point they say there are no apparent reasons why the chutes should not continue in depth, whilst the second point depends on the existence of the conditions evidently favourable to the concentration of mineral values. "It will be evident, therefore," say they, "that the present value of this mine is a speculative one, and far too little work has yet been done to enable one to form any idea of the future prospects." An important opinion, indeed.

British Central Gold Mining Company.—This company's output for the half-year to September 9 was 19,665 tons for a yield from the mill of 16,613 oz. 10 dwts., of a value of £58,469. Of the residues 10,325 tons realised £3,752, whilst 10,550 tons treated for the company produced bullion valued at £6,964. The total income from the mine was, therefore, £65,229, or £3 7s. 4½d. per ton of stone raised. This shows an increase of 2,307½ tons over the figures of the previous half-year, but the yield decreased, necessitating the reduction of the monthly dividend from 1s. to 9d. per share. The half-year commenced with a debit of £1,228, and ends with a credit of £3,295, against which, however, the current dividend of £3,750 must be set. Prospects are described as hopeful.

Bellevue Proprietary.—The directors of this West Australian company publish their report for the seventeen months ending

June 30. Since the acquisition of the property the gold obtained has amounted to 24,138 oz., of the value of £80,256. After deducting expenses and depreciation, there is a profit of £11,318, which the directors are spending in the development of the mine, with the object of having large ore reserves opened up well ahead of the new battery, when the latter is started. It is explained that the expenditure in working the mine has necessarily been heavy, as, until recently, operations have been carried on largely by hand labour, and that crushing with the old 20-stamp mill (which has now become practically obsolete and is in a bad condition), has been carried on at a much greater expense than will be the case with the new and up-to-date labour-saving plant with which the mine is being equipped. The mine management was placed in the hands of Messrs. Bewick, Moreing, and Co. in July, 1902. Operations have consisted chiefly in sinking the new vertical main shaft, and in driving the No. 3 level on the Bellevue chute of ore, and the No. 2 level on the Mertzy's chute. These drives have proved the chutes to be a total length of over 900 ft., and have opened up 53,360 tons of ore in reserve, in addition to the tonnage already milled. It is the confident anticipation of the board that the mine will, in the spring of next year, be in full working order, and will then be able to record regular monthly crushings of about 6,000 tons. Cash and short loans are consolidated in the lump sum of £42,575.

WEST AUSTRALIAN CRUSHINGS.

The crushing returns for all the gold mining companies in the Colony for October were—Ore treated, 185,072 tons, yield of gold, 188,262 oz., average, 1 oz. 0 dwt. 8 grs., compared with 168,938 tons for 188,605 oz. in October, 1902, thus showing a great falling off in quality and only a slight increase in quantity. The return shows an increase of 2,174 oz. over September of the present year, the average yield continuing poor. It will be seen from our table that there is a considerable reduction in the gold export, and mint returns, which amount only to 190,748 oz., compared with 201,404 oz. in the preceding month, and is the lowest figure of any month of the present year.

Company Reports and Balance Sheets

*** *The Editor will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Bengal and North-Western Railway.

For the six months ended June 30 this company's gross revenue was Rs.65,68,290, or Rs.7,32,149 more than in the opening half of 1901, earned at an increased cost of Rs.31,120 only at Rs.24,42,105, so that the half year turned out very profitably. The improvement in passenger traffic was Rs.2,47,051, chiefly intermediate and third class, and was due to the general development of traffic along the line especially on the Tirhut section. Total goods traffic rose Rs.4,90,075, and the directors are able to report fair crops over the whole country served by the system. A big advance occurred in the carriage of rice, owing to the partial failure of the crop in 1902, and important increases are noticeable in wheat, linseed, and "other commodities." Tobacco fell away sharply in consequence of a poor outturn, and there was less local traffic in salt. Steamboat earnings continue to improve, passengers and goods both doing well. At Mokameh ferry there was a considerable increase, due to general development, and to the transfer of the Calcutta traffic from Digha, where an important decrease occurred. At Manjhi and Bhagalpur slight increases are noticeable. Ratio of working expenses to gross income was only 37.18 per cent., against 41.31 per cent., and the very slight net increase is due to the fact that under "special and miscellaneous" there was an extra charge in 1902 for arrears for rent of a station jointly occupied at Cawnpore. This item of expenditure absorbed only Rs.1,17,938, in the period now being reviewed against Rs.1,80,985 last year, while we find increases in locomotive expenses, carriage and wagon outlay, and traffic and general charges. Of the net earnings Rs.24,42,105, the company's share is Rs.23,10,977, and at 1s. 4d. per rupee realised £154,065. To this is added balance brought forward, etc., making a total of £158,885, and after providing sundry charges £828, income-tax £12,000, and debenture stock interest £6,000, the disposable sum is £140,057, or £23,107 more than than in the corresponding period. Preference interest having been met with £19,202, the directors propose the usual dividend of 3 per cent., the absence of increase enabling them to place £20,000 to reserve, against nothing, with a very moderate drop in the carry forward to £22,823. Further extensions call for more capital, and the board seeks powers to issue 25,000 new ordinary shares of £10 each.

Cordoba and Rosario Railway.

During the year ended June 30 this company recovered all the ground lost in the previous year, the gross receipts being $357,777 up at $1,716,451, against a saving in working expenses of $75,904, so that the net receipts have risen from $180,227 to $613,908. In sterling the advance is £38,829 to £53,606. Passengers did not contribute much to the improved revenue, the gain here being no more than $11,828, but we find the goods carried 54,110 tons higher, meaning an increase in earnings of $273,502. As with the other lines of the Argentine Republic the chief gain was in cereals, which went up no less than 55,211 tons or 170¾ per cent. Wines and liquors, hay, posts, and general goods also did well, although on a much smaller scale, while sharp decreases occurred in lime, bricks, stone and sand, and flour and bran. The revenue of the Embarcaderos was $183,261, compared with $92,807, against a rise in expenditure of $22,137 only to $64,951, so that the net profit is no less than $68,317 better at $96,173, a gain of 245 per cent. A saving was effected in nearly all items of expenditure, but principally traffic expenses and maintenance of way. It appears that during the harvest nearly all the labourers left the railway, as to keep them the company would have been called upon to pay prohibitive wages. So the permanent way was left practically without maintenance during the harvest, and repairs delayed until it was over. This doubtless accounts for the decline in expenditure under this head. To the net revenue of £53,606 is added a small balance at the credit of debenture stockholders, etc., making £54,085, and after deducting the debit of £14,123 brought forward, 4 per cent. debenture interest and interest charges in London, £10,918 is left. This will permit of a cash payment of £2 on the 6 per cent. debenture stock, while the balance of £3 per cent. to make up the 5 per cent. due for the ten months to June 30, 1903, will, in accordance with the arrangement made in September, 1902, be met by a distribution of 4 per cent. income debenture stock. The directors describe the outlook as more promising than at any previous period.

Paraguay Central Railway.

This company's gross revenue for the twelve months ended April 30 was $1,991,905, or $122,247 more than in the preceding year, fine imposing looking figures, but the appalling premium on gold in Paraguay brings the sterling equivalent of these receipts to £41,160, or only £258 more, the average exchange being 967.65 per cent. against 914 per cent. Expenses were $1,320,278, or $56,586 less, and here the further fall in exchange proves an advantage, the saving in sterling being £2,840, at £27,288. Thus the net balance is £3,098 higher, at £13,881, but debenture holders cannot have it, as the cost of necessary renewals has absorbed the lot. A good deal more would go the same way were it available. Passengers did best during the period now being reviewed, numbers increasing 33,076 and receipts $77,642, and it was fortunate that the falling off in goods was in the class carried at low rates, as it was possible to offset the decrease with better paying traffic. No moneys were obtained by the receiver for dis-

tribution to the debenture stockholders, and their interest in arrears is now the trifle of £585,389, while the Paraguayan Government owes £1,181,068. We are told that the proposed arrangement for a settlement of the outstanding questions between the company and the Government is still in the hands of the executive, which has promised to take it into consideration at the next sitting of Congress, now that their financial schemes have been apparently settled. Of course no one supposes that anything will be obtained from the Government, for the all-sufficient reason that it has nothing to give.

Buenos Ayres and Valparaiso Transandine Railway Co., Limited.

The construction of this line proceeds slowly, and, having been carried to within two kilometres of the frontier, is now apparently suspended indefinitely pending the settlement of the exact location of the tunnel on the Chilian side. Tenders, however, have been invited by the Chilian Government for the completion of that railway, to be presented in May next, and construction will thereafter be pushed forward as fast as possible. On the portion of the line open for traffic there has been a substantial growth of business, and gross receipts for the twelve months ended June 30 rose from £14,145 to £21,777. Working expenses, including one-sixth of administration charges in London and Argentina, came to £3,037 more at £26,697, reducing the deficiency on working to be carried to construction account by £4,597 to £4,919, a result which is certainly satisfactory and full of promise. The working agreement with the Argentine Great Western Railway, which was approved by the shareholders in July last, was executed in October and came into operation on the 16th of that month, but this in no way affects the payments of interest and dividend provided for under the scheme of arrangement of 1901. Capital expenditure during the year, including the loss on working, amounted to £53,575, bringing the total spent to date up to £1,772,225. No further issues of capital were made, but the company sold £63,900 of its Argentine Railway Guarantees Rescission bonds for £44,561, and therefore still has a balance of £4,529 unexpended.

Clerical, Medical and General Life Assurance Society.

The business of this fine society during the twelve months ended June 30 continued to expand in a very gratifying fashion, and the net new assurances effected were for the largest amount ever transacted in any one year. New policies issued numbered 820 for £823,738, and yielding in annual premiums £33,846, of which £112,800 was reassured at a cost of £10,375. The total premium income showed a further increase of £13,727 at £325,999, and the income from investments rose by £4,156 to £151,715, while on the other hand the mortality experience was again favourable. Claims paid required £199,180, compared with £186,273 in the previous year, and after meeting all other outgoings there was a balance of £175,100 to be added to the assurance fund, raising it to £4,005,892. A detailed list of the investments furnished with the report shows that the funds are carefully placed. About one-third of the total is in fluctuating securities, which, of course, have fallen in value of late, but their value as a whole is still well above the original cost at which they appear in the balance-sheet, and there has therefore been no necessity to write off anything for depreciation. The society recently lost its chairman, Mr. W. J. Cripps, C.B., through death, and the board has elected Mr. John Coles, who has been a director since 1877, to succeed him.

Westminster Fire Office.

Very substantial progress was made by this old fire office during the year ended September 30, the premium income being £25,932 up, at £178,870, and the total revenue from all sources £26,291 higher, at £187,668, while at the same time expenses of management came to £32,639, or £729 less, and commissions were £7,862, or £1,711 lower, the ratio of these two to premiums showing a reduction from 28 to 22.64 per cent. Returns and reinsurances absorbed £79,035, against £56,496, and net claims took £39,546, compared with £47,574, leaving a balance of £28,585, or £14,220 more, of which £9,717 was carried to the septennial fund, and £18,868 to the surplus fund.

South British Fire and Marine Insurance Company of New Zealand.

Moderate progress was made by this company in the year ended August 31, the net revenue showing an increase of £5,633, at £269,516, of which, after making provision for outstanding losses and setting aside the usual £5,000 to reinsurance fund, £39,467, or £7,943 more than a year ago, was saved as net surplus. A larger balance of £24,817 was brought in, but the company got no help from profit on property sold this time, against £9,000 so realised in the previous twelve months, so that the available balance was only £2,683 higher, at £64,284. Of this another £20,000 was transferred to reserve, £135 to sinking funds for leasehold properties in Auckland and Johannesburg, and £407 was written off office furniture, and after payment of two dividends, making 5s. per share, or 25 per cent. on the paid-up capital, £27,585 was carried forward.

West India and Panama Telegraph Co., Limited.

Gross receipts for the six months ended June 30 amounted to £34,904, or an increase of £5,933, and as expenses only rose £652, to £23,052, in spite of £802 more being spent on cable repairs, the net profits were £5,281 higher, at £11,852. With £2,128 from interest on investments and £1,014 brought in, the balance available was £15,804, compared with £13,167 a year ago, and the company is therefore able to distribute 8s. per share on account of the arrears of dividend on the first preference shares against 6s., and to carry forward £2,068. This payment, however, still leaves £3,456 in arrears on the first preference, and £8,404 on the second preference shares, or for twenty months on the former and three years on the latter.

Ashby's Staines Brewery.

This undertaking further slightly increased its profit to £30,298 during the twelve months ended September 30, compared with the preceding year, the total being arrived at after providing unnamed amounts for repairs, renewals, depreciation, directors' fees, management, and bad and doubtful debts. Debenture interest takes £8,134, income-tax £1,742, and £20,423 is left. At the end of the previous year the sum carried forward was £2,424, but it appears that the company's stock of bottles was over-valued to the amount of £1,211, so that only £1,213 remains to be credited to the year's profits, making £21,637 in all. Deducting the preference dividend £7,094, there is sufficient left to pay the ordinary shareholders 8 per cent., or 1 per cent. less, with £2,000 to reserve, and £1,167 carried forward. We do not at all like the look of the balance-sheet, and regret to see the directors embarking in important new business. Properties and goodwill are valued at no less than £507,096, including £3,404 added during the year, and all that is allowed for depreciation is £1,519 written off leaseholds—less than a third of one per cent. This would be sufficiently serious were the company possessed of substantial reserves, but with the addition now proposed from revenue the savings only aggregate £8,000, and the concern is badly impoverished. Debtors are nearly £3,000 less than creditors, there is no money available to pay the final dividend, and in order to provide deposit and fees for the new purchase to be referred to presently, the bankers were called upon to lend £9,888. It may be mentioned that the cash holding, apart from £5,142 in hands of trustees for debenture holders, is just £223, and we should imagine that the undertaking had quite enough to do to keep itself going, without indulging in big acquisitions. Nevertheless the directors announce that they have recently purchased at a cost of about £125,000 Harris' Brewery and Maltings, with certain freehold, copyhold, and leasehold licensed houses, resulting in a net increase of 35 freehold and copyhold properties, and eleven leasehold houses. Up to date £50,000 has been advanced on mortgage, which will be increased to £75,000, and the directors want shareholders to find the balance of the purchase money by subscribing for 5,000 additional ordinary £10 shares at a premium of £2 each. This will provide an additional £10,000 of working capital, and the company can do with the money.

"Evening News," Limited.

This evening journal flourishes amazingly, and, despite a falling off in advertisement revenue, earned a slightly larger profit in the year to October 31 than in the preceding twelve months. It is a little amusing to note the neat way in which the Messrs. Harmsworth seize every opportunity of extolling the merits of their publications, and in the report under notice they indulge in the following:—"During the past year advertisers have been obliged, by the general falling off in trade and the heavy taxation which at present unquestionably affects the purchasing power of the public, to reduce their expenditure; and though your journal, by reason of its enormous sales, has suffered perhaps less than any other paper, with the exception of the *Daily Mail*, from this cause, yet 1903 will be known throughout the newspaper world as a bad advertisement year." The manner in which the *Daily Mail* is here dragged in is really clever. Profits from all sources are returned at £44,654, or £614 more than in the preceding year, but £3,762 less than the abnormal war year 1900. If we add in the balance of £2,718 brought forward the sum for disposal is £47,372, and the dividend will again be 25 per cent., divided into an interim payment of 10 per cent. and a final distribution of 15 per cent. Another £5,000 is placed to reserve and £4,922 carried forward. This will make the reserve fund £34,000, and it is worth noting that the company has over £76,000 in tip-top investments, besides £27,063 in cash. It also possesses 13,030 £1 shares in the Newspaper Syndicate, a concern formed for the purpose of acquiring the *Weekly Dispatch*, "which it is intended to establish on the basis of a great weekly newspaper, appealing to all classes." Dear, dear! The directors believe the venture will turn out very profitably, and the interest taken by this company represents one-half the ordinary share capital. But what of the German black bread propaganda?

Boots Cash Chemists (Eastern), Limited.

The lack of animation in the general trade of the country and the unseasonable weather during the summer are put forward by the directors in a seemingly superfluous desire to excuse themselves for not having done better. Yet the business done was again satisfactory and the gross profits, including £71 from transfer fees, were £697 up at £32,417. Allowances for repairs and renewals and depreciation were slightly larger at £4,321 and £4,885 respectively, but even so net profits came to £22,242, or £550 more, and with the larger balance of £7,096 brought in, the total available came to £30,238, compared with £28,203 a year ago. The dividends on the preference and second preference shares having been met and the same dividend of 12 per cent. paid on the ordinary shares, £1,000 is transferred to the branch managers' provident fund, the fire insurance fund is converted into a contingency fund and increased by £500 to £3,500, and a further £2,000 is written off for displacements and depreciation of fittings at Pelham Street, Nottingham, due to rebuilding, leaving £8,137 to be carried forward. Freehold properties are now valued in the balance-sheet at £89,090, or £3,082 more, leasehold premises, fixtures, etc., have risen by £10,055 to £132,474, with an increase in the number of branches from 90 to 94, and stocks, probaby from the same cause, are £2,265 higher at £109,395.

Against these, however, the various reserve and depreciation funds with the present additions stand at the satisfactory total of £107,927. A rather startling increase of £11,068 to £20,820, is shown in the amount due to sundry creditors, while cash is only £5,817 more at £13,968, and sundry debtors are down £405 to £2,562.

Liverpool Warehousing Company

This unfortunate undertaking makes a very poor display for the year ended September 30, and undoubtedly the business has been seriously restricted by the great shortage in the supply of cotton. Revenue from all sources is returned at £88,368, against which rents, rates, taxes, insurance, repairs, renewals, and all other expenses required £66,347, so that the net balance is only £22,021, or about £10,600 less than in the preceding twelve months. Managing directors' salaries, directors' fees, and trustees' remuneration take £3,260 between them, and debenture and mortgage interest absorbs £15,797, leaving £2,964. Of this the directors write off £2,000 on account of machinery and plant depreciation, and set aside £525 for the further redemption provision of long leaseholds, the sum remaining being just £439. Therefore not even the preference shareholders can receive a dividend, the net balance being added to the sum brought in, making £5,101 to be carried forward. For 1901-2 preference holders received 3 per cent., but that only brought the payment down to October 17, 1900, and there is now 16½ per cent. in arrear. A study of the balance-sheet makes it evident that unless matters rapidly improve a reorganisation of the company's finances will become inevitable. Freehold, leasehold, and other premises and goodwill are valued at very nearly £1,000,000, and should business become worse instead of better, we find that the concern has just £2,000 to fall back on in the shape of general reserve. Debtors exceed creditors by £8,738, but £8,625 is due to bankers, and cash available for the purposes of the company stands at £317. Investments on account of leases renewal, fire insurance, and other funds come to £64,407, a figure which the auditors tell us is in excess of their market value. The extent of the depreciation is not mentioned, but we may be sure it is pretty substantial and clearly the concern cannot long go on under present conditions.

British and Benington's Tea Trading Association, Limited.

The net profit on trading for the year ended September 30 rose by £2,116 to £12,338, but the receipts from interest and transfer fees fell off from £160 to £96, so that the total revenue was £2,052 up at £12,434. Expenses, however, practically absorbed this advance in income, and after transferring £100 to machinery etc. reserve against £170 a year ago, the balance was £7,929, or only £103 higher. Including £106 brought forward there was a disposable sum of £8,035, out of which the preference dividend was met and the ordinary shares received 5 per cent., or a further drop of 1 per cent., and £487 is transferred to reserve, leaving £48 to be carried forward. A little better state of affairs is shown by the balance-sheet, the item of sundry creditors being reduced on the one hand by £2,337 to £4,275, against decreases of £1,208 to £27,193 in sundry debtors and £3,190 to £13,300 in stocks, and an increase of £1,086 to £3,466 in cash and bills receivable. Goodwill, trade marks, and names, however, still stand at £89,519, while the reserve fund has only risen to £8,800, and of this £3,450 is invested in the company's own preference and ordinary shares, so that there is room for further improvement yet.

International Financial Society, Limited.

The income from dividends, interest, commissions, and profits on sales of securities during the year ended September 30, showed a decrease of £2,241 at £21,057, but with £11,443 or £621 more brought in, the total available came to £1,720 less at £32,500. Of this debenture interest took £7,500, and current expenses £3,964, leaving a balance of £21,037 to be dealt with compared with £22,802, and after payment of the usual dividends of 5 per cent., the balance forward was increased to £11,662. Nothing is transferred to reserve out of current revenue against £1,984 a year ago, but to balance this a sum of £1,400 from profits on sales of securities held on September 30, 1893, has been added, making a total of £26,400. Bills payable show an increase of £11,240 at £35,000, and the amount due to sundry creditors is down £1,127 to £5,661, while on the other hand a decrease of £8,900 to £17,999 in bills receivable held is accompanied by increases of £4,757 in sundry debtors, and £7,285 in cash to £19,907 and £30,331 respectively. The value of the marketable securities held has shrunk by £9,425, to £341,525, and of other securities by £2,096 to £19,825, while that curious "asset," the investments' fluctuation account, shows a serious advance from £8,714 to £28,823.

J. Hepworth and Son.

This wholesale and retail clothing concern did not do so well during the year ended September 30 as in the preceding fourteen months, profits declining from £40,621 to £31,081. Evidently, however, the directors are not aware of the shrinkage in revenue, as "the managment are gratified to be able to report a satisfactory result of their trading during the past twelve months, notwithstanding the abnormal character of the seasons, which has no doubt tended to restrict the business done." Further than this, we are told that the development of the business is proceeding in a satisfactory manner, the number of retail branches being now 132. After deducting directors' fees and adding £2,362 brought forward, the sum for disposal is £32,243, from which preference dividend takes £5,658, and leaves £26,585. Ordinary shareholders then get an 8 per cent. distribution, or the same as for the previous fourteen months, so that £6,000 less at £5,000 is placed to reserve, and the balance over falls to £1,911. Savings now aggregate £50,000, but the whole amount is invested in the business, and a large part of the heavy stock of £126,601 is apparently carried on borrowed money, because the amount owing to sundry creditors is the large one of £94,815, against debtors £36,655, and a paltry £440 held in cash and bills. Against £3,358 allowed for depreciation, the additions to plant, fixtures, etc., were £5,956, making the item £37,075, but nothing is written off factory and other properties, which, on the contrary, were increased £756 to £319,658, within the period under review.

New Centaur Cycle Company.

This company went through the reconstruction process last year, but the effect on revenue was the reverse of encouraging. Profits in fact fell nearly £2,200 during the twelve months to July 31, compared with the previous year, the total being £6,553. Adding rents receivable, dividend, interest, etc., the total income was £6,883, against £8,825, and as £376 more, at £3,524, was allowed for repairs and depreciation, the net balance, after providing for managing directors' salaries and income-tax, was £2,382 smaller at £2,273. Out of this it is proposed to write off the expenses of capital reduction, £240, to pay preference dividend, and provide £250 for the directors' fees, which means that practically nothing is left for the ordinary shareholders. Nevertheless, they receive a dividend of 2½ per cent., the money being found by reducing the carry forward, from £983 to £175. This dividend is really 4½ per cent. less than was paid last year, as proprietors then received 3½ per cent. on £1 shares, against the 2½ per cent. now distributed on the 10s. shares. Unfortunately, no compensation for this unsatisfactory state of affairs is to be derived from a study of the balance-sheet. Apart from the reduction in goodwill and patents of £43,154 to £10,000 in consequence of the capital reorganisation, the position is much less favourable. Creditors have gone up to £3,460, and £4,864 is now owing to bankers, while cash and bills have fallen £3,377 to £408, and sundry debtors are only £1,000 higher, at £17,035. Nothing is allowed for depreciation of freehold land and buildings, but in other directions the sums written off for wastage are fair.

Wearwell Cycle Company.

This company slightly improved its revenue during the twelve months ended September 30 compared with the preceding year, the trading profit being £254 higher at £5,020. Balance brought forward, however, was down almost as much at £572, so that the sum for disposal is a mere £26 better at £5,592. As usual the concern has sundry losses to provide for, and first of all writes off £644 for debits incurred at the Swansea and Stafford depots. Next £750 is placed to a special reserve against possible loss in connection with Scotch accounts, and as £500 more at £1,500 is placed to reserve, the ordinary dividend is reduced 2½ per cent. to 5 per cent., and the carry forward to £298. Sundry debtors owe £2,172 less than a year ago, at £14,095, and we notice reductions of £1,298 and £708 in the amounts due to creditors and the managing director. The debt to bankers, however, has slightly increased, and bills payable reach £3,972, while cash and bills are poor at £1,780. Reserve is now £7,000, and goodwill stands at £16,500.

Bowden Brake Company.

Another great display is made by this bicycle brake business, and once more the gross profit exceeds the amount of capital issued. Revenue from trading was £41,925, and from all sources £42,329 for the twelve months ended September 30, the increase compared with the preceding year being £1,719. General expenses absorbed £13,131, depreciation, etc., £259, and directors' fees £300, so that the net balance was £28,638, a decline of £2,530, due to an advance in general outlay. Adding £5,043 brought forward, the sum for disposal is £33,682, and the directors again recommend dividends and bonus aggregating 40 per cent. Licence patents and goodwill are then reduced £2,500, reserve receives another £8,000, a sum of £1,500 is allowed for depreciation on investments, and £5,657 is carried forward. After writing off the sum mentioned, the licence patents and goodwill will stand at only £12,500, while the reserve fund will now stand at £20,000, or 50 per cent. of the issued capital. Investments amount to £16,000, trading accounts are favourable, and cash and bills reach £25,365. It is seldom that a company's position shows such all-round excellence.

Palmer Tyre Company.

This company's report for the twelve months ended September 30 has no accounts attached, and therefore is of little value. Apparently, however, the concern continues to do well, the profit being £7,558 against about £7,000 for the preceding year. Balance brought forward being much smaller at £6,996, the available balance is some £3,000 lower at £14,554, but still quite sufficient to maintain the dividend at last year's rate of 20 per cent., if the directors so wished it. They sensibly prefer to pay 10 per cent. only on the shares, and are thus able to devote £7,800 to a reduction of the patents and goodwill, leaving £1,954 to be carried forward. This procedure was probably dictated by the board of that flourishing undertaking, the India Rubber, Gutta Percha, and Telegraph Works, which in 1902 acquired most of the Palmer company's shares.

Land and House Property Corporation, Limited.

A small increase of £230 to £36,423 in the rents received during the twelve months ended September 30, was more than offset by the heavier ground rents, rates and taxes, etc., which were £431 up at £19,923, and although interest received and accrued came to £1,745, or £276 more, £1,430 of this has been transferred to a special reserve for some unexplained reason, and the total income was consequently £1,355 lower at £16,815. Interest paid and management expenses were also rather heavier, and the net revenue showed a decrease of £1,761, to £6,152. Adding in £1,841 brought forward, and deducting the preference dividend,

there was a disposable balance of £7,281, and although the ordinary shares again receive 4½ per cent., it is only by reducing the balance forward to £1,486 that this is possible. A year ago £1,000 was added to reserve out of profits, against nothing this time, but presumably the directors regard the transfer of interest to a special account mentioned above as sufficient. As the result of their appeal to the shareholders to subscribe for preference shares, £1,115 was taken up during the year, making 3,460 shares out of a total of 10,000. Although the description of their merits as an investment security is less flamboyant, the urgency of the appeal is as great as ever, and shareholders are implored to take up the unissued balance, or the 4 per cent. debentures, or induce their friends to do so, and save the company from having to adopt the expensive method of borrowing on mortgage. The directors speak feelingly, and from the heart no doubt, seeing that the company is burdened with over £150,000 of this class of debt, in addition to owing its bankers £11,000 and depositors £14,462.

Buluwayo Market and Offices Company.

Market commissions and rent of tables brought in £2,339 to the end of June, and rent of offices, £5,472, the net profit on trading account being £4,050. Adding to this £375 from transfer fees and £60 from interest, and deducting administrative expenditure in Rhodesia and London, income-tax, depreciation, etc., the credit remaining is only £129. This reduces the company's debit to £1,930. Current liabilities total £2,158, and on the other side sundry debtors appear for £6,384, £3,500 is out on loan, and cash totals £1,865. The auditors report that the amount appearing due by sundry debtors is in excess of the probable sum that will ultimately be received from them, nor can they estimate the value of the security the company holds in respect of the debts. The directors have practically nothing to report beyond the statement that "owing to the continued depression in Buluwayo and the absence of building enterprise, the company has not been able to dispose of any of its stands."

Arnold, Perrett and Co.

Gross profits of this brewery business slipped back a little during the twelve months ended September 30 compared with the preceding year, the total being £61,630 against £62,760. Net rentals, however, were £100 or so higher, at £7,332, so that the total income was £922 down at £68,962. Depreciation was again slightly increased to £10,029, and after meeting all other charges, fully detailed in the profit and loss account, the net income is only £260 less at £35,511. Balance brought forward and transfer fees build this to £36,536, from which preference dividend absorbs £12,000 and mortgage and debenture interest £12,718, leaving £11,818. Such sum again provides a dividend of 4 per cent. on the ordinary shares, with another £2,000 to general reserve, £1,000 to reserve for bad and doubtful debts, and £818 carried forward. From the point of view that trading accounts are in the company's favour and that a fair sum is held in cash, the position is moderately satisfactory, but the reserve fund is terribly poor at £4,000, even though nearly all the company's properties are freehold, and the ordinary dividend must not be increased until this fund is substantially higher.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Bengal and North-Western.—Dividend of 3 per cent. on ordinary stock, placing £20,000 to reserve, and carrying forward £22,823.

Cordoba Central.—Interim payment in respect of the year 1903 of 1 per cent. on the income debenture stock (Central Northern Section).

BREWERIES.

Ashby's Staines.—Final dividend at the rate of 10 per cent. per annum on ordinary shares, making 8 per cent. for year, placing £2,000 to reserve, and carrying forward £1,167.

Birkenhead.—Dividend of 10 per cent. and also a bonus of 4 per cent.

Frank Jones Brewing.—Interim dividend of 2½ per cent. on the preference shares for the six months to August 31 last.

New York.—Dividend of 3 per cent. on the unified stock for year to August 31.

Royal Brewery, Brentford.—Interim dividends for the six months ending December 31, at the rate of 12 per cent. per annum on the ordinary shares.

Stretton's Derby.—Dividend on ordinary shares at the rate of 10 per cent., placing £10,000 to reserve, and carrying forward £5,987.

MINES.

Brilliant and St. George United Gold.—Dividend and bonus of 1s. per share, payable December 22.

Kalgurli Gold.—Interim dividend of 2s. 6d. per share.

Oroya Brownhill.—Interim dividend of 2s. 6d. per share, payable Dec. 21.

Sons of Gwalia.—Further interim dividend of 3s. per share, payable Dec. 30.

MISCELLANEOUS.

Boots Cash Chemists (Eastern).—Half-yearly dividend on the 7 per cent. preferred ordinary shares.

Burgon and Ball.—Dividend of 6 per cent.

Broken Hill Water.—Dividend (No. 42) of 6d. per share, payable Jan. 6.

Eastman Kodak of New Jersey.—Dividend of 2½ per cent. upon the common stock.

George M. Callender.—Interim dividend of 4 per cent. on ordinary shares for first six months.

Guardian Assurance.—Interim dividend of 2s. 6d. per share, being at the rate of 5 per cent. per annum.

John Brown and Co.—Interim dividend of 6d. per share on the ordinary shares (15s. paid), and 8d. per share on those fully paid.

London and River Plate Bank.—Dividend of 11 per cent., making, with dividend of 7 per cent. paid in June last, a distribution of 18 per cent. for year ended Sept. 30 last; placing £5,000 to pension and benevolent fund, and carrying forward £37,368.

Metropolitan Amalgamated Railway Carriage.—Dividend at the rate of 7½ per cent. per annum on ordinary shares for half-year ended Sept. 30.

Natal Estates.—Dividend 10 per cent.

Power Gas.—Dividend on ordinary shares of 5 per cent. for year ended Sept. 30 last.

Santa Fe Land.—Dividend of 2 per cent. for year ended June 30 last.

Transvaal Mortgage Loan and Finance.—Dividend of 2½ per cent. on ordinary shares, carrying forward £12,145.

Warwicks and Richardsons.—Dividend of 5 per cent. on ordinary shares, making 9 per cent., carrying forward £3,440.

William Cory and Son.—Interim dividend of 4s. per share on ordinary shares.

William Hancock and Co.—Interim dividends for half-year ending Nov. 30 at the rate of 6 per cent. per annum on the preference shares, the preferred ordinary shares, and on the deferred ordinary shares, payable Dec. 1.

MINING RETURNS.

Brilliant and St. George United Gold.—Crushed 2,419 tons, 1,715 oz., value of bullion produced at cyanide works, £3,460.

British Exploration of Australia.—Lalla Rookh: 100 tons crushed, 124 oz.; 3 tons first concentrates, 18 oz.; 7 tons second concentrates, 17½ oz.; and tailings and slimes 48½ oz.; total, 208 oz.

Central Chili Copper.—Production of regulus 428 tons.

Day Dawn Block and Wyndham.—2,950 tons crushed, 965 oz.; 4,014 tons of tailings, bullion value £2,600.

Eaglehawk Consolidated.—800 tons crushed, 365 oz.; 100 oz. from cyanide.

Frontino and Bolivia Gold.—Produce, £1,085; expenses, £2,745.

Hyderabad (Deccan).—Output of coal, 23,007 tons.

Malacca Diamond.—124 loads washed, producing 177 carats diamonds and 1,730 lb. of tin.

Mills' Day Dawn United.—Crushed 897 tons of quartz, 604 oz.

Pahang.—2,700 tons of stone crushed, producing 50 tons of black tin.

Pahang Kabang.—620 tons of stone crushed, producing 15½ tons of black tin.

Queensland Menzies Gold.—Crushed 630 tons, 622 oz. Cyanide 480 tons, 130 oz.

Royal Oak of Hauraki.—Crushed 910 tons quartz and 360 lb. picked stone, for £1,021.

St. John Del Rey.—Gold produce, £7,900.

Sulphide Corporation.—15,257 tons of ore milled at Central Mine, producing 2,904 tons leady concentrates, and 3,428 tons of middlings treated, producing 1,724 tons of zinc concentrates. At Cockle Creek 2,712 tons leady concentrates, 129 tons residues, and 1,839 tons of purchased ores smelted, yielding 1,549 tons lead, containing 99,136 oz. silver and 5,808 oz. gold.

Victoria Proprietary (1905).—202 oz. from 400 tons crushed.

NEXT WEEK'S MEETINGS.

Monday, November 30.

Boots Cash Chemists (Eastern).—29, Farringdon Road, 3.30 p.m.
Callard, Stewart, and Watt.—Cannon Street Hotel, 2.30 p.m.
North White Feather Gold Mines.—Winchester House, noon.
Pretoria-Pietersburg Railway.—Winchester House, 12.30 p.m.

Tuesday, December 1.

Arnold, Perrett.—Wickwar, 2.30 p.m.
Bengal and North Western Railway.—Gresham House, noon.
Cordoba and Rosario Railway.—Winchester House, 2.30 p.m.
Louise.—Winchester House, 11.30 a.m.
Santa Elena Nitrate.—Winchester House, 12.30 p.m.

Wednesday, December 2.

Narquah Syndicate.—Winchester House, 3 p.m.
Paraguay Central Railway.—35, New Broad Street, 2 p.m.
Salvador Railway.—7 and 8, Idol Lane, 2.30 p.m.
Thwaites and Co.—Dublin, noon.
Troush Mines.—Winchester House, noon.
Wenlock Brewery.—Winchester House, 1 p.m.

Thursday, December 3.

Adlers' Consolidated Mining.—1, Moorgate Place, 2.30 p.m.
Khedivial Mail Steamship.—Winchester House, 11 a.m.
Mysore Reefs.—Cannon Street Hotel, noon.
North China Insurance.—Winchester House, 3 p.m.
Power Gas Corporation.—Westminster Palace Hotel, 1 p.m.
St. John Del Rey Mining.—Cannon Street Hotel, noon.

Friday, December 4.

Goebel Brewing.—Winchester House, noon.
Ilford Company.—Winchester House, 2 p.m.
Montana Mining.—Winchester House, noon.
Old Bushmills Distillery.—Cannon Street Hotel, 2 p.m.
Pillsbury Washburn Flour Mills.—Winchester House, 2.30 p.m.
Ouro Preto Gold Mines of Brazil.—9, Queen Street Place, 12.30 p.m.
Transfer Mortgage Company.—Cannon Street Hotel, noon.
Uruguay Northern Railway.—35, New Broad Street, 2.30 p.m.

COMPANY MEETING.

CLERICAL, MEDICAL, AND GENERAL LIFE ASSURANCE, SOCIETY.

The 79th annual general meeting of the Clerical, Medical, and General Life Assurance Society, Limited, was held yesterday at the Society's office, Mr. John Coles, chairman of the company, presiding.

The Secretary, Mr. Alfred M. Humphreys, having read the notice calling the meeting, and the auditors' report,

The Chairman said—I presume, gentleman, in accordance with the old practice, you will take the revenue account and balance-sheet for the year in your hands, as read. (Hear, hear.) I will therefore, enter upon the business of to-day. There is a change as you will notice consequent on the death of our excellent chairman, Mr. Cripps, and I am sure we shall all miss him very much indeed. He was a director here for about 23 years, and chairman for the last four years—and very prosperous years they were—and he always displayed great tact, great brightness, and has displayed the greatest zeal in the interests of the society, at the same time becoming the personal friend of every director of the company. A copy of a local paper has been sent to me from Cirencester, which contains a paragraph which I should like to read to you, because it conveys very concisely my opinion upon his merits. At the Gloucester County Council, the chairman said, "before commencing the business of the meeting, he was very sorry indeed to have to announce to them that they had lost that morning one of the most valuable members of the County Council, a man who was most useful to the County, most useful to him as a sound adviser, and a man who filled a great place in the life of the Council—he referred to their good friend, Mr. Wilfred Cripps." I can only add that his name will long be remembered and long linger in the minds of every one of us. For myself, may I say one word? I stand here at the request of these gentlemen on my right and left, and I hope you will extend to me the same kindly hearing you have always given to my predecessor. In return I may venture to say that as I am a very busy man, I will not take up your time unduly and will not shower down upon you more figures than I think you can bear. With these few remarks I will now turn to the report which is in your hands, and you will find that it bears upon the face of it signs of the prosperity with which you have long been familiar in this room and in this office. Before I proceed to deal with the paragraphs of the report I should like to refer to some figures which appeared the other day in the "Journal of the Institute of Actuaries," a journal which is seen little by general readers, and probably seen little by those who graze on the common of literature, but it contains valuable information to those engaged in the insurance world. The figures are absracted from the Board of Trade returns and have reference to the whole of the work done by insurance companies. The totals are extremely striking—I will give you some of them. The premium income of all the offices in this return amount to 22 millions sterling, the funds invested amount to 255 millions, and the policies or sums assured total to 661 millions. I think the latter item almost reminds us of National Debt before the war. The figures show that the business of life assurance has assumed national proportions; I believe it may compare with any other business, and gives as much benefit to the community as it can possibly be expected to give. Although the life assurance of to-day stands in the public mind in a position of great attraction, that is to say the benefits ensured by life assurance are accepted and adopted by the public at large, for the more timid I may say that the business is based on one of the best averages we can have—the average duration of life. The averages which regulate fire insurance, possibly marine insurance, and possibly accident business may be reliable, but they are not quite so uniform in their results as that which we have to deal with. In this society we have always regarded security as the primary consideration on which our business is based; we have sometimes yielded in the matter of interest a shilling or two, but we have never yielded on the question of security. We put that before everything else, and therefore we can point to-day to a record position which can hardly be matched elsewhere. In early days we devoted our savings, thanks to the wisdom of those who went before us, to building wide and deep foundations for our final superstructure. These foundations were watched over by the late Mr. Pincard and Sir John Mowbray with a skill and care, and a genius, almost unmatched. Their busts very properly stand in this room as a result of what they have done for this society. I attribute to a great measure the prosperity of this society to its being always willing to make alterations from time to time to meet the varying conditions by which we are surrounded. It almost seems ancient history now to point to the time when we first began to pay claims in cash. I think we were almost pioneers, and I am proud to think that whether we were pioneers or among the first to do this, it has been one of the most acceptable concessions to the insuring public. Next, as we travelled on, we granted policies which are good the whole world over, they are good for the people who wish to go to the Cape in war time or to the West Coast of Africa. Next, gentlemen, we granted great facilities for the renewal of lapsed policies. Sometimes people allow their policies to lapse through inadvertence, and it is extremely hard in such cases that they should lose the whole of the money they have paid in; therefore we gave very great facilities for the renewal of policies that have lapsed. Coming to more recent times, we have issued what we call prime cost tables which have been very popular, we have granted redemption policies whereby if a man buys a lease he can come here and he can pay an equal annual amount to get back his capital at the time the lease runs out, and the other day we granted a new prospectus for the officers of the Army and Navy. That new prospectus contains rates which can never be altered during the time the policy is running, and that prospectus, as I believe, is also extremely acceptable. These are some of our improvements, and we do not desire to stand still. We have made these improvements mainly in order to stand well with the public, and specially to stand well with those who hold our outstanding policies. That we have succeeded, in some measure, in gaining the favour of the public, and of our own policy holders, may I think be assumed from the fact that a large number come here—a larger number than usual—direct, without the intervention of any agent whatever, and insure their lives. This we wish if possible to encourage, because it helps us very much in the development of our business. I have now dealt with the changes we have made, and I may say that I do not think it is the wish of the board to stand still even now, I hope we shall never forget "That the old order changes, yielding place to the new," and that we shall from time to time be prepared to meet the fair requirements of the public and alter our mode of procedure to keep abreast with the times and have our full share of the business that may be going on amongst the offices.

I now come to the report. In the second paragraph you will note that we speak of the development of the business last year. Now, last year was not all we could wish by any means; our agents and staff must have found that out. The public had to bear a very heavy imperial taxation and also a very large local taxation. There was also a very disquieting state of politics, and all these things affect life insurance more or less. But at the same time you will find in the following paragraph which bristles with figures that we did a large amount more business. You will find that there was new business to the amount of over £700,000 in sums assured, and that the premium income was £23,000, and those who like percentages may care to know that £23,000 divided into 700,000 will show an entrance rate of 3.3 per cent. That is a higher initial rate, but when you consider that a very large amount of business is now done by offices under the endowment principal, it enhances the average of our premium. Whether in time this will be neutralised by the smaller premiums from thrift policies I cannot say, but I do know that our thrift premiums are increasing rapidly; that means small premiums, but they will last a long time with us I hope. Paragraph 4 speaks for itself. Paragraph 5 deals with the mortality, and you will find that the claims paid last year were a little under £200,000, and in the previous year a little below that, but it is well to bear in mind that in 1899 we paid £240,000, and in 1900 £276,000. These figures show that we are greatly indebted to the great skill and great care and ability shown by the medical directors of this society. (Hear, hear.) We now come to paragraph 6, which shows the largest genuine saving we have ever made—£176,000 in the year. These savings now total up, as you know, to four million sterling. The society was established in 1824, it was not until 1855 we arrived at our first million—it must have been a long and weary time for those of that generation. In the next twenty years we added another million, that brings us down to 1875, in the next sixteen years we added another million, that brings us to 1891, and in this last twelve years we have added yet another million. We have now, therefore, arrived at four millions, in fact, we have doubled twice I think in fifty years. Now we come to paragraph 7, and paragraph 7 has an attraction for me, it speaks of essential factors which make for the growth and prosperity of the society. We have passed the second milestone on our way to the next valuation, and it may occur to you that we may look round a little and look at the ground over which we are travelling. We have three great streams running into what I may call the reservoir in which we are accumulating our reserves. It is an open secret that we want something like £600,000, that means £120,000 a year. There is therefore much food for reflection on the part of those who have the management of the society. The first stream running into this reservoir is the stream which arises from the difference in the interest. We are able to estimate by our calculations on our tables that if we make only 2½ per cent. on our money on all our contracts, we can pay all our claims. What is the fact? We make not only 2½ but we make 3½ per cent., in fact we make about £3 12s. after the heavy income tax is paid. Now, if we take 1 per cent., which will be within the mark as the difference, 1 per cent. on four millions amounts to £40,000 a year. Now £40,000 a year, as you will see, at the end of five years, makes £200,000, and there is also the compound interest on that item from time to time, so that you will see there is a never-failing stream of profit which is constantly accumulating. The next is the one that comes from the rate of mortality, to which I alluded just now. I know that at the present moment our mortality is ranking very low, indeed for these last two years we may take it at £200,000 a year, so that £1,000,000 for five years will leave a very considerable item indeed to the good. I cannot at present give you the exact amount it will be, but I know it will be very considerable, and we look upon that, next to the rate of interest as a steady stream running into our accumulations. The third is what we call the difference of the loading—that is a technical term. There are several eminent actuaries present among our shareholders who will recognise the term as an old friend in whose presence they have much comfort. The loading here is about 18 per cent. You are bound to spend annually 12½ per cent., and it is this spending we have to look at with very great care. The difference is something like 10 per cent. to the good, and as our premium income is about £325,000 that will be about £16,000 a year, which accumulated for five years will come to quite £100,000 at compound interest, or not

very far off. These are the three main streams which run into—it may be a lake at the end of time, but it is a reservoir at present—for division at the end of the five years. There is yet another small stream which is apt to dry up in the summer, and which comes from our surrenders. We do not like them, but they come in sometimes, and of course there is a profit left. There is also a profit we have had for a series of years on investments. The profit has been of course carried into the profit and loss account. So there are these three points we must carry away in our memories. We want to keep up the rate of interest consistent with our security. We want to keep down the rate of expense, that we may gain from the loading, and we want to do our very best to keep down the rate of mortality as compared with the tables under which we are working. You may ask, is there no leakage in this reservoir? I do not think there is a sixpence loss that I cannot account for. We have no loss whatever. You will see from one of the paragraphs that there is no loss on mortgages, nor on fluctuating securities. This is a point which I think you will say is of considerable importance. Our neighbours, I am sorry to say, have many of them to write down their losses on the market value of securities. We, fortunately, in the early days, bought a considerable amount of railway debenture stock, that we still have, and it has never fallen to the price that we originally paid for it in the sixties. That has improved our position very much, and in recent times even we have been fortunate in having securities which are of the value of probably £200,000 more than they cost us. I hope I have not wearied you too much—(Applause)—but I am nearing the end. The last paragraph refers to our freehold possessions in the City. I have taken some interest in the City branch for the last five years, and I am delighted to think that we have secured a valuable site in King William Street where City men can go and insure instead of coming so far west. The City branch has not only been successful but very successful, and for that we are in a large measure indebted to the great energy and ability of our late manager Mr. Churchward. It is now being carried on by his successor Mr. Brown, who, I am sure, will uphold it and increase it largely in the future. (Applause.) The accounts generally that you will find on the other side are much the same as last year. The mortgages have increased £100,000, loans on policies are again increased a little, and outstanding interest is absolutely nil—a silent testimony to the value of our investments. The interest income has gone up £4,000. I think that is all I have to trouble you with, and I now move "That the revenue account and balance-sheet, and also the directors' report now read, be adopted and entered on the minutes."

The Rev. Prebendary Kempe: I have every reason for seconding this resolution with more than common satisfaction, notwithstanding its having been proposed by the successor to my lamented friend, who occupied the chair last year. We have suffered a great loss, but I may venture to express my thankfulness for our having filled it by the election of a gentleman to the office who has every qualification that we could possibly have desired. (Hear, hear.) That I should be able notwithstanding my very advanced age and very great infirmities to stand here again in unbroken succession for I do not know how many years, is a matter for which I am exceedingly thankful. I am also thankful that I have been able to see the business increasing year after year and to be able to take an interest in an institution in which we are so deeply interested, and that I should now be able to sit down with every confidence that there will not only be no interruption to the success in coming years, but that it will be greater and greater as time goes on, administered by such chairman, secretary and officers as I have been privileged to see in the past.

The resolution was carried unanimously.

Sir Robert Mowbray: I have had put into my hands a resolution which I am sure needs very few words from me. It is: "That John Astley Bloxam, Esq., F.R.C.S., Maurice Otho Fitzgerald, Esq., The Viscount Midleton, and Sir Richard Douglas Powell, Bart., M.D., K.C.V.O., be and are hereby re-elected directors of the society." It is unnecessary for me to say anything in support of such a resolution. The names speak for themselves. Two of them are most eminent members of the medical profession, which has already been alluded to to-day, as being one of the sources of strength of the society. Mr. Maurice FitzGerald is well known in City and banking circles, and Lord Midleton has been connected for many years with the society, and is well known in public life. I cannot imagine a better combination of names than those of the retiring directors, who now come before us for re-election, and I have every confidence in moving this resolution that we may consider ourselves very fortunate, in having such gentlemen to support our chairman in his arduous duties, and to carry on the traditions of the society even more successfully than in the past.

Mr. Edgar, in seconding the resolution, took the opportunity of expressing on behalf of the members their great satisfaction with the election of the present chairman and their confidence in his ability.

The resolution was carried unanimously.

The Chairman proposed "That the Reverend Canon William Page Roberts, M.A., be and is hereby elected a director in place of Wilfred Joseph Cripps, Esq., C.B., deceased." The Canon, he said, was very well known to members of the board, and would be an extremely acceptable member.

Dr. Bowles seconded the resolution, remarking that Canon Page Roberts would be a very acceptable addition to the board.

The resolution was carried unanimously.

Sir Owen Roberts moved "That George Sheward, Esq., be and is hereby elected an auditor on behalf of the proprietors in the place of Herbert Edwin Coles, Esq., who retires in accordance with the laws and regulations, and does not seek re-election." He said: I was initiated into the matter of insurance as auditor of this company, and served in that office with great satisfaction to myself. There is, as you know, a professional auditor who is primarily responsible for the accounts; I looked, therefore, upon the auditors of the company as gentlemen elected for the purpose of making themselves personally conversant with the details of the company's affairs, and in that capacity to give a double assurance as to the accuracy of the accounts if that be needed. I also looked upon them in the guise of agents to the society, who, when they have made themselves so acquainted with the admirable way in which the business is conducted are able to speak with singular effect to their friends and those of the public to whom their testimony is acceptable. This time last year I had the pleasure to propose Mr. Herbert Coles as auditor. Some feeling of delicacy which I entirely respect, as we must all respect, has caused him to resign his office. I thank him as we all do, for the services he has rendered during the past year, and feel certain that the experience he has obtained as auditor will be of value. I have now to propose his successor, who is very well known as manager of a very important bank, whose acquaintance with finance is very intimate, and who will, in the position as auditor to this society, give a security if any were wanted that the affairs of the society will be conducted in a methodical and praiseworthy way.

Mr. Dent seconded the resolution, feeling sure that the appointment would commend itself generally to the meeting, though at the same time he regretted that anyone bearing the name of Coles should cease to hold office in the society.

The resolution was carried unanimously.

The Secretary reported that at a meeting of persons assured, held on the previous day, in accordance with Article 88 of the Laws and Regulations, Henry Averell Daniell, Esq., was unanimously re-elected an auditor on behalf of the persons assured.

Mr. E. Boyle: May I be allowed to move that a cordial vote of thanks be tendered to the chairman and the other directors for their management of the affairs of the society during the past year. We have heard that the directors have selected you, sir, as chairman, and I need not say how warmly on this side of the table, we individually welcome you. A gentleman on my left has congratulated you on the high position you have obtained; on this side of the table we also congratulate ourselves upon being able to avail ourselves of those services which we know are so valuable. (Applause.)

Mr. Ryan: I rise with very great pleasure to second the resolution. In regard to the board in its corporate capacity I think we may say that the wonderfully good report they have presented to us to-day gives us all very great satisfaction. As regards the chairman, everyone in this room will, I am sure, give his unqualified approval to the appointment and give Mr. Coles a hearty welcome on his first appearance in the chair. I think it only right that some one whose occupation chains him to the City of London should take the opportunity of saying that Mr. Coles is no ordinary chairman of an insurance company. He is a man who occupies an eminent position in the City of London, which peculiarly entitles him to be in the chief position in connection with such an institution as this has become. There was a doubt at one time lest the Imperial Parliament might gain at the expense of London, but the obtuseness of the electors of mid-Hertfordshire prevented such a calamity. I wish to offer one particular word of congratulation to you to-day, and that is that I wish on behalf of the Institute of Actuaries, of which you have been a fully qualified member for 40 years, to ask you to accept, in addition to the congratulations of the proprietors, the congratulations of that body. The profession of actuary is an honourable one, and I hope a useful one. I am sure it is a very humble one, and it is not often we have the opportunity of recognising or congratulating any of the members on obtaining such an important position as that you occupy to-day. I think your appointment gives us a splendid and stimulating lesson on this, that success in life does not depend upon chances or favouritism, but that the highest posts are obtainable as the result of great powers of mind and great industry. ((Applause.)

The resolution was carried unanimously.

The Chairman: I am sure I speak the feeling of every director present when I say how grateful I am for the more than kind manner in which Mr. Boyle has introduced the matter to you, and the equally kind manner in which it has been supported by my old friend, Mr. Ryan. It will stimulate us to further energies in the future.

Mr. G. E. Cochrane moved a vote of thanks to Mr. Whittall, the actuary, Mr. Turner, the secretary, and the officers and staff of the society.

Mr. G. L. Cheatle, C.B., seconded the resolution, and it was carried unanimously.

The Secretary, in acknowledging the resolution, said it was very apparent that all the officials had worked very well during the year in order to produce such a good record of business, and especially was this the case with regard to the outdoor staff, and the members of the staff generally. There had been many changes during the year in addition to the retirement of Mr. Churchward from the City Branch. They had lost the services of another branch manager, who had accepted an important position in a company transacting a different class of business. and they had taken the opportunity to open another branch in Newcastle-on-Tyne, in order to better work the northern part of the country. The vote would stimulate them to fresh exertion.

The meeting then terminated.

RAILWAY TRAFFIC RETURNS.

Foreign.

Argentine North-Eastern.—Traffic receipts for the week ended Oct. 16, $13,871; increase, $420. Aggregate from January 1, $501,978; increase, $19,090.

Assam Bengal (Chittagong Section).—Traffic receipts for week ended Oct. 24, Rs. 47,586; decrease, Rs. 800. Aggregate from July 1, Rs. 5,72,478; increase, Rs. 38,306.

Assam Bengal (Gauhati Section).—Traffic receipts for week ended Oct. 24, Rs. 10,236; decrease, Rs. 417. Aggregate from July 1, Rs. 1,44,200; increase, Rs. 35,774.

Bengal Central Railway.—Traffic receipts for week ending Oct. 31, Rs. 41,318; increase, Rs. 14,636. Aggregate from July 1, Rs. 630,613; increase, Rs. 125,438.

Canadian Northern Railway.—Traffic receipts for week ended November 21, $84,600; increase, $25,200. Total, from July 1, $1,359,100; increase, $506,500.

Lucknow Bareilly Railway.—Traffic receipts for week ended Oct. 24, Rs. 17,497; decrease, Rs. 13,877. Aggregate from July 1, Rs. 3,39,264; decrease, Rs. 20,409.

Quebec Central Railway.—Traffic receipts for the 3rd week of November, $10,446; decrease, $3,167. Aggregate from January 1, $620,136; increase, $12,292.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended Oct. 24, Rs. 11,044; decrease, Rs. 5,644. Aggregate from July 1, Rs. 1,68,522; increase, Rs. 712.

Salvador Railway.—Traffic receipts for week ended Nov. 21, $14,750; increase, $5,000.

White Pass and Yukon Railway.—Traffic receipts for the week ended Nov. 7 amounted to $4,353.

English.

Cleator and Workington.—Gross receipts for the week ending Nov. 21, £1,158; decrease, £27. Total receipts from July 1, £23,214; decrease, £269.

Cockermouth and Keswick Railway.—Receipts for week ending Nov. 21, £818; increase, £48. Aggregate from July 1, £21,235; decrease, £997.

East and West Yorkshire Union Railway.—Traffic receipts for the week ending Nov. 21, £444; increase £14. Aggregate from July 1, £8,267; increase, £375.

Liverpool Overhead Railway.—Traffic receipts for week ending Nov. 22, £1,592; increase, £104. Aggregate from July 1, £35,186; increase, £2,313.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Aston Manor Urban.—Traffic receipts for week ending Nov. 21, £519, increase £15; aggregate from July 1, £11,695, increase £294.

Belfast Street.—Traffic receipts for week ending Nov. 21, £2,379, increase £108; aggregate from July 1, £56,933, increase £1,800.

Birmingham and Midland.—Traffic receipts for week ending Nov. 20, £797, decrease £19; aggregate from July 1, £17,559, increase £43.

Birmingham City.—Traffic receipts for week ending Nov. 21, £4,877; increase £242; aggregate from July 1, £109,178, increase £3,466.

Blessington and Poulaphouca.—Traffic receipts for the week ending Nov. 22, £7, decrease £2; aggregate from July 1, £479, decrease £50.

Bristol Tramways and Carriage.—Traffic receipts for week ending Nov. 20, £4,303, increase £266; aggregate from July 1, £106,696 increase £4,175.

Burnley Corporation.—Traffic receipts for week ending Nov. 21, £751, increase for week £95; aggregate from July 1, £17,974, increase £2,942.

Dublin and Blessington.—Traffic receipts for week ending Nov. 22, £89; decrease £9; aggregate from July 1, £3,139, decrease £150.

Dublin and Lucan.—Traffic receipts for week ending Nov. 22, £87, increase £6; aggregate from July 1, £2,766, increase £171.

Dublin United.—Traffic receipts for three days ending Nov. 21, £4,184, increase £82; aggregate from July 1, £108,837, increase, £7,765.

Edinburgh and District.—Traffic receipts for week ending Nov. 21, £4,114, increase £467; aggregate from January 1, £201,841, increase £20,284.

Edinburgh Street.—Traffic receipts for week ending Nov. 21, £400.

Harrow Road and Paddington.—Traffic receipts for week ending Nov. 20, £243, increase £12.

Isle of Thanet.—Traffic receipts for week ending Nov. 21, £268, increase, £29; aggregate from July 1, £21,375, decrease £1,042.

London General Omnibus.—Traffic receipts for week ending Nov. 21, £21,547, increase £2,123; aggregate from July 1, £510,441, increase £9,987.

London Road Car.—Traffic receipts for week ending Nov. 21, £7,190, increase £513; aggregate from July 1, £163,209, decrease £1,191.

Rossendale Valley.—Traffic receipts for week ending Nov. 20, £166, decrease £8; aggregate from July 1, £3,819, decrease £27.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending Oct. 26, £6,889, increase £1,963; aggregate from January 1, £258,248, increase £65,061.

Barcelona.—Traffic receipts for week ending Nov. 21, £2,122; decrease £32, aggregate from January 1, £108,705, decrease £3,552.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending Nov. 21, £329, increase £133; aggregate from January 1, £13,935, increase £7,340.

Brazilian Street.—Traffic receipts for the month of August, Rs. 36,892; increase Rs. 2,241. Total receipts from August 1, 1903, Rs. 36,892, increase Rs. 2,241.

Brisbane.—Traffic receipts for the week ending October 7, £2,300, decrease £90.

British Columbia Electric.—Traffic receipts for the month of September $188,373, increase $33,216. Net earnings from July 1 to September 30, $67,113, increase $17,691.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending Oct. 25, £3,066, increase £205.

Buenos Ayres Grand National.—Traffic receipts for week ending Oct. 24, $44,956, increase $3,239; aggregate increase from April, 1903, $42,570.

Calais.—Traffic receipts for week ending Nov. 21, £139; increase £12; aggregate from July 1, £4,169, increase £30.

Calcutta.—Traffic receipts for week ending Nov. 21, Rs. 35,525 increase Rs. 4,320; aggregate from July 1, Rs. 702,496, increase Rs. 130,008.

Carthagena and Herrerias.—Traffic receipts for the month of October, £3,129, decrease £112; aggregate to Sept. 30, £36,550; increase £2,902.

Lombardy Road.—Traffic receipts for the month of July, £1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Twin City Rapid.—Traffic receipts for the month of September $372,252, increase $32,583; aggregate from January 1, $3,020,843; increase $353,749. Net traffic receipts $215,328, increase $6,270; aggregate from January 1, $1,621,955, increase $146,181.

TENDER.

INDIA BILLS, PAYABLE IN LONDON IN STERLING.

ISSUE OF £500,000.

The Secretary of State for India in Council hereby gives notice that Tenders will be received at the Chief Cashier's Office, at the Bank of England, on Monday, the 30th of November, at One o'clock, for India Bills, to be issued under the East India Loan Act of 1893, to the amount of £500,000 (five hundred thousand pounds), to replace in part Bills for £1,000,000 falling due on the 4th of December, 1903.

The Bills will be in amounts of £1,000, £5,000, or £10,000. They will be dated the 4th day of December, 1903, and will be payable at twelve months after date, viz., on the 4th of December, 1904.

The Tenders must be expressed in English currency, and not in fractions of a penny other than halfpence or farthings, and must specify the net amount per cent. which will be given for the amounts applied for; and the Tenders of Private Individuals must be made through a London Banker.

The Bills will be issued and paid at the Bank of England.

The persons whose Tenders are accepted will be informed of the same on Tuesday, the 1st of December, and payment in full of the amounts of the accepted Tenders, must be made to the Bank of England not later than Three o'clock on Friday the 4th of December.

The Secretary of State for India in Council reserves the right of rejecting any Tenders.

Tenders should be upon the printed form which can be obtained at the Chief Cashier's Office, Bank of England.

India Office,
23rd November, 1903.

NOTICE.

THE STOCK EXCHANGE.—NOTICE.
NO MEMBER OF THE STOCK EXCHANGE is ALLOWED to ADVERTISE for business purposes, or to issue circulars to persons other than his own principals.

Persons who advertise as Brokers or Share Dealers are not Members of The Stock Exchange or under the Control of the Committee.

A List of Members of The Stock Exchange who are Stock and Brokers may be seen at the Bartholomew Lane entrance of the Bank England or obtained on application to EDWARD SATTERTHWAITE,
Secretary to the Committee of the Stock Exchange.

Committee Room, The Stock Exchange, London, E.C.

The Investors' Review.

The Folly of the De Beers Syndicate.

The longer this syndicate exists the more conspicuous does its short-sighted folly become. Originally, we believe, some of the members of this syndicate were undoubtedly illicit diamond buyers. They belonged to what may be called the I. D. B. brigade, and naturally men of that stamp could not be expected to possess any elevated conception of business morality, far-sighted views of any sort. They might, however, have been forgiven much if they had stuck to mining and done their best to dig out the gold and precious stones, iron, coal, copper and other minerals of which South Africa is alleged to possess such a bountiful store. It would still have been in large measure a robbery of the inhabitants of South Africa had this industry been systematically and exclusively pursued for the benefit of the alien few, but the world is so constituted that nobody would have given a thought to that so long as the yield of minerals was splendid and the dividends distributed fat. Unhappily for themselves and for their millions of dupes the world over, the members of this syndicate quite early became possessed of grandiose conceptions of political power, and in pursuit of the false ideals thus originated, they started upon a career of conquest in the north, the result of which is seen to-day in Rhodesia, and that pitiful bubble and sham, the British South Africa or "Chartered" Company, one of the most solemn and futile impostures the world ever saw. In every other direction also these fellows went into schemes for the political control of the country from Cape Town to the Zambesi and beyond, and out of these political aims came the Jameson Raid, the South African war, and untold evils of which we as yet see but the beginning.

How came these illicit diamond buyers and consolidators of the diamond monopoly in Kimberley to go astray in these directions? It was primarily because they abandoned their real business of miners in order to make as rapidly as possible gigantic fortunes upon the Stock Exchange. The success of the De Beers Consolidated mines turned their heads and led them to imagine that the immense gains resulting to them from this successful financial operation might be indefinitely repeated. Therefore when they got hold of the Transvaal gold mining industry they were not satisfied with merely developing mines on the Witwatersrand or elsewhere, after a moderately honest fashion, with digging out gold and making profits for themselves by disposing of it in the markets of Europe. That was too mean a business to occupy such great minds, and accordingly they commenced to manufacture companies with preposterous but imposing share capitals on paper, far more rapidly than the facts about the gold deposits warranted, and to play with the shares upon the European Stock Exchanges in order to entice the public to buy. Their success in this malign kind of industry was stupendous, one may say, unprecedented. Never in the history of mankind has such a furore of share gambling been seen as that which culminated in 1895. The whole civilised world may be said to have gone mad upon South African mining shares, and fresh supplies of the paper could not be provided fast enough. So heated was the imagination of the crowds which flocked to the markets to buy that questions were never asked as to the quality of the property, and the higher the premium put upon the shares offered the more eagerly were they bought. Witness that monster imposition of the Barnatos. When they issued at enormous premiums shares of a company supposed to take over their business, and found a public eager to buy their paper, so much beyond all forecasts was the madness that a position was rapidly created which impelled the original tempters and schemers to enter into all sorts of fantastic projects in order to hide the depth of their turpitude in beguiling the people. Hence in no small measure the various schemes entered into for the purpose of upsetting the South African Republics. They knew very well, the members of that De Beers syndicate, how impossible it would be to produce gold or other minerals in sufficient quantity to enable them to pay dividends upon the market valuations of the multitude of bubble companies they had created and, to a probably unhoped for extent, sold to the public. In order, therefore, to keep up the game, schemes of political monopoly were indulged in, and early in the career of the syndicate prophecies were circulated through the Press it had taken care to buy up or suborn to the effect that as long as this or the other obstruction stood in the way the mining industry could not possibly attain its supreme excellence, its fabulous output of gold.

You know all the story of the dynamite monopoly, of the Netherlands Railway exactions, of the Boer Government corruption, of the absence of liberty for the subject, especially for the Uitlander subject. You know also the lamentable results of the great conquest of Rhodesia, the possession of a territory sold in part to the avidious British public on terms which even the late Cecil Rhodes admitted constituted the transaction a "damned swindle." By emitting these falsehoods and leading the poor deluded share gamblers here to conceive hopes of indefinite gain based upon the removal of this and the other, often imaginary, obstruction alleged to hinder the fair progress of the industry, the bosses of De Beers were able to fill the minds of the public with a lust for war and conquest. "We shall be all right," they were told, "when we get rid of that reactionary, corrupt, and altogether unspeakable Boer." The Boer went under, the war came and passed leaving the position worse, unspeakably worse than it was

before. Instead of being brilliantly progressive the gold mining industry stagnates, expands slowly, yields often but poorly, and disappointment follows, so much so that the bosses have been compelled to come to the support of their hollow and dishonestly inflated market to prevent a complete collapse.

What can they do in such circumstances but try one more expedient in order to beguile those who have parted with their means to create Park Lane "helots" and endow some members of the I. D. B. brigade and its associates with unexampled fortunes? "We must have Chinese," the bosses now cry, and Chinese will accordingly be introduced with the assent of a complacent Lyttelton and a subservient Milner, no matter what the hostility of the white population of the destroyed Republics may be or what the opposition in Cape Colony and Natal. England has destroyed the two Republics for the benefit of the mine bosses and that alone. They are therefore free to do with the annexed territories as seems to them good and if, in pursuit of their schemes, both white and black populations perish, it is nothing to them. All they desire is active and rising markets so that the millions of shares they now hold, bought back from a wearied out and impoverished public, or freely manufactured afresh in order to be sold for a still greater augmentation of their fortunes, may be disposed of.

But will the position be any better than it is now when Chinese labour does come upon the Rand in the course say, of another two or three years, for it will take that time to fully organise the supply and bring the necessary numbers to the mines? There is hardly a shadow of reason to suppose that it will. Much more probable is it that a still worse state of affairs will ensue, a state involving conflicts between the natives and the imported Asiatics—disorganisation of labour at such mines as are worked in order to abstract gold, and a further wave of disgust amongst the speculators who have been holding these shares in the hope of a rise in prices. It must never be forgotten that the bulk of the ore found in the Transvaal is of a very low grade, and we have as yet seen no reason to believe that as many as one-fourth of the mine companies created for the purpose of selling their shares will ever yield any profit at all from their operation as mines to the beguiled shareholders, no matter although Rhodes' ideal of labour at twopence a day is attained. Disappointment will consequently ensue when the Chinese remedy has been applied, just as disappointment has dogged the steps of the bosses throughout. They have not entered into this Chinese scheme in any honest frame of mind. It merely proclaims them to be in the grip of the fate they have themselves invoked, and when the war brought ruin instead of the prophesied wealth and prosperity their desperate case compelled them to hunt around for some other public-hoaxing device. Hence Chinese cheap labour, hence the outcry about shortness of natives and the prophecies of gains to come once Asiatics are sent down into the bowels of the earth to hew out the ore. We were told that the abolition of the dynamite monopoly would mean so much to the shareholders, that the removal of the oppressive taxation of the Boers would mean so much more, that the control of the Government by the De Beers syndicate would ensure harmony of working between all interests, and every one of these prophecies has been falsified just as fully as if they had been made by Mr. Joseph Chamberlain himself. Is there any reason to suppose that the hopes now encouraged around Chinese labour will prove more substantial than those that have had to be abandoned in the past? None whatever, and the truth of the matter is that these great millionaires of yesterday, who arose out of nothing to dazzle the world by the gaudy magnificence of their wealth —wealth the product of share gambling—have from first to last been amongst the most egregious fools the human eye could light upon. They are continually in pursuit of will-o'-the-wisps, deluded by their own lies, and live in an unreal world of their own creating. It is time for the public to become alive to this aspect of the great South African conspiracy and of the altogether unworthy characteristics displayed by the conspirators. These men are in the grip of fatalities evolved by themselves, and because they are so we nourish the expectation and entertain the belief that ruin will overtake them in spite of their scheming. What reason can they advance in support of the view that the importation of enormous numbers of Chinese or other Asiatic labourers will improve the position of the mines? There is no solid reason whatever advanced. It is not even certain that the Chinese will consent, in their hundreds of thousands, to go down the mines and dig out the ore on the terms offered when they do arrive, but it is as nearly certain as anything can be that the first batch of slaves landed will be the signal for dangerous outbreaks in and around Johannesburg. Confusion and stoppage of work are consequently much more likely to be the product of this latest market beguiling device of the bosses than a rapidly improved output of gold and higher or more numerous dividends. We repeat, these multi-millionaires—if they all are that, which we doubt—present to us some of the most stupendous examples of human shortsightedness and folly history can supply.

Economic and Financial Notes and Correspondence

Tibet.

"The advance of a British expedition into Tibet is a monstrous thing, an outrage and a blunder through and through." Such is Sir Henry Cotton's description to a daily paper's representative of our latest "peace" mission over the northern frontier of India. The whole object of the raid is to bag the Chumbi Valley and to gather fresh laurels for the political and military glory-hunters who are the curse of our Indian Empire. It has always been the same and always will be until the people here display a more real interest in the affairs of our Asiatic possessions. Lord Curzon's mind is undoubtedly inflamed with great ideas of making history, in the approved Pro-Consul style, by war and bloodshed, and the chance of going down to posterity as the Viceroy who gave us Tibet, or first sent a force into Lhasa is too good a one to be missed. To have announced his ambition in this crude manner would have raised a hornet's nest about his ears so a story of disregarded treaty rights and refusals to negotiate was promptly trumped up. Had his lordship and his ministers studied their history they might have avoided falling into a palpable and idiotic mistake, one quite out of keeping with their skill in hoodwinking the authorities at home to their true aims. For the talk of treating with the Dalai Lama is as absurd as to talk of negotiating a treaty with the chief of Maoris. Tibet is, and for several centuries has been, under the suzerainty of China, whose two residents known as the Ambans reside permanently in Lhasa. We ourselves recognised this in 1892, since the treaty made then was negotiated by Lord Lansdowne direct with the Senior Amban. Why, then, in 1903 should we ignore the Ambans and talk about the Dalai Lama refusing to carry out his treaty obligations or to negotiate a fresh arrangement? The only explanation of this is that when it suits the glory-hunting instincts of our bureaucrats and military in India precedent goes to the wall, and with it national honour.

The Russian bogey is quite as flimsy as the treaty one, for what does Russia want with a bleak cold plateau, or with a town fifteen hundred miles from its nearest base? Besides, the Czar has quite enough on his hands at present in the shape of Turkey, China and Japan, to say nothing of domestic "boils and blains," without troubling about Tibet and the annoyance it would cause us if he gained the upper hand there. All this and more Sir Henry Cotton said, and when he speaks his words are well worth listening to, for he is at present perhaps our greatest authority on Indian affairs. Yet because his knowledge is so great and wide, his warnings are certain to be disregarded by the people here, the majority of whom are tainted with the poison of megalomania.

Sir Henry's last remarks in this interview were significant. The time of year, he pointed out, was most unsuitable for the proposed operations, since all over Tibet the

temperature is below zero, while the camp where the force is to have its base is some 14,000 ft. above sea level, so the cold there will be even more terrible. What hardships this climate means to the troops engaged on this criminal blunder, it is almost impossible to imagine, and the death roll from cold and disease will be far greater than that by actual fighting. But it is all of a piece with the fatuousness and ignorance of the average Calcutta and Simla bureaucrat. So long as his skin is safe he cares little what becomes of the unhappy pawns he shifts to gain him a wreath of mock and tawdry laurels. Yet perhaps the day will come when such as these may reap their true reward.

The Patriots of Birmingham.

Brummagem patriotism is as brassy as many other things it turns out, and a curious little bit in the War Commission's report affords an excellent example of the way the patriots of Mr. Chamberlain's pet preserve regard their obligations as citizens. In 1898 the official world, outside the War Office, had practically made up its mind that war with the Transvaal was bound to come, and the knowledge had to some extent spread beyond the charmed circles of Government departments. Bearing this in mind, a despatch from Mr. Conyngham Greene, the British Agent at Pretoria in the pre-war days, affords highly interesting reading. On February 7, 1898, this gentleman wrote to Sir Alfred Milner, as he was then, on the subject of the supply of rifles in the Transvaal. These Mr. Greene was told amounted to 105,000 in the magazine at Pretoria, besides stocks in the various district magazines, and it was therefore difficult to understand how any further supplies could be necessary. He then adds the following significant statement:—

"It is, however, clear that the Government (i.e., the Transvaal Government) do not share this view, for they recently despatched an order to Messrs. Kynoch for 8,000 rifles, as reported in my secret despatch of the 16th ult., and I am told that they now propose to place another order for arms with Messrs. Wetley, of Birmingham, a member of that firm to be invited to come out here and enter into a contract. Moreover, the Government are, I hear, prepared to give orders for the latest improvements in field artillery and quick-firing guns—the orders for artillery to go to Germany, and those for small arms to Birmingham."

In Pretoria common gossip explained this desire for further rifles on the ground that the Transvaal wished to arm the Orange Free State, in case of eventualities, and this interpretation was supported by a secret Executive resolution passed some time before, which, it was alleged, declared the necessity for the Transvaal to go on arming gradually, "because the Government has others to provide for besides the burghers of the Transvaal." However, Birmingham is not concerned with this point. What does concern it, is that these two firms were evidently prepared to supply both arms and ammunition to a nation with which we, within a very short time, were almost certain to be at war. So far as the direct evidence contained in the report goes, there is nothing to show whether these contracts were made or not, but the Intelligence Department might possibly be able to throw considerable light upon this point if it cared to open its lips. For when Sir John Ardagh, its late chief, was examined upon the estimates of the arms and ammunition possessed by the burghers before the war broke out, his explanation of their remarkable accuracy was that "the stock was not so large but what we (meaning the Department) could put our hands on the invoices." Does this mean that the Army officials knew all the time where these guns and ammunition were going and yet could do nothing to stop their leaving the country?

But Birmingham is not the only offender, since Sir William Butler told the Commission that Vickers-Maxim shipped pom-poms to the Boers either just before or at the time hostilities broke out, the last lot Sir William thought leaving the docks here at the same time as the first artillery we despatched. All this may be, and no doubt is, excellent business, but surely it cannot by any stretch of imagination be called patriotic. The days of chivalry passed away ages ago, and it is no longer courtesy of war to supply your foe with what he lacks in tools to kill you with. Therefore might not these firms have sacrificed a little gain and refused the Boer orders? Doubtless the burghers would have got what they required elsewhere, but we should have had the satisfaction of knowing our men had not been killed by weapons and bullets turned out in their own country. Was it to hide this and other ugly facts connected with the war and the pre-war days that Mr. Chamberlain concocted his nightmare vision of a diminishing trade and his cure-all spook of preference? It might be, for somehow we remember that there was an intimate connection between the ex-Colonial Secretary or his family with Kynochs. How much of the Kynoch dividends of those years was provided by Mr. Kruger?

The Dock Companies' Port Scheme.

The outlines have been published of the scheme by which the London and India Docks Company hope to improve the Port of London, and though there are certain points which might be amended, it is on the whole considerably in advance of the Government's idea of a Port of London Board. One of the objectionable features, and the most important, is the River Authority. This under the new scheme is still to be the Thames Conservancy with all its existing powers and duties, but with an increase of seven in its number, in order to provide for interests now insufficiently represented or not at all, the power of appointment of these additional members being given to the Board of Trade. Would it not have been better to have placed the authority in the hands of a joint committee of the Dock Companies and the London County Council, if it was not thought advisable to place it in the hands of one or other alone? With such a governing body there would be a far smaller chance of conflicting interests than there will be in the unwieldy Thames Conservancy, many of whose representatives are not directly concerned with London and its trade. Furthermore, the Turtle Corporation with its reactionary proclivities would be entirely shut out, an enormous gain in itself, since it is progress and not retrogression that is needed.

This River Authority is to have power to charge all existing river dues on shipping and in addition all seaborne goods discharged within the Port, with certain exceptions, are to pay dues based upon the schedule now in force in Liverpool. These exceptions are transhipment goods on a through bill of trading, coastwise goods, including coal, and export goods. The revenue to be derived from all these is to be collected by the Customs on entry, that portion received from goods discharged in the docks of the three companies to be paid to the respective companies, while that derived from goods discharged elsewhere is to be handed over to the River Authority. But what becomes of the wharfingers and barge owners under this arrangement? Are they to have no share in the revenue? If so, they are almost sure to raise a howl of protest which will so scare the present effete Ministry that it may spoil the whole scheme by trying to tinker up a compromise. That portion of the revenue taken by the River Authority is to be devoted to river improvements for facilitating navigation, as on it is imposed the obligation to deepen the Thames. Should it not do so in a manner satisfactory to the Dock Companies, they can request the Board of Trade to call upon the River Authority to execute such improvements as the companies consider requisite. But here again the danger of a multiplicity of cooks arises. Any surplus left in the hands of the River Authority after payment of dredging is to be spent on other improvements or in the reduction of the river tonnage dues on shipping.

So far as they themselves are concerned, the Dock Companies, that is, the London and India, the Millwall and the Surrey Commercial, wish to be left as they are at present, with the addition above mentioned to their revenue. All barges are also to pay on entry into the docks a fee of 3s. 6d. if under 100 tons burden, and 5s. when over. From the companies' point of view this is quite fair and reasonable, but shippers and barge-masters possibly will not hold the same opinion. The result, therefore, may be that vessels will take more and more to

loading and unloading in the stream, since by doing so they will only have the statutory dues to pay to the River Authority. For this reason the companies might find it advisable to reduce this charge or do away with it altogether, so as to tempt vessels to use their wharves and enable them to take the statutory dues themselves. Another power which the dock companies seek is the right for each to be allowed to form a reserve fund for the equalisation of dividends for dock extensions and equipment, or for any other purpose they may think fit and proper. This reserve is to equal 10 per cent. of the ordinary stocks of the company concerned, a fair and reasonable basis, against which no ready objection offers.

In consideration of these powers the companies on their side agree to fix the maximum dues on shipping entering the docks at 1s. per ton net register; to give free the services of their staff at the docks and the use of capstans or other power for assistance to lighters in entering or leaving; to limit the export and import rates at some of the docks, where the same are at present not fixed by the schedule in force for Tilbury under the Act of 1882 and to submit their charges in case of dispute to the Railway Commission. The London and India Docks Company also undertake to spend £2,000,000 in all on the construction of a new dock parallel with the Royal Albert Dock and in further improvements. With regard to their capital the companies declare themselves willing that the Board of Trade should have power to veto any capital expenditure and also that the same body may have the right to call upon any of them to execute such improvements of existing works and docks as it shall think necessary in the interest of the Port, subject to certain necessary conditions for the protection of the companies. It is also proposed to limit the dividends to 4 per cent. on the capital stock of the London and India Docks and the ordinary stock of Millwal, and to 6 per cent. on the ordinary stock of the Surrey Commercial, any new capital to be offered either by auction or tender. Surplus income remaining after the dividends are paid and reserve fund provided for is to be used for capital purposes, including the purchase or extinguishment of the companies' loan obligations.

From this summary it will be seen that the scheme looks the most feasible yet produced for the improvement of London's port, and if the River Authority were changed to a simpler and less unwieldy body it should stand a good chance of success. It is not too late for some such amendment to be made, and we hope it will be during the discussion of the bill next year. After all it is Greater London which is most intimately concerned with the welfare and well-doing of its port, and for this reason its representatives should be given a large share in its management. The various local authorities further up the river have at the most only a secondary interest, and to give them any voice in the control is manifestly absurd. So let the companies face the position squarely and ask that so long as they exist, they and the County Council jointly shall control the port and the waterway leading to it, for such an arrangement would be to their benefit. Only we should like to see arrangements made for the complete extinction of their capital in time and think the maximum dividend should in no case exceed 5 per cent.

Another Lloyds Bank Absorption.

We read the news in Thursday's *Manchester Guardian* with regret, and felt disposed to hope that it might not be true. But the letter of Mr. Abel Buckley, chairman of the District Bank, and the significant neutrality of the authorities of Lloyds Bank only too fully confirm the *Guardian*, which is, besides, one of the most careful and accurate of newspapers. We may therefore accept it as a fact that the old, well managed and eminently prosperous Manchester and Liverpool District Bank is to become another limb in the far spreading tree of Lloyds Bank. For many reasons we wish it had not been so. It is uncomfortable to see our best provincial banks one by one thus disappearing, and in spite of the assurance of Mr. Buckley that his absorbed bank is to remain a "head bank" for Manchester, the end must be its obliteration. How could Lloyds have two "head bank" branches in one city? It already holds a magnificent position in Manchester as owner of Brooke's Bank.

But our most serious objection to amalgamation of this kind is economic not sentimental. We dread the consequences to the nation and to British banking credit the world over, should trouble arise affecting the stability of any of our mighty banks. For example, an amalgamation of these two banks implies, on their last published figures, a liability of about £71,000,000 to depositors, an amount no other joint-stock bank in the world habitually owes, and of that total something like £40,000,000 would be locked up in advances, probably to a great extent unrealisable at any pinch. Nor is this the worst of it. Lloyds has already 268 branches, besides 127 sub-branches and agencies. Add in the branches of the Manchester and Liverpool District Bank, and the total of these dependent offices becomes 483. What would that mean were anything disquieting to arise inducing a run upon banks generally? It would mean that in order to provide an average of only £50,000 in cash to each of these branches Lloyds would require to have more than £24,000,000 of money in hand. There is not enough unemployed cash available in the three kingdoms to provide any such sum, and were all the banks together to be driven to buttress their credit by strong displays of similar magnitude, the result would be universal paralysis. For this reason alone we regard these imposing aggregates of liabilities to the public with no small apprehension. In the present instance it baffles conjecture to find a reason for the abandonment of its fine independent position by the District Bank, for we cannot entertain the idea that it has got its assets so locked up as to be driven by mere expediency to call in the support of a more powerful institution. From the point of view of the business man, likewise, these monster credit-handling institutions are to be deprecated. They tend towards monopoly banking and to the conduct of the nation's affairs through and through by Bank controlled corporations. Altogether we feel anything but jubilant on this latest stroke.

The Transvaal New Gold Law.

The provisions of the draft ordinance amending the Gold Law of the Transvaal have now reached this country. The principal alteration is that affecting the rights of the lasdowners, who were granted by the old law the right to one-tenth of the whole area of the proclaimed farm. Hereafter the owner is to be entitled to one-seventh of the area, has right to a half share of licence money on claims, and three-quarters of these on stands being unchanged. "In surveying the said area the reef may not be taken lengthwise only, but the proportion of breadth to length shall be taken as one to two." Such is the reservation, and it refers, of course, to outcrop indications, indications that have recently been disregarded in favour of boreholing operations. So the remaining area of six-sevenths of the farm will go to the State. Under the old law, the owner had the right to reserve homestead and cultivated ground as a werf, and under clause 50 of the 1898 law it was competent to the owner to have werven converted into mynpachts. The new law, however, gives no right to convert werven into mining claims, whilst the right of setting apart werven, that is, the homestead and cultivated grounds, to be excluded from the general proclamation, is retained in a modified form. Vergunning claims are also done away with, so that the owners, mostly Boer farmers, will be less liberally dealt with than they were by the late Government. The prospector, on the other hand, will be more kindly dealt with if the discovery be made on Crown lands. Under the old law he was entitled to six claims if the discovery was at a distance greater than six miles from a locality already worked, and these claims he could hold free of licence money. Both the majority and the minority reports recommended that the number be increased to thirty claims, but the Government has increased it to fifty, no licence money to be payable as long as the area is held by the discoverers. If, however, the discovery is made on private land, the prospector gets nothing at all, but he must make the best terms he can with the landowner, therefore in this respect he will suffer, as the old law made no distinction between Crown and private land. This is likely to tend to the ultimate extinc-

tion of the individual, more especially as the new-fashioned system of boreholing extends. There promises to be bitter opposition to the draft before it becomes law, and there ought to be. The rights of private owners and the profit of the State seem to be alike disregarded.

Dunlop Tyres.

We fear the finances of the Dunlop Pneumatic Tyre Company will never be quite so good as its really famous manufactures, but by devious methods it continues to make long suffering shareholders imagine that things are looking up, and if the latter desire to be really happy it will be well to accept the figures as presented, and not inquire too closely into their origin. The annual report is not couched in quite such elegant language as we have a right to expect, considering the swellish board of directors, and proprietors must be content to peruse some very ordinary observations concerning the events of the year to September 30 last. After expressing pleasure at the improvement in the company's business, Messrs. Harvey du Cros and Co. observe that the following difficulties have been successfully encountered:—"A very serious advance in the price of rubber which prevailed during the past year. The effect of the grievous weather on the cycle trade. A very large reduction in the price of tyres." At this point there is opportunity for some vigorous trumpet blowing, and it is nice to know that these drawbacks have been turned to nought:—"By still further advances in the efficiency of manufacturing processes. By the healthy condition of the company's investments. By the success of the Automobile Tyre Department." Every trade nowadays suffers from dumping, according to the idealistic Chamberlainites, and of course the tyre industry does not escape. It seems that there is a large importation of automobiles fitted with tyres made abroad, and users do not always understand that motor tyres made in Germany and France are manufactured according to purely English inventions the property of the Dunlop Company, but which are not recognised in those countries. Such tyres when improperly imported to England constitute an infringement of the company's rights, and the efforts made in defence of those rights have led to a good deal of interested misrepresentation as to the quality of the company's goods. But the directors tell us, and they ought to know, that the extended sale and practical use of Dunlop motor tyres are proving the strongest factors in establishing the superiority of tyres made at home under the original patents, to which they owe their existence. So we can again breathe freely, and shout with joy that there is at least one industry that does not need protection. As usual, there is just enough omitted from the report and profit and loss account to prevent us from discovering the actual source of the company's revenue. We give below details of the profits and their allocation for the past three years, and it will be observed that the income for the twelve months to September 30 is nearly £31,000 more than in 1902. In each case dividends on investments, including those on subsidiaries, are absorbed in this total, but whereas in the past year's report the whole amount received is stated, that for 1902 only gave the revenue from subsidiaries, with no mention of the receipts from other sources. This, however, may be a small matter, in comparison with the fact that the income for the period under review is brought up to amount stated by the addition of profit on debentures redeemed. From the report we learn that debentures representing £132,600 have been purchased and extinguished, and we know that the market price of Dunlop debentures has been round about 75 during the whole of the past year. Now we take it that these debentures have been cancelled on the balance-sheet at par, and if the company paid an average of 75 for each debenture purchased that would mean a profit of 25, or £33,150 on the £132,600 extinguished—an amount larger than the increase in profit. If these figures are substantially correct the directors have no right to say the business has improved., and such sum should not have been brought into the profit and loss account at all, but set aside for the reduction of the paralysing item of goodwill. But the directors thought otherwise, and we do not suppose anyone will grumble, because it means another 1 per cent., making 6 per cent., on the 8 per cent. ordinary shares, with a substantial improvement in the amount carried forward. It will also be noted that nothing is now written off investments, and we hope this means that they do not need depreciating. We are encouraged to think so, because the auditors no longer declare themselves unable to express an opinion as to their value, and in the report the board speaks of the "healthy condition of the company's investments." The item of patent rights will now disappear from the balance-sheet, as a result of the writing off now proposed.

	1901. £	1902. £	1903. £
Net profit	253,617	203,353	234,178
Other revenue	626	355	3,928
Brought forward	163,756	178,580	177,922
Total	417,999	382,288	416,028

Written off for depreciation	—	5,027	4,397
Written off patents	100,000	45,371	45,371
Written off investments	—	20,000	—
Debenture interest	22,995	22,127	17,270
Dividend on preference shares	49,750	49,750	49,750
Dividend on 8 p.c. ord. shares	(5 p.c.) 49,999	(5p c.) 49,999	(6p.c) 59,999
Carried forward	178,580	177,922	235,541

Little that is new can be said about the balance-sheet, the only movement of importance being the reduction in cash and bills in consequence of the debenture redemption. Goodwill, it need hardly be mentioned, remains at £3,894,071, and ordinary, preference and deferred shareholders are no doubt pleased with the distinction of having their interests represented by this resplendent item without regarding what may be behind it.

German Imperial Finance.

"Cæsarism" in Germany is no cheaper apparently than anywhere else, and the friends of humanity can look only with sorrow upon the miserable pass into which the conquering imperial German people has already fallen. Militarism is threatening to ruin the country. Its industries are flagging and becoming disorganised. All the magnificent wealth extracted from France has been distributed or is held apart as a war chest with a view to further escapades and adventures of the man-killing type. So now we have the imperial budget for 1904 exhibiting a deficit of about £11,000,000. The aggregate expenditure is £123,036,750, an increase of £2,185,304 upon the total for the year now closing, and the sources of revenue appear to be drying up, so that the Government has no help for it but to lean upon the usurer, and debt to the amount of £10,735,000 will have to be realised next year. Contributions from the federated states cannot be increased. In the years 1902 and 1903 these states had already declared their inability to undertake more than a round sum of £1,200,000 as uncovered assessed contributions for each of these years, and it stated that even this sum imposed upon their budgets the heaviest burdens they could possibly bear. Discontent indeed of a dangerous kind is

being generated amongst the inhabitants of these states at the insatiable demands of the imperial Exchequer.

Some people, according to Reuter's summary of the budget statement, appear to hope that the revenue may increase when the new tariff comes into force, if ever it does come, but as that tariff is higher than the existing one and will fall upon a population already exhausted by the monstrous taxation demands they now have to meet, the probability is that instead of an increase the higher tariff will produce a further diminution in the Treasury's resources. We are reminded that the federated state governments during the years from 1899 to 1903 have already contributed nearly £5,000,000 to the empire in the form of assessed contributions not covered by their appropriated share in the imperial revenue, that is to say they have had to find out of their own resources a vast amount of money above and beyond the sum they are entitled to receive from the Customs revenue and other imperial monopolies. It is, Reuter adds, clear, therefore, that the financially weaker among these states would inevitably be placed in an uncommonly difficult and critical position if for the year 1904 higher contributions than those of the previous years were exacted from them. Hence there is no help for it but to borrow. As long as Cæsarism dominates the life of the German people the debt laid upon the backs of that people must expand, and Cæsarism increases its demands every year. The army will cost about £24,000,000 next year and, as we explained last week, the navy is also busy in devouring the nation's substance with a fury ominous of approaching mischief.

Furthermore, Germany is being bled by its colonies to an extent which is anything but pleasant to look upon. The receipts of these colonies fall short of the estimated expenditure for the coming year by £1,345,000, their total outgoings being £1,924,000 against an income of only about £579,000. Part of this outlay is for railway extensions and other public works, so-called, but much of it is incident to the mere administrative necessities, and although the receipts show an increase of about £111,000, the demands also continue to grow by almost the same amount. The home taxpayer has to make this waste good, and Germany is consequently a country whose poverty as measured by the condition of the masses is on the increase. Will our people take the lesson afforded by this striking example of the consequences of Cæsarism to heart, or is it, too, determined to rush headlong upon its fate? After little more than thirty years of this kind of blight the empire has a debt interest charge to carry amounting in the coming year to £5,265,627, an increase of £311,416 compared with 1903. Germany is pouring out money in China, in East and South-West Africa, and getting nothing in return. The total extraordinary expenditure debited in next year's budget to China account alone is upwards of £700,000, an increase of £88,000 odd on the current year's outgoings. Some of this money comes back, thanks to the cruel exactions of the German Government upon China under the guise of an indemnity, but even if that indemnity is all paid—and there is still nearly £14,000,000 of it due—the ultimate product to the German people is almost certain to be loss. Meantime, however, the budget demands are relieved by about £250,000 a year from this source.

Peruvian Corporation.

For some time past the gross earnings of the railways belonging to the Peruvian Corporation have been increasing steadily, and on the assumption that the company's guano business was also doing well, recent months have witnessed a steady absorption of the company's securities until the debenture bonds reached 88, the preference stock nearly 18, and the ordinary stock 4, and although the denomination in each case is £100, these are really wonderful prices when the Corporation's history is borne in mind. Its record renders any forecast of the future practically impossible, and it is therefore difficult to pronounce an opinion as to the justification of the present level of quotations, but taking all matters into consideration we should say that all reasonable prospects are discounted at prevailing prices, and that those who got in lower down and now see fair profits should not hesitate to take them. There is, of course, always the hope that one of these days a sort of a settlement may be arrived at with the Peruvian Government, but we must never forget that however much the executive may feel disposed to come to terms, the impoverished condition of the national finances must always stand in the way of a really satisfactory arrangement. As the annuity of £60,000 has now been in default ten years that means the Government owes the company £600,000, and it would require a financial genius of a very high order to suggest a source from which even a tithe of such sum could be obtained. Besides, anything the Government could get hold of it would probably stick to. In making the usual reference to the matter, the directors say that in May last a presidential election took place, and resulted in the appointment of Senor Manuel Candamo, who assumed office and appointed a new ministry on September 8. Since then the representative of the Corporation has availed himself of all opportunities of discussing with the new Government the question at issue with the Corporation, but no satisfactory result has hitherto been arrived at. So the directors can only devoutly hope, and stockholders will echo the prayer, that the new Government "will be able to obtain from Congress that liberty of action which is absolutely necessary for bringing to a termination those questions the existence of which has hitherto proved to be so great an obstacle to the work of the Corporation and proper development of Peru." From the subjoined table it will be seen that the company's achievements of the past year are really excellent, and become quite remarkable when comparison is made with the results attained at the time when it was decided to scale down the debenture interest:—

Year nded June 30.	Net Railway Receipts.	Guano Receipts.	Total Receipts.	Dividend. On debs.	Dividend. On pref. Stock.	Balance forward.
	£	£	£	p.c.	p.c.	£
1897	78,017	57,196	135,412	3	nil	44,723
1898	103,230	35,146	138,608	3	nil	61,052
1899	115,814	67,749	183,876	3	nil	120,005
1900	172,028	105,355	279,792	5	¼	103,081
1901	194,625	57,441	258,459	5	¼	124,973
1902	172,743	114,196	289,886	5	¼	146,874
1903	207,089	152,598	368,058	6	¾	153,241

A brief reference to this debenture interest reduction may prove useful now that the rate has been restored to its original level. Owing in part to the default of the Government, and also to the devastation of the country caused by the civil war, in 1896 the directors were compelled to ask the debenture holders to forego part of their interest, and they agreed to accept 3 per cent. per annum until April, 1901, and thereafter 4 per cent., the Corporation, however, not to pay any dividend on the preference stock without first increasing the debenture interest to 5 per cent. and not more than ¼ per cent. on the preference stock unless the full 6 per cent. was paid on the debentures. As our table shows, matters improved more rapidly than had been anticipated, and by 1900 the debenture holders received 5 per cent., and the preference stockholders ¼ per cent. These rates were maintained for the following two years, and for the period under review the full 6 per cent. is payable on the debentures and ¾ per cent. on the preference stock. Revenue from the railways was £207,089 or £34,316 more than in the preceding year, a result all the more satisfactory in that it was obtained in face of sundry outbreaks of plague on some of the systems. Guano receipts rose £38,403 to £152,599, and with interest, exchange, and registration fees the income from all sources shows an improvement of £78,172 at £368,058. Net administration charges absorb £9,516, and interest at 4 per cent. per annum on the debenture bonds £148,000, leaving £210,543. Adding £146,874 brought forward, the total is £357,417, and the directors first set aside £2,000 towards an insurance fund on Lake steamers, and write off £2,394 on colonisation account in respect of indebtedness of colonists who have been compelled to abandon their holdings. This leaves £353,023, and after placing £70,000 or £20,000 more to reserve, the debenture bond interest is brought up to 6 per cent., pre-

ference stockholders receive ¾ per cent., or ½ per cent. more, and £153,242 remains. Of this, however, £84,834 has been used for the general purposes of the company. The balance-sheet reaches the great sum of £20,797,057, and the reserve fund now amounts to £250,000.

Mr. Edward Atkinson on the Cost of War.

Some interesting facts have been compiled by Mr. Edward Atkinson, of Boston, Massachusetts, relative to the price being paid by the people of the United States for the luxury of war. He puts the cost of what he calls "war and warfare" from 1898 to 1903, inclusive, at upwards of $900,000,000, say nearly £200,000,000. In fact, it would be quite that if all the charges directly borne by the taxpayers were included. The war with Spain cost over £60,000,000, and it has taken about £140,000,000 to partially deprive the people of the Philippine Islands of their liberty. Perhaps when the people of the United States begin to count the cost they will think the empire-creating business a trifle too expensive. The worst of it is, it is not an expense that can merely end when wars are over. Wars breed an extravagance in all departments of the state, which cannot be shaken off when the pretext for excessive outlay is at an end. Mr. Atkinson shows that the average cost of administering the affairs of the Union for twenty years, from June 30, 1878 to the same date in 1898, was $5 per head. During the five years of war under Presidents McKinley and Roosevelt the average rose to $6.61 per head, and although war is now supposed to be at an end, for the fiscal year ended June 30 last the cost of the administration has been $6.35. Thus the present normal expenditure has laid a burden of $1.35 per head more upon the people than the average borne during the twenty years of peace immediately preceding the "imperial" folly. Every branch of the federal expenditure has increased its demands. For the twenty years ended on June 30, 1898, the civil service took only $1.48 per head. In the past year it demanded $1.77. The war department in the earlier period took only $0.75 per head, it now demands $1.47, and the increase in the navy department has been from $0.35 to $1.03, while pensions have risen from $1.52 to $1.72, and in the five latest years, whose average is also worked out by Mr. Atkinson, pensions alone took $1.86. Interest on the public debt has gone down, and is now only $0.36 per head, against $0.90 in the twenty years' average. These figures, however, do not, Mr. Atkinson says, show the whole case, for during the twenty years prior to the Spanish war the cost of pensions and interest together was $2.52 per head, and these charges would not have exceeded $1.88 in the last fiscal year, but for the debts incurred and pensions granted to "so-called Spanish war veterans." In the last fiscal year war waste cost the country $152,000,000. Such is imperialism in action.

Banking Reserves.

Subjoined is a further note upon this important subject by the writer of the letter we printed last week. It deserves thoughtful consideration, not merely because of the suggestions it makes as to the formation and disposition of the gold reserve, but because of its insistence upon the critical and altogether unsatisfactory position of our joint-stock banks as at present conducted. It is so long since we have had anything resembling a banking panic in this country that the present generation has come to regard any such event as impossible. The ultimate result of this indifference is sure to be that when an affliction of the kind does come upon us, as it assuredly one day must, our banks will all be found to be more or less unprepared, generally more. But we do not quite follow the writer's argument on one point. It is true that the rate of discount would probably be kept relatively high were banks to devote part of their profits to the purchase of gold with a view to forming reserve of a substantial and effective kind, but how would that high rate of interest promote the digestion of "financed" stocks? Would it not rather force many of the firms and institutions now carrying excessive masses of these stocks into that very bankruptcy they are now doing their utmost to avoid?

"The rough sketch of a scheme for building up a gold reserve independent of that in the coffers of the Bank of England, was in no way designed to combat the evil of our joint-stock banks lending too large a porportion of their assets—if they do so. They no doubt trade now up to the level of safety, and, while there are shareholders' pockets to fill, they will continue to do so. Assuming that they already use all the money they can, they will go on doing it. My object was not to interfere with this, but to ensure an emergency stock of gold to be used only in times of credit or currency panics. With such a reserve we should obviously be better off than we are now, with only the Bank and the illegal suspension of its charter, to fly to. We should have two strings to our bow in place of one. The emergency gold reserve would be under the control of practical bankers, in the cellars of their own clearing house, and in time of sufficient need would no doubt be wisely used. For instance, the strength of a chain is its weakest link, and in a panic a particular bank would be first singled out for suspicion or for a run. Supposing the institution to be sufficiently solvent in itself, the other bankers might determine to come to its aid with the gold reserve. For many reasons the Bank of England gold stock is really no reserve at all in a proper sense, because it is liable to so many calls of a conflicting character. Supposing, as an alternative to my sketch, that the Government by law bought up and held a stock of gold, they could not, it seems to me, issue demand notes against it, for that would defeat its purpose. Nor could they, not having the special knowledge, lend their gold to particular banks in time of panic. The building up of an adequate and independent gold stock would be specially valuable, as the steady demand for gold would keep the rate of discount relatively high for some years, and thus promote the gradual digestion of the financed stock that is now so serious a danger."

Mutual Life Insurance Company (of New York) Puffery.

If he does not take care the City editor of the *Pall Mall Gazette* will get into this extravagant life office's bad books, for he ventured the other day to criticise their account keeping. Amongst other things he questioned their habit of "writing up" stocks, and made some very just observations upon its misleading character. Readers of this Review are quite familiar with that and many other objections to the practices of this alien monster in the life insurance line, for that is what it is, an irresponsible monster. It seems that it has been having its affairs overhauled by the Insurance Department of the State of New York, and has, according to its own story, come out triumphantly. We dare say it has, and do not think any the more of it therefor. It, however, uses the opportunity to get out great blasts of puffery, much in the style with which the persistent advertising of the "Encyclopædia Britannica" has made everybody familiar to weariness, and tries, amongst other things, to set forth an attractive account of the marvellous bonuses its policyholders receive. This trick is easy enough when carefully selected show policies are alone dealt with, but we challenge this huge imposture to issue a complete properly audited account of its policies which have become claims, and of the bonuses paid to them, say during the past ten years, and also to tell us how much money it has made by lapses and surrenders, to the more or less complete stripping of the victims of its tender mercies in these directions.

One policy and another may be nursed like the larva of a queen bee, and utilised for advertising purposes, but that the whole body of the company's obligations can be met in the fashion suggested by its latest piece of puffery is impossible when we look at the aggregate figures of its business. These are paraded in the subtle manner of the practised quack advertiser and yield a highly suggestive group of facts to the analyst. During the four years, ended presumably December 31 last, the company claims to have received a premium income, new and renewal, of the aggregate amount of £45,450,000, and to have bestowed upon its policyholders in the form of claims paid no less than £20,700,000, its total disbursements being just short of £40,000,000 in these same four years. Now, how do these figures work out? They show that the policyholders have received very little more than 33 per cent. of the

premium income, and that the working expenses came to more than 30 per cent. of that income. If we take these expenses at £19,500,000, the working outlay will be fully 31 per cent. Is anything more needed to show how impossible it must be for an office run on such an extravagant scale to treat its clients fairly in any bargain entered into? Yes, there is one other fact, and it is the statement that last year the "average rate of interest earned was 4⅛ per cent." Many an English office can do better than that, and it gives the policyholders the benefit of its higher earnings, instead of sweeping them away in enormous salaries to officials, in excessive commissions, and so forth. We have been told that the London agent of the Mutual enjoys an income of £20,000 per annum, and it astonished us that it should be so modest when the gross receipts are so large and the "accumulated funds" so stupendous. Renewal premiums, the company tells us, cost in commissions "an average of only a fraction over 1 per cent." All we can say is that if this is true—a gigantic "if"—the permanent staff must all have princely incomes, since the company cannot live on less than 30 per cent. of the premium income, or nearly one-third of all its victims find for it. Our best English companies manage to carry on their business at a cost as a rule of not more than half this shameful proportion, and many of them do it at a third of it. Surely this ought to be enough to warn the easily misled British public away from the enares of the Mutual Life Company of New York and all of its kidney. There will be a shocking scandal followed by unutterable misery arising out of the practices of all these American offices one of these days. What we should like to have is the experience of a few who have suffered. Occasionally such stories of mal-treatment have reached us, been published, and our columns are always open to well authenticated facts of a like kind.

A Suggested Dock Combine.

Two Cardiff stockbrokers have succeeded in making themselves thoroughly unhappy concerning the future of the various dock companies serving the ports of Cardiff, Barry, and Newport, and without giving the slightest reason for interesting themselves in other peoples' business pathetically ask shareholders to apply the usual remedy for financial ailments and amalgamate the lot. Altogether eleven companies have come under the notice of these emotional philanthropists, some of them apparently by no means unsuccessful, one or two keeping their heads above water with difficulty, and the others in imminent danger of sinking with not the remotest chance of ever reappearing on the surface again. At the present moment these undertakings are happy in the possession of ordinary share capitals aggregating £1,271,280, preference capitals £275,670, and loans and debentures £631,516, or £2,178,466 in all, and the proposal is to form a new company with a capital of £2,050,000 divided into £1,100,000 £10 ordinary shares, £300,000 5½ per cent. preference shares, and £650,000 4½ per cent. debentures. Up to this point the circular contains nothing very startling or heroic, but as shareholders read on they will probably arrive at the conclusion that the issue of this fantastic scheme has somehow got delayed a month or so. It should have been published in the silly season alongside stories of sea serpents and so on, because no one with a spark of intelligence could be expected to regard the idea seriously. It is not often that a proposal comes forward to join together as many as a dozen companies, but when one does, the least to be expected is a complete valuation of assets of each undertaking, with profits and dividend records for a series of years, so that all concerned can see where they stand. Apparently, however, business is not conducted on those lines in Cardiff, and we are told that "petty jealousies must be thrown on one side, the past history of each company discarded, and only the future taken into account." Then "all should be in accord and show mutual interest in the future of the ship-repairing trade in the Bristol Channel." There are other gems in the stockbrokers' literary effort of a similar character, and when we come to glance at the table setting forth the proposed division of the ordinary capital, we find it almost as profitable to be interested in one of the companies that pays no dividend as in those making a substantial return. Thus if a certain profit of £128,250 is forthcoming, on each £10 of capital held the Barry Graving Dock will get £1 2s. 6d. instead of £1, a gain of 2s. 6d., while the Bute Dry Dock receives 11s. 3d. against nothing paid now, a clear gain. Then there is the Cardiff Channel Dock, which is only to have its existing rate of 15s., at the same time that three other concerns at present paying no dividend obtain 7s. 6d. each. Should revenue fall below the amount mentioned—and there is not the slightest evidence that any such sum can be earned—the last-named concern would be seriously worse off than at present, and so far as one can see this scheme is a desperate attempt to bolster up the worn out, decripit concerns at the expense of their more up-to-date neighbours. Will the Cardiff stockbrokers please issue another circular informing us if they are interested in any of these companies, if so, which, and to what extent? These details would clear the air. Meanwhile we note that several of the companies dissociate themselves entirely from the scheme, and urge shareholders to have nothing to do with it. That advice should be rigidly followed.

Sweetmeat Automatic Delivery.

As is frequently the case when matters commence to go wrong, considerable delay has occurred in the issue of this company's annual report, and now that they are at last in possession of the document, those proprietors who have held on to their shares throughout the recent heavy slump in prices will find little to reward them for their pertinacity. We fear it must be said that for a considerable number of years the company's affairs have been conducted on very indifferent lines, to use the mildest phrase possible, and protests have frequently been made in these columns against the board's methods. By systematically neglecting to make the least provision for depreciation or reduction of goodwill, the directors were enabled to continually increase the dividend until it reached 21¼ per cent. per annum, and having got it to this height they felt it a duty at all cost to keep it there. This rate commenced in 1898 when there was a shortage in the amount required to meet it of £1,558. In 1899 the deficit had increased to £5,216, in the following year it was £18,456, and in 1901 £12,192. For 1902 the money to meet the distribution was just squeezed out, but in the profit was included a sum to be realised from a sale of certain machines to go abroad, the company being possibly liable to repurchase at a sum considerably below the sale price. What the outcome of the transaction has been we do not know, but clearly the revenue derived from it should never have come into the profit and loss account at all, as the business may result in a loss. Reverting, however, to former years, the money to provide the various deficits was either taken direct from reserve or withdrawn from premiums on new issues, so that as soon as proprietors subscribed for fresh capital they received part of it back in dividends, a policy giving a fictitious value to the shares, and sooner or later bound to lead to sorrow. As is well known, during the latter part of the company's year to September 30 last the receipts fell away severely, and since there is now no exceptional revenue, the income from all sources is down £20,769 to a total of £142,914. At the same time expenses rose rapidly so that when it comes to net profits the drop is £28,511 at £44,195. This means that the dividends paid amount to only 12½ per cent., against 21¼ per cent., with an increase from £202 to £922 in the sum carried forward. There is no attempt to further trench upon reserves, although they amount to £192,054, principally because they are locked away in the business, and also because one of these days they must largely disappear in providing for depreciation, ignored for so many years. Something uncomfortable seems to have happened in connection with the chairman and managing director, Mr. E. Hore. He has resigned, leaving unfulfilled a liability of £19,471 in respect of an obligation to purchase a certain asset of the company, and the directors thought it prudent to write off the whole of this amount from reserve, although expecting to recover a portion of it by the realisation of certain securities. A question arose as to whether Mr. Hore was entitled to hold his position at will, and that matter, together with the amount of compensation which

might be due to him for loss of office have been submitted to arbitration. Should anything be due it will also go in reduction of the late chairman's debt. In order to strengthen the directorate, Messrs. Geo. A. Touch and W. Capel Slaughter have been elected to seats on the board, and on these appointments it is needless to make comment.

Critical Index to New Investments.

**** *To assist subscribers of* The Investors' Review *in deciding how to act when new issues of capital appear during the early part of the week, and lists close before the critical examination given in this Index can appear, the Editor has decided to reply by telegraph to all enquiries referring to such issues. A letter sent to the Office of* The Investors' Review, *Norfolk House, Norfolk Street, Strand, and enclosing a shilling for the reply, or a reply-paid wire to "Unveiling, London," will bring a prompt answer whether to subscribe or leave alone.*

Municipality of Johannesburg 4 per cent. Inscribed Stock.

After protracted negotiations and many changes of opinion as to the amount and terms it would be advisable to offer, this municipality has decided to restrict the present issue to £1,500,000, or one-half of the total authorised. The stock is redeemable on October 1, 1933, by means of a cumulative sinking fund, and is offered through the London and Westminster Bank, at the price of 95, payable in instalments of 5 per cent. on application, 40 per cent. on December 15, and 25 per cent. each on January 15 and February 24. Of the money raised, or to be raised, £713,000 is required for repayment of outstanding liabilities, £605,000 for electric tramways and lighting, and £1,150,000 for expropriation of land and improvement scheme, and the balance of the £3,000,000 will be utilised for sewerage and other improvements. The population is now approximately 180,000 and the rateable value, exclusive of Government property, is put at £36,006,042. On June 30 last the assets amounted to £665,125, and the liabilities to £961,482, the excess being due, it is said, to the town having no town land at present, and to the ordinary expenses during the war period having been defrayed out of borrowed money. For the financial year to that date the revenue came to £396,220, and the expenditure including the deficiency of £24,400 brought forward, to £392,196. This was exclusive of £156,141 collected on account of arrear rates and used for capital expenditure, and also of a profit of £21,561 from the electric lighting and power department, which was devoted to the reduction of the liabilities of the undertaking. A full six months' interest will be paid on April 1 reducing the net cost to the purchaser somewhat, but even so the issue is not altogether attractive, especially with a further £1,500,000 to follow it as soon as conditions seem favourable. The Continent, however, is said to be rather eager to take it up, and if that is so the underwriters will probably not have so much left on their hands as would be the case if they relied on this market alone.

G. Beer, Limited.

There does not appear to be any adequate reason for the conversion into a limited liability company of this business of couturier, robe, mantle, and costume maker, which is carried on in Paris, with branches at Nice, Monte Carlo and London, especially on the lavish terms offered. The capital is £480,000, divided equally into 7 per cent. cumulative preference and ordinary shares of £1 each, the former being entitled to a further non-cumulative 3 per cent. dividend after the ordinary have received 7 per cent., and 205,000 of these are offered for subscription at par. Profits have risen at a steady rate from £15,605 in 1898 to £54,201 in 1902, and the sales for the six months to June 30 last are certified to have been in excess of those for the corresponding period of the previous year, so that the concern seems in a flourishing condition. The purchase consideration has been fixed at £390,025, made up of £290,765 for goodwill, £20,000 for stocks, £13,500 for other assets, including fixtures and fittings, £34,260 for leases, with option of purchase of the Paris freehold, and £22,500 for estimated profits from June 30 to November 18. Of this the vendor takes £205,740 in ordinary shares, £35,000 in preference shares, and £59,025 in cash for the goodwill, £34,260 in ordinary shares, and the balance of £56,000 in cash for the leases. The business appears to be one which has rapidly grown in public favour, which is proverbially fickle, and although the proposition seems attractive, subscribers must not overlook the fact that should the company's creations fall out of fashion they would only have tangible assets representing about 40 per cent. of their capital. Why was it considered necessary, with such favourable prospects, to guarantee the preference dividend for five years?

George Trollope and Sons and Colls and Sons, Limited.

This company has been formed to amalgamate two building businesses, established in 1778 and 1840 respectively, owing to the recent deaths of partners and the wish of the survivors to secure the benefit of each other's assistance in the management of the business. The capital has been fixed at £450,000, divided into 20,000 5½ per cent. cumulative preference and 25,000 ordinary shares of £10 each, and the former are offered for subscription at par. All the ordinary shares, except £3,000 taken by the directors as their qualification, are issued to the vendors in part payment of the purchase price of £400,000, the balance being payable in cash. In addition to the goodwill of the businesses, valued at £93,000 and £70,940, the company acquires assets worth, after deducting trade liabilities, £236,060, and the present issue will provide further working capital of £50,000. Joint profits of the two firms for each of the last three years are certified to have been more than four times the amount of the preference dividend, while for the year 1902 they were greater than those of either of the two preceding years. It would have been more satisfactory if the actual figures had been shown, but the two firms seem to have a good business, and the preference shares may be regarded as a fair investment.

Cerebos (1903), Limited.

This is an amalgamation of the English and French companies engaged in the manufacture of a salt and other table delicacies, and incidentally takes over from the managing director sundry rights in the manufacture and sale in the United States and all countries and colonies where these are not already owned or worked. The capital is £250,000 in £1 shares, and 95,402 are now issued, principally for the purpose of acquiring the Greatham Salt and Brine works, West Hartlepool. Although the original English company was established in 1894, it does not appear to have made very much headway, and even by 1898 the results were not much to brag of. Profits, before providing for depreciation, came to £2,054 in that year, and increased gradually, until in 1902 they were £10,042. For the assets of this concern no less than £123,812 is asked, of which £105,000 represents goodwill, and this amount is satisfied by £111,312 in shares and £12,500 in cash. The French company is a more recent creation, having been started in 1901, and has not yet reached paying point, yet the purchase price is £31,286, including £25,000 for goodwill, all but £500 being payable in shares. Mr. George Weddell takes 12,500 shares and £3,500 in cash, of which £10,000 is for goodwill, for the so called assets handed over, and Sir Christopher Furness gets £33,500 in cash for the salt works, but stipulates for an allotment of 15,000 shares out of the present issue. No dividend valuation of the assets is given, but from these particulars it will be seen that more than enough water has been pumped into the new undertaking, and the shares had better be left alone.

Answers to Correspondents.

[*A Fee of Five Shillings per query is charged for replies under this heading. Letters, Five Shillings extra per letter.*]

Rion.—I have no great opinion of it, partly because I cannot trust the men in charge of it. Besides, the ups and downs of the output are too fluctuating to make the ordinary share anything other than a gambling counter, to be bought only at rubbish prices.

Passing Events.

Really our Protectionists ought to be very angry with Canada. In spite of that "privilege" of one-third off Canadian import duties granted to poor old England, the Dominion imported during the fiscal year ended June 30 last $137,605,000 worth of goods from the United States, against only $58,897,000 worth from Britain. The increase in imports from the United States was $16,790,000, compared with only $9,691,000 from the United Kingdom. This will never do, and we are not surprised to find a great statesman like Mr. Ross, the Premier of Ontario, deprecating "entangling alliances" with the United States. He admits—and we are grateful to him for going so far—that Canada cannot afford to quarrel with the United States, but spoils that admission by declaring that the States equally cannot afford to quarrel with Canada. He votes for preferential trade within the empire, does Mr. Ross, and is altogether a wonderful product of modern democracy. But he forgot to say anything about the Dominion's bounty on the production of iron, a bounty that has enabled the iron manufacturers of that great independent state to dump an enormous quantity of their production here. They have no home market for it in other words, but now, with their reduced railway charges, the United States are perhaps going to round on them there likewise.

What foul beast has bitten nearly all the correspondents in the Far East, and given them Russophobia? Telegram after telegram is published here, from "our own correspondent" in Tokyo, Pekin, Shanghai and elsewhere, breathing hatred and war against the Russ, until it looks as though they meant to educate the public up a shindy both in Manchuria and Korea. Japan is undoubtedly sore at Russia's dilatoriness in answering her proposals, and no doubt the mob, foolish there as in other countries, wants to wipe out the insult in blood, forgetting that it is not all shed by the other side. But in spite of this feeling of the many, the few in power are striving hard to settle the outstanding questions amicably, and Russia, so Count Lamsdorff declares, is ready to do her part. Why then should these fire-eating journalists try to force the two nations along the broad and hellish path of war?

There was recently an election in South Africa for the Legislative Council of the North-West Circle, and the addresses of the candidates afford interesting reading, particularly those of the Progressives. This party, under the leadership of the effulgent Doctor "Jim," numbers in its ranks the old Rhodes party in Cape politics, and so might naturally be expected to side with the Rand bosses on the question of Chinese labour. But not a bit of it. Public feeling against the Chinaman is too strong outside the mine magnates' territory, and therefore the Progressives are as much opposed to the yellow peril as the South African party. Rather a flat contradiction, is it not, of the tales told of mass meetings passing resolutions in favour of Chinese labour, which have been so assiduously circulated over here?

Without details the interpretation of the Egyptian budget for the coming year is difficult, but Reuter's summary figures are worth putting on record. It seems the budget for 1904 shows an estimated surplus of £E.500,000 over that for 1903, and that this result is product of the normal development of the revenue. Receipts are estimated at £E.11,500,000, and expenditure, including the amount assigned to the general reserve fund, at £E.11,410,000. There is thus a net final surplus of £E.90,000, notwithstanding the fact that the effective expenditure shows an increase of £E.227,000 compared with the current year. The gross surplus is put at £E.807,000, but of this £E.717,000 is set aside to increase the general reserve fund, making the actual net surplus as above stated. Debt conversion economies, it is added, will by the end of the present year amount to £E.5,507,000, and by the end of 1904 will be increased to a total of £E.6,040,000. Does this mean that debt to that amount has been redeemed and cancelled, or what?

Signor Giolitti has announced that an important conversion of the Italian debt is to be undertaken. The 4½ per cent.'s are to be converted, he said, on a basis which will give an annual saving of 6,000,000 lire on the budget. Also the Government is confidently preparing for the conversion of the 5 per cent. Rente on terms which will yield an annual profit to the budget of 40,000,000 lire. This is good news for the people of Italy, and a welcome proof that economy and the cultivation of the spirit of peace is enabling the country to recuperate.

So Mr. Robert Williams is going to have his railway up to those magnificent copper deposits in Central Africa. The Portuguese Government, it seems, has granted the Benguella Railway Company an extension of time sufficient to allow of a previous survey of the line from end to end. This is good news, for there seems to be no doubt whatever that the copper deposits in that region of Africa are of exceptional richness, and we trust that in due time the road may be economically made.

From Mr. Joseph Brailsford's letter in yesterday's *Times*, we should infer that he never knew of severe fluctuations in the pieces of iron and steel before, as one of the after efforts of a costly war. That a stick-in-the-mud, capital swamped affair like the Ebbw Vale Company should suffer from such a recoil was inevitable, but its chairman should really play the man and the true Briton, and not howl so. But has not Mr. L. T. Hobhouse, the able secretary to the Free Trade Union, made a fool of him just, out of his own mouth too.

So it is our rich and cash embarrassed Government which has picked up the two war vessels built for Chili, at a cost of nearly £2,500,000. Our masters, the bureaucrats, have got them for £1,875,000 inclusive—dirt cheap, of course—and will pay for them, we suppose, by a fresh issue of Treasury "kites." We congratulate Chili, which has lost only some £600,000 on the job, and might have lost twice six millions by using the vessels in a war. But what do we gain? What are our irresponsible rulers going to do with their armada when they have got it? Let it rust, sell it as "scrap," or what?

China, it is rumoured, means to forbid recruiting for South Africa within its boundaries. If true, this is the nastiest shock the mine bosses have received for a long, long time. Yet out of the evil some of them perhaps may squeeze good, since it will afford a convenient and plausible excuse for reduction of capital, reconstruction, or any other kind of bankruptcy they think most suitable to their needs. Those who still believe the British public has some money left to gamble with, in spite of the burdens of the war, will no doubt try to stir up the Colonial Office to get the fleet sent off to China, and coerce those haughty Orientals into working in the mines. For it is a gross insult to refuse to allow your subjects to be bound down to work three years at low wages in unhealthy mines, and so deprive members of the great British race, who can only speak their mother tongue with a slight British accent, of their deserving spoil. Hang it is, it's enough to make a mine boss refuse to pay his share of the coming ten millions!
